THIS TEXT MEANS, BE NOT UNREASONABLY anxious or disturbed by future cares. It is an advice easily adopted, if we take such steps as prudence suggests. Sufferers who are troubled with Coughs or Consumption, the temples are ached, and the good dispositions of the soul languish, the mind suffers; but obtain bodily relief from the use of Dr. DEWINE'S COMPOUND PITCH LOZENGES, and the mind and soul repose in that tranquil reliance on Divine Providence which the text commands. Price 50 cents a box, or 3 for \$1. Sent by (v3-11) LITTLE & CO., Apothecaries, 137 Montgomery street.

First Premium Daguerotypes.

Surgery.
R. B. COLE, M. D.,
Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.
Office—Athens Building,
South-east corner of Montgomery and California streets, opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself principally to his office, where he proposes to treat all
Surgical Diseases,
feeling assured as he does that his former connection with Medical Schools and Hospitals, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the affections to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and morbid growths, occurring on any part of the body, Disease of the Spine, Chronic Ulcerations, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of Eye, Ear and Skin Affections of the Bladder, Urethra, Scrotum and Testis (in other words, all diseases of the Genito-Urinary Apparatus) and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly treated Fractures, Contractions of the Limbs and loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.
Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.
(Morning, From 10 till 12;
Afternoon, " 2 " 5;
Evening, " 7 " 9. (v3-12)

HOTELS.

Orleans Hotel,
Second, between J and K streets, Sacramento.
THE above Hotel, occupying a space of 25 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.
The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.
The Table will be found at all times supplied with the choice of the market.
At the Reading Room can always be found the daily papers of the State and the latest dates from the Atlantic and Europe.
The Billiard Saloon is furnished with five excellent tables, superintended by a competent keeper.
The Bar will be supplied with the best Liquors and Wines.
The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished.
We have also leased the large brick building corner of K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.
The "Orleans" is also the Depot and Office of the California Stage Co., from which place stages leave daily for all parts of the State.
HARDENBURGH & CORSE, Proprietors. (v3-2)

Rasette House.
SAN FRANCISCO, CAL.
THIS HOTEL affords inducements to persons visiting San Francisco, unexcelled by any on the Pacific Coast. Gentlemen can be accommodated with single rooms, or families with suites of rooms.
The House is entirely new, built of brick; all the rooms are furnished in a style of comfort hitherto unknown in the Hotels of California, and the House is capable of accommodating over five hundred boarders. (v3-2)

Murray's Fifty-cent Western House.
Corner of Second and D streets, SAN FRANCISCO.
THIS HOUSE is entirely devoted to the wants of the traveling public and to all who will favor us with a call, entire satisfaction will be given. (v3-17) R. J. MURRAY.

American Hotel
NAPA CITY, CALIFORNIA.
J. A. & W. W. CHAPMAN, Proprietors.
GOOD accommodations for families, and on reasonable terms. Saddle and buggy horses kept for hire. Horses kept on board, by the day or week, and well taken care of. (v3-26)

California Stage Company.
Office at the Orleans Hotel, Sacramento.
STAGES leave regularly for the following places: Nevada, Ophir, Auburn, Yankee Jim's, Georgetown, Placerville, Mormon Island, Coloma, Drytown, Jackson, Mokelumne Hill, Stockton, Sonoma, Marysville and Shasta, and all parts of the Northern and Southern Mines, every morning, as follows:
Nevada and intermediate places, at 5 1/2 o'clock A. M.
Georgetown " 6 " "
All other places " 6 1/2 " "
Accommodation line for Mormon Island, 1 1/2 o'clock P. M.
All passengers will be called for at their residences, and the utmost attention and care paid to them and their baggage.
Stages arrive in time every day for the San Francisco boats.
JAS. HAWORTH, President C. S. Co. (v3-4)

Travis & Vaner's International Hotel Stage.
PASSENGERS will be taken to the International Hotel free of charge, and to any part of the city for One Dollar. The proprietors will, in all cases, be responsible for baggage, after it is put in their charge. Any orders for the stage left at the International Hotel will be promptly attended to. Our stage may always be known, having the name of International Hotel on the sides, and in the night time it will be seen on the lamps. (v3-10)

PACIFIC EXPRESS COMPANY.
THE late employees of ADAMS & Co., in consequence of the disruption of that firm, have organized themselves into a joint stock company, under the above name and title, for the purpose of conducting a General Express and Forwarding business in all its branches, throughout California, Oregon and the Pacific Coast generally.
The business will be strictly and solely a forwarding one, having no connection with banks and bankers, and will be conducted on safe and economical principles.
The Expresses will leave the office at the north-west corner of Washington and Montgomery streets, daily, at regular hours, for Sacramento and the Northern Mines, Stockton and the Southern Mines, San Jose, San Juan and Santa Cruz, Monterey, San Pedro and the Southern Coast generally, as well as to the Northern Coast of California and Oregon.
We will also run a regular Express for Freight, Small Parcels and Letters to and from the Atlantic States by every steamer.
The parties who have organized this company are well known in the community as old and experienced express men, and hope it will be acknowledged generally, understanding their business thoroughly. They think they are not saying too much, when they attribute much of the success of the late firm of Adams & Co. in the express business to their exertions and personal energies.
In conclusion they would solicit a fair share of the favors of the public, pledging themselves to exert their best endeavors to transact such business as may be entrusted to them in a prompt and business-like manner.
Collections of all kinds will be promptly attended to at any of the points mentioned above.

Corner of First and Mills streets, San Francisco.

Encourage Home Industry and Home Production.

THE attention of dealers and consumers of Flour is respectfully invited to the Superior Article manufactured at the above establishment, from California Wheat of the growth of 1854, selected and prepared with the greatest care. These Mills have been in successful operation for nearly two years, during which time the proprietors have received such satisfactory assurances from those who have tested the quality of their Flour, that they can confidently recommend it as being fully equal to any brand in the market. Among the many evidences of the superior excellence of the Flour manufactured by them, the proprietors would direct attention to the substantial compliments received at the two last Annual Meetings of the State Agricultural Society, premiums have been awarded at both Fairs for the superior specimens of Flour from these Mills.

Domestic Flour.—A superior article for family use, manufactured from selected Wheat—a constant supply always on hand at the Mill, or at the Depot of the Proprietors, 35 Sacramento street.

A liberal allowance made to the trade.

J. N. BROOKS, } Proprietors.
F. C. HALL, }

Wheat Purchased or Ground on the most favorable terms.

INDIAN MUMMY.

ONE of the most interesting specimens of preserved humanity is now open for exhibition at the office of the CALIFORNIA FARMER. The certificate of Dr. Evans, U. S. Geologist, furnishes sufficient data to prove its authenticity and value; the certificates of five of our most distinguished naturalists furnish facts that should awaken a general interest in our community to see this valuable and positive proof of the earlier races of the aborigines of California.

The Mummy now exhibited is supposed to be a highly distinguished chief of some tribe of the "Flat-Head Indians." This race have left no record, and the present tribes have no knowledge of the race of which this is a representative. Capt. Russell, the discoverer, is familiar with the Indians of the same vicinity, speaks their language, and has been years with them; yet neither they nor him self can find any trace by which to recover the history of the present relic.

The Chief now measures five feet three inches in length—full size—the feet are three inches long. The body presents a natural appearance, and, as it lies in the canoe, surrounded by the materials usually deposited with chiefs, together with other bones and skulls found with the Mummy, it is indeed a most interesting specimen.

Captain Russell has expended much in bringing this specimen to the city and preparing it for the States, and it is now offered for exhibition in hopes that a sufficient sum can be raised to retain it here, as it is a record of the early history of the CALIFORNIA FARMER, for a short time. Admission 50 cts.; Children half price. The Press, Medical and Scientific men, and Clergymen, are invited Free, as the object is diffusion of knowledge.

C. J. W. RUSSELL, Proprietor.

Diamond Rings, Pins and Brooches, from \$80 to \$500 each.

Diamond Port Monnaie, with Miniature Watch, size of half dollar—\$600.

Diamond and Emerald Set—Branch, Ring and Ear Ring—the handiwork of the jeweler ever imported into this city—\$1,500.

Solid Silver Salver—\$550.

Magnificent Diamond Bracelet, with Pin attached—31 diamonds—the centre one of extraordinary size and brilliancy—\$1,000.

Diamond and Opal brooch, with 116 Diamonds, and a very fine Opal—\$800.

Three Massive Silver Breakfast and Tea sets—\$750 each.

ALSO,

Superb Ornamental Clocks,

Solid Silver Drinking Cases,

Silver and Gold Work,

Paintings,

Works of Art, etc., etc.

An examination of the Goods will show that a fair business profit is realized and no more.

The distribution will be conducted by a Committee of the Shareholders, and every care will be taken to give the same satisfaction to the public that has continued from year to year their confidence in our house.

The GALLERY OF PAINTINGS is now open to the public, without charge.

ALSO,

Ingham's Improved Smut Machines.

THESE Machines combine all the apparatus necessary to clean Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove short straw, white caps, weeds and other foul substances in the most perfect manner. All of the official work is collected in a reservoir, while the smut and light dust are passed out of the mill, allowing the machine to be put on the same door with the flour chests or wherever most convenient, without being enclosed. It is a California improvement and designed to meet the wants of this country; eastern machines having been found to be inadequate to that purpose. It has received the highest recommendation from all using them, among whom are Pettit & Hedges, Hightman Mills, Sacramento; Brooks & Hall, Happy Valley Mills, San Francisco; Wm. Sharp, American Mills, San Francisco; Hubert & Hale, Sierra Nevada Mills, San Francisco; H. B. Hall, Washington Mills, San Francisco.

The building Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHIP on L. street, between Front and Second, Sacramento.

N. B.—All information given, and orders left at WARREN & SON, San Francisco, will be attended to.

The following certificate is among the number received others can be referred to in quantities:

This is to certify that I have one of H. B. Ingham's Improved Smut Machines, and believe it to be superior to any other. I need no other fixture for cleaning grain, except the machine itself; it makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before.

WM. SHARP, Agent American Mills,
Pine street, San Francisco.

San Francisco, Jan. 11, 1855.

INNS AND OUTS.

BY J. K. R. M. S.

I'm out of cash, and so, of course,
I've pocket room to let;
I'm out of patience, just because
I'm never out of debt;
Besides, I'm dreadfully in love,
And more than half in doubt
Which is the greater evil, that
Of being in or out!

I'm deeply in my tailor's books,
But I don't mind a dun;
And if I wasn't out of funds
I'd pay him, out of fun.

He always gave me "fit," he said,
But heaven bless his eyes;
I would put him in a fit, I guess,
He'd be in such surprise.

I'm out in elbow, in distress,—
In sooth, a sorry tale!
I'm out of favor, out of sorts,
But, then, I'm out of jail.

My landlord says my time is out,
And I think I'd better "abide,"
I'm such an out and outer, bo
Won't have me in his inn.

I'm out of office, but in hopes
To get put in some day;
I'll don't run for something soon,
I'll have to run away.

I'm out of spirits, and I'm out
Of more than I can think;
I'm out of temper; hang the pen;
Ye gods!—I'm out of ink!

THE DISSATISFIED MAN.

Still restless, still chipping and changing about;
Still enlarging, rebuilding, and making a rout;
Little Timothy, strange as things may appear,
Picks down and builds up again, two times a year;
With this altering rage, poor dissatisfied elf!
What a pity it is he don't alter himself.

A JOKE OF THE QUINCYs.—Some years ago the venerable Josiah Quincy, then President of Harvard University, and his son, who lectured here one evening so humorously, instructively and happily on "Joe Smith and the Mormons," then President of the Common Council of the city of Boston, were toasted or alluded to as two President Quincy's. After the usual noisy demonstration, the younger Quincy very gravely arose and repudiated the idea of such grouping of Presidents. He told the audience that he intended to be courteous to others, and yet submit to allow nothing to be said derogatory to his own dignity. "I beg leave to request the audience to remember that the old gentleman over there presides over a parcel of boys, while I preside over a body of men." It is superfluous to mention that the uproar among people who had known both gentlemen long and well, was tumultuous.—*Tel- edo Blade.*

RATHER SAVAGE.—Dr. Johnson was one night at a concert, where an elaborate and florid concerto on the violin was performed; after it was over, he asked a gentleman, who sat near him, what it meant. The question somewhat puzzled the amateur, who could only say that it was very difficult. "Difficult!" answered the learned auditor, "I wish it had been impossible!"

"FULL JEWELLED."—An old bachelor says that the young ladies who rejoice in a multiplicity of rings, chains, lockets, etc., to the unparalleled extent now fashionable, should be labelled like watches in windows—"Warranted full jewelled."

GOOD GRAMMAR.—"O, Mr. Museum," do you say, "Bring me that ham and eggs," or "Bring me those ham and eggs?"—Editor: "No; we say, Bring us two plates of ham and eggs immediately."

A CAUTION.—Avoid argument with ladies. In spinning yarn among silks and satins a man is sure to be worsted and twisted. And when a man is worsted and twisted, he may consider himself wound up generally.

WOMAN.—God has made her to be loved. She exercises a sovereign influence over the sterner sex, when she keeps within her proper sphere. Her influence diminishes in proportion as she "pants for notoriety."

When the idea of any pleasure strikes your imagination, make a just computation between the duration of the pleasure and that of the repentance that is likely to follow it.

"Do you think you are fit to die," said a step-mother to her neglected child. "I don't know," said the little girl, taking hold of her dirty dress and inspecting it—"I guess so—if it aint too dirty."

THE RULING PASSION.—An editor became martial, and was created captain. On parade, instead of two paces in front—"Advance!" he unconsciously bawled out, "Cash—two dollars a year in advance."

THE POETRY OF MOTION.—The circular movement described by a rich uncle's arm, when he hands you a thousand dollar check.

A MAN, writing from the West, says that he is altered so since he left home, that his oldest creditors would not know him.

DONES wants to know whether sea-sickness is one of the "wave offerings" spoken of in Lovet-icus.

This reply to a whopper now, is "you are So-bastopolizing."

NURSERIES, &c.

Golden Gate Nursery,
Corner of Folsom and Fourth streets, San Francisco.
OFFICE—No. 170 WASHINGTON STREET.
THE attention of the public is requested to a large collection of the flowering plants, now for sale at this establishment, embracing the most extensive assortment in the State; among which may be found—

Caneblooms, in seventy varieties;
Perpetual blooming Roses, of all the classes;
Moss and climbing Roses, do do;
Fuschias, a choice collection; Heliotropes, in variety;
Roses and Lemon Geraniums;
Lemon-scented Verbenas, Flowering do, Arbutus, Azaleas, Oleanders, Pansies, Honeysuckles, Carnations, Dahlias, Bulbous Roots, &c., &c.; and a general collection of Green-house plants and ornamental shrubbery.

Catalogues for 1855 will be ready on the 1st of December, and will be forwarded on application.
Orders for any part of the State, will be promptly attended to, on application to D. Nelson, No. 170 Washington street—or to the proprietor.
(3-10) W. C. WALKER.

Smith's Pomological Gardens,
Banks of the American River, two and a half miles from Sacramento city.

THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show to them, ready for sale, this fall, as fine a collection of

Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Flowering Plants, and Green House Plants, as can be found in all the great Sacramento Valley.

The proprietor would call particular attention to his collection of Peaches, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.

The collections of Pear Trees will equal any in the country; these, with all the new varieties, will be offered this autumn.

The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Ornamental.

The subscriber will offer this autumn Five Tons Vegetables Garden Seeds, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.

Persons in want are invited to call upon us, and we will make reasonable terms.

Fruits, Bouquets, &c., will always be furnished at short notice at the Gardens.

The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favors.

10 A. P. SMITH, Proprietor.

San Jose Nursery.

WE are prepared to supply the trade with the best varieties of Fruit Trees, Grapes, Vines, Roses, Plants, &c., in all their varieties; and are disposed to sell at a low price, that we may suit the times. Our Trees are cultivated with great personal care. Those who desire to make Nurseries and Gardens will do well to visit and ascertain for themselves our ability to supply what we advertise. Trees will be carefully labelled and packed for any season or distance.

The following Trees we offer this season:
Peach Trees, 14 varieties;
Pear do 44 do
Apple do 34 do
Plum do 15 do
Apricots 6 do
Almonds 2 do
Quinces do 2 do
Cherry do many do
Grapes, 12 do

In addition to our Fruit and Ornamental Trees, we offer ten thousand fine Roses, comprising more than one hundred varieties, all of the best known kinds. Our plants are too numerous to specify in an advertisement. Hoping visitors will come and see us, we refer them to our agent in San Francisco, Mr. DE LADONNE, 121 Sansome street, where we shall have a collection of plants in the season as samples. The nursery is situated in the city of San Jose, immediately above the City Mills.

We are also permitted to refer to Warren & Son, who have examined our grounds, and who can testify of the character of our nursery, and who will receive and forward orders to us. Every order promptly and speedily attended to.

8 lat L. PREVOST & CO.

Pacific Nursery.

MISSION DOLORES AND ALAMEDA.
HAVE always on hand for sale, the largest collection of choice ROSES to be found in the State. Also, Grape Vines, Fruit and Ornamental Trees in great variety; 500,000 Strawberry Plants, including thirteen varieties of all the best known kinds. For sale cheap, in lots to suit purchasers. All orders left with us at the Mission Dolores, or at our Nursery at Alameda, or with Warren & Son, at the office of this paper, will be promptly attended to.

Prices guaranteed at the lowest market rates, and everything sold fully warranted to be correct.

18 H. A. SONNTAG & CO.

SOLIDIFIED MILK.

MANUFACTURED BY
SAMUEL T. BLATCHFORD.
FOR SALE BY
BINGHAM & REYNOLDS,
201 Sansome street.

THE PRESERVED MILK is made from PURE FRESH MILK, combined with crushed sugar, and when reduced to liquid, as stated in the directions, can be used for all purposes for which Milk is used, as it is simply Pure Milk and Sugar. The Tablet weighs one pound and is equal to live plants of pure milk. The proprietor recommends with confidence the article to all persons going to sea, its properties of self-preservation having been fully tested during the last eighteen months. To the WHOLESALE trade its value is justifiable, and to travellers by land or sea, (especially when accompanied by young children) it recommends itself by its portableness and the facility with which it may be used.

Certificates.
The proprietor would call the attention of the public to the following certificates:

NEW YORK, April 4, 1854.

Mr. S. T. Blatchford—
DEAR SIR: In answer to your inquiries relative to the preparation of Solidified or Preserved Milk, having used it on my last voyage to San Francisco, I can with the utmost confidence recommend it to rendering men as being the best article of the kind I have ever seen or used, retaining, as it does, the taste and flavor of fresh milk.

Yours, &c.,
O. R. NUNFORD,

Master of Clipper Ship "Tornado."

Extract from a letter from a Californian, dated May 31, 1854.

"In regard to the Solidified Milk which you entrusted to me for the purpose of testing the merit of the preparation, I can with confidence say that it has proved entirely satisfactory. I have a portion of it yet remaining in as good condition as when you gave it to me, and it will, I have no doubt, keep for years. The preparation will be a great luxury to the sailor, as it will enable him to enjoy an article of food that has hitherto been supposed could only be had on shore.

Very respectfully, yours, &c. FARR BARTLETT."

Extract of a letter from Rev. M. Williams, dated Valparaiso, Aug. 9, 1853.

"But the Tablets of Milk prepared by S. T. Blatchford & Co. were the climax of comfort. I would say, let no one go to sea without them. I have a few now left in my room as perfect as when first made."

April, 1853.

Mr. Samuel T. Blatchford—

DEAR SIR: Some twelve months since I heard of your preparation of Milk and procured a sample, a portion of which I tried at the time and found it good. When preparing for sea last December, I tried the balance which proving equally as good as months before, I procured several pounds, and during the voyage to and from Europe, have had the milk on the table every day, and have found it excellent.

I have used several preparations of milk, and have no hesitation in pronouncing yours the best. I consider it just the thing for future voyages I shall endeavor to have a supply of it.

Yours, very respectfully, RICH. S. CORNING.

Master of Clipper Ship "Rapid."

Valuable Newspaper Routes.

WE have several very valuable Newspaper Routes for sale. Enquire at the office of CALIFORNIA FARMER, Masonic Hall Building, Montgomery street.

HORTICULTURAL, &c.

17,000 Premium Strawberry Plants!
From the Shell Mound Nurseries and Fruit Gardens, Near San Antonio, Alameda County.

WE offer for sale the following List of Plants, viz.:
1,000 Boston Pine, at \$70 per 100
5,000 British Queen, " 35 " "
1,000 Burr's New Pine " 35 " "
500 Rival Hudson, " 35 " "
5,000 Large Early Scarlet, " 15 " "
2,000 Hovey's Seedling, " 15 " "
1,000 Prolific Houtboy, " 15 " "
1,000 Black Prince, " 15 " "
500 Crimson Cone, " 15 " "

Plants from "Shell Mound" received a premium at the late Fair of the California State Agricultural Society. Several of the varieties above named are believed to be remarkable for their fruitful qualities, having been cultivated for several years by Mr. Sanford, at his gardens in Wayne county, N. Y., with special reference to the production of fruit.

Orders received for any number of plants, (not less than 100) and promptly executed. On invoices of \$500, and over, a discount of twenty per cent. from the above prices will be allowed.

Address, J. L. SANFORD, Cultivator,
Shell Mound, near San Antonio;
or, R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco.

Seeds! Seeds!! Seeds!!!

WE are constantly receiving the most complete assortment of Garden Seeds to be found in the State, received by express, among which are—

Branch store, F. I. West, cor. Third.

New Invention.

BULKLEY'S STEAM DRY KILN.

THE undersigned takes this opportunity to offer to the citizens of California, Oregon and Washington Territory, the valuable invention hereby announced. One of the greatest wants of California and vicinity, for years, has been the means of preserving her products so as to have a continued supply during the late months. The vegetable products to an immense amount are annually lost at the approach of the rainy season, its long continuance, and the exposure that necessarily results to those products from the season; and the vast quantities that are exposed and accumulated in warehouses and elsewhere, have demanded some method of preserving these immense and valuable crops, that otherwise would be a loss to the producer and to the State. The loss of the Potato and Onion crop last year would amount almost a million of money, and the loss the present year will be heavy, without preservation.

The undersigned, holding the "Patent Right of the Steam Dry Kiln," offers this invention with the confident assurance that it is the very thing needed—that it is the *ne plus ultra* for this very want. It has been thoroughly tried and approved, for these products, and for grain also. It has been tried for lumber, to which it has been more particularly applied in the States, for there the Vegetable products do not require so much care as here. To shippers of Grain this invention removes all the difficulty in sending Grain on long voyages, and under the drying process of this valuable invention our Grain growers can now send their Grain to New York with safety.

The proprietor needs only to append the following certificates. The name of Henry L. Ellsworth, Esq., carries a weight that is convincing to intelligent men, and the other evidences should be satisfactory.

The model machine will soon be placed on exhibition at the office of Warren & Son, where all information can be had.

JOSHUA BUTTS, Proprietor of Patent.

A Diploma and Silver Medal.

Was awarded to the Inventor at the last New York State Agricultural Fair, held at Rochester, as a testimonial of its superior merits.

Letters from Hon. H. L. Ellsworth.

LAFAYETTE, January 7, 1853.

DEAR SIR: I congratulate you on the completion of your Dryer. I have for a long time urged the importance of extracting the moisture from grain and flour before shipment, to prevent fermentation. Your plan will obviate the difficulties hitherto experienced. There can no longer be any doubt that 18 pounds of water can be taken from a barrel of meal, and 15 pounds from a barrel of flour without affecting the taste or appearance of the same. Experiments at Lafayette show this. Nor is it a less satisfying circumstance that when the flour or meal is cooked, it re-absorbs proportionately more water, thus saving freight and the purity of the article. If the moisture is extracted, it must be obvious this meal will keep for long voyages, passing through the hottest climates. To the Navy, your improvement is invaluable. The world has become somewhat skeptical on the subject of patent rights. The simplicity and compactness of your machinery enables you to exhibit a working model, to remove in a moment any doubts as to your ability to sustain your patent and prove its utility. One feature in your plan deserves particular notice; in fact, this constitutes your main claim, viz., not drying by common steam, or by fire heated pans, as has been done hitherto, but by using heated steam. Few persons are aware of the small expansion of steam, and how easily it can be heated to a high temperature with little confinement. You will be able to raise a stream to the point of ignition, say 600 or 700 degrees, though a far less heat will answer all your purposes. I will only say that European prejudice against Indian corn is fast dying away, and we may anticipate large shipments both for man and beast. The great fertility of the West, and the reduction of freights both inland and on the ocean, justifies this anticipation. Wishing you success,

I remain, yours respectfully,

HENRY L. ELLSWORTH, late Commissioner of Patents.

To Henry G. Bulkley, Esq., Kalamazoo, Michigan.

LAFAYETTE, March 20, 1853.

DEAR SIR—I am highly pleased with your Dryer for lumber by *Aerial Steam*. It seems almost incredible how soon even green lumber can be prepared for use. Twenty-four hours is all that is required. Steam has hitherto been used to advantage, but heated steam has not been applied for this purpose before. It is profitable to create a cheap dryer on your plan. Full one-third of the weight of some kinds of lumber is removed by drying; the saving in cartage will more than repay the expenses of drying. When the difference between seasoned and unseasoned lumber is considered, no one who regards good work will regret the trifling expense of preparing the raw material.

Yours respectfully,

HENRY L. ELLSWORTH.

To H. O. Bulkley, Esq., Kalamazoo, Michigan.

HARRISBURG, Pa., July 12, 1853.

I hereby certify that I have had charge of one of W. O. Hickok's shops where the most of his wood work is done, that I put up and have used H. G. Bulkley's Patent Kiln, and heartily approve of everything W. O. Hickok has said about it, and am certain that no recommendation can be too strong in praise of said kiln.

[17] W. H. SULLIVAN.

THIS CELEBRATED REMEDY

is offered to the WESTERN WORLD in full faith, as being

The Only Certain Cure ever Discovered

For COUGHS,

SORE THROAT,

ASTHMA,

BRONCHITIS,

HOARSENESS, Incipient CONSUMPTION,

PAINS IN THE SIDE AND CHEST, AND ALL CURA-

BLE CASES OF DISEASES OF THE LUNGS.

They will be found the best article in use for the RELIEF

of the Consumptive Patient when past all hope of recovery, and

will in any case where lungs sufficient are left to maintain life,

check the ulceration and raise the patient to health.

Certificates of cures, to be relied on, can be found in the cl-

culnars left with the agents, and the public may be assured that

we shall never publish anything we do not believe entitled to

the fullest confidence, as truth.

"Nothing but the Truth."

The world is challenged to produce such cures as are effect-

ed by faithfully using this cheap and pleasant medicine.

This remedy is pronounced by Clergymen, Orators, and Vo-

calists to be the best in use for clearing the voice and relieving

the irritation of the throat, so troublesome to public speakers.

Price 50 cents a Box, or 3 Boxes for \$1.

* Postmasters throughout the State, are kindly invited to act
for us.

We desire our Agents to report to us on the 1st of every
month, the increase of names and the prospects, together with
the amount due the office.

Novel Form of Industrial Protection.

If the State is benefited by the progress of
American industry, as it surely is; if it is the
State which is reformed in all such progress as
that now soliciting our attention, as it certainly
is, then the State is, in fact, the community which
should tax itself, and the people have no cause of
complaint for any such assessment. It is equally
true that all outsiders have nothing to do with
the thing; and if they "come in" at all, it must
be on our own terms. Now, suppose we should
agree that any may come in, provided a certain
amount of per centage of the articles thus brought
in and sold shall be put into our treasury, to
form a Fund to be expended for our improvement,
to enable us to produce the very best specimens
of the article in question in the very best man-
ner. It is unquestionably better that each unit,
whether individual or social, should be independ-
ent of all others, so far, at least, as these necessa-
ry products of labor are concerned. It is desir-
able that no "neighbor" should be obliged to ask
favors of another, to enable him to carry on suc-
cessfully his own legitimate, regular, and desir-
able and even indispensable calling, whether this
necessity involve one or one hundred items. This
seems clear.

These outsiders would like to sell us lots of
linen goods, iron in various forms, etc., etc. We
have agreed to suffer them to do so at certain
rates. Now, let the Committee of Arrangements
at Washington, who say that things must remain
as they are, so arrange the matter that all or a
certain share of these sales of the property of
outsiders, shall be given to our State societies
(there, perhaps to be further subdivided), to be
expended in instructing us how to produce the
highest and best specimens of the same kind
among ourselves. In other words, our Society
will admit outsiders to sell on our own grounds
and in our warehouses, provided they will pay us
what we consider a fair price for this right, in
competition with our own products. While we
are unwilling to tax ourselves for self-improvement,
this plan would work out magnificent results.
Minute calculations and apportionments
would be too tedious, of course; but we might
make a general apportionment. The essential
point of the thing is, that the management at
Washington shall secure to the State societies, as
trustees, an amount for agricultural and mechan-
ical improvement at home, which shall be a fair
equivalent for any loss by the competition of out-
siders, which may be permitted on our own soil.
If we shall prove ourselves incompetent to the
work of producing the very best qualities, and
in indefinite amounts, after a fair trial, then let
all the gates of our inclosure be thrown down
and all our fairs, through all our States and ter-
ritories, be turned into commons. Would not
any farmer justly complain if he was obliged to
furnish the necessary facilities in his own build-
ings, for a rival from a distance to sell the very
same articles he produces, and in which competi-
tion is hazardous to himself?

But the form in which we have presented this
may be thought "too political." In fact, we think
it entirely politic, and we will be content if, in
any form, our political governments—who do al-
most every thing because it is politic or policy,
and not because it is just—will carry out a plan
of this sort; and we do strenuously contend that
our national and State governments ought to fur-
nish liberal provision for expenditures of this de-

scription. It might reasonably be required, that
all kinds of useful industry should be alike en-
couraged by premiums and otherwise; and then
we can see no reason why the measure should
be deemed undesirable or impracticable. All
that is necessary is, that the farming and manu-
facturing industry of the country should demand
this for themselves, and the thing is done. One
million of dollars apportioned among the States,
would give an average of more than \$30,000 to
each State, and even much more than this might
be given. Our national treasury is running over,
but no one dreams of distributing its provision
among the farmers and mechanics, for the im-
provement of their several crafts, though these
are the very men who sustain the institutions of
the country.

We have said that premiums are or may be
comparatively unimportant among the instru-
mentalities used for this object. Perhaps it would
be better to say that they should be regarded
chiefly as the indirect means of good, rather than
as having any value of their own. Thus, when
premiums and other means of power over man's
curiosity, selfishness, love of gain, etc., have done
their work, in securing the attention of the pub-
lic in one or several places of convocation, then
let us have the benefit of carefully drawn state-
ments of the processes adopted, all the circum-
stances involved, with the errors of previous
years; the details of experiments, whether suc-
cessful or unsuccessful; propositions for future
experiments; suggestions in regard to new ma-
chinery and new applications; specimens of very
high styles of products of any kind, as of print-
ing, weaving, paper-making, etc., etc. Thus all
may be alike encouraged to emulate these higher
specimens of skill, and a general attention, at the
same time, be secured at these annual or semi-an-
nual convocations, which might continue for sev-
eral successive days. Were no other expendi-
tures demanded in such cases, this amount of time
and labor would be cheerfully given, and, no
doubt, prove very profitable.

The actual view of fine products of the farm,
or shop, or mill, we think of vastly higher value
than the most eloquent harangue on theories or
on facts. The premium is only valuable as it
leads to this other and greater good. Hence the
influence of the latter should be as widely ex-
tended as possible. The boy in his teens, may
be essentially affected for a whole life as a farmer
by such an exhibition. Many a fruit-grower or
raiser of cattle would then be stimulated to
adopt practices of vital importance in the im-
provement of our stock. Many a dairy-maid
might there be inspired with a sort of *esprit de
corps*, which would exert a controlling influence
upon these products of the farm. This kind of
training might awaken a *pride of production* in
every department of farm work, which would de-
serve the name of revolution, when contrasted
with the general indifference now prevalent among
a large majority of our citizens.

We have often said that our farmers need not
information half so much as means, to place them
all among our men of progress. One form in
which capital might be used to very great advan-
tage, through the agency of agricultural societies,
is by loaning money, with or without interest,
for a term of two or three years, to enable farm-
ers of small means to cultivate their lands. In-
creased products would furnish the means of re-
payment and leave them in possession of fertile
acres in place of barren, worn-out wastes. The
loan might be repaid by a certain amount of each
year's crop, or by the excess of all over so much
per acre, when expended under direction, and
thus more be received than was given, while the
farmer also has more, besides his improved lands.
We are by no means sure that the money now
paid as premiums, if laid out as interest for money
loaned, even from the banks, for such uses, would
not accomplish more good than it does now.
Certainly it is true that a capital of a hundred
thousand dollars of State stocks, might be created,
costing no man a farthing, but the whole man-
ufactured out of a quire of paper, and at the only
possible cost of the State's name. We can see
no objection whatever to such an operation, to
any reasonable amount. It is not fictitious issue
for currency, but a State loan for a specific pur-
pose. All that the State could be liable for could
be most abundantly secured in various ways, so
that no loss, in any event, would be anticipated.
But on the other hand, a fund of actual value to
an indefinite extent might, in due time, be ac-
quired by the payments of instalments, from
time to time, by those who have had the benefit
of the loans. Then the whole operation would
be, not more safe, but become a solid and sub-
stantial fund, the very erection of which has al-
ready renovated, perhaps half the farms of the
State, and its future operations secure constant
and important progress in every branch of home
industry, whether on the farm or in the shop.

There is another form of service, which, we
think, our agricultural societies might render at
a trifling cost. When we had the honor of pre-
siding over a school, we did much by honorary
marks. Not only each boy might earn them, but
a series of benches—that is, the occupants of
them—was also entitled to them. Thus the more
orderly, or more gentlemanly half, as the eastern
and western, received, each week, some valued
distinction. So our committees might do with
towns or districts. Some men have a measure of
town pride, who have no love of self-reform. They
like to belong to a handsome company, military
or any thing else; though they have no love for
tactics or strict discipline. When the best town
team is honored with a premium, as it is in many
counties in Massachusetts, a farmer may buy a
yoke of good oxen from this sort of pride, when
he would not do so from any love of good cattle.
So the general condition of the several districts
or towns in each and all the several points of good
husbandry might, at least, be given in a carefully-
drawn report, the facts being determined by ac-
tual observation. Thus we have work for a trav-
elling committee, named in the former part of
this paper, on whom also the weekly or monthly
supervision of all fairs entered for premium as
the "best managed farms" would naturally de-
volve. The same committee might also inspect,
with little additional trouble, all experiments go-
ing on under the auspices of the society. In fact,
the difficulty would consist in making the selec-
tion of those services which should seem most
urgent, rather than in finding out how to occupy
such a committee to advantage. This labor would
now seem premature in some committees. When
we have advanced far enough to employ such
committees, many questions will naturally pre-
sent themselves as to the duties to be required of
them. It is only just, however, to suggest that
several societies in New England, and perhaps
elsewhere, have had such committees for several
years.

Agricultural Papers Instead of Money.

FRIEND BROWN:—I wish you to give me a
small space in your paper, to enter my protest, as
politicians say, against Agricultural Societies
awarding money or cash premiums.

Now what is the object of awarding premium?
Certainly not to pay the receiver for having the
best farm, or best horse, or corn. The very fact
of having such is his reward. The object is to
improve our farmers in agriculture. Now how
does the donation of a dollar and a half in money,
to a farmer, improve agriculture? The amount is
too small to be of any permanent benefit to him.
Suppose the same amount was paid him in the
"Ohio Farmer," for one year! He gets fifty-two
instalments, each of which will do him more good
in farming, than the whole would if paid in money.
He has something permanent, substantial, useful.
It is spread over a whole year; like the dew of
Heaven, it is continually refreshing his soil, im-
proving his stock, bettering fruit, and will aid
enough to the profits of his farm to buy, not only
a flock for the baby, and shoes for John and Pete,
and the rest of the little ones, but also a silk
dress for—well, he will know who it's for, and so
will his wife.

Our County Society have taken this course of
giving premiums in first rate agricultural papers,
instead of money; (you know what paper they
give, and how many.)

Now seriously; it does appear to me, that this
course ought to be pursued by all of our Socie-
ties. By this course, our agricultural papers will
be sustained, and useful agricultural knowledge
scattered among the farmers.

Who second the motion?—L. V. Bierce in
Ohio Farmer.

Waiting for the Latest Improvement.

Are you acquainted with Farmer Tardy? He
is a cautious man. He is what might appropri-
ately be termed an excessively prudent individual
—one of that class who is never taken in with
new fangled notions of this inventive age. He
professes to be thoroughly acquainted with every
thing he purchases, and never (in his own esti-
mation) has he been "taken in" by dealers. In
a word, Farmer Tardy is the man who for many
years past has been waiting for the latest im-
provement in agricultural machinery. Three
years ago when his neighbor Thrifty purchased
the first reaping machine introduced into his sec-
tion of the country, Farmer Tardy laughed
heartily at his neighbor's veridancy. But Farmer
Thrifty had never been taught to hold the six-
pence so close to his eye as to hide the dollar be-
yond. Tardy's pleasures were received good
humoredly, and the reaper was put to work. The
first season nearly one-half the expenses of cut-
ting his harvest were saved, and the next showed
a similar result. Laborers were scarce and wages
high last season, and Thrifty, not only saved

enough to pay for his reaper, but had his grain
harvested a full week before his slow but sure
friend. Where was Farmer Tardy all this while?
You might have seen him last season, cautiously
examining the different reapers and mowers, seek-
ing for the latest improvement, but evidently no
nearer the object of his search than when he com-
menced it four years before. McCormick's was
too heavy, Manny's too light, Atkin's too compli-
cated, Burrall's was only a reaper, Allen's and
Ketchum's only mowers, and he was fully per-
suaded that next year there would be something
still better; a machine that would embody that
great desideratum, the latest improvement.

Reader, do you recognize Farmer Tardy, from
the description we have given. If not the veri-
table Tardy himself, have you not his exact coun-
terpart in your own neighborhood, some one, or
perhaps a great many, who are throwing away
important advantages while waiting for the latest
improvement, men who are growing poorer daily
simply because they are too prudent to avail
themselves of the labor saving machinery, by the
use of which the enterprising and confident far-
mer is amassing an independence.—Cor. Pro-
gressive Farmer.

Tender Foot in Horses.

MR. EDITOR:—The mechanism of the horse's
foot—contemplated anatomically—is truly won-
derful. No one who understands it will be sur-
prised at the number of lame horses seen in our
streets, and on our farms, for with such compli-
catedness and delicacy of construction, it is not at
all astonishing that, with the careless manner in
which these valuable animals are treated and rid-
den, they should so frequently be rendered use-
less by lameness, especially in their legs and feet.
Tender feet are quite common, and I will, with
your permission, relate an incident that occurred
some years since in my experience, which I think
goes far to elucidate the cause of this disease. I
was owner of a young horse, for which I paid a
large price, and which I knew to be perfectly
sound when I purchased him. He was one of
the best animals I ever knew—kind, docile and
intelligent, and having an affection for him, I
could not bear the idea of causing him pain. But
I sold him, and purchased another—a young
strong horse which had been soured on a neigh-
boring farm and which I had known from a colt.
He, like his predecessor, was perfectly sound in
all his limbs when he came into my possession,
but he was soon so lame that I was forced to de-
sist from using him. I now thought seriously on
the matter, and to hunt for the cause. Both
these horses had stood on the same soft floor. It
was my practice to allow the manure to accumu-
late under the animal to the depth of twenty
inches, fresh straw being sprinkled under him
daily to keep him clean—and then clear it out.
This manure, from its fermentable nature, acted
like a hot bed, sending forth great heat at times,
and copious exhalations of ammonia. But on
this, the animal was compelled to stand; there
was no escape. A thought suggested itself. The
manure was removed, the horse's feet and legs
carefully washed in cold water three or four times
a day, and he compelled to stand on the hard
plank floor instead of on the manure. He was
cured! I have not, since this change in my prac-
tice, had a lame horse. If others who have horses
with tender feet, have managed as I did, they will
do well to change their practice at once.—J. B.
C. in Germantown Telegraph.

Interesting Statistics.

The report of Mr. DeBow of the census Bu-
reau, shows that the foreign born population of
the United States numbers only about one-eighth
of the native—much the largest portion being in
the Middle States. The largest number of immi-
grants to this country in any one year was 439,
437 in 1852.

The most valuable crop in the United States is
that of Indian Corn, estimated in 1850 at two
hundred and ninety-six millions of dollars—and
being nearly three times as valuable as Wheat,
and more than three times as valuable as Cotton.
Six times as many acres of land are devoted to
Indian Corn as are given to Cotton and three
times as much as to Wheat.

The value of Butter made annually in the United
States exceeds fifty millions of dollars.

There are only 347,625 slaveholders in the
United States, of whom only two own over one
thousand negroes, only nine own over five hun-
dred, only fifty-six own over three hundred, one
hundred and eighty-seven own over two hundred,
fourteen hundred and seventy-nine own over one
hundred. The greatest number of slaveholders
own more than one and less than five; the num-
ber of this class is 105,683.

The statement of the occupations of the people
shows that the Farmers outnumber by far any
other profession. Their number is 2,363,950—

while the class which approaches nearest to them is that of laborers, who number 909,786. The Carpenters stand next, counting 164,671, and then Cordwainers, 130,473, &c.

How to Know the Age of a Horse.—The colt is born with twelve grinders. When four front teeth have made their appearance the colt is twelve days old, and when the next four come forth it is four weeks old. When the corner teeth appear the colt is eight months, and when the latter have attained to the height of the front teeth it is one year old. The two year old colt has the kernel (the dark substance in middle of the tooth's crown) ground out of all the front teeth. In the third year the middle front teeth are being shifted; and when three years old these are substituted by the horse teeth. The next four teeth are shifted in the fourth year, and the corner in the fifth. At six years the kernel is worn out of the lower middle front teeth, and the bridle teeth have now attained to their full growth. At seven years a hook has been formed on the corner teeth of the upper jaw; the kernel of the teeth next to the middle fronts is worn out, and the bridle teeth begin to wear off. At eight years of age the kernel is worn out of all the lower front teeth, and begins to decrease in the middle upper fronts. In the ninth year the kernel has wholly disappeared from the upper middle front teeth, the hook on the corner teeth has increased in size, and the bridle teeth lose their points. In the tenth year the kernel is worn out of the teeth next to the middle fronts of the upper jaw; and in the eleventh year the kernel has entirely vanished from the corner teeth of the same jaw. At twelve years old the crown of all the front teeth in the lower jaw has become triangular, and the bridle teeth are much worn down. As the horse advances in age the gums shrink away from the teeth, which consequently receive a long narrow appearance, and their kernels have become metamorphosed into a darkish point, gray hairs increase in the forehead over the eyes, and the chin assumes the form of an angle.—*Pittsburg Gazette.*

Russia Draining England of Gold.—The Philadelphia Ledger remarks that it is a curious fact that the blockade of the Russian harbors, so far from relieving the exports of Russia, has only diminished the capacity of England to pay for those exports otherwise than in gold. This extraordinary result has been brought about by the Russians shipping their hemp, hides, tallow, &c., from Prussian ports, while they have not received in exchange as formerly, their raw cotton, coffee and sugar from the London merchants. Thus, while England has received thirty-five million dollars worth of Russian produce since the commencement of the war, she has given Russia but six millions worth of goods in return. For all these articles from Russia, England has been obliged, of course to pay double prices, so that besides being unable to barter off her own ordinary share of tropical products for the production of her enemy, she is compelled to contract nearly twice as great a debt as is usual in order to obtain the quantity of Russian articles she requires. She is therefore obliged to disburse gold to an unprecedented amount, and thus furnishes the Czar with those very sinews of war in which he is most deficient. The Ledger says:

"This condition of affairs is attracting the attention of the British press. Many journals are even calling for a return to the old practice of seizing enemies' goods in neutral bottoms. The large quantities of lead shipped to Prussian ports, and thus carried into Russia to be manufactured into musket balls, has particularly exasperated the British press. Yet what is to be done? It will scarcely do for England to retreat from her late decision, with respect to free ships making free goods, especially as the treaty between the United States and Russia pledge this country, in a measure, to enforce that doctrine in regard to our marine. It will answer but little to make war with Prussia, for other avenues for Russian hemp and tallow will open. The truth is, England is in what is technically called 'a fix' in reference to this matter, and will probably have to pay Russia, as long as the war lasts, from twenty to twenty-five millions of dollars in specie, for necessary tallow, wheat and hemp. In other words, the Czar will get out of her every year enough to keep a small army in the field. Such are some of the odd results of war when waged between a military and commercial power."

A SORROWFUL SIGHT.—A few days since, as we were walking down Clay street, near Dupont, we saw a middle aged woman staggering and reeling from intoxication. The quiet manner in which she passed along the sidewalk, and the effort which she made to conceal her deplorable condition, appeared to call forth the sympathy of those who were gazing at the pitiable object.

SUICIDE.—Last Tuesday morning, Mr. Patrick Donahue committed suicide at his residence, corner of Bush and Larkin streets, by cutting his throat. Deceased was a drinking man, and leaves a family to mourn his rash act. He was 40 years of age.

EASTERN SALMON.—A pair of salmon weighing sixteen pounds each, were sold lately in the Bangor, (Me.) market for the moderate sum of \$80. What would California vendors of this finny luxury say to such prices?

A NATIONAL KNOW NOTHING CONVENTION is to be held in Philadelphia.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, APRIL 5, 1855.

Convention of the Farmers.

It has long been deemed most advisable by the Executive Committee of the State Agricultural Society to call a convention of the "Cultivators of the Soil." By the advice and counsel of many, the Executive Committee do therefore call upon all who feel an interest in advancing the Agriculture of California, to assemble at the City of Sacramento, on Wednesday forenoon, 25th April.

The Executive Committee of the State Society earnestly call upon all County Societies, already organized, to call together their members and appoint full delegations to represent their several counties; and in those counties where there are no organization existing, it is hoped meetings will be called and delegates chosen; and it is also suggested that as the Convention is to be held at the capitol of the State, each section of the State will immediately open a communication with their Senators and Representatives, and make known to them all the important matters necessary to be acted on, and to furnish them all important statistics relative to their several locations. Where delegates cannot be appointed or be able to attend, the Senators and Representatives will act as their special delegates.

It is requested that the officers of the State Society in the several counties will give this matter their immediate attention, and each officer be present himself and with full delegations. It is also requested that farmers and cultivators, grain growers and stock raisers, from every section, will feel personally called upon to attend this Convention. The Executive Committee most respectfully yet earnestly call upon the Press to make known this Convention to their readers, and present the matter to their consideration.

Communications upon the subject from all who are interested, but who cannot attend are solicited. Communications should be addressed to the Corresponding Secretary, at San Francisco, previous to the 11th; after that date to Sacramento. It is hoped that there will be interest enough to continue the Convention several days and evenings, as the plans of the "Annual Fair and Industrial Exhibitions," will be brought before the Convention. By order,

C. I. HUCHINSON, President.

O. C. WHEELER, Rec. Sec'y.

Agricultural Aid from the State.

ONE year since the Legislature granted \$5,000 per annum for four years, for the special purpose of awakening a due attention to this great science among the cultivators. This amount was specially devoted to the payment of "premiums" only; no provision was made for the support of the Society, in any expenditure it should be called upon to make, to organize a State Society, or prepare for an Annual Exhibition and Fair. All such expenditures had to be provided for by donations from friends, by memberships, and admission fees at the Annual Fairs.

The First Fair was held, and owing to the general depression among cultivators, there was not that interest shown which was hoped and which was expected. The Fair was of a character however that reflected credit upon the State, but many circumstances occurred at the time to prevent a general interest and attendance—such as the calamity to the "Yankee Blade," the Meiggs excitement, a stormy week, &c., and the consequence was a burden of expense beyond the income; this fell upon the Executive and the members. A very generous feeling was manifested and a large portion was raised to carry forward the enterprise. But still the debt remained, to a considerable amount, upon the Society; it was for this purpose that a bill was introduced into the Legislature, to relieve those upon whom it would fall, (most unjustly upon a few,) and enable the Society to proceed with the coming year's duties, and to carry onward a work which must result in great good to the whole State.

That bill is now pending, and it is to be hoped

that those into whose charge it has been committed will feel the importance of that bill. The Agricultural interest is too great to be neglected, and the cultivators of California feel confident they have not only advocates, but friends, firm and true to their interests, in both Houses, that will not permit their interest to pass unheeded. While they readily admit that all the interests of the State—its mining, its manufacturing, its mercantile, and commercial, should be cared for, they will not forget the duty they owe to their own. The bill to which we have alluded was reported favorably to the Senate and then referred to the committee on claims. Hon. Senators Day, Colby, and several others nobly advocated the cause, and proved themselves the true friends of the farmers.

A report in full of all the remarks made we shall publish, together with all matters appertaining to this bill, as soon as the matter is finally decided. The farmers of California must know who are their friends; this is vitally important to their interest, not only for the present, but for coming years.

We earnestly hope a favorable decision of the bill, for the sake of the general good it will do, and the prompt action it will give to the State Society.

The Seasons.

FROM letters received from nearly all sections of our State, we have very flattering accounts of the crops. Grain never looked better, and the quantity planted will be found to be large. A most gratifying attention has been paid to seeding land to grasses of various kinds—herd, grass, red top, red clover, alfalfa (Peruvian clover,) and some other grasses have been planted in various sections of our State, and with flattering prospects.

In the vegetable districts a more systematic plan has been pursued. The amount that has been planted of potatoes, onions, cabbages and roots crops generally, is more in accordance with the wants of the given section, than as a mere system of guess work or speculation. This will be far better for all.

By the appearance of the orchards that have sprung into existence within two years, one can anticipate the present year a most luxurious market of fruits. Many thousands of fruit trees of all kinds have been planted and with great success.

The increase of "Homes" has also added much to the floral beauties of our cities, villages and residences in every part of our State. These all unitedly give a promise, in spite of all the embarrassment that prevails over the State, that seed time and harvest shall never fail; a promise that man can ever rely upon with more confidence than anything else.

California Wine.

KEEP it before the people that California will ere long export wine, aye, and the produce of the wine vats of the Golden State. Mr. Buffum, the able Representative of San Francisco, in a recent speech on the liquor law, gave the following data relative to the vineyards and wine of Los Angeles. In frequent visits to the capital we have noticed with satisfaction that he is ever ready upon any question. We never saw him away from his post, or unprepared upon any question of importance that might arise. Such men are the real working men, and such men we want always. We are happy to know we have many such from all parts of the State, and we shall endeavor to note them and their actions justly:

In Los Angeles county—the vineyard of California—there are already under cultivation as many acres covered with the vine as there are in the whole great State of Ohio, the pioneer in the wine manufacture of the United States. In Los Angeles the number of bearing vines amounts to 800,000; the number of acres under grape culture is 1,500; the quantity of wine which can be made to the acre is 400 gallons; the amount of capital invested in the grape culture is \$1,000,000, and the number of persons engaged in the various branches of the business is 4,000. Thus, these 1,500 acres only under grape culture can produce 600,000 gallons of wine annually, which at two dollars per gallon will yield, in this single district, the annual income of \$1,250,000. If there are in this State but 250,000 acres of land which can be brought into grape culture, it would produce 100,000,000 of gallons of wine annually, which at one dollar per gallon would yield the enormous annual revenue of \$100,000,000.

THE HUMBOLDT TIMES VS. THE FARMER. We acknowledge the kindness of our neighbors of the "Humboldt Times" for a very generous notice in their issue of Feb. 24. We sincerely thank them, and while we do so, we can say too that we will try to deserve their notice of our journal, by doing the utmost in our power to make the CALIFORNIA FARMER worthy the pat-

ronage of every farmer in the State. We extract only a small part of their notice—sufficient to show the good will of our cotemporary, who thus speaks to the point:

"The FARMER is one of our most interesting and instructive exchanges, devoted to those interests which are and ever will be the main reliance of our State. Will not our farmers aid in the advancement of that branch of business by which they subsist? Every one of them should subscribe for a copy and remit the money through Express—it will be the best investment they ever made."

Letter from Sierra County.

DOWNIEVILLE, March 29, 1855.

MESSENGERS. EDITORS: The season here is as far advanced as it was last year the last of April. I have commenced plowing and putting in seed. Times are brightening up some; miners are making good use of the water they have, although there is not enough for all. I should judge from the snow in the mountains that there will be hard times the coming summer; there is not snow enough to keep up the springs later than the middle of April.

Potatoes are selling here at 12 cents a pound, cabbage 20c, beets 20c, carrots 20c, ruta baga 16c; the trouble is to get the money, though that is not so bad as it was. I have on hand 8,000 cabbages which average six pounds to the head.

There are better times coming, whether we live to see them or not. Hope on, hope ever, is my motto. Yours, P.

NOTE.—We publish the above, although a private letter, to show that our mountain friends are wide awake on the subject of raising their own produce in the mountains. This is right, and they are well paid for it. Miners receive the produce for less per pound than they formerly paid for the freight of it, and farmers get well paid for their crops; this builds up the country. We hope to hear often from our friend. We hope to have a goodly list of subscribers from that section soon, in addition to our present list.—En.

Management of Tobacco.

WE call attention to the annexed article on the "Management of Tobacco," as important to growers in this country. It is presumed that a considerable quantity will be raised in this State the present year, and successful as may be the culture, the curing and preparing of it for the market is a very important theme. We know that last year the value of what was raised was materially affected in value by the condition in which it was brought to market—varying, in many instances, 25 cts. and 50 cts. per pound. We knew of fine tobacco raised here and sold for wrappers as high as \$2 per pound: for this reason we lay before our readers all the information we can upon all the productions of our State.

In looking over the November number of the Southern Planter, my attention was particularly called to an "Essay on the Culture of Tobacco," over the signature of Wm. H. Jones, of Mecklenburg. Being a planter myself, I read it carefully, and think it a good production. By writing this, or saying what I shall I do not mean or intend to controvert any thing said by him; but as we differ in our management in several particulars, I thought it would not be amiss to give to the readers of the Southern Planter, as a suggestion only, my plan of management upon a few of the important points in the management of a crop of tobacco, in which we differ. He says after the tobacco is cut, "as soon as it can be handled without breaking it is placed in small parcels, say enough for six or eight sticks, and hung on sticks." My plan is to stack it in round sticks, by setting it up upon the tails, as straight up as I can make it stand and press it close together, else it will fall about and coddle; but if put up right it will never coddle. I put as much in a stack as is convenient, paying no regard to the particular quantity. In this condition, it may, if you choose, remain for days, if the weather is suitable. My practice, however, is (if I do not want it to yellow some in the stacks) to haul it immediately off to the barn upon an ox cart, placing planks upon the bottom of the wood body, made fast, with all the wood standards out; put a little dry straw or hay upon the planks to make the load slip off when the body is tilted, which will place the load in a pile just where you want it without damage, and as it was put upon the cart. When the cart body is tilted, the oxen are made to draw the cart from under the load. The load is placed on the cart by lapping the tails together, with the stalks out. Secondly, when the tobacco is sufficiently cured for stripping, and it is put up in a bulk for that purpose, he says: "Whenever the weather is unfit for out-door work, the tobacco is stripped." I am aware that the progress of the general business upon a farm may be advanced by this course; but whether the interest of the planter is promoted by it, is a matter of some doubt with me, for the following reasons: 1st. It is a difficult matter to keep a bulk in good condition for stripping in harsh winter weather, unless covered with damp oak leaves from the woods; and even then, we are apt to let it lie in bulk too long. If it is too soft, we let it fank, and if not, it is liable to get too dry and waste much in stripping. My

practice is, whenever I put tobacco in bulk for stripping, to strip it forthwith, straighten and bulk down by lapping the tails, weight heavily, and invariably re-hang in from four to six days, after bulking; if re-hung at all. 3dly. If I purpose not prizing until spring or summer, as it is re-hung it is crowded high up in the house and then let remain until I wish to order it for the hogshend. When, on a soft time, to prevent its shattering, it is opened for ordering. My conviction is from experience that good tobacco of any class will be reduced in its original value two dollars per hundred by bulking it and letting it remain in bulk to sweeten, then re-hang it to order for prizing. Consequently, tobacco should not, under any circumstances, I think, be permitted to lie in bulk but a few days out of prizing order. Hence it is, I think, that the tobacco merchants mostly advise the planter against re-hanging. It is clear to my mind that if tobacco is permitted to sweeten in the bulk and then re-hung, the finer properties and the more delicious qualities escapes in drying in the atmosphere, and can never be regained; whereas, if it does not sweeten until in prizing order, it has all its originality in it, and is undoubtedly better, and is worth more money. 3dly. In stripping we make two sorts only—good and lugs. When it is struck off of the sticks in prizing order, we then class the different qualities and sizes, and pack and prize separately. Albernarle, Nov. 26, 1854. Ed. J. Thompson.

The Dairy Raffle.

SACRAMENTO, April 2, 1855.

MESSRS. WARREN & SON—Gents: Enclosed we have pleasure to hand you circulars of postponement of our Raffle to the 30th April, and feel sure that our ticket-holders, and the public generally, will see the necessity of it, when they consider the short period we have been before the public, through a time of unparalleled depression and general panic. We have reason to believe that we have sold more tickets than any other scheme at present before the public, and stand well with the community here—our scheme is in great favor, and if our friends here will come forward and purchase tickets this month, we shall have disposed of the bulk of them by the 30th. Our agents in the country, in the mining regions especially, will have a better chance this month, as there will be much more money about.

We shall feel obliged by your doing all in your power to facilitate sales this month, and hope you will be able to sell a few thousands.

We are, Gents, yours respectfully,
SOUTHWICK & Co.

NOTE.—Our duty to the proprietors of this Raffle (who are constant advertisers) requires that we should call the attention of all interested in this matter to a careful reading of their card in this week's issue. In times like the present, when every ticket-holder feels anxious, from the fact that they may (like the milk maid in imagination) have calculated to a certainty of winning the highest or one of the highest prizes, and they are really in want of it, and have made their calculations to carry out certain plans from the proceeds of the great prize—we cannot blame them, for it is about as reliable a calculation as to rest a hope from the collection of any ordinary transaction.

Let all who are interested in this Raffle look at the list of names that have given it their sanction. A very strong array of names appeal to the public for an interest in behalf of the proprietors, and we know the different parties to be men of wealth and among the first citizens of Sacramento. Their names are a sure guarantee of the fairness and certainty of the drawing on the day now fixed upon. The cause of the postponement should be satisfactory, as appears by the card.

"POMOLOGICAL GARDENS," SACRAMENTO.—To every lover of fine fruits who may find himself at Sacramento, we ask them not to leave that city without visiting Smith's Pomological Gardens, on the American. We think the truth will bear us out in saying that there is no equal to it in all Sacramento valley. It really does one good to see the long rows of fruit trees loaded with blossoms and young fruit which give assurance of a most bounteous harvest. Peach, pear, plum, cherry, apple, grape, fig, and strawberries in great abundance, will be raised the present year at these grounds. Great praise is due Mr. Smith for the skill and care bestowed to make one of the finest orchards in the State. A very handsome greenhouse, well stocked with choice plants; a fine promenade garden, full of fragrant flowers; an extensive nursery and other grounds; these, with the attention of the courteous proprietor, will ensure to all who visit these grounds very great pleasure and satisfaction. We commend the example and the skill of Mr. Smith as far more worthy of imitating than those who import their hundreds of thousands of merchandise into our State; for the former is a producer and keeper of gold to build up the State, while the latter

cheeks home production, and then, by exporting the precious metals, impoverishes the State.

The Cultivation of Grasses.

The Journal of the Royal Agricultural Society of England for 1853, contains a paper "On the relative Nutritive and Fattening Properties of Different Natural and Artificial Grasses," by J. T. Way, Consulting Chemist to the Society. He has made analyses of some thirty-four species, collected plant by plant, as they were growing naturally in the soil, at the time of flowering. Witherto nearly all our information respecting the nutritive value of the grasses has been derived from the celebrated Woburn experiments conducted by Mr. George Sinclair. It has long been known, however, that his method of determining the amount of nutritious matter in the plant was far from accurate, and hence the necessity of investigations conducted in conformity with the present more advanced state of chemistry and physiology. We have much to learn in regard to the cultivation of grasses, ere we can show such permanent meadows and pastures as are found even in the poorest cultivated districts of Great Britain. Few American farmers have any just conception of the productiveness of a well stocked, under-drained, and irrigated meadow, though all must at once see the value of such a meadow in furnishing food for stock and in increasing the fertility of the upland portions of the farm. It is money thrown away to sow choice grass seeds on a wet ill prepared soil, but after proper cultivation of the soil it is very important to sow a good variety of the best seeds. The English farmers frequently sow a dozen kinds of grass seeds while we seldom sow more than two or three, even when laying down land to permanent grass. It may be argued that if we have one or two that are best adapted to our soil and seasons, it would be foolish to occupy the land with those of a less valuable character. But there is no grass that is best for all purposes and at all seasons of the year. Sinclair, our best authority, writing on this subject says: "A certain supply of the most nutritious herbage will be in vain looked for from any one species of grass and can only be found where nature has provided it in a combination of many."

We are very far from possessing sufficient data to enable us to decide which are the best grasses for pastures and meadows in this country—since it is well known that some of the most popular English kinds prove very inferior with us; and we have yet to take the first step in an experimental investigation of American grasses—yet we think a few articles setting forth some of the opinions of practical men, so far as they can be ascertained, may do good in directing attention to the subject. The following table shows the composition of a few of the specimens analyzed by Prof. Way. The first column gives the percentage of water in the grass when gathered, at the time of flowering. The other columns show the percentage amount of albuminous matter, or flesh forming principles, of fatty matter, of heat producing principles, of woody fibre, and mineral matter in the dry substance of the grass:

Common name of Plant in this country, and Botanical name.	Percentage composition of the Dry Matter.				
	Albuminous, or flesh forming principles.	Fatty matter.	Heat producing principles—starch, gum, sugar, &c.	Woody fibre.	Mineral matter, or ash.
Timothy (Phleum pratense).	11.96	1.55	34.35	39.46	5.21
Oregonian Grass, (Poa polystricha).	11.33	1.14	34.72	39.70	5.31
Red Clover, (Trifolium pratense).	11.33	1.14	34.72	39.70	5.31
White Clover, (Trifolium repens).	11.33	1.14	34.72	39.70	5.31
Alfalfa, (Medicago sativa).	11.33	1.14	34.72	39.70	5.31
Lucerne, (Medicago sativa).	11.33	1.14	34.72	39.70	5.31
Strawberry Clover, (Trifolium fragillimum).	11.33	1.14	34.72	39.70	5.31
Black Clover, (Trifolium meliloti).	11.33	1.14	34.72	39.70	5.31
Red Top, (Lolium perenne).	11.33	1.14	34.72	39.70	5.31
White Top, (Lolium perenne).	11.33	1.14	34.72	39.70	5.31
Blue Grass, (Poa annua).	11.33	1.14	34.72	39.70	5.31
Kentucky Blue Grass, (Poa pratensis).	11.33	1.14	34.72	39.70	5.31
Sheep's Fescue, (Festuca ovina).	11.33	1.14	34.72	39.70	5.31
Hard Fescue, (Festuca ovina).	11.33	1.14	34.72	39.70	5.31
Soft Fescue, (Festuca ovina).	11.33	1.14	34.72	39.70	5.31
Italian Ryegrass, (Lolium italicum).	11.33	1.14	34.72	39.70	5.31

We are not treading on controverted ground in saying that the less water, woody fibre and mineral matter the grass contains, the more nutritious will it be found. Some will claim that the nutritive value of the grass is in proportion to the amount of "albuminous or flesh forming principles" which it contains; but this, to say the least, is very doubtful. The fatty matter and the "heat producing principles," in our opinion, afford a better test of value, especially for fattening purposes; though it cannot be said that these alone, irrespective of "flesh forming principles," determine the worth of a food. A glance up the first column will show a striking difference in the percentage of water, timothy having much the least, and the sweet scented Vernal grass the most. But we leave the figures to speak for themselves.

Timothy, (Phleum pratense).—This grass is

called Meadow Cats-tail in England. It is said to have acquired its name of timothy from its first introducer into Maryland, Timothy Hanson. In the New England States it is known as Herd's grass. It is admirably adapted to our climate, flourishes in all soils except an undrained swamp or a blowing sand; is hardy, easy of cultivation, of luxuriant growth, and makes the most nutritious and palatable hay for horses of any of the grasses. Between 38° and 44° north latitude it is the most popular grass cultivated on arable land. For permanent meadows, its great drawback is in yielding little aftermath. Prof. Way's analyses show it to be the most nutritious of grasses, yet it is not prized in England from "being harsh, late and yielding little aftermath, and from possessing no quality in which it is supposed not to be excelled by the fox-tail grass." This is probably a hasty conclusion which Way's results will do much to reverse, since they show green timothy to contain twice as much nutritive matter as the fox-tail.

Red Top, Herd's Grass, FOUL MEADOW OR COMMON BENT. (Agrostis vulgaris.) This grass springs up naturally in wet, swampy land. It is sown with timothy by many good farmers in order to thicken the bottom of the hay, form a closer pasture for cattle, and furnish aftermath. We are sorry it has not been analyzed by Prof. Way, as there is much difference of opinion among practical men in regard to its value. The late John Delafeld, Esq., in his "General view and Agricultural Survey of the County of Seneca," says: "It would be an improvement to the hay and pasture grounds of this county, if red top grass were more generally cultivated. Red top is a valuable and acceptable fodder for cattle, and another important characteristic is that it is a less exhausting crop than timothy as it contains only four or five per cent. of potash while timothy contains over thirty per cent." The fact that the ash of timothy contains six times as much potash as red top is no evidence that it is more exhausting to the farm; if it was, we must consider white and red clover much more exhaustive to the soil than most of the grasses which, to say nothing of scientific experiments, is contrary to all experience. We cannot, therefore, consider red top valuable because it contains little potash. It may be useful on swampy lands where better grass will not grow, but for uplands it is more than probable that there are other grasses which will be found to possess the good qualities of red top without its bad ones. In the New England States it is called Foul meadow grass, from the "great difficulty with which it is eradicated when it has once obtained a footing." It is said that the Pennsylvania farmers are so much opposed to having this grass rooted in their fields and meadows that they reject clover and every other grass seed in which the least red top appears. Nevertheless, red top has some good qualities, and many warm friends among the best cultivators in the country. In Massachusetts it is said there are two varieties of Agrostis vulgaris, generally known under the name of red top; one considerably larger and later in flowering than the other, and is better adapted to cold moist lands. The small kind is however held in great estimation for its nutritive qualities, especially for feeding working oxen, for which it is, in some districts, thought more valuable than any other grass.—Country Gentleman.

A Dream.

Is it not very beautiful? Such was the exclamation of one fair and beautiful, as she stood before that "majestic vase" that is now on exhibition at the "Art Union."

I would rather be the owner of that vase, than the "monster lump of gold" that men prize so much. I would build a pretty boudoir beneath my favorite oak in the garden, and I would trim it with the cypress. My pets of silver and gold should sport in the fountain, and my canaries should be suspended from these frescoed leaves—oh! would it not be beautiful?—and this fair creature clasped her hands with delight at the picture she drew—but I cannot draw this vase, it is not one of the prizes. I shall win a prize I know; see, here is my gift, ticket, No. 20,461, and I know it is a prize—and clapping her hands, she gaily sprang forward, singing and dancing merrily; in her haste she made a misstep and fell—springing forward to offer aid, I woke—it was a dream. Who holds No. 20,461?

Vine.

GIANT ASPARAGUS.—Dr. B. B. Brown, a very enthusiastic and most skillful cultivator, of Sacramento city, has sent us a very large bunch of Asparagus. It was indeed a most generous one, a feast for a family of six. We have never seen finer or tasted that which was more tender. We measured several stalks and found them two and a half and three inches in circumference. Who can excel the Doctor? It is very strange that so delicious a vegetable should be so little cultivated; it always commands a high price in our markets. We are very grateful to you, Doctor; we like your medicine; we could take it every day and grow fat upon it.

The upper Klamath rivers are represented as affording excellent mining facilities—the waters having fallen and fluming operations being under way.

ANSWER TO ENIGMA.

MESSRS. EDITORS: The answer to the Enigma in the CALIFORNIA FARMER of the 22d March, is "Liebig on Agricultural Chemistry."

Yours respectfully, C. CROSO.

THANKS.—We are under many obligations to our friends the proprietors of Noisy Carrier's Hall, No. 77 Long Wharf, for periodicals, &c.

To Murray & Co., Montgomery Block, for the late monthly magazines per last steamer.

To both the Pacific Express Co., and Wells, Fargo & Co., for prompt delivery of up-river papers, &c.

A MORNING BOAT.—Our Sacramento friends are at last about to realize a hope entertained for several years, viz: the putting on the line between that city and San Francisco of a morning boat. The press of the former place has labored long, and argued eloquently for such a desideratum, without being able to secure it; and now, when the event was least expected, the steamer Surprise makes her appearance in the lists as a candidate for the morning patronage. She will leave her dock at Vallejo wharf this (Wednesday) morning at 9 o'clock, and returning, start from Sacramento at 7 or 8. This arrangement will place the newspaper offices of both cities in possession of exchanges at a seasonable hour, and prove a great accommodation to the public generally.—Sun.

SUPPOSED TO BE LOST.—The schooner Sen Sorpent has not been seen or heard of since the 18th of February last, at which time she sailed hence with thirty passengers bound for San Pedro. Among those on board were a brother of Judge Lake, Capt. Hague and lady, and several persons on their way to Kern river. It is feared that not only the vessel but likewise her passengers and crew have been lost.

MECHANICS' INSTITUTE.—This Society was organized on Thursday evening by the election of Benj. Haywood, President; J. W. Brooks, Treasurer; P. P. Dexter, Recording Secretary; Wm. La Roche, Corresponding Secretary; and Gardiner Elliot, G. Coffin, S. H. Williams, James Ballantyne, J. J. McCready, Ely Cooke and S. C. Bugbee, Directors.

BOARD OF U. S. LAND COMMISSIONERS.—The only claim confirmed by this Board Tuesday, was that of J. R. Scott and B. Hays, for two square leagues in Los Angeles county. The claims of Maria P. Peralta, for land in Marin county, and Anselito Lestrade, for land in Los Angeles county, were rejected. The Sutter claim was not brought up.

SACRAMENTO ELECTION.—The election for city officers, which took place on Monday, at Sacramento, resulted in the election of James L. English, Mayor; N. G. Curtis, Recorder; J. W. Haines, Marshal, and the entire know-nothing ticket except one Alderman. The minorities they received were large.

TUOLUMNE ELECTION.—The telegraph reports that the election for county seat of Tuolumne county, last Monday, resulted in favor of Sonora by a large majority. Jamestown was the opposing claimant.

SUGAR CANE.—Mr. E. Covington, of Sacramento, has received through the Pacific Express Company, 500 stalks of sugar cane from Panama. His intention is to test the expediency of cultivating it in the Valley of the Sacramento.

U. S. MARINE HOSPITAL.—The number of persons received into this institution during the quarter ending March 31, was 301. Previously in hospital, 133. The number discharged, cured, was 341; died, 19; remaining April 1st, 164.

THE ART UNION.—The drawing of prizes in the Second Art Union took place on Monday. The highest prize, \$5,000 in gold, was drawn by Mr. B. C. Horn, of this city.

TWO INDICTMENTS AGAINST ABHORNEN HYDE, Van Bokkelen, Buckingham and Assistant Aldermen Wilde, was for malfeasance in office.

I. O. or O. F.—A Lodge of this order was instituted at Placerville, Butte county, on the 24th ult.

FIVE NEVADA JOURNAL states that Mr. H. Davis purchased \$60,000 in gold dust, last week, in that place.

The Sacramento Union says the mining accounts from Tuolumne, Nevada and Sierra counties, were never more favorable than at present.

NAME CHANGED.—The citizens of Cherokee, Nevada county, have changed the name of their place to that of Patterson.

FINE, large, ripe strawberries are in the market at Coloma, which are raised in gardens in that vicinity.

The store of C. P. Moore, at Craig's Flat, Sierra county, was destroyed by fire last week. Loss, \$4000.

The Wisconsin Company, at Iowa Hill, worked out \$687 25 from one pan of dirt, last Saturday.

THE recent rains caused the river to rise several inches at Sacramento.

Horticultural Department.

Vineyards in the South—A Word to the Wise.

MESSRS. EDITORS: The almost daily accounts we receive of the destruction of wine crops in Europe, and of the partial, and, in many instances total annihilation of the vineyards by an exterminating disease, cannot fail to suggest many serious thoughts as to the influence this may have upon society in this and other countries. The supply bids fair to be diminished fifty or a hundred per cent., while the demand has been increasing latterly at an almost equal ratio. The consequence will, of course, be much higher prices, greater adulteration, and greater consumption of spirituous liquors. What the ill effects of the two last consequences will be, I leave to Physicians and to Moralists to discuss and to combat as well as they can.

To us belongs the first of the three evils, which may indeed be considered as the immediate cause or parent of the others. It is the business of the owners of the soil to grapple it, and in combating to benefit themselves, their country and the world at large; in other words to turn the evil itself into a source of good.

Let us speak plainly, first to the Farmer and Planter, and then to other classes of Society.

Cultivators of the land, (would we say,) what are you toiling for? For the comfort of yourselves and families? For comfort you raise hogs, chickens, cows, vegetables, etc., all of which require a certain amount of labor and trouble; most of you even have a few fruit trees; and then you plant vast fields of corn and cotton, to enable you to enjoy comforts or luxuries which you cannot raise at home. All this is very well; but let me request you to lay aside the poorest corner of your corn or cotton field (provided it be dry land). Procure cuttings or roots of some approved vines, and plant yourself out a vineyard. After it is planted it will give you very little more trouble than an acre of corn or cotton; and only think of the amount of enjoyment it will afford you; an abundance of delicious and wholesome fruit will grace your table, and the charming bright juice will give pleasure and health to your little ones and your "better half;" for be sure they will enjoy it after a while. And do not forget that if once your boys learn to love good wine, they will never take to whisky—they will despise it!

Many of you are, perhaps, deterred from the experiment by some fancied ideas of great difficulties in the way. Let me assure you that vine culture is the easiest thing in the world; any of your sons, or your field negroes will "take to it" in one season; the pruning can be learned in ten minutes; the work is simply hoeing, tight plowing, and tying of branches. The making of the wine and its subsequent management, require some attention. (Can you make good bacon without care and attention?) All this can and will be explained to your satisfaction. Only do not let the fear of difficulties prevent you from making the experiment on one acre; the outlay is not as much as you would give for a milk cow or a second-hand buggy! An acre should yield, at the very least, 300 gallons of wine, which, at the lowest price, is worth \$1 25 or \$2 per gallon; say \$1, to be within the mark. One hand can attend five acres; here you have \$1500 for that one hand. You may say that this is all "paper calculation;" it certainly is; but experience proves that many have realized more than that amount—it has been made, and it can be made. Have the energy to try it.

Now, to merchants and other men of business in cities, I would say: You spend, every summer, vast sums of money in search of health and pleasure for yourselves and families. You go North where you lavish your money among men who hate you, who insult you—(but let us not indulge in politics.) Finally, you travel all summer, undergo great fatigue, experience many provocations, enjoy very little pleasure, (if the truth be told,) and have spent more than you had anticipated. All this is of yearly occurrence, and I doubt not many would be rejoiced to find some more rational mode of passing time, and of improving their health at less expense. I here propose another plan, which, I hope, will be viewed in a favorable light, and acted upon by some. In one of the most healthy regions of the world, extending along the line of the South Carolina Railroad, from Williston, (105 miles from Charleston) to the Graniteville Station, a few miles farther than Aiken, lies a considerable extent of broken land, the principal growth of which is the noble pine, intermixed with the stunted scrub oak and black jack, with occasionally some hickory and other trees. I will speak at present only of that narrow strip from fifteen to twenty miles in length, most easily accessible from the railroad. It is a part of a vast plateau, extending over a portion of our State, and I believe of Georgia, at an elevation of from 500 to 800 feet above the level of the sea; being just at that particular height where the miasma and the damp and heavy atmosphere of the lower country so fatal to health and so destructive to the lungs cannot possibly ascend, and where the air has not yet acquired that degree of rarefaction and that keenness, fatal to those having already the germ of consumption. I need say nothing more of its climate; it is of world-wide celebrity. This plateau is, in many places, very much broken; it is intersected and crossed by valleys (formerly the beds of deep rivers) varying in depth and in width; sometimes with high, steep and rugged embankments, often crowned with huge masses of granite or burr stone thrown up, and then rent asunder by some terrible convulsion of na-

ture, and threatening destruction to all beneath, and at other times gradually sloping to the bottom, where a gentle rivulet weeps its quiet and shaded way to some mightier stream.

The quality of the soil there varies as much as its surface; the bottom of the valley is often very rich, and when well cultivated will yield abundant crops of grain, potatoes, etc. The unbroken lands or levels are of a very fair quality; and all who have ever tried the experiment will certify to the fact that they improve very rapidly by proper management and a free use of manure, the good effects of which they will retain for several years.

Now, Mr. Merchant, go and purchase a small farm, say from 100 to 200 acres, even smaller if your means are limited; you can buy land for from \$2 50 to \$5 per acre; build yourself a comfortable cottage—lumber is cheap and plentiful. Put on your farm an old negro to plant your vegetables and gather your fruit; his wife to raise your chickens and your pigs, and to take care of your dairy; his son to attend to your vineyard, and some little ones to run about. This will form the capital you are to invest.

You generally wish to get your children out of the heated and dusty city by the middle of July. Take them up to your farm; give them a run in your orchards in search of fruit and rosy cheeks; buy you a season ticket on the railroad, and come up every week to enjoy their innocent pleasures and improvement. The trip will be an immense benefit to you, and with renewed health and strength you resume your winter business with more energy, and they their studies with more pleasure and success. Your orchard and garden will supply your table and your friend's table with choice fruit and vegetables; and your investment will not be dead capital on your hands.

A vineyard of six acres will yield you, at the end of three or four years, an interest of 50 or 100 per cent. Be not skeptical as to the quality of the wine. This is no more a problem! it is practically proved that wine of first quality can be made in large quantities; keeps as well as Madeira, and this without the addition of spirits. Why, this is the finest country in the world for wine! and should the grape disease continue its ravages in the old countries as there is every reason to suppose it will, we shall have to supply not only America but Europe also. Good, pure, wholesome juice of the grape will always command a fair price; we need not dread competition, for the more producers, causes the more improvements in the manufacture, and the greater demand for home consumption.

It does not require a great stretch of imagination to fancy our piney woods transformed into vineyards, and this entire section studded with neat cottages (if not chateaux) each sending to market from 50 to 100 barrels of their own particular and renowned brand, dry, sweet or sparkling. We have all in our favor; everything to encourage us in this enterprise; it promotes morality and temperance more than any other measure yet suggested; it improves and enriches the country; it conduces to health and comfort; it is a highly profitable and agreeable employment for any man; requires but a very small outlay, and would ruin no one, even should the experiment be a failure.

Why not try it?

Tell me not that your business would not allow you to devote sufficient time to it! Six weeks in summer when there is nothing doing in your cities, will more than suffice to gather and press your fruit; one week in winter to draw your wine, and occasionally a visit to see that all is going on right.

I again repeat, try it, and you will never repent. South Carolina, 1855.

A correspondent of the Country Gentleman, from Naples, Ontario county, New York, gives a case of an acre of ground planted with Isabella Grapes, which in the season of 1853, yielded to the value of \$800 worth by actual sales. During the season of 1854, the product was ten tons of fruit, which, at six cents per pound, would amount to \$1200. The cost of tending and picking, he estimates at not more than \$400, which would leave a clean profit of \$800, for one acre of land. The vineyard is situated at the base of a hill, in a valley sheltered from winds, has a sandy, gravelly soil, and is highly manured. Between the rows of the grapes, potatoes and other vegetables are usually planted.

The Ohio Farmer of a late date also gives the following:

"LARGE YIELD OF GRAPES.—Charles Carpenter, of Kelley's Island, one of the most successful cultivators of grapes in this country, from a single acre of his own growing, last season, expressed 800 gallons of juice, making 700 gallons of wine. Besides this he sold \$100 worth of grapes, and it was the poorest season they have ever had at the island for grapes."

And a letter from a Kentucky wine-grower is published in the last number of Putnam's Magazine, in which the writer states:

"Wine can be made in Kentucky as cheap as in Germany or in France; it can be made as cheap as cider, and at 15 cents a gallon it will pay better than any of our staple productions—and now for the proof. Say that an acre of vines will average 400 gallons; 400 gallons of wine at 15 cents is \$60.

"An acre of our land in hemp will average 600 weight, which at \$5 per hundred is \$30, leaving a balance in favor of the vineyard of \$30, or 100 per cent.

"One acre of corn will average 50 bushels, say at 30 cents per bushel, \$15—leaving a balance of \$45, or 150 per cent. in favor of the vineyard."

"The expenses of establishing a vineyard will be balanced by the cost of seeds of hemp and corn sown annually, making all things equal in that respect. The tillage of the vineyard and making wine is not so laborious or expensive as that of corn or hemp. If we could get \$1 per gallon for wine ready for market, or 50 cents at the press, what a source of wealth it would be. Only think of 100 acres in vineyard, the products at 50 cents per gallon, amounts to \$20,000 per annum. A man having five acres, which he could manure himself, would find them more profitable than a Kentucky farm of 200 acres, with three negroes to cultivate it."

All this is very conclusive as to the profits of Grape Culture, and here we rest the question for the present.—Southern Cultivator.

Cranberry Culture.

LAST week we published a Cranberry advertisement, of F. Trowbridge, of New Haven, Ct. In a circular which he sends us he gives some valuable information in reference to the cultivation of Cranberries. Here it is:

The kind most known and best adapted to all kinds of soil, is the Bell Variety or Egg Shaped, and most cultivated in New England. They can be propagated from the seed, or from cuttings, or by transplanting. The last method is most frequently adopted. The first crop obtained by planting the seed will be one or two years later than that produced by transplanting. When cultivated, the berries are large and abundant; after being gathered, they turn from light scarlet to deep red, and sometimes almost black. They will keep a very long time if not gathered too early. They should remain on the vines until it is necessary to gather them from the frost. They should be properly dried by spreading them thin for three or four weeks. They can be packed and sent to any part of the world. If gathered too early, while some of the berries are green, they will not keep.

The soil most suitable for their growth is poor swampy land, where nothing else will grow. They grow naturally on watery bogs and marshes, and bear abundantly on marshes covered with coarse sand, entirely destitute of organic matter of any kind, but accessible to moisture—on pure peat covered with sand, and on every variety of soil, except clay or sand, liable to bake or become hard in dry weather, but not so abundantly on dry soil, (unless treated as recommended by Mr. Bates of Mass.) He has raised 300 bushels to the acre, by spreading a quantity of meadow muck on the soil. After harrowing the soil, plant them in drills. For cultivating the Cranberry on poor swampy land it should be drained, (and the surface taken off for a compost heap,) and sand or gravel carted in, or plowed and harrowed; sometimes it can be burnt over, so as to get it in a condition to set out the plants. Have a pointed stick or dibble, and make a hole for the plant—have the roots emerged in muddy water so thick as to adhere to them—place it in the hole, and press the dirt very closely around it. To have the rows uniform, draw a line and put the plants 18 or 20 inches, in rows—where small patches are desired, which can be kept clean with a hoe—the nearer they are together, the quicker they cover the ground—but where acres are planted, it will save much labor by putting them 2 to 2 1/2 feet apart, then a plow or harrow can be used to keep out the grass and weeds until they cover the ground.

At 18 inches apart, it will take 19,000 plants; 2 feet, 10,000; 2 1/2 feet, 7,000 plants to the acre. After one or two years cultivation, to keep out the grass, they will take care of themselves. Where the ground is slaky or loose, two or three inches of sand is sufficient on the surface.

A more simple mode where there is hardly any thing but brushes and bogs, then strike a hoe into the soil, and raise it a little to insert the roots and press the soil slightly with the foot.

They can be planted out in the fall at the North, from September until the ground freezes, or in the Spring until the middle or last of May—at the South from January until April. Every family can have their garden patch in that case, and in dryish soil, grass, meadow muck or tan around the plant, will be beneficial to retain the moisture. No animal or vegetable manure should be used, as the fruit draws most of its moisture from the atmosphere. The poorer the soil the less cultivation is needed. The first year they often bear 50 bushels to the acre, and increase every year, until sometimes they bear from 200 to 300 bushels per acre. Perhaps the net average is from 100 to 150 bushels per acre.

They are highly ornamental in pots—the fruit hanging on the plants until the blossom appears for the next crop.

One man with a rake made for the purpose, will gather from thirty to forty bushels a day with a boy to pick up the scattering ones.—Ohio Farmer.

THE MONEST VIRGIN, the prudent wife, or the careful matron, are much more serviceable in life than petticoat philosophers, blustering heroines, or virgin queens. She who makes her husband happy, and reclaims him from vice, is a much greater character than ladies described in romance, whose whole occupation is to murder mankind with shafts from the quiver of their eyes.

CASHMERE GOATS.—A pair of pure-bred Cashmere goats were recently bought by some gentlemen in Richmond, Va., for fifteen hundred dollars. The wool from another pair of the same lot, when examined by a microscope, compared precisely in fineness with the hair of a \$2,700 Cashmere shawl.

The Muse.

THE MAIDEN'S DESTINY.

[THE South may well be proud of the beautiful poetry of its beautiful young poetess. Here is one of her most charming productions, written for the Louisville Journal:]

The earth had welcomed that calm hour
That wooed the maiden to her tower;
The sky had changed its blushing hue,
And melted to a deep, dark blue,
While o'er the vale and on the hill
The evening star was trembling still,
So deeply bright, so softly fair
It seemed all heaven was glowering there.
The spot was lovely and serene—
Hung round with vine and leaves of green,
With here and there an opening made
For the low wind's sweet serenade—
Yet not for winds alone, for there
Was one whose girlish brow was fair
As starlit waves. And by her side
Knelt one whose soul's unfathomed tide—
Whose dreams, whose hopes of future years,
Whose earliest love was here—all here.
But on her lip there was no tone
In soothing answer to his own;
His heart leaped with tumultuous thrill,
But hers was cold and calm and still,
Save when she met that burning glance—
Then came a momentary trance
Of inward agony. It passed;
The quivering lip was downward cast
And though the cheek was just as fair,
A tear—one only—trembled there.
'Twas dashed aside—why weep in vain,
And thus add torture to his pain!
His soul too long had nursed a care,
That love could never win or share.
The struggle passed with that wild tear—
The lover bowed his aching ear,
As though a poet's glorious lyre
Was trembling on her lips of fire.

I would that thou hadst loved me less,
Or I had dared to love thee more;
It would have spared the deep distress
Which thou must feel and I deplore.

It might have plucked earth's brightest flowers,
And made their fragrance all thine own—
It would have spared the saddest hours
This untamed heart has ever known.

Or had it been my destiny
To haply love as others may,
My spirit would have chosen thee
As one who wins not to betray.

I might have loved! My soul has been
All hope and trust and passion too,
But knowledge plucked away the screen,
And all were found alike untrue.

It told me human love was bright,
And sometimes deathless as the soul,
But oftener fades as yon false light,
Fades from the heaven's unclouded scroll.

'Tis well for those who every hour
Can love, forget—then love again,
But for the soul that feels its power,
Life is too dark, for hope is vain.

I know my heart could nurse despair—
I feared not woe's afflictions deep,
And now the only hope that's there
Is proud ambition's daring leap.

My soaring hopes must only rest
Above mortality's dull fate,
Then should the lightning cease the my breast
The fatal truth will come too late.

Forewell!—I were sweet to have thee here,
But for thy soul's unwhispered strife—
This moment, though it wins no tear,
Is still the darkest of my life.

And thus they parted. One deep sigh—
One mournful glance of that dark eye—
One wall low as the wind's soft moan—
One parting word—and he was gone,
With this sad truth, time now could bless
With but one boon—forgetfulness.
And she a moment bowed her head,
As o'er her cheek a pallor spread
Like unto death. That grief was past,
It was the bitterest, and the last
That love could claim. Her destiny
Was half fulfilled—her soul was free;
Her unchained spirit left to spring
Free as the eagle's dauntless wing
That mounts the tempest—sweeps the air—
Earth has no chain to bind it there.

Flourer, Ala., Jan., 1855.

SALLIE A. REEDY.

A SINGULAR INCIDENT.—The following incident, from the Knickerbocker for December, says a Pittsburg correspondent, can be relied upon:

"A lady of this city mourns a husband lost in the ill-fated Arctic. Some time before the news of the disaster, and about the time she expected his return, (indeed she had received notice that he would probably return on the very day the circumstance occurred which I am about to relate,) while she was sitting in her room, alone, a friend called, and found her in a state of extreme agitation. Upon inquiring the cause she stated that, just a moment before, while she was sitting, thinking of her husband, perfectly conscious of all around her, the door opened and he appeared before her, with hat and coat off, bending over slightly towards the floor, as he walked toward her, while the water streamed down his shoulders and arms. Just as she was about to question him, he left the room, and a moment after the person alluded to above came in. The visitor rallied her upon her fears, and succeeded in partially quieting her mind. The incident was related to the writer a day or two afterward, but had been partially forgotten, until the dreadful tidings brought it fearfully vivid to my mind. Alas! for that poor widow!"

Miscellany.

Studies in the Field and Forest.

BY WILSON FLAGG.

FEBRUARY.

The deeper gloom of Winter is dispelled,
An earlier, longer daylight is beheld,
The skies are clearer, and the hues of heaven
Are brighter in our morning and our even.
The landscape is more radiant, and the sun
Shines more serenely, when his course is run.
Each waking dawn is fairer than the last:
Our melancholy days are nearly past,
And every omen from the north or sky
Tells that a happier season is hard by.
Earth is more lovely drest in flowers, and while
Autumn's gay splendors make the prospect smile,
Yet there's a deep and still sublimity
Pervading all the breath of land and sea,
That may beguile the wanderer, till he hails
The vernal flowers and April's spicy gales.

It is one of the most cheerful of employments for a leisure hour, to go out into the fields, under a mild open sky, to study the various appearances of nature that accompany the changes of the seasons, and to note those phenomena which are peculiar to a climate of frost and snow. The inhabitant of the tropics with his perpetual summer, who sees no periodical changes except the alternations of rain and drought, is deprived of a happy advantage possessed by the inhabitants of the north; and with all the blessings of his voluptuous climate is restricted by a smaller portion of the most enjoyments of life. In the minds of those who dwell in a northern latitude there are sentiments which are probably never felt by the indolent dweller in the land of the date and the palm; and however poetical to us may seem the imagery drawn from the pictures we have read of those blissful regions, ours is most truly the region of poetry, and of all those sentiments which poetry aims to express.

It will not be denied that in winter, nature has comparatively but few attractions; that the woods and fields offer but few temptations to ramble; and that these are such as appeal to the imagination rather than to the senses, by furnishing matter for studious reflection, and calling up phrasing and poetic images. The man of phlegmatic mind sees, in all these phenomena, nothing but dreariness and desolation; while to the studious or the imaginative, every form of vegetation on the surface of the earth becomes an instructive lesson, or awakens a train of imagery that inspires him, on a winter's walk, with a buoyancy not often felt in the balmy days of June. Then does he trace with unalloyed delight every green leaf that seems budding out for spring; and in the general stillness, every sound from abroad has a gladness in its tone, not surpassed by the melodies of a summer morning.

On these pleasant days of winter, which are of frequent occurrence in our variable climate, I often indulge myself in a solitary ramble, taking note of those forms of vegetation that remain unchanged, and of the still greater number that lie folded in hyemal sleep. For such excursions the only proper time is when the earth is free from snow, which, though a beautifier of the prospect, conceals all minute objects that are strewn upon the ground, or that are still feebly vegetating under the protection of the woods. The most prominent appearances are the remains of autumnal vegetation. The stalks of the faded asters are still erect, with their downy heads sinking in the breeze which has already scattered their seeds upon the ground; and the more conspicuous tufts of the golden rods are seen in nodding and irregular rows under the fences, or bending over the ice that covers the meadows where they grew. All these are but the faded garlands of nature, that pleasantly remind us of the past festivities of summer, of cheerful toil, or studious recreation.

Nature never entirely conceals the beauties of the field and wood, save when, for their protection, she covers them with snow. The faded remnants of last summer's vegetation may have but little positive beauty; but to the mind of the naturalist they are attractive on account of the lessons they afford and the sentiments they awaken. But there are objects in the wood which are neither faded nor leafless; and many that are leafless still retain the beauty and the appearance of life. Besides the evergreens, many of the herbs that bear the early spring flowers still retain their freshness, and spread out their green leaves in the protected nook or in the recesses of the fern-covered rocks. The leaves of the wild strawberry and the cinquefoil are always green in the meadow, and those of the violet on the sheltered slope of the hill. The crowsfoot and the geranium are in many places as fresh as in May; and the aquatic ranunculus and the wild-cresses are brightly glowing with their emerald foliage, in the depths of the crystal water-courses that remain unfrozen beneath the wooded precipice, or in the mossy ravines of the forest.

These phenomena are doubly interesting as evidences of the continued life of the beautiful things they represent, and of the invisible and ever watchful providence of nature. Every step we take brings under our review other similar curiosities of vegetable life, which by reason of their commonness, often escape our observation. On the sandy plain the slender birch trees are loaded with thousands of purple aments, suspended from their flexile twigs, all ready to burst into bloom at the first breath of spring. In the wet lands, where the surface is one continued sheet of ice, the crowded alder bushes are so full of these embryo blossoms, that their branches seem to be hung with dark purple fruit; and the sweet fern of the upland pastures, in still mild weather, often faintly perfumes the atmosphere

with the scent of its half developed leaves and flowers.

Nor is the season without its harvest. The sweet gale, or false myrtle, in dry places gleams with dense clusters of greenish white berries, that almost conceal the branches by their profusion; the pale azure berries of the juniper are sparkling brightly in the midst of their sombre evergreen foliage; and the black-alder trees, glowing with the brightest scarlet fruit, and resembling at a distance pyramids of flame, are irregularly distributed over the wooded swamps. While the barberries hang in wilted and blackened clusters from their bushes in the uplands, the cranberries in the peat meadows shine out like glistening rubies from their masses of delicate and tangled vinery. In the open places of the woods the earth is mantled with dark glossy green leaves of the gaultheria, half concealing its drooping crimson berries; and the Mitchella of a more curious habit, each berry being formed by the united germs of two flowers, trines upon the same stem, adorns similar places with fairer foliage and brighter fruit.

There is a sort of perpetual spring in these protected arbors and recesses, where we may at all times behold the springing herbs and sprouting shrubbery, when they are not hidden under the snow drift. The American hare feeds upon the foliage of these tender herbs, when she exposes herself at this season to the aim of the gunner. She cannot so well provide for her winter wants as the squirrel, whose food, contained in a husk or a nutshell, may be abundantly hoarded in her subterranean granaries. The hare in her garment of fur, protected from the cold, feels no fear of the climate; and man is almost the only enemy who threatens her, when she comes out timidly to browse upon the scant leaves of the white clover, or the heath-like foliage of the hypericum.

But the charm of a winter's walk is derived chiefly from the flowerless plants—the ferns and lichens of the rock, the mosses of the dells and mores, and the trailing wintergreens of the shrubby pastures. Many species of these plants seem to revel in cold weather, as if it were congenial to their health and wants. To them has nature entrusted the care of dressing all her barren places in verdure, and of preserving a grateful remnant of summer beauty in the dreary places of winter's abode. And it is not to be wondered, that, to the fanciful minds of every nation, the woods have always seemed to be peopled with fairy spirits, by whose unseen hands the earth is garlanded with lovely wreaths of verdure, at a time when not a flower is to be found upon the hills or in the meadow.

Whether we are adapted to nature, or nature to us, it is not to be denied, that, on the face of the earth, those appearances established by nature are more congenial to our feelings than others strictly artificial. The lichen-covered rocks, that form so remarkable a feature of the hills surrounding our coast, are far more pleasing to every man's sight than similar rocks without this garniture. All this may be partly attributed to the different associations connected with the two, in our habitual trains of thought:—the one presenting to us the evidence of antiquity, the other only the disagreeable idea of that decadence so generally attendant on the progress of pioneer settlements. Hence the lichens and mosses upon the surface of the rocks have an expression which has always been eagerly copied by the painter, and is associated with many romantic images, like the clambering ivy upon the walls of an ancient ruined tower.

At this season, when the greater part of the landscape is either covered with snow, or with the sear and brown herbage of winter, this vegetation of the rocks has a singular interest. In summer the rocks are bald in their appearance, while all around them is fresh and lively. In winter, on the other hand, they are covered with a pale verdure, interspersed with many brilliant colors, while the surrounding surface is a comparative blank. Some objects are intrinsically beautiful, others are beautiful by suggestion, others again by contrast. This latter principle causes many things to appear delightful to the eye at one period, which at other times would, by comparison with brighter objects, seem dull and lifeless. Hence on a winter's ramble, where there is no snow upon the ground, our attention is fixed, not only upon the lichens and evergreens, but likewise on the bright purple glow that proceeds from every plat of living shrubbery which is spread out in the wild. This appearance is beautiful by contrast with the dull sombre hues of the surrounding faded herbage, and it is likewise strongly suggestive of the life and vigor of nature. It is the vivid hue of health, and entirely unlike the hue of the same plants if they were dead or dying. It is not necessary that we should have meditated upon this idea, in order to be affected by it. We are all unconscious physiognomists of the face of nature; and over a wide tract of country, where the vegetation blasted in autumn by some secret pestilence that had destroyed its vitality, its whole aspect would be such as to sadden every beholder, though unaware of the fatal event. As the human face in sleep wears the glow, if not the animation of waking life—so the face of nature, in her hyemal sleep, has a glow that harmonizes with our feelings and with our sense of universal beauty.

The wild wood is always full of instruction for those who are mindful either of its general aspects or its minutest details; and a ramble on a pleasant winter's day produces on the mind an invigorating effect that might be used as a safeguard against mental depression. The landscape, when undisturbed by art, is never without beauty, and the woods are always redolent of

sweet odors that assist in perfecting the illusions that arise from agreeable sights. While the exercise thus partaken in the open air strengthens the body and improves the health, the objects presented for our contemplation are tonic and exhilarant in their action on the mind. Whatever may be the season of the year, to the student of science as well as to the lover of beauty something is always presented to fix his attention or awaken his admiration, and he seldom returns from a woodland ramble without increased cheerfulness and satisfaction with the world.—*Mag. of Horticulture.*

Atmospherical Electricity.

Professor Joseph Lovering, of Harvard University, contributes to the American Almanac and Repository of Knowledge for the present year, a valuable article upon the subject of atmospherical electricity. In the course of his remarks he says that the passage of electricity between two clouds, or between the earth and a cloud, is sometimes through an intervening space of several miles; and this is an immense distance when we reflect that a large prime conductor, manufactured by the hand of man, will not collect sufficient electricity to give a spark of more than two or three feet in length. Leslie accounts for the great distances which lightning sometimes traverses, by supposing it to find a vaporous conductor, or to make the moisture or rain in the atmosphere a chain of communication. It is known that lightning strikes to the ground most readily during a rain storm.

According to Prof. Lovering, it has never as yet been satisfactorily explained whether lightning always starts from the cloud towards the earth, or whether it sometimes leaves the earth to go to the cloud. (We had supposed that it had been satisfactorily demonstrated that lightning sometimes proceeds from the earth.) Thunder clouds usually hang low in the air, and often sink to within one thousand feet of the surface of the earth. The effects of the lightning's stroke are often found near the summits of the highest mountains; but this is no proof that thunder clouds ever reach so great a height, for it is an established fact that lightning may strike up to a higher peak as well as downward. There is a church in Syria, which stands upon a mountain top. On the first of May, in the year 1700, a physician at that place observed a dense cloud below him. The sky above was clear and blue. Presently a flash of lightning ascended from the cloud, struck the church and killed seven persons.

Lightning is divided by Arago into three classes; the zigzag, sheet and ball lightning. The first of these is commonly manifested between the earth and a cloud; and Professor Lovering thinks that its irregularity of appearance is caused, not by any refraction of the atmosphere, but by the fact that it takes its direction from the accidental, zigzag lines in which the conducting particles of vapor are arranged. Sheet lightnings, or as they are called in Sweden, "lightnings of the barley," are those illuminations which every one has witnessed on a calm summer night, when the horizon is at intervals illuminated by a broad flash of light, and when perhaps not a cloud dots the fair surface of the sky. This kind of lightning is fainter than streak lightning, and has frequently been supposed to be the reflection of distant storms below the horizon of the observer. Arago favored this theory. Nevertheless, strong objections are urged to it.

Ball lightning is entirely different in appearance from the other kinds. It resembles a ball of fire, a sort of electric bomb, which is visible from one to ten seconds, and then explodes. These balls have been known in several cases to fall upon the decks of ships, or rest upon the hulls of their masts, and upon their explosion to destroy every thing around them. They are said to sometimes strike the earth and rebound. Fusinetti states that he has found iron and sulphur in the powdery deposits around the fissures through which lightning has entered, and the question arises—Are these balls mere subjective phenomena, originating in a dazzling brilliancy of the lightning, or are they agglomerations of ponderable substances?

It is well known that some spots of the earth's surface are less frequently visited by storms of thunder and lightning than others. In Lima, for example, but four cases of thunder are known to have occurred since 1652. The natives of the place, who have not travelled, do not know what thunder and lightning are. Arctic navigators state that no thunder storms ever occur north of seventy-five degrees. They are most frequent in the tropical regions. In England, France and Germany, thunder is heard on an average twenty days in a year, and in Rio Janeiro it is heard fifty days.—*Boston Journal.*

Sexuality of Plants.

The doctrine that plants are of different sexes, and which constitutes the foundation of the Linnean system, though but lately established upon the basis of logical induction, is by no means a novel doctrine. It appears to have been entertained even among the original Greeks, from the antiquity of their mode of cultivating figs and palms. Aristotle and Theophrastus maintained the doctrine of the sexuality of vegetables; and Pliny, Dioscorides, and Galen adopted the division by which plants were distributed into male and female; but chiefly upon the erroneous principle of habit or aspect, and without any reference to a distinction absolutely sexual. Pliny seems to admit the distinction of sex in all plants whatever, and quotes the case of a palm tree, as exhibiting the most striking example. Linnaeus, reviewing with his usual sagacity the evidence

on which the doctrine rested, and perceiving it was supported by a multiplicity of the most incontrovertible facts, resolved to devote his labors peculiarly to the investigation of the subject, and to prosecute his inquiries throughout the whole system of the vegetable kingdom; which great and arduous enterprise he not only undertook, but accomplished with a success equal to the unexampled industry with which he pursued it; so that by collecting into one body all the evidence of former discovery or experiment, and by adding much that was original of his own, he found himself at length authorized to draw the important conclusion "that no seed is perfected without the previous agency of the pollen; that the doctrine of the sexes of plants is, consequently, founded on facts."—*London Farmer's Magazine.*

Beautiful Incident.

A correspondent of the Preston (England) Chronicle gives the following anecdote:

"A good while ago a boy named Charlie had a large dog which was very fond of the water, and in hot weather he used to swim across the river near which the boy lived. One day the thought struck him that it would be fine fun to make the dog carry him across the river, so he tied a string to the dog's collar, and ran down with him to the water's edge, where he took off all his clothes; and, then, holding hard by the dog's neck and the bit of string, he went into the water, and the dog pulled him across. After playing about on the other side some time, they returned, as they came; but when Charlie looked for his clothes, he could find nothing but his shoes. The wind had blown all the vest into the water. The dog saw what had happened, and making his little master let go the string, by making believe to bite him, he dashed into the river, and brought out first his coat and then all the rest in succession. Charlie dressed and went home in his wet clothes, and told his mother what fun he and the dog had had. His mother told him that he did very wrong in going across the river as he had done, and that he should thank God for making the dog take him over and back again safely; for if the dog had made him let go in the river he would most likely have been drowned. Little Charlie said, 'Shall I thank God now, mamma?' and then he knelted at his mother's knee and thanked God; then, getting up again, he threw his arm round his dog's neck, saying, 'I thank you, too, dear doggie, for not letting me go.' Little Charlie is now Admiral Sir Charles Napier."

A TURKEY STORY.—One of our subscribers in Montague, Mr. Alonzo Pryue, writes us that a turkey belonging to him, was blown from a tree during the storm of the night of December 31, to the ground, where it was buried ten feet under the snow, and there remained without food for thirty-three days, until the thaw of January 4th, when it was enabled to extricate itself from its confinement, and the night following, to take a respectable seat with its feathered tribe, on that self same tree, about twenty-five feet from the ground. Who can tell a larger turkey story?—*Ex.*

THE rose of Florida, the most beautiful of flowers, emits no fragrance; the bird of paradise, the most beautiful of birds, has no song; the cypress of Greece, the finest of trees, yields no fruit.

Valuable Recipes.

TO MAKE GOOD PANCAKES.—These are made of eggs, flour and milk. The just proportions are, one table spoonful of flour to each egg. To make two small pancakes, heat a couple of eggs thoroughly, and add sweet milk. Then take a couple of table spoonfuls of flour, work it into a thin, plastic, and brittle batter, by adding the milk and eggs, and a slight seasoning of salt. Grease the pan with a piece of sweet lard or butter, and stir briskly to prevent its catching or adhering to the bottom. When the under side is sufficiently browned, turn it. Leave the cakes folded, with sugar or honey and butter between the folds, or sugar alone. If this is found to be too solid, add more eggs, and use a little less flour. A slight sprinkling of grated nutmeg will be an addition.

RICE MILK.—Pick and wash half a pint of rice, and boil it in a quart of water till it is quite soft. Then drain it, and mix it with a quart of rich milk. You may add half a pound of whole raisins. Set it over hot coals and stir it frequently till it boils. When it boils hard stir in alternately two beaten eggs, and four large table spoonfuls of brown sugar. Let it continue boiling five minutes longer, then take it off, and send it to table hot. If you put in raisins, you must let it boil till they are quite soft.

TO DESTROY CUCKERS.—Sprinkle a little quicklime near to the cracks through which they enter the room. The lime may be laid down over night and swept away in the morning. In a few days they will most likely all be destroyed. But care must be taken that children do not meddle with the lime, as a very small portion of it getting into the eye would prove exceedingly hurtful. In case of such an accident, the best thing to do would be to wash the eye with vinegar and water.

TO REMOVE MILDEW FROM WHITE CLOTHES.—Having well washed the part with soap and water, lay upon it, while it is yet wet, a thick plaster of finely scraped chalk, expose it to the air, and as the chalk becomes dry, wet it again and again, until the spots are quite removed, which will most likely be on the second if not on the first day. A grass plot in the shade, is the best situation for bleaching.

HORTICULTURAL, &c.

Seeds! Seeds!!

THE undersigned is desirous of calling the attention of the public to the following collection of fresh seeds, &c., which he has for sale:

Apple seed,	Nutmeg, Musk-Melon,

v3-1

Usage Orange.

THE following resolution was passed at the great State of
Ohio Agricultural Meeting, at which sixty counties were
represented by nearly three hundred delegates:
"Resolved, That we recommend to the farmers of Ohio, the
Osage Orange as most valuable plant for hedging, superior in
every respect to any other plant which has yet been introduced
in Ohio, for economical and enduring fences."
100,000 strong, healthy plants, for sale at \$20 per 1,000; or
\$5,000 and upwards at \$15 per 1,000, by the undersigned on the
Pulgas Ranch, near the San Francisco Embarcadero.

ALPINE Monthly Strawberry Vines, at \$1 per dozen; Black
Prince \$4 per doz; Hovey's \$4 per doz, and Elton \$4 per
doz or \$25 per hundred, strong plants. Plants will be carefully
packed and forwarded according to direction, to parties that
forward the amount of their order to us. Now in the time.
Directions for planting with the plants.
v3-9 WARREN & SON, Masonic Hall Building.

The Upland Bell Cranberry.

WE have just received, per last steamer, the famed "Upland
Bell Cranberry," to which we call particular attention at
the cultivators of California. They are put up in parcels of 100
and 200, at \$10 per hundred. Only a few are received, and an
early call only can secure them. Please notice the characteristic
them, as described in an article in another part of this paper.
v3-9 WARREN & SON,
Masonic Hall Building, Montgomery street.

Garden Seeds.

WE have received several valuable invoices of Garden,
Vegetable and Field Seeds, for consignment, to be sold at
wholesale, to which we call the attention of the trade. Among
them are invoices of NEW and VALUABLE GARDEN SEEDS,
from France, of the highest character, particularly worthy of
attention.
v3-4 WARREN & SON,
Masonic Hall Building, Montgomery street.

which the famous "Sparkling Catawba" is made. Garden-
ers in want of any will do well to call and secure them.
v3-11 WARREN & SON.

Choice Seeds.

A FULL assortment of Fresh Garden Seeds, just received,
from the States.
v3-1m BRYANT & CO., 68 Battery street.

Hydraulic Pumps.

AN invoice of new patterns of Hydraulic Pumps, just re-
ceived at our office.
v3-1m WARREN & SON.

Happy Valley Flour Mills.

Corner of First and Mellus streets, San Francisco.
Encourage Home Industry and Home Production.

THE attention of dealers and consumers of Flour is respect-
fully invited to the Superior Article manufactured at the
above establishment, from California Wheat of the growth of
1854, selected and prepared with the greatest care. These Mills
have been in successful operation for nearly two years, during
which time the proprietors have received such satisfactory
assurances from those who have tested the quality of their Flour,
that they can confidently recommend it as being fully equal to
any brand in the market. Among the many evidences of the
superior excellence of the Flour manufactured by them, the
proprietors would direct attention to the substantial compli-
ments received at the two last Annual Meetings of the State
Agricultural Society, premiums have been awarded at both
Fairs for the superior specimens of Flour from the Mills.
Domestic Flour—A superior article for family use, manu-
factured from selected Wheat—a constant supply always on
hand at the Mill, or at the Depot of the Proprietors, 35 Sacra-
mento street.

A liberal allowance made to the trade.
J. N. BROOKS, } Proprietors.
F. C. HALL, }

AGRICULTURAL, &c.

Boston Clipper Steel Plow.
Manufactured by Reggles, Nourse & Mason.
THIS splendid Plow is made after the style and form of the
famous Eagle Plow, so universally known. This form of
Plow in all its parts has been considered the most perfect yet
invented, having taken premiums in every State in the Union;
also at the World's Fair.
The present Plow has been manufactured by Messrs. Reg-
gles, Nourse & Mason, with great care, and in the most im-
proved style, of the very best steel, and may now be considered the
highest finish and most complete Plow; and the undersigned
with the cultivators of California to call and examine the same
at their place of business.

OFFICE AND SALES-ROOM CORNER CALIFORNIA AND MONT-
GOMERY STREETS.

THEODORE PAYNE AUCTIONEER.
Messrs. PAYNE & CO. respectfully inform the public
that they have established themselves as above, for the purpose
of transacting the
Real Estate business, in all its branches.
For the conducting of which they esteem themselves peculiarly
qualified, by having given it their special attention for over ten
years past, and made themselves familiar with all questions
affecting titles, &c., &c.
They will give their special attention to the public sales of
estate, by Administrators, Assignees, Receivers, Mortgagees,
&c., carefully complying with the terms of law.
A Register for Property, at either public or private sale
always open at their office. 20 61a

Ingham's Improved Smit Machines.

THESE Machines combine all the apparatus necessary to
cleanse Grain, rendering it unnecessary to have any other
machinery for that purpose in the mill. They are portable and
occupy about four feet square in the floor, by sight and a
half inch in height; and will clean the worst samples of Smutty
Grain, also reaper, straw, wheat, corn, seeds and other
local substances in the most perfect manner. All of the offal
which is collected in a reservoir, while the smut and
light dust are passed out of the mill, allowing the machine to
be put on the same floor with the chest or wherever
most convenient, without being moved. It is a California im-
provement and designed to meet the wants of the country;
modern machines having been found to be inadequate to that
purpose. It has received the highest recommendation from
all reliable men, among whom are Pettit & Hedges, Brighton
Mills, Sacramento; Brooks & Hall, Happy Valley Mills, San
Francisco; Van Sump, American Mills, San Francisco; Hal-
bit & Hale, Sierra Nevada Mills, San Francisco; J. B. Hill,
Washington Mills, San Francisco.
These Milling Mills can save expense and room by using
this machine, as they will avoid all the machinery ordinarily
used for that purpose.
Orders filled on short notice. SHIP ON L street, between
Front and Second, Sacramento. H. B. INGHAM,
N. B.—All information given, and orders left at WARREN &
SON, San Francisco, will be attended to. v3-5

THE following certificate is among the number received
others can be referred to in quantities:
This is to certify that I have used of H. B. Ingham's Improved
Smit Machines, and believe it to be superior to any miller. I
used no other fixture for cleaning grain, except the machine
itself; it makes no dirt in the mill; occupies but little room;
requires less power, and does the work more perfectly than
any other I have ever seen or used before.
WM. SHARP, Agent American Mills,
Pine street, San Francisco.

San Francisco, Jan. 11, 1855. v3-5

INDIAN MUMMY.

ONE of the most interesting specimens of preserved human-
ity is now upon exhibition at the office of the CALIFOR-
NIA FARMER. The certificate of Dr. Evans, U. S. Geologist,
furnishes sufficient data to prove its authenticity and value; the
certificate of himself now most distinguished resident men furnish
facts that should awaken a general interest in our community
to see this valuable and positive proof of the earlier races of the
aborigines of California.

The Mummy now exhibited is supposed to be a highly dis-
tinguished chief of some tribe of the Flat-Head Indians. This
race have left no record, and the present tribes have no knowl-
edge of the race of which this is a representative. Capt. Row-
ell, the discoverer, is familiar with the features of the same
variety, speaks their language, and has been years with them;
yet neither they nor him of our day find any trace by which to re-
cover the history of the present relic.
The Chief now measures 5 feet 3 inches in length—full size—
the feet are 9 inches long. The body presents a natural appear-
ance, and, as it lies in the casket, surrounded by the materials
usually deposited with chiefs, together with other bones and
skulls found with the Mummy, it is indeed a most interesting
specimen.
Captain Russell has expended much in bringing this specimen
to the city and preparing it for the State, and it is now offered
for exhibition in hopes that a sufficient sum can be raised to
retain it here, as it is a record of the early history of California.
The Mummy will be exhibited at the office of the CALIFORNIA
FARMER, for a short time. Admission 50 cts.; Children half-
price. The Price, Medical and Scientific men, and Clergymen,
are invited, as the object is diffusion of knowledge.
v3-4 C. J. W. RUSSELL, Proprietor.

Artesian Well Boring.

WE would respectfully inform the public that we are fully
prepared to take contracts in the above operations in a
manner to guarantee satisfaction or no charge will be made.
SMITH & VAN DYKE having associated themselves with an
old and experienced operator from the East, who challenges the
world to compete with him in all the branches connected with
the above business, are fully confident to guarantee success in
all contracts that we may undertake, and warrant the work for
one year. We have also implements for boring through stone
to any depth, and all work done in the most reasonable terms.
For the satisfaction of those wanting anything in the above
line, we would refer to Thomas Fuller, San Jose; Rufus H.
Fells, of Hawley & Fells; M. A. Sullivan, New Custom House
Wharf & Co., 137 Jackson street, &c., &c.
We can do work cheaper than any other operators, for two
reasons:
1st. Because we are prepared to work on a most extensive
scale.
2d. Because we undertake all branches connected with the
above business, and are, therefore, able to work with certainty.
All orders left at the What Cheer House will be promptly at-
tended to.
SMITH & VAN DYKE, Contractors,
118 Sansome street.
N. B.—We also refer to Warren & Son, publishers of the
"California Farmer," who have seen and known the character
of the work done. 7

Pottery! Pottery!!

San Francisco ahead of the World!

Ever on, on space with the Age and Times!

Hunt for Vaner's new Daguerreotype Gallery!
Largest Light in the World, (over 500 feet Glass.)

No Building, car, Sacramento and Montgomery streets.

WHY should every man go to VANER'S who wishes
a PERFECT LIKENESS? Because he has now the
best arranged Gallery in the Pacific Coast, and not to be sur-
passed by any in the world. Instruments containing lenses
more perfect, and with greater power than any ever before
used in this country.

2d. Because he has the largest light in the world, from which
he can burn three distinct lights—day, night, and half day light—
that no other gallery can in any way equal the great brilliancy which
every artist in this city has to command with—namely, in order
to obtain perfect likenesses, different formal features require
different arrangements of light.

3d. Having the largest light, he is enabled to make pictures
in half the time of any other establishment in the city; there-
fore they must be more perfect, for it is well known, the shorter
the time the more perfect the expression.

4th. Because every plate is carefully prepared with a coating
of pure silver (which produces the clear, hard and lasting picture
that is so much admired), and which cannot be produced on the
common plates, as they are now made by other artists.

5th. Because his plates are late, after much experience brought
his chemical preparations to perfection, using compounds
entirely different from anything ever before used in the art, which
enables him to produce perfect likenesses, at every sitting, with
that clear, soft and beautiful tone, so much admired in all his
pictures.

All those wishing perfect likenesses will do well to call before
going elsewhere, and judge for themselves.
6th. Prices as reasonable, and work superior to any in the
city.

Don't forget the place.
New Building corner of Sacramento and Montgomery
streets, entrance on Montgomery, next door to Austin's. 17

SOUTHWICK & CO.'S

GRAND RAFFLE.

\$30,000 for one Dollar

THE FIRST GRAND PRIZE is, probably, the best

promptly. 22

WARREN & SON.

Varieties.

NOT SO VERY GREEN.—A young and apparently verdant ship, who gave his hailing place as "old Vermont," found himself surrounded, upon a certain occasion, by a crowd of quizzing upstarts, who seemed bent upon displaying their own smartness at the expense of the Yankee. "Hello, Jonathan!" says one, "where you bound?" "Deonn to Boston, on a little tramp," was the reply. "What's your business in Boston?" continued the inquisitive gentleman. "Oh, I'm deonn arter my pension money," responded greeny. "Pension money!" ejaculated whiskee—"how much do you get, and what are you drawing pension money for?" "Oh!" answered the countryman, "I get four cents every year—few mind my own business, and few let other folk's business alone!" The crowd had no more remarks to offer. The answer was entirely satisfactory.

ANOTHER MUSICAL PIGEON.—The editor of the Lowell News, upon reading the paragraph which has been going the rounds of the papers about a pet pigeon which dances to the sound of the harp, recalls to mind the following: "We remember seeing, many years ago, a pigeon belonging to the late Dr. Wm. L. Richardson, of Boston, which was singularly affected by the sound of a flute. If a person commenced playing a slow air upon this instrument, the bird would fly to the person's head and remain there till the music ceased, unless the time was hurried or a more lively air commenced, in which case it would descend to the person's shoulder and stretch out its neck toward the instrument, with evident delight. It made no difference with the bird if the flute was played by an entire stranger."

A PATRIARCH LOCATED.—A clergyman, preaching a sermon on some particular patriarch, was extremely high in his panegyric, and spoke of him as far exceeding every saint in the calendar. He took a view of the celestial hierarchy, but in vain; he could not assign to his saint a place worthy so many virtues as he possessed; every sentence ended thus: "Where, then, can we place this great patriarch?" One of the congregation, tired at last of the repetition exclaimed: "As I am going away, you may put him in my pew."

A CLEAN TOWEL.—One of the most amusing incidents of the late excursion to Rock Island is thus related in the Utica Telegraph: "A gentleman in the wash-room said to the captain of the boat, 'Can't you give me a clean towel, captain?' 'No,' said the captain, 'more than fifty passengers have used that towel there, and you are the first one that's said a word against it.'"

NO HONORS FOR THAT.—"Can you tell me, my dear fellow," said a hen-pecked gentleman to a bachelor friend, "what look is that which even Hobbs himself cannot take to pieces?" "Not I," was the short reply. "Happy dog?" was the rejoinder, "to be without my experience! It is wed lock!" If ever that gentleman offends us, we will tell his wife—that's all.

"PERSEVERANCE," said a lady, very earnestly, to a servant, "is the only way to accomplish great things." One day eight dumplings were sent down stairs, and they all disappeared. "Sally, where are all those dumplings?" "I managed to get through them, ma'am." "Why, how on earth did you contrive to eat so many dumplings?" "By perseverance, ma'am," said Sally.

THE CHIEF END OF GIRLS.—Young women generally do much better when set up with men, than when set up in business. The two arrangements are quite different. If there is one thing more than another that the female institution was cut out and finished for, it is the other half of a courting match.

"WHAT ARE YOU ABOUT THERE," said a gentleman to a boy whom he had found in his orchard, disposing of a few apples to the best advantage, viz.: in lint and handkerchief, for pockets he had not. "I'm about going," replied the boy.

WHY ARE WOMEN CALLED THE SOFTER SEX? Because they are so easily humbugged; for out of every hundred girls, ninety-five would prefer ostentation to modesty and real worth, a dandy husband to a mechanic.

A YANKEE IN HORN has just taught ducks to swim in hot water, and with such success that they lay boiled eggs. Who says this is not an age of improvement?

PRETTY MUCH THE SAME.—"Have you ever broken a horse?" inquired a horse-jockey. "No, not exactly," replied Simon, "but I've broken two or three wagons."

"SAL," said one girl to another, "I am so glad I have no hair, now." "Why so?" asked the other, "Oh, cause I can eat as many onions as I please."

"IF YOU DON'T GIVE ME A PENNY," said a young hopeful to his mamma, "I know a boy that's got the measles, and I'll go and catch them, so I will."

COMFORTING.—To lose a small fortune in an unlucky speculation, and have all your friends wonder how you could have been "such a fool!"

WHY IS A WOMAN'S TONGUE LIKE A PLANET? Because nothing short of the power that created it, is able to stop it in its course.

WHATEVER AMOUNT OF "COOING" there may be in our honeymoon, it may be pretty sure of having a tearful amount "bbling" afterwards.

WHY IS A LAZY SCHOOL-BOY LIKE A POSTAGE STAMP? Because he has to have his back licked to make him stick to his letters.

NURSERIES, &c.

GOLDEN GATE NURSERY.
Corner of Folsom and Fourth streets, San Francisco.
OFFICE—NO. 170 WASHINGTON STREET.
THE attention of the public is requested to a large collection of the following Plants, now for sale at this Establishment, embracing the most extensive assortment in the State; among which may be found—
Camellia Japonica, in seventy varieties;
Paeonia blanda, in all the colors;
Mass and climbing Roses, do do;
Fuschias, a choice collection; Heliotropes, in variety;
Roses and Lemn Geraniums;
Lemon-scented Verbenas, Flamingos, Azobollas, Azobollas, Paeonias, Honeyuckles, Convolvulus, Dahlias, Bulbous Roots, &c., &c.; and a general collection of Green-house plants and ornamental shrubbery.
Catalogues for 1855 will be ready on the 1st of December, and will be sent on application.
Orders for any part of the State, will be promptly attended to, on application to J. L. SANFORD, No. 170 Washington street—or to the proprietor.
(7-3a) W. C. WALKER.

Smith's Pomological Gardens,
Banks of the American River, two and a half miles from Sacramento city.
THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show them, ready for sale, this fall, a fine collection of
Fruit Trees, Ornamental Trees, Grape Vines, Shrubs, Flowering Plants, and Green House Plants, as can be found in all the great Sacramento Valley.
The proprietor would call particular attention to his collection of Peaches, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.
The collections of Pear Trees will equal any in the country; these, with all the new varieties, will be offered this autumn.
The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Orcharding.
The subscriber will offer this autumn Five Tons Vegetable Garden Seeds, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.
Persons in want are invited to call upon us, and we will make reasonable terms.
Fruit, Bouquets, &c., will always be furnished at short notice at the Gardens.
The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favors.
A. P. SMITH, Proprietor.

San Jose Nursery.
WE are prepared to supply the trade with the best varieties of Fruit Trees, Grapes, Vines, Roses, Plants, &c., in all their varieties; and are disposed to sell at a low price, that we may suit the times. Our Trees are cultivated with great personal care. Those who desire to make Nurseries and Gardens will do well to visit and ascertain for themselves our ability to supply what we advertise. Trees will be carefully labelled and packed for any season or distance.
The following Trees we offer this season:
Peach Trees, 44 varieties;
Pear do 44 do
Apple do 54 do
Plum do 15 do
Apricots 6 do
Almonds 2 do
Quinces do 2 do
Cherry do many do
Grapes 12 do
Strawberries, 7 varieties;
Fig Trees;
Pomegranates;
Walnuts;
Chestnuts;
Locust Trees, very large
Rose Acacias, for hedges.
Orange Orange.
In addition to our Fruit and Ornamental Trees, we offer ten thousand small Roses, comprising more than one hundred varieties, all of the best known kinds. Our plants are not numerous to specify in an advertisement. Hoping visitors will come and see us, we refer them to our agent in San Francisco, Mr. Dr. LAMSON, 121 Sansome street, where we shall have a collection of plants in the season as samples. The nursery is situated in the city of San Jose, immediately above the City Mills.
We are also permitted to refer to Warren & Son, who have examined our grounds, and who are testifies of the character of our nursery, and who will receive and forward orders to us.
Every order promptly and speedily attended to.
L. PREVOST & CO.

Pacific Nursery.
MISSION DOLORES AND ALAMEDA.
HAVE always on hand and for sale, the largest collection of choice ROSES to be found in the State. Also, Grape Vines, Fruit and Ornamental Trees in great variety; 500,000 Strawberry Plants, including thirteen varieties of all the best known kinds. For sale cheap, in lots to suit purchasers.
All orders left with us at the Mission Dolores, or at our Nursery at Alameda, or with Warren & Son, at the office of this paper, will be promptly attended to.
Prices guaranteed at the lowest market rates, and everything sold fully warranted to be correct.
H. A. SONNAT & CO.

SOLIDIFIED MILK.
MANUFACTURED BY
SAMUEL T. BLATCHFORD.
FOR SALE BY
BINOHAN & REYNOLDS,
201 Sansome street.

THE PRESERVED MILK is made from PURE FRESH MILK, combined with crushed sugar, and when reduced to liquid, as stated in the directions, can be used for all purposes for which Milk is used, as it is simply Pure Milk and Sugar. The Tablets weigh one pound and are equal to five pints of pure milk. The proprietor recommends with confidence the article to all persons going to sea, its properties of self-preservation having been fully tested during the last eighteen months. To the WHOLESALE interests its value is inestimable, and to travellers by land or sea, (especially when accompanied by young children) it recommends itself by its portableness and the facility with which it may be used.

Certificates.
The proprietor would call the attention of the public to the following certificates:
New York, April 4, 1854.
Mr. S. T. Blatchford—
DEAR SIR: In answer to your inquiry relative to the preparation of Solidified or Preserved Milk, having used it on my last voyage to San Francisco, I can with the utmost confidence recommend it to sea-faring men as being the best article of the kind I have ever seen or used, retaining, as it does, the taste and flavor of fresh milk.
Yours, &c.,
O. R. MUNFORD,
Master of Clipper Ship "Tornado."

Extract from a letter from a California, dated May 31, 1854.
"In regard to the Solidified Milk which you exhibited to me for the purpose of testing the merit of the preparation, I can with confidence say that it has proved entirely satisfactory. I have a portion of it yet remaining in as good condition as when you gave it to me, and I will, I have no doubt, keep for years. This preparation will be a great luxury to the sailor, as it will enable him to enjoy an article of food that has hitherto been supposed could only be had on shore.
Very respectfully, yours, &c. EARL BARTLETT."

Extract of a letter from Rev. M. Williams, dated Valparaiso, Aug. 9, 1853.
"But the Tablets of Milk prepared by S. T. Blatchford & Co. were the climax of comfort. I would say, let no one go to sea without them. I have a few now left in my room as perfect as when first made."
April, 1853.

Mr. Samuel T. Blatchford—
DEAR SIR: Some twelve months since I heard of your preparation of Milk and procured a sample, a portion of which I tried at the time and found it good. When preparing for sea last December, I tried the balance, which proving equally as good as months before, I procured several pounds, and during the voyage to and from Europe, have had the milk on the table every day, and have found it excellent.
I have used several preparations of milk, and have no hesitation in pronouncing yours the best. I consider it just the thing. In future voyages I shall endeavor to have a supply of it.
Yours, very respectfully, RICH. S. CORNING,
Master of Clipper Ship "Rapid."

Valuable Newspaper Routes.
WE have several very valuable Newspaper Routes for sale. Enquire at the office of CALIFORNIA FARMER, Masonic Hall Building, Montgomery street.
v3-3

HORTICULTURAL, &c.

17,000 Premium Strawberry Plants!
From the Shell Mound Nurseries and Fruit Gardens, Near San Antonio, Alameda County.
WE offer for sale the following List of Plants, viz.:
1,000 Boston Pine, at \$70 per 100
5,000 British Queen, " 35 " "
1,000 Hart's New Pine " 35 " "
500 Royal Hudson, " 35 " "
5,000 Large Early Scarlet, " 15 " "
2,000 Harvey's Seedling, " 15 " "
1,000 Profuse Humboldt, " 15 " "
1,000 Black Prince, " 15 " "
500 Crimson Camp, " 15 " "
Plants from "Shell Mound" received a premium at the late Fair of the California State Agricultural Society. Several of the varieties above named are believed to be remarkable for their fruitful qualities, having been cultivated for several years by Mr. Sanford, at his gardens in Wayne county, N. Y., with special reference to the production of fruit.
Orders received for any number of plants, (not less than 100) and promptly executed. On invoices of \$500, and over, a discount of twenty per cent. from the above prices will be allowed.
Address, J. L. SANFORD, Cultivator,
Shell Mound, near San Antonio;
or, R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco.
v3-4

FRUIT TREES! FRUIT TREES!
WE have for sale at our Nursery at the Mission San Jose—Five Thousand large Apple Trees: Two thousand of them of extra size. Many of them will bear fruit the next year. Two Thousand Peach Trees, choicest kind—large and handsome trees.
Pear Trees on the Quince as well as Pear.
Fifteen Hundred Cherry Trees from two to four feet high. Grape, Fig, Quince, Apricot, Nectarine and Almond Trees in less quantities. All the above we guarantee in quality, and we warrant them what they should be, and will sell at prices to suit the times.
Apple Trees from \$1.00 to \$2.50
Peach, Pear, Cherry, from 1.50 to 2.50
Extra sized trees in proportion.
BEARD & LEWELLEN, Mission San Jose.
Orders with Warren & Son, corner of Montgomery and California streets, will be promptly attended to. 18 61a

Flowering Flowers!
GOLDEN GATE NURSERY.
Corner Fourth and Folsom streets.
Office 170 Washington street, San Francisco.
PERSONS desirous of embellishing their gardens or conservatories, will find at this establishment the largest stock and greatest variety of plants to be found on the Pacific coast. Among which are:
Camellia Japonica, in 70 varieties; Perpetual Roses of all the colors; fragrant and fancy Geraniums; Paeonias, Heliotropes, Verbenas, Honeyuckles, Abutilons, Myrtles, Oleanders, Jasmines, Fuschias, Dahlias, Bulbous Roots, Ornamental Shrubbery; and a general assortment of Green House and Hardy Plants.
Orders for shipment to any part of the State will be carefully executed by addressing H. Nelson, 170 Washington street, or the proprietor, Box 1, 957 Post-office.
v3-9-3a W. C. WALKER.

Cabbage Seed.
WE have received an invoice of fresh Drum-head Cabbage, from Philadelphia—about 200 lbs., and guaranteed fresh. Will be sold low by the culture importer.
v3-10 WARREN & SON, Montgomery street.

New Invention!
BULKLEY'S STEAM DRY KILN.
THE undersigned takes this opportunity to offer to the citizens of California, Oregon and Washington Territory, the valuable invention hereby announced. One of the greatest wants of California and vicinity, for years, has been the means of preserving her products so as to have a continued supply during the late months. The vegetable products to an immense amount are annually lost at the approach of the rainy season, its long continuance, and the exposure that necessarily results to these products from the season; and the vast quantities that are exposed and accumulated in warehouses and elsewhere, have demanded some method of preserving these immense and valuable crops, that otherwise would be a loss to the producer and to the State. The loss of the Potato and Onion crop last year would have cost a million of money, and the loss of the present year will be heavy, without preservation.
The undersigned, holding the Patent Right of the Steam Dry Kiln, offers this invention with the confident assurance that it is the very thing needed—that it is the *salus vici* for this very want. It has been thoroughly tried and approved, for these products, and for Grain also. It has been tried for Lumber, to which it has been more particularly applied in the States, for there the vegetable products do not require so much care as here. To shippers of Grain the invention removes all the difficulty in securing Grain on long voyages, and under the drying process of this valuable invention our Grain growers can now send their Grain to New York with safety.
The proprietor offers only to append the following certificates. The name of Henry L. Bulkley, Esq., carries a weight that is convincing to intelligent men, and the other evidences should be satisfactory.
The model machine will soon be placed on exhibition at the office of Warren & Son, where all information can be had.
JOSHUA BUTTS, Proprietor of Patent.

A Diploma and Silver Medal.
Was awarded to the inventor at the New York State Agricultural Fair, held at Rochester, as a testimonial of its superior merits.
Letters from Hon. H. L. Ellsworth.
LAFAYETTE, January 7, 1853.
DEAR SIR: I congratulate you on the completion of your Dryer. I have for a long time urged the importance of extracting the moisture from grain and flour before shipment, to prevent fermentation. Your plan will obviate the difficulties hitherto experienced. There can no longer be any doubt that 18 pounds of water can be taken from a barrel of meal, and 15 pounds from a barrel of flour without affecting the taste or appearance of the same. Experiments at Lafayette show this. Nor is it less gratifying circumstance that when the flour or meal is cooked, it reabsorbs proportionately more water, thus saving freight and the purity of the article. If the moisture is extracted, it must be obvious this meal will keep for long voyages, passing through the hottest climates. To the Navy, your improvement is invaluable. The world has become everywhere skeptical on the subject of patent rights. This simplicity and compactness of your machinery enables you to exhibit a working model, to reinforce in a moment my doubts as to your ability to sustain your patent and prove its utility. One feature in your plan deserves particular notice; in fact, this constitutes your main claim, viz., not drying by common steam, or by fire heated pans, as has been done hitherto, but by using heated steam. Few persons are aware of the small expansion of steam, and how easily it can be heated to a high temperature with little consumption. You will be able to raise steam to the point of ignition, say 600 or 700 degrees, though a far less heat will answer all your purposes. I will only say that European prejudice against Indian corn is fast dying away; and we may outstrip large shipments both for meal and wheat. The great fertility of the West, and the reduction of freights both inland and on the ocean, justifies this anticipation. Wishing you success,
I remain, yours respectfully,
HENRY L. ELLSWORTH, late Commissioner of Patents.
To Henry G. Bulkley, Esq., Kalamazoo, Michigan.

LAFAYETTE, March 20, 1853.
DEAR SIR—I am highly pleased with your Dryer for lumber by heated steam. It seems almost incredible how soon even green lumber can be prepared for use. Twenty-four hours is all that is required. Steam has hitherto been used to advantage, but heated steam has not been applied for this purpose before your improvements. Every manufacturer of lumber would find it profitable to erect a cheap dryer on your plan. Full one-third of the weight of some kinds of lumber is removed by drying; the saving in cartage will more than repay the expenses of drying. When the difference between seasoned and unseasoned lumber is considered, no one who regards good work will regret the trifling expense of preparing the raw material.
Yours respectfully, HENRY L. ELLSWORTH.
To H. G. Bulkley, Esq., Kalamazoo, Michigan.

HARRISBURG, Pa., July 12, 1853.
I hereby certify that I have had charge of one of W. O. Hickok's shops where the most of H. G. Bulkley's Patent is done, that I put up and have used H. G. Bulkley's Patent Kiln, and heartily approve of everything W. O. Hickok has said about it, and am certain that no recommendation can be too strong in praise of said kiln.
(17) W. H. SULLENBERGER.

MISCELLANEOUS.

TREADWELL & CO.

Italian Agriculture.

WHAT we have so often asserted relative to the conversion of our hill sides into vineyards and gardens, we know to be worthy the attention of all who are interested in Agriculture and Horticulture. We ask attention to the article we publish from the Edinburgh Journal of Agriculture, as worthy particular notice, believing as we do that our mountain sides, even high up the lofty Sierras, may all in appropriate seasons and under proper care be made fertile and productive.

Some of our most beautiful locations for scenery and some of the richest soil can be found upon our mountain slopes; and there can be established homes far happier than those that are found in the palaces of the cities of our land. We trust a due attention will be given to this subject; now is the time to give heed to it. This is the article referred to:

Under the blue heavens and delightful sun of Italy, even its mountains are fertile; and the fruits of the earth are reared with ease in every part of the ascent from the base almost to the summit. An admirable terrace-cultivation—such as prevails in the mountains of Syria and China—has everywhere converted the slopes, naturally arid and sterile, into a succession of gardens, loaded with the choicest vegetable productions. "The grapes hang in festoons from tree to tree; the song of the nightingale is heard in every grove; and all nature seems to rejoice in the paradise which the industry of man has created." Nor was that industry a small matter. The earth for these gardens had to be brought from a distance—retaining walls had to be erected—the steep slopes converted into a series of gentle inclinations—and the mountain torrents diverted or restrained, so as to provide the means of artificial irrigation, wherewith to support vegetation during the long drouths of summer. By the incessant labors of centuries all this has been accomplished. The rocky debris have been cleared off the slopes, and built into walls and terraces; these terraces are always covered with fruit trees, and amid the reflection of so many walls the fruit is most abundant and of a superior quality. One who has himself visited this mountain paradise, thus speaks of it: "No room is lost in these little but precious freeholds; the vine extends its tendrils along the terrace-walls; a hedge formed of the same vine-branches surrounds each terrace and covers it with verdure. In the corners formed by the meeting of the supporting walls, a little sheltered nook is found, where fig trees are planted, which ripen delicious fruit under their protection. The owner takes advantage of every vacant space to raise melons and vegetables. Olive-trees shelter it from the rains; so that, within the compass of a very small garden, he obtains olives, figs, grapes, pomegranates and melons. Such is the return which nature yields under this admirable system of management, that half the crop of seven acres is sufficient, in general, for the maintenance of a family of five persons; the whole produce supports them all in rustic affluence. It may be added, that the sweet chestnuts, which grow luxuriously in almost every part of the Apennines, contribute to uphold this dense population, by the subsistence

which they afford in regions where the terrace-culture cannot be introduced. And much care, and the constant labor of the husbandman, are required to uphold the little freeholds thus formed out of natural sterility; for, if his attention be intermitted for any considerable time, the violence of the tempest speedily destroys what it cost so much labor to produce. The heavy rains and swollen torrents sweep away the soil; the terraces are broken down; everything returns rapidly to its former state; and of so much labored construction there soon remains only shapeless vestiges, covered with the wild-briers of the mountains.

Treatment of the Horse Distemper.

By request, and in consequence of having had an unusual number of horses under treatment during the last few weeks, suffering from influenza (commonly called distemper) which I believe to be, to a certain extent, contagious, I ask the liberty of communicating to gentlemen who own, or are interested in that noble animal, the horse, my opinion of what predisposes and makes them more susceptible of being affected by it, also what ought to be done to prevent it. The conditions inducing it may exist alone, for some exciting cause may be required for their full development; for instance, gunpowder wants a predisposition to dryness, and peculiar composition in order to take fire from a spark. The most prominent predisposing causes, are sudden and undue exposure to extremes of cold and heat, impure atmosphere in stables, arising from dampness, darkness and bad ventilation.

The skin of a horse at ordinary work is raised in temperature in order to maintain organic and animal activity; there is an unusual rapid passage of blood through the lungs and the whole system, and perspiration is excited; if, under such circumstances, he be suddenly exposed to the action of cold, by being put in a damp, cold stable, or any other way, this action of cold would greatly disturb the balance of circulation, particularly in spring, (when a horse changes his coat,) and produce a contracted state of the skin and its vessels, consequently blood collects around and within internal organs, by being repelled from the outward surface, which causes congestion of the internal organs, a condition only one stage short of inflammatory action; for instance, suppose we perspire from exercise, then to cool off, sit in a draught; in a short time we shall shudder without and chill within, and probably in less than twenty-four hours suffer from sore throat and chest caused by it. I believe that a cold, northeast wind, (which ought to be guarded against,) in which there seems something especially irritating, blowing into a well-ventilated stable, would induce cold and cough, for which reason I should recommend gentlemen contemplating building stables, not to have doors or windows, or any other way exposed to the north-east. If the stable be warm and close, bronchitis and pneumonia will present themselves, and sometimes bad cases of influenza (if that disease be prevailing) will follow the cold and cough contracted as above. A horse shuns offensiveness instinctively, because his lungs require such a quantity of good air; he avoids offensive smells probably more resolutely than any other animal.

The heart of a man averaging about eight ounces at each pulsation, propels about two ounces of blood into the system, say one hundred and forty to fifty ounces a minute, and about as much more is sent into the lungs in the same period; his lungs during ordinary breathing, contain one hundred and seventy to eighty cubic inches of air for the support of life. To maintain this at the proper purifying standard, he breathes out (expires) all hurtful products continually collecting in the blood, and draws in (inspires) about twenty cubic inches of fresh air, some sixteen times every minute. The heart of a horse, at a low computation, is twelve times heavier than that of a man; it propels five times as much blood, viz: upwards of forty pounds are sent into the system, and as much more into the lungs every minute. This amount, great as it seems, is increased when in exercise, and so ample and so perfect is the apparatus for respiration, that the lungs are continually supplying adequate means for the purification of this enormous vital tide. This is not practically borne in mind, and those in immediate charge of horses (especially in this country) are often most ignorant of the properties of air and the requirements of blood.

Consider for a moment the size of an ordinary room, with its windows for light, its fire and its doors for ventilation, contrasted with many of the stables in this city, and you will find five, six and seven horses, (each requiring eight times as much air as a man, are stabled in less space than this, with perhaps no window that admits light, no provision to remove dampness and gasses originating in the natural evacuations

Why, may I ask, are so many stables almost dark, even in the day time? A kind Providence, as if to show man his duty to the lower animals, brings forth the choicest natural productions of organic life where there is the best light and the purest air.

Where there is darkness in stables, there is almost always a dampness; where darkness, dampness and a close atmosphere combine, each and all reeking with decomposing animal evacuations, particularly where the manure is put under the stable floor, which is of too frequent occurrence, there is the worst possible provision for sustaining life and health in a state of integrity. Small indeed, is the spark here required to kindle a great amount of disease. When influenza or any other kind of epidemic disease prevails, each is most severely felt in dark, damp stables, the unnatural heat of which is caused by many horses being crowded into a small compass. It has also a very serious effect upon the eyes, the details of which time and space will not at present allow.

Many horses bought by dealers, of farms in Connecticut, Vermont and other States, are brought here, and two-thirds of the number are more or less attacked with distemper soon after their arrival. The reason is asked why. Visit the farmer; there you will find the horse surrounded with pure, healthy atmosphere; if in the spring, (when most are bought,) living upon grass, clover, &c., not overworked, probably never driven fast; if stabled, fed regularly, good wholesome water, &c. It may take four, five, and sometimes eight or ten days, according to distance, to arrive here. One man is generally employed, (who often knows as much about a horse as a horse knows about him,) to bring a string of half a dozen, more or less, as the case may be. During the journey, which is generally made as quick as possible, that no time may be lost, and more particularly to curtail expenses, they are fed on cut feed, with probably a little extra quantity of meal, (no shorts,) and watered when conveniently met with. Upon arrival they are at once ushered into the stable, (such an one as described above,) in some cases washed and showered all over with cold water, perspiring or not, immaterial; put in a stall to be dried by heat of the body and atmosphere combined, without even a thought of rubbing a hair dry. Such treatment, with diet changed from grass to hay and meal, with perhaps a great degree of difference in the atmosphere to what he had been accustomed, and crowded in a dark, close, ill-ventilated stable, can any reasonable man be surprised at the horse being sick? I should be much more so were he not, no matter what kind of a constitution he had previously.

If, instead of the above treatment, he traveled say about twenty miles a day, fed and watered regularly, the former to consist of shorts, principally, instead of meal, and upon arrival, (same feed continued a few days,) well cleaned, a good bed of straw, in a dry, well ventilated stable, and such treatment followed up a few days, not one in ten would be attacked with disease, (unless previously contracted,) the owner save the expense of medicine and medical advice, and I probably lose the chance of having to present my bill for services rendered.

If the public, individually or collectively, derive any benefit from any of the foregoing remarks, I shall consider myself well paid, from the fact that I have been able to prevent even one of God's noblest animals (the horse) from sickness and probably from a premature death.—S. Marlor, in the Providence Journal.

Cutting Hay.

Messrs. Editors: It was a saying of the sage of Monticello, that "all religious opinions would be tolerated in a free country, where reason was left free to combat it," so, the advocating of a wrong theory in agriculture will do no harm, for the judicious tiller of the soil will cull and select what seems to him right; may we claim then the right to combat the correctness of our friend Sargent's theory on the cutting of hay. He says, the "ultimatum of all plants is their seed, therefore, no plant will decay until the seed is perfected in its growth." Plants are raised for different purposes; some are grown for their seeds, as with the cereals; some for the feed of stock, as the grasses; no man will suppose that plants raised for different purposes require to be harvested at the same time. Our observation and practice confirm us in the opinion, that early-cut hay is far preferable to late. If the seed is matured, a large part of the heat of the qualities of the grasses is evaporated in the process of the ripening of such seed, besides drawing heavily on the soil in the last stages of its growth. Has our friend not noticed, with what vigor the second crop of grass starts if the first is cut early; for instance, the last of June or the first of July, compared with the fully matured seed of August?

We have a small piece of grass that has been cut twice for several years without sensibly diminishing the crop, always careful to cut when it is in blossom. The past year we had one acre of clover cut the last week in June, making eighty heaps; the last of August it was cut again, producing about one ton, and this in a season of great drought. We would ask our friend, if he supposes that we could have done better to have let the seed mature? That stock can lay on fat better with late-cut hay than early, we think our friend is quite mistaken in; our observation among farmers that practice the two systems, we think can bear us out in the assertion, that it is in favor of the early system, and by the looks of the animals themselves. Early-cut fodder is eaten clean by all stock; none is wasted, as is the case with late-cut. An old and successful farmer informed me a few years ago, that he had been in the habit of stall feeding oxen every year for a great number of years, and that his cattle would fat far better on early-cut hay than late.

That there is more nourishment in early-cut grass than late, we believe; after the maturing of the seed, the stalk and leaves are more like the straw of the cereals, after they have matured the grain, and are lathel by all stock that can get anything else. We have practiced and advocated the late system, and found it all wrong in every part; an injury to the soil and less nutritive to the animals that are designed to be fed; we had rather pay \$1.50 per day for labor the first two weeks in July, than to have it for nothing in August.

As to our friend's statement, "some may say, it is not eaten as well; I readily admit they do not eat so much, and good reason for it, they do not need it, for it has more nutrition, and they do not require the same amount." Not long since a case came under my observation: a teamster purchased two or three loads of early-cut hay; he fed his team for two or three weeks upon it, and afterwards he obtained a load of late-cut, which his animals refused to eat, and he refused to pay for it! Now, the natural qualities of this hay were alike, one late cut, and the other cut early, but it appears his team found out the difference, and refused to eat it.—D. L. Harvey, in Boston Cultivator.

Cultivation of Sandy Soils, Long Island.

Messrs. Editors: A large portion of the soil of the country is of this class, and very little of it is under what may be considered good cultivation. The greater part is managed on the skinning or starvation system. That these soils possess many advantages, has been long acknowledged by those who have given the subject the least consideration, whilst their peculiar adaptation to the culture of root crops is now generally admitted. The absence of alumina and their porous character rendering them unable, in a great measure, to retain moisture, the best portions of manure are lost, either by percolation or evaporation; and hence has arisen a great objection to the cultivation of this class of soil, which their cheapness, ease of tillage, and facility for raising early crops, do not seem to have obviated. And yet that such soil can be profitably cultivated has been long known; witness the barren sand of Belgium and the estates of Coko and Hatherston in England, or, nearer home, the blowing sand near Albany, and some small portions of Long Island. Their adaptation also for sheep husbandry is well known; and yet, within a few miles of this great city are thousands of acres, every way capable of supporting immense flocks, with not a sheep on them. I have been led to make these observations from a recent trip on the Long Island Railroad, when, in the space of about fifty miles, I did not see that number of sheep; and, as a friend with me observed, on passing Hempstead Plains, here are the Downs, but where are the South-Downs? Certainly not there. A great many sheep, I understand, are raised on the north side of the island, and the stock is generally improving; Wm. Becar, W. W. Mills, and J. Smith having some fine flocks. Still they are the exceptions, not the rule, and it is the latter that we want. The growing taste for mutton, and the high price a good article will always command, we think should stimulate the farmers of Long Island to push forward in what I consider a profitable branch of husbandry; and instead of being satisfied with raising eight or ten bushels of rye to the acre, and then carrying the straw off the farm, consume it on the farm, not rest satisfied till they can, from the same land, raise from five to six hundred bushels of turnips. That this can be done, we will endeavor at some future time to show.—L., in the Plough, Loom, and Anvil.

There is no greater obstacle in the way of success in life, than trusting for something to turn up, instead of going to work and turning up something.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, APRIL 12, 1855.

STATE AGRICULTURAL CONVENTION.

At a meeting of the Executive Committee of the California State Agricultural Society, held on the 2d inst., it was unanimously

Resolved, That a Convention of the Agriculturists of the State be called, to assemble in the city of Sacramento, at 11 A. M., of Wednesday, the 25th of the present month.

The objects of such Convention are numerous and important to every cultivator of the soil, every grower of stock, and every manufacturer, in the State. It is hoped that public mass meetings will be held in the evenings of the days which may be occupied by the sittings of the Convention. Such meetings will be seasons of free discussion, and public speaking by the best talent available.

It is earnestly desired that every County or Town Agricultural Society will send delegates, and that where no such societies exist, the inhabitants of the several towns, villages, and precincts, will meet and appoint representatives. Where no such representation can be obtained, it is desirable that the members of the legislature from said districts should be considered, *ex-officio*, such delegates.

The call is issued at this day in order to give time for every part of the State to be represented.

O. C. WHEELER,

Rec. Sec. Cal. State Ag. Soc.

SACRAMENTO, April 3, 1855.

Agricultural Convention.

We call the attention of all the Agriculturists of this State to the Convention which is called for the 25th of this month, at the Capital.

In order to make the State Fair of the present year prosperous, and to have its influence spread widely over the State, it is important that every portion of the State should be fully represented, so that committees can be selected from every county. These committees should be working men, men that will take hold in earnest and see that every farmer in his district is notified of the Exhibition in season, and be sure that he has no excuse for not having his farm and grounds examined and reported fully. The success of the farmers can be greatly promoted by an energetic and earnest attention to these matters in season.

Will all who are engaged and interested in these matters feel they are a committee for their own neighborhood, to rally a delegation that will be present on the 25th? The cost of traveling is now but a trifle, the California Stage Company carries passengers at a very low fare, and the steamers do everything that could be desired, and there is no excuse for any for not being present.

By reference to the call, it will be seen that important matters will come before the meeting and able speakers will be present to advocate the best measures for the advancement of Agriculture.

Those Presses that feel disposed to publish the call and notice it, (and it is hoped all will do so,) will confer a great benefit upon the whole State, and cannot fail to receive benefit from it themselves.

Large Sales of Plants.

An increasing love of flowering plants and a greatly improved taste, are manifested by the public sales of Blooming Plants that are now made in our principal cities, almost weekly. Handsome collections of Greenhouse Plants are offered in this city from the fine gardens of, Sontag & Co. and Center & Co., of the Mission, and also from the conservatory of W. C. Walker, Esq., Golden Gate Nurseries, and from Donnell & Co. At Sacramento city, very handsome plants in large quantities are exhibited and sold, and at very satisfactory prices. The last week we saw two large sales in one day—one collection from San Francisco of nearly 300 plants, and a still larger lot of about 450 plants from the extensive gardens of Messrs. Smith, and also Mr. Keehler. These collections embraced every variety of choice plants worthy of growing, Camellias, Geraniums, Lillies, Passion Flowers, Heliotropes, &c. We noticed fine Moss and Tea Roses, Climbing Roses, and superb Yellow Roses. One beautiful Climbing Rose, "Laura Davoust," brought \$16 50; others \$13, \$12, \$10. Such evidence of taste and improvement, even under depressing influences upon trade, is a sure and abiding proof that the country is steadily progressing, and we hail such truth with satisfaction; it speaks well for our State.

Dairy Ware—Water Pipes.

MANUFACTURES are springing up all over our State. The want of an article creates a supply. The increase of dairies has produced a demand for milk pans, churns, &c. The necessity of conveying water over extended grounds, called for water pipes. The drainage of wet land required pipes also, and the potteries have now extended their business so as to embrace all the articles in demand. We feel it our duty to note these things, and to make them known.

Recently at Smith's Gardens, at Sacramento, we saw extensive preparations for the water pipe which was to convey water over the entire grounds of many acres. We saw the pipes and learned they were made near by, at the pottery on the plank road, above the Fort, where afterwards we saw them, together with earthen churns, drainage pipes, milk pans, water coolers, beer bottles, flower pots, and ware of all kinds, equal to any that can be made in the States. All and everything needed in this line can now be procured here, and the result is, so much gold saved to the country by "Home Manufactures."

Should not these be encouraged?

Let our legislators look to the needed aid required to cheer our Home Industry, and our country is sure to prosper.

Noble Tennessee in the Field.

We believe we cannot better serve the cause of agriculture and the mechanic arts than by publishing entire the most excellent address of Ex-Governor Brown, delivered at Knoxville, last Oct., on the occasion of the Public Fair held by the State Agricultural College of Tennessee.

The Legislature of Tennessee, with a magnanimous liberality, have established an Agricultural College, and given power to establish branches in every county in the State. Here we have an example worthy of imitation. The address should be read by every legislator in our own country, and no farmer can read it without being better prepared for his duties.

We especially commend this address to Californians. Tennesseans speak of the gold of California and her climate, &c.; but they prefer Tennessee and her agriculture. They love both, for both are protected by a wise and noble legislation. We trust ere long California will imitate Tennessee and have her college also.

We copy the following notice of the address, and it is worthy all that is said of it:

We have received two copies of the Agricultural Address, of Ex-Governor A. V. Brown, delivered at Knoxville, Oct., 1854. It is a very neat pamphlet of some 18 pages. As to the matter, we need not speak, every man in Tennessee knows the author, and knows there are few as great men now living, as A. V. Brown. We would like to see him President of these United States.—*London Free Press*.

Oysters! Oysters!

CAPT. RUSSELL, the pioneer of the Shoalwater Bay trade, and the particular pioneer in the Oyster Trade, has just received two more cargoes of these bivalves, for the satisfaction of our citizens, and to please their increasing taste for the good things of—the waters.

The last two cargoes consist of some 5,000 baskets of the best oysters yet brought to market, and we learn that Captain R. is planting them on the Oakland side of the bay. A friend at our elbow asks us, (as we tell of planting oysters,) if they will grow? We assure our friend that nothing increases faster by planting than oysters.

Some may think but little of the announcement of the oyster trade on this coast, but it is an important fact. Thousands and tens of thousands of dollars are thus retained in California, giving employment to vessels and men, that otherwise would go to the East for preserved oysters. Now we have them fresh and save the gold in the State.

STRAWBERRIES ARE COMING.—We saw fine ripe strawberries at Smith's Pomological Gardens, at Sacramento, on Friday last, and the prospect of a very large and early crop. Strawberries are coming in now to our markets from various gardens around the city and from Oakland. The San Jose papers tell of fine fruit from the Stockton Ranch, under the care of E. F. Kennedy, Esq., under whose care these grounds have reached a high degree of celebrity.

ROCHESTER HORTICULTURIST.—Barry's Magazine, one of the best of the present day, is being widely disseminated over the States, and is obtaining a deserved popularity. No magazine of Horticulture deserves more success. Recently we have not received it regularly; will our friends please see to it?

Address of Ex-Governor Aaron V. Brown.

LADIES AND GENTLEMEN: You do wrong in calling me to address you on the present occasion: Wrong to me for want of previous notice, and consequently for want of proper preparation: Wrong to that elaborate and able Address to which you have just listened, no word of which I would obliterate from your recollections: Wrong to this noble occasion, when everything around us is speaking to you in language more eloquent and effective than any which I can hope to utter. The farmer is here, speaking to you through the rich and varied productions of his fields; the manufacturer is here, speaking to you through his curiously wrought and costly fabrics; the mechanic is here, speaking to you through the wonderful ingenuity of his peculiar art; but, above all, the fair daughters and matrons of East Tennessee are here, speaking to you in the delicate texture of their own handiwork, and shedding over the exhibitions of the day, the light of their presence and approbation. Well might we exclaim, "The Occasion speaks for itself."

But what is this occasion? To appreciate its importance, we must fully understand it. It is no isolated and disconnected movement of the people of this part of the State, to accomplish some local and temporary purpose, and then to pass away, never to be repeated. No, fellow citizens, we have assembled under the authority of the law, as a duly constituted Agricultural College and Mechanic Institute, rounding off and completing that grand and comprehensive system of education which Tennessee has devised for the advancement and improvement of her people.

This agricultural bureau, or college, for really it is nothing else, has been located at the seat of government, as the common centre of the State. It has been duly chartered, with ample powers to locate similar institutions in each of the grand divisions, and indeed in every county in the State. In pursuance of these powers, that one has been established, on whose exercises and duties we are this day engaged. Until the last session of your legislature, our system of popular education had never been fully and completely established. At different periods of her history, the State had erected universities and colleges, and endowed them with all the liberality which her means and condition would admit of. She had also diligently husbanded her resources, for the establishment of county academies and common schools. Individual liberality and devotion to the cause of learning, had generously come to her aid in building up male and female colleges and institutes, of the highest respectability and usefulness. These were intended to meet the mere literary and scientific wants of the country, whilst law schools, medical colleges, and theological seminaries, of high repute, had been provided, partly by individual and partly by State endowment, for the benefit of those who desire to betake themselves to the learned professions.

Still it was evident that, as yet, however creditable and praiseworthy had been our exertions, we had done little or nothing for the education of the millions who, at no distant day, are to inhabit our State—little or nothing for the farmers and planters, the manufacturers, the mechanics, and artisans of every description. Where were they to go, in order to learn and grow proficient in their respective callings? Where even to exhibit the products of their untutored industry, and by observation and comparison, keep pace with the rapid and wonderful improvements of the age? The legislature, at its last session, responded nobly to these questions; and the people everywhere, from your mountains here in the East, to the shores of the Mississippi, are approving and confirming their action—enrolling themselves as members of agricultural societies—appointing times for their frequent meetings—making arrangements for their public fairs—selecting men of sound, practical learning, to lecture on agriculture and the mechanic arts. In fact, doing every thing to organize and arrange these new institutions, upon the best plan to secure the great object intended by the Legislature. In this view, how great, how beneficent, how sublime, is the present occasion!

When this degree of education, and this mode of imparting it to the agriculturist and the mechanic, was first proposed, many doubted its success; but the spirit which animates this large assembly—the spirit which animated the 7,000 or 8,000 persons assembled at Nashville and Gallatin, on a similar occasion, gives unerring evidence of a final and triumphant victory over every obstacle. It is a spirit not of wild disorder and destruction, but of rational progress and improvement. It wages no war, and bodes no evil to any of the other institutions of society, but generously seeks to aid, to enlarge and perfect them, until all men, of all classes and pursuits, shall participate in their blessings. If it be thought by any, that the means appropriated by the legislature are inadequate to the great end designed, let it be remembered that this is but the beginning—a mere experiment—and if started right, and sustained with proper earnestness larger means will never be withheld in so good a cause. Besides, it is not money that can best accomplish what is so much desired. It requires zeal, energy, determination, more than money. Take an agricultural society for an example. What need for money? To build some stately edifice, in which to hold their monthly or stated meetings? Some neighboring church, some Odd Fellow's or Masonic Hall, or even some capacious school house, will fitly serve for that purpose. Is it to procure standard and scientific works, and ably conducted periodicals on agricultural subjects? A small contribution by individuals, always to be had in a generous and liberal country like this, can easily procure them. Is it to pay salaries to able

and competent lecturers? Why, you are to be your own lecturers! Your own members and others of your fellow citizens from other societies, will be the very best orators on such occasions. They will give you the oratory of facts, the eloquence of experiment and observation. The exercises of the society will consist often in discussions or debates among themselves, of all the disputed problems of agricultural science; of criticisms on the prevailing modes of building farm houses, barns and other plantation fixtures; on planting out orchards; the selection of fruits; making fences; on plowing and otherwise cultivating the different varieties of crops. Now, all these things can be done and ought to be done without any great deal of money. The great object is to awaken inquiry; to excite emulation, to stimulate to the highest exertion, by the distribution of premiums and medals, as the rewards of merit, and the incentives to industry. An earnest and energetic people, firmly resolved to inform and improve themselves on one of the most important sciences ever known to man, cannot fail of success.

In no portion of the State would the results of that success be more striking and gratifying than in East Tennessee. For more than half a century you have been mountain bound, and consequently excluded, save at vast expense, from the great market places of the world. Deprived by the fiat of nature, of the usual stimulus to action, you have put forth no great agricultural or mechanical exertion. Your houses were not promptly and neatly repaired, your orchards were left unpruned and neglected, your best grass and meadow lands were unreclaimed, your fields were cultivated with a slovenly indifference, both as to regards durability and production. Indeed, the whole aspect of your country was that of a dissatisfied and desponding people, ready to seize the first opportunity to sell out and be off, to some new and more favored land. But now, how changed the scene! The genius of internal improvement has waved his magic wand over you, and house, and field, and orchard, all the splendid exhibitions of this day's fair, proclaim you a contented, happy and prosperous people. The traveler pauses and tells you in vain of the rich prairies of Texas, or the deep alluvion of the Arkansas. Even his gorgeous description of the diamond-studded and gold-glittering California, can extort from you nothing more than the reply: "East Tennessee is good enough for me." And so it is, my countrymen. After years of travel and observation, I cordially endorse the sentiment, that East Tennessee is good enough for you, and good enough for any body. Where, upon this continent, can you gaze upon a more varied and lovely landscape than now spreads out before you? Hill and dale, forest and field, torrents gushing from the mountain side, and streamlets gently flowing through valleys fragrant with flowers of perpetual bloom! Further off in the distance, we behold mountains in which lie imbedded, in close proximity, the largest supply of coal and iron ore, that the whole Appalachian chain can boast. In the opposite direction, but in full view, lies another range of mountains, from whose bosom are daily borne inexhaustible treasures of copper and other valuable minerals. Between these mountains lie a succession of luxuriant valleys, irrigated by streams of unrivalled purity, and capable of sustaining, in elegance and plenty, ten-fold their present population. In these valleys the iron horse is already making his restless way, and winking to his fiery tread the slumbering echoes of six thousand years. When to these mere geographical advantages we add the charms and attractions of a population of whom it may be well said, without poetic license:

"Where man is brave and woman true,
And free as mountain air."

who would exchange his own native or adopted East Tennessee for any other land on the globe?

I pause at this point in the current of my observations, to submit a few remarks on the joint action and influence of Railroads and these Agricultural Fairs. I hail their advent into our country not for the riches they confer. They will make you rich; rich in the increased value of your lands; in the annual increase of their products; in the development of your amazing mineral resources; in every way they will make you rich; but who can repress the fear that they may make you a proud and luxurious people. Not so much, therefore, for the wealth they may bestow, do I hail and welcome them, as because they are well calculated to make us a contented and settled people; contented with our State, with our particular region of the State, with our homes and our fire-sides.

No people, whether ancient or modern, have made any striking progress in the elegant or even comfortable arts of life, until they have become thus contented and settled. Until then, there will be no elegant and costly mansions, no wide-spread and verdant lawns, no ample and convenient institutions of learning, no temples of religion lifting their lofty spires to the skies; all these are too much neglected or postponed, in the restless inquiry about other and better lauds, where mountains do not interpose their eternal barriers to the approach to market, and whose interminable forests will not require a whole life-time to reclaim the land and put it in a condition for successful cultivation. The census tables exhibit an annual drain from our State, for which no want of climate or soil can account. Illinois and Missouri, Arkansas and Texas, have gained hundreds and thousands from us, during the trying and unsettled period to which we have alluded. But those days have passed. Our mountains are being levelled, or we are bursting through them, many thousand feet below their summits. The heavy forests of the middle and western portions of the

State, have given way before the sturdy blows of the axeman, until their fields, like yours, will soon begin to resemble a blooming and cultivated garden. Our whole system of internal improvement is in the course of rapid completion, and we shall then see the accumulated products of our mines and our forests, of our fields and our workshops, wending their way to the great market places of the world.

From the observations which we are now making, you will perceive that, according to my views, Tennessee is just now in a condition to enter fairly upon a career of Agricultural, Manufacturing, and Mechanical Improvement. Let no man reproach her for supposed negligence in the past. Let no man institute comparisons to her disparagement with older and once more favored States of the Union, for not commencing sooner. The early settlement of Tennessee commenced in blood. The red man of the forest warred against you at every step of your progress. Your own end of the State is studded with battle-grounds, where your fathers signalized their valor. Nashville, and indeed all Middle Tennessee, was one vast theatre of Indian warfare and depredation. When these were over, our early pioneers had to contend with heavy and interminable forests, year after year, reclaiming but a few acres from its inexorable dominion. It is no over-estimate of fact to say, that it required two entire generations to open land enough, and to put it in reasonable condition for cultivation, to meet in abundance and plenty, the current wants of the people. During this tedious but unavoidable process, how nobly she has sustained herself in all her social and political relations with her sister States of the Union. She has furnished already, before her Indian forts have disappeared, or her earliest log cabins have mouldered down, two Presidents to the Republic, five members of the Cabinet, and many Foreign Ministers. In war—in every war—she has sent forth a full proportion of her gallant sons to sustain the violated rights or the insulted honor of the nation.

But Tennessee can need no labored vilification from me. Having secured her safe lodgment in the wilderness, having felled her forests, having provided well for the literary wants and professional demands of her people, she now enters upon the final and noble work of advancing and improving her Agricultural and Mechanical interests. I shall speak of Agriculture first, as the great interest of every State. It is, in fact, the substratum or foundation of all others. It spreads every sail and drives forward every car of commerce. It gives motion to the vast machinery of manufactures, and nerves to vigorous exertion the arm of the mechanic, the artisan, and the day-laborer. There is, indeed, no subsistence to man or to beasts that he subjects to his control, without it. In the terse and expressive language of an old adage, "It makes all, pays all, and supports all." It is not only the most necessary, but it is the natural and ancient employment of man. Adam was created a farmer; born swift, and deeply to impress upon him the advantages of rural life and occupation over all others, he was located on a farm or garden, surrounded with its fruits and vines, and flowers. This Divine indication of the proper and best pursuit of man, has been faithfully preserved through all ages and nations to the present day. The patriarchs preserved it, in the ownership of their extensive flocks and herds; the apostles, or at least some of them, preserved it, by laboring in the field, whilst engaged in the sublime vocation of regenerating the human family; among the Greeks and Romans, the greatest philosophers and proudest patricians disdained not the cultivation of the soil with their own hands. Cincinnatus, in the hour of peril, went forth, not from the capitol, but from the plow-handle, to shield and save his country. And it is precisely from such situations, that the purest patriots and statesmen have been most frequently selected. Washington was called for, from his fields, far distant from the first outbreak of the revolution, and Jackson sighed when he left the precincts of the hermitage, "to sway the executive sceptre of a mighty empire." There can be no other employment so well calculated to inspire deep and undying sentiments of patriotism. In this country a large proportion of those engaged in agriculture, are the owners of the soil. The title has been secured to them by the laws of the land. The very fields which they cultivate may have been moistened by the blood of some honored ancestor, in repelling the rude invasion of the red man. Thus consecrated by paternal valor, they will relinquish it only with their lives. And such has been the lesson taught us by American history. The officers and soldiers of the revolution were farmers, and the sons of farmers. They waited not for formal proclamations and the slow-moving ceremonies of military organization. Like Putnam, many of them literally left their plows in the furrow, and hastened to the tented field. What a lesson to the legislators and statesmen of our land. What an appeal to them, loud as the thunders of the revolution, to make haste, by all the means in their power, to identify every freeman and citizen of America, with the broad and fertile acres of our public domain.

"What constitutes a State?
Not high raised battlements and labored mound,
Thick wall or moated gate;
Not cities proud, with spires and turrets crowned,
Not bays and broad-armed ports,
Where, laughing at the storm, proud navies ride;
Not starred and spangled courts,
Where low-browed baseness wafts perfume to pride:
No, men! high-minded men!
Men who their duties know,
But know their rights, and knowing dare maintain."

This noble profession, for such in every respect it deserves to be called, although the most ancient and useful, has, however, been most neglected. Apprenticeship, or some specific course of instruction, seems to have been considered necessary in

all other pursuits. How many years of hard and laborious study have to be employed in the University or College, with its Greek and Latin; its Mathematics and Philosophies, in order duly to qualify the Lawyer, Physician, or the Theologian? Not so has it been with the Planter and the Farmer. How to wield the axe, to hold the plow, or to swing the scythe, has commonly been regarded as the sum total of a Farmer's education. No wonder, then, if not knowing by instinct, the nature of the soil he had to cultivate, the adaptation of manures to the soil and to the crop, the natures of the plants they cultivated, the food they require, and the best method of administering that food, in order to produce health, and vigor, and fruit—no wonder, I repeat, if farmers, not knowing these things by instinct, have been generally content to pursue the course their fathers have pursued, and to rely on the earth and seasons, good fortune and Providence, to help them out at the end of the year!

I pause in order to point out to you another great cause for the neglect and low condition of Agricultural knowledge. Who is it in most of our families that are set apart and devoted to the business of farming? Not the sprightly and energetic, whose progress at school points them out as likely to become eminent in whatever they pursue—no, not these—the bar, the healing art, or the pulpit, take them, and leave a profession which a Washington has followed, to the less promising members of the family. "Oh he will do for a farmer," says many a farmer, when speaking of one of his most unpromising boys. Well, if he will, then I would say to that father, he will do for any thing else. Give him the same general education at school. Let him take lessons in the College, under the Professor of Agriculture, as the other son does under the Professor of Law. When he comes out into the world, let him lecture and debate in the Agricultural Societies, as the other pleads in the Courts of Law, and my word for it, the accomplished lawyer will bring no higher honor to the family than will the educated, dignified and enlightened farmer.

And why should not the planter and farmer claim equal rank in this country with the lawyer, the physician, or the clergyman—rank in public employment—rank in the social circle? Why should he stand back in my conscious inferiority to either of them? His general education is as good; as learned in his profession as they; remunerated by as large profits, and expending those profits in charities as benevolent, and hospitalities as elegant, why should he not stand forward as the compeer of all or any of them? Let us set our faces against unjust discriminations like these, which have long existed and which yet exist, though in less degree than formerly. Let us give rank and dignity to labor in every honorable pursuit.

We would submit to you similar observations, even with more striking emphasis in relation to our mechanics and artisans. They, too, by some strange infatuation, have failed to acquire, in some degree, their just position in the social circles of life. They do not often mingle in full fellowship at the festive board and evening parties of the rich, the gay and the fashionable. The merchant, the extensive manufacturer, the lawyer and the physician, the man of science and letters, is there in free and unrestrained hilarity—but by a sort of silent acquiescence by both parties, the mechanic and tradesman but rarely is seen to mingle in the throng. Yet, in the eloquent language of an extract which I have seen this morning in one of your city papers, "they are the palace builders of the world; not a stick was here, not a stone was shaped, in all the lordly dwellings of the rich, which does not owe its beauty and its fitness to the mechanic's skill. The spires that raise their giddy heights among the clouds, depend on the mechanic's art for their strength and symmetry. The thousands of noble ships that cover the seas of the world; the magnificent steamers that plough the Northern lakes and Western rivers; the swift locomotives that traverse through the States with the rapidity of lightning, are all the constructions of that noblest of human beings, the mechanic. Not an edifice for devotion, for business, for comfort, but bears the impress of their handiwork. How exalted is their calling, how noble their pursuits, how sublime their avocation!" A class of our fellow citizens, deserving encomiums so high, ought not to be neglected or slighted in any of the educational arrangements of the State. In every University and College, there should be professorships endowed for full and accurate instruction in the general principles of the mechanical sciences. In our Academies and Common Schools, text books should be introduced, and all the information imparted which circumstances would allow of. But it must be, after all, in Mechanic's Institutes, that the highest degree of general improvement may be expected. They should exist in every city, town and village, these being the places where most of our mechanics reside. By private or public contribution, small but well selected libraries should be provided. They should meet frequently, to hear lectures and addresses from those who may be best calculated to impart instruction. Each Institute should hold its own fairs, and come forth at the general one, in proud exhibition of its progress and improvement. Simple as these means may seem, a steady and energetic application of them cannot fail to obliterate existing distinctions in social life, and exalt honest labor in every department, to its proper dignity and rank. If I were asked what constituted the true nobility of manhood, I should answer labor—labor of the head—labor of the heart—labor of the hand. By it, man has accomplished all his great achievements since the day

it was declared, "thou shalt live by the sweat of thy brow." From that day, labor became Heaven's great ordinance for the improvement of mankind. It has sanctified the heavens, and discovered all the beauties of creation. It has encompassed the earth, and brought forth the richness of her valleys, and all the glittering treasures of her mountains.

It has reared our habitations, and sent forth the fairest flocks and herds upon the hills. It has built the ship, and guided it in safety through distant oceans. It has opened the bosom of the earth, and given to man all its teeming fruits essential to his subsistence. It has laid at our feet, with a provident care, the contributions of every soil and climate. With magic hand it has touched the lightning, and sent it flashing round the world, speaking the language and uttering the sentiments of every people who inhabit it. In fine, the labor of the mind, of the heart, of the hand, has, and will conquer all things. The earth, the seas, the winds, will all stand sublimed in its all-prevailing presence and power? Who, then, shall be ashamed of either intellectual or manual labor? Ashamed to obey the high ordinance of God; ashamed of the hard hand, because it be sanctified with honorable service; ashamed of the dingy work-shop or the dusty labor-field; ashamed of his soiled and weather-beaten garments; soiled by the sun whom he has beaten in his early risings, by the rain, whose descending torrents he has defied, in the noble discharge of industry and duty! Say not ashamed of these. It is treason to nature! It is impiety to Heaven!

But I honor not labor, mental or manual, if its sole or even chief object be sordid and selfish. What honor would Franklin deserve for smothering the lightning from the clouds, if his object had not been the peace and safety of his fellow-creatures, in the hour of storm and of tempest. What credit is due to him who invented the Printing Press, that great instrument of civilization and refinement, if his purposes only were "to set mankind by the ears," and to put money in his purse, out of the stripes and dissensions which he himself had created. If Fulton looked not to the good, the moral good, as well as to the gains of mankind, his sublime invention of the power and application of steam, loses nearly all its value, in the eyes of a sound and benevolent philosophy. The labor of Whitney, in inventing the Cotton Gin, of Arkwright, for Spinning, and Cartwright for weaving, did indeed lead mankind to the acquisition of great wealth; but they also brought honorable and useful employment, and with them abundance, and plenty, and joy, to many millions of the human family. For this I honor them. For this I honor all the great improvements and inventions of the age, intended to advance mankind to the highest state of moral improvement; to make them good as well as great; happy as well as rich. But there never has been, and never can be, happiness without employment—that degree of employment, intellectual or manual, which we call labor. Man may build his palaces; he may adorn his grounds and throw around him all the blandishments of Asiatic luxury; still, if he have not employment, something constantly to call forth his energies, he becomes languid and dissatisfied. The merchant must embark in new enterprises, even though former success had invited to retirement and repose. The lawyer and the statesman engage in new encounters in the forum and the Senate House, long after either necessity or fame have invited them to the conflict. The great warrior of antiquity, reposing on the laurels of an hundred conquests, still sighed for more victories and more nations to subdue. All this is by a great and fixed law of nature. Without this law, the body of individual man would sicken and die. His mind grows trivial and effeminate. Without it, even nations could not survive the blighting, sulcating influence of inglorious ease. Tyre and Sidon, Babylon and Palmyra, even Imperial Rome, laden with the spoils of the world, could not escape the stern and inexorable penalties of this law.

There are no lessons in history more impressive than these. The same law and the same penalty have been imposed on our own country. I mean the great law of labor and continued exertion. Let us all pay to it the homage of a prompt and ready obedience. Nay, more, let us honor the men of toil and labor, intellectual, moral and manual, who go forth into the field of industry, science and art—who go with stout arms and brave hearts, amid the struggling elements, to fight the battle of human progress and improvement throughout the world. And where should that great battle be fought so well as here, in our own young and vigorous America? We have already fought the battle of human liberty, and flashed the light of our triumph over half the habitable globe. In the fondness of hope, nay, in the confidence of a firm conviction, I maintain that America, in the Providence of God, is destined to be the grand theatre of man's moral and intellectual advancement, to the very highest degree of perfection. Be not startled at the boldness of this word perfection. We mean not that of angels, but of men. The great seal of divinity stamped upon him, stamped on his origin, on his destination, makes him and perfection one and inseparable.

"How complete, how wonderful is man!
Dim salaried of greatness absolute,
—A worm! a God!"

Extremes how wide, how wonderful! and yet, as sure as in his feebleness he is a worm, so surely in his capabilities he is a God. Slowly it may be, but certainly, step by step, he must and will rise upward to his lofty destination. Be not incredulous. Look backward into the dark ages of his existence, and mark how he was on the scale

of his being; the mere savage, the barbarian; compared with them, how noble, how majestic he now stands, with all his temples dedicated to learning and piety, and good government, around him! He is yet, however, only midway in his high career; but he can now behold, reflected from his native skies, not only "the dim miniature," but the bright portraiture of his future greatness.

Speech of Hon. C. W. Cook, OF THE ASSEMBLY.

The following glowing extract is so full of true enthusiasm of the right kind, so full of earnest pleas for truth and right, that we insert it with much pleasure. We wish all our legislators would mark the great boundaries of nature, and not only boundaries, but the wonderful revelations that this country affords, and do what they can to promote their development, and thus place our State before the world, as grand and glorious as nature designed her to be.

We note with much pleasure the zeal of the honorable member in behalf of all great interests of the State; they are worthy of just commendation.

EXTRACT FROM THE SPEECH OF MR. COOK, ON THE QUESTION OF A BOUNDARY LINE FOR STANISLAUS COUNTY.

Sir: Our possessions on the Pacific are the wonder of the world. California is an anomaly in the history of nations. There is not now and never has been another country like it. She is not, from Siskiyou to San Diego, one republic only, but a valley of a thousand republics in one. With the scenery of the Alps and the climate of Italy, every valley in her mountains is a republic, independent as any in the valley of the Mississippi. Every gulch and ravine makes its own laws and regulations. This, sir, with me, is the crowning glory of its acquisition—that its political organization is the highest earthly commentary on the genius and perpetuity of our institutions.

While the leading democratic statesman will point to this country as the proudest trophy of his progressive and expansive policy, and others gaze on her with admiration as the future commercial seat of the world's great empire, I, sir, prefer to contemplate her as the realization of that belief entertained by the Humphreys and Cromwells of long ago, but here for the first time practically demonstrated, that the voice of the majority is the only true government, and that man when enlightened and free needs no king but God. Sir, the hand of God in that immense river canyon, has traced the natural boundaries between the two counties; and as I have shown that an overwhelming majority of the people of that district wish it there, you cannot, you dare not, locate it elsewhere, without violating the fundamental principle of our Republic.

THE MAMMOTH OX.—The Mammoth Ox now exhibiting at Sacramento city is indeed one of the finest specimens that has ever been shown; every feature of the animal is pleasing; noble in size, weighing nearly 4,000 pounds, this ox strikes you at once with pleasure; the color of a soft chestnut brown, with broad dashes of white, after the character and marks of the Kentucky and Ohio cattle. A large and finely formed head, full, clear, but mild eye, large and handsome horns that have been polished and tipped, present this noble specimen before you in the most pleasing manner; no one can fail of being gratified. The ox is enclosed by a railing, within which you can pass to examine him. He stands upon several inches of sawdust, for ease. He is so fat that he is obliged to lie down during the heat of the day, and is now exhibited only in the evening. Stock raisers should all examine this animal, and note his fine points; it will guide them in their selection of stock for fattening. This ox was under the yoke till within a few months, and this extraordinary result will be of great good to those who raise stock for the markets. All should see this mammoth creation.

To our READER.—We have occupied a large portion of our paper to-day with the noble Address of Ex-Governor Brown of Tennessee, to which we refer our readers.

"Address of Hon. Edward Everett"—this address contains sentiments that should be engrained upon every heart engaged in Agriculture.

"Female Education"—California should rear a high standard for education. Educated mothers present to the world the only nobility that exists—men of virtue and intelligence.

"All is not darkness yet!"—lines by "Mary May,"—are most appropriate at the present moment, when so many hearts are oppressed with care and misfortune. The sentiments are most truthfully expressed, and breathe a strain of true poetry; we trust to hear often from Mary.

"Peep behind the curtain," should be read by every woman in our land. There is a voice in it that if heard in season, would save many a breaking heart.

Horticultural Department.

Evergreens.

We publish the following article upon evergreens with the hope that a proper attention will be given to this subject in California; for here we have some of the finest specimens of evergreens that can be found in the world.

In addition to the rules laid down by Mr. Cross, we would add one, and we believe the all important one—"the time of planting." We believe the best—we would say the only time that evergreens (we mean more particularly all the tribes of pines,) should be planted, is when their buds are just starting into new growth: remove them then, and follow the rules of Mr. Cross, as alluded to, and success is certain.

We really hope all who are laying out grounds will reflect upon this matter before their whole space is occupied.

In looking around among the enlightened farmers of the Empire State, I am sorry to see so little taste manifested for planting evergreens. Some pretend to say they are good for nothing but to look at. This a great mistake. They are useful in many ways. They are good for the eyes; but some will ask, how can they benefit the eyes? Physicians tell us that green is the most strengthening to the eyes of any color we have. During the long and gloomy winter, when the earth is white with snow, which by its perfect whiteness almost blinds us, how quick the eyes are relieved by looking at evergreens or any object whose color is green. They are good for a defence, when planted on the exposed sides of an orchard, by keeping off those blasting winds which injure the trees and destroy the fruit. Some of these evergreens, especially the firs, yield a rich balsam, which is very much used for medicine. Although these trees are so useful, not one farmer in ten ever plants an evergreen in his lawn or around his orchard. Ask them the reason; they reply it takes too much time; by which I understand it costs too much money. Ask them if they are in debt for their farms, they say no; and by inquiring, we find they have hundreds of dollars on interest. You may ask them what they intend to do with their money; they say they want to get a big pile to leave for their children. Poor creatures, they are to be pitied; they do not seem to think that their children may quarrel about dividing this pile, and feed out half of it to the lawyers, while the other half may be spent at the tippling house. Thus you see many people deprive themselves of many of the enjoyments and blessings of this life, for the sake of having it said they left a big pile of money. These remarks will apply to many farmers, but not all, for I have seen some farmers set out many evergreens, and lose every one, all for the want of knowing the secret of transplanting them. As I have said there is a secret in transplanting evergreens, which all do not understand, some may be led to inquire what this secret is; therefore I will try to tell them in few words. First, do not get trees that are too large. Second, be sure to procure trees that have been exposed to the sun. Third, in taking them up, do not break or mangle the roots. Fourth, don't prune them too much; and last but not least, be sure not to let the roots dry before they are placed in the ground, for if you do, your labor will be lost. If these directions are heeded, there is not much danger.—*Elihu Cross in Country Gentleman.*

Hints on Grafting.

Much is written in every horticultural journal upon grafting, and each treatise of fruits gives all the information desired, numerously illustrated with cuts. Yet a lamentable ignorance exists among farmers and many fruit culturists upon the subject.

It is not our intention to give the mode of the operation, but to say when it should be performed, and the stocks applicable to each kind. Any work on horticulture may inform sufficiently a novice who possesses an average amount of skill and care, so that he may be able to graft successfully.

The first step to be taken is to obtain scions of those varieties which are desired; they can be cut from bearing trees, or from young plants, if genuine, between which there be no choice, only that the shoots should be well ripened. They may be cut during March or April, or at any time the buds commence to swell, indicating the approach of Spring. They may be kept till wanted in a moist cellar, partly imbedded in sand.

There are only two forms practiced in ordinary grafting, viz.: Stock grafting, and whip or tongue grafting. The former is adopted for large trees, where the stock is more than three-fourths of an inch in diameter. The latter is applicable only to seedling stocks, and small trees. The stock and scion ought to be about the same size, that the cut may unite on both sides; but it is nearly as well if the point of union be only on one side, when a stock, two or even three times the diameter of the scion, may be worked in this manner.

The season for grafting is during March and April, and in some localities it may be deferred till May. As a general rule, however, it should be done as the buds begin to swell, and several days before they will expand. The cherry is one of the first trees that shows the approach of Spring, and therefore should be grafted first—then plums, pears and apples.

When scions are kept fresh and in good condition we have had considerable success resulting from grafting trees when in leaf or in bloom.

This may be accomplished sometimes with such easy growing sorts as apples and pears, and often with plums, but with cherries never. The composition for grafting is about equal parts of beeswax and tallow, and double the quantity of rosin into which, when melted, dip narrow strips of cotton cloth or colico.

As a general rule scions should be grafted upon their own kind, as apples upon apples, pears upon pears, except when some specific object is wished to be obtained. All experiments in grafting the pear upon apple trees, on the mountain ash, will fail, giving the cultivator no reward for his pains. The apricot upon the plum stock is an exception, which however, can not be successfully grafted, unless a piece of old wood, say three-fourths of an inch, is attached to the scion.

Address of the Hon. Edward Everett, AT THE DERHAM CATTLE SHOW.

Remarks at the dinner of the Norfolk County Agricultural Society, at Dedham, on the 26th of September, 1849, Hon. Marshall P. Wilder, president of the society, in the chair.

After making his personal acknowledgments to the Chair and to Mr. Webster, Mr. Everett went on as follows:—

You have been pleased, Mr. President, to inform the company that I am a Norfolk man. I am, sir. I was born in Dorchester, and my ancestors, from the first settlement of the country, were born and bred in this prosperous town of Dedham. I am not ashamed of my descent. My forefathers were humble men, farmers and mechanics, and pursued a most unambitious career. They left nothing to their descendants of either fame or fortune, but a good name. But as times go, he is not the worst citizen who gives himself up to unpretending industry to a private career; content to embark in the ship of state as a private passenger, and if need be, to work his passage before the mast. My course of life has carried me away from the paths trod by my ancestors. But as I advance in years, I am inclined to think with his excellency, that the pursuit of the farmer is most conducive to virtue and happiness. I will not compare it invidiously with other occupations; they are all honorable and all respectable, when pursued by honest men and for honest ends; but I do think, sir, upon the whole, and for the mass of mankind, that agriculture, as it is of necessity the only occupation which could be pursued by the majority, is in its nature entitled to the preference. I believe it to be the occupation most favorable to health, to tranquility of mind, to simple manners, to frugal habits, and to what is of utmost consequence in a republican government—equality of condition. What more is wanted to make up an occupation in life most favorable to happiness? Certainly there is no other pursuit, which, to the same degree lies, at the basis of the entire social system. I am not speaking without warrant, Mr. President, for you have told us the same thing to-day in better language. It is in fact the consenting judgment of the world.

In the infancy of our race, men could express their feelings of gratitude and wonder in reference to agriculture and its fruits only by saying that the products of the soil were the gifts of Heaven. Corn, wine, and oil, the implements of husbandry, and the skill to use them, were, to their simple apprehension, all given by the gods. The wisdom of man was not sufficient to account for the introduction of these beneficent gifts. The descriptions of China tell us that even to this day, the sovereign of that empire, the despotic master of one third part of the human race, in order to show his high esteem for agriculture, once in the year, holds the plow and turns a furrow, in the presence of his court and of all the highest dignitaries of the land. When we consider the almost idolatrous homage paid by the Chinese to their emperors, we shall better appreciate the significance of a ceremony like this. One cannot but recall the beautiful allusion of Thomson,—

"In ancient times, the sacred plow employed
The kings and awful leaders of mankind;
And some, with whom conjured, your insect tribes
Are but the beings of a summer's day,
Have held the scale of empire, ruled the storm
Of mighty war; then, with unwearyed hand,
Disdaining little delicacies, seized
The plow, and greatly independent lived."

But we need not, sir, go back to the past, to find the times when agriculture has been held in the highest estimation. The gentleman who has just taken his seat (Mr. Webster) will bear me out when I say, that in England, at the present day, it is the great interest. Land is the favorite investment, though it rarely yields an income of more than three per centum. As soon as a man becomes possessed of a fortune in England, he buys land. If the estate be large, the greater part will be leased to tenants; but a considerable proprietor generally retains a portion of land in his own hands. Every thing pertaining to its cultivation—the improvement of the soil, the contrivance of agricultural implements, the choice and succession of crops, the warfare against noxious insects—receives a degree of attention, in that country, hardly known here. The best talent, unwearyed research, and capital in abundance, are enlisted in the service of husbandry. Mr. Webster, from his own observation, will tell you that the annual meetings of the Royal Agricultural Society are deemed of greatest interest by the most intelligent portion of the community. The prizes that are given at those meetings are objects of competition to all, from the consort of the queen down to the tenant farmer and the farm laborer. At these festivals, persons belonging to the highest nobility and to the wealthiest gentry in the kingdom are seen examining the condition of the animals at the pens, or carefully

inspecting the implements of husbandry in the machine yard.

The character of the agriculture of any region must depend on the soil and climate. Mr. Webster has given us an account of the root culture of England. We cannot have it, as he has told us, to the same extent in New England, although it will be carried, unquestionably, much further than it has been. Nor will our climate and soil permit us to cultivate, on a large scale, what may be called, in the temperate region, the great staple of agriculture—that is, wheat. Much less can we produce the staples of southern and tropical climates. Still, however, I do not know that agriculture is not as important an interest in this as in any other part of the world. I believe that by the aid of our golden grain, the Indian corn, (which I imagine will prove in the end the most valuable gold dug out of the earth on either side of this continent, eastern or western,)—I believe that with the aid of Indian corn, the invaluable potato, and the other vegetable products adapted to our soil and climate, we may have farms that will compare advantageously with those of any part of the world. I mean farms on which a moderate outlay of capital, judiciously invested and well worked, will yield a reasonable profit; and that is the most that can be done any where; for great speculative profits can never exist in the pursuit of any great permanent business, and are of course not to be taken into account in a comparison of this kind. It is true that no skill, that no thrift can make our soil yield the cotton plant, the sugar-cane, the tobacco—what shall I call it—plant, or rather weed. But we have no reason to regret them. On the contrary, it is these comparatively barren plains, these sterile hill sides, to which we owe, in the last result, the prosperity of New England. It is precisely to these that we are indebted for that patient industry which is more than a counterbalance for a rich alluvial soil, and for that aptitude for the arts and energy of purpose which are vastly more productive of wealth than a genial climate. Who does not know that it is precisely such a region as that in which we live, that has been at all times the cradle of those inventions which seem to endow metal, and wood, and stone, with muscular activity and living sense; which enable a man to say to this piece of machinery, framed of wood and metal, "Go and remove the chaff from the wheat," and to that structure of stone and wood, "Throw out your revolving arms to the winds, and grind my corn into bread?" Where were these primitive machines, and the thousand still more ingenious and complicated contrivances of modern art, invented? On a soil and beneath a climate like our own. May I not go further, and say, that it is a soil of moderate fertility, beneath the climate of the temperate regions, that has always been the cradle of constitutional freedom, and of that passion for liberty, which are the great hereditary glories of the Anglo-Saxon race? Poor as our soil, ungenial as our climate may be, it is precisely to these that it is owing, under Providence, that our farms are tilled by the arms of freemen.

There were some things, Mr. President, that I thought to say to you; but Governor Briggs and Mr. Webster have dealt with my intended speech somewhat as the farmer deals with a barberry-bush on the side of his field. They have passed their great breaking-up plough through it, and grubbed it all up. I will only speak of one circumstance which is going, as I think, to prove more favorable to our agriculture than has been generally supposed, and that is, the multiplication of railroads. We have hitherto, perhaps, thought more of the benefit resulting from these new facilities of communication, in connection with commerce and manufactures. But I believe they are to do quite as much for our agriculture. I think that this network of railroads thrown over the land, is to be of more benefit to the husbandry interest of New England, than all the gold of California. It will put it in the power of the farmer to get his supplies from the seaboard, and to carry his produce to market, much more advantageously than formerly. In short, sir, it will enable him to live three days in one; and that, if one lives wisely, is no small matter.

There is another thing worthy of consideration. You stated, sir, that our young men of enterprise had hitherto committed a great error, in leaving all other pursuits and thronging to the city. I agree with you entirely. But a counter-current is now taking place. It is getting to be much more common now than formerly, when a man has acquired the means of doing it, to go back to his native village, and to seek a quiet retreat under the trees, beneath whose shade he was born. This practice will be greatly facilitated by the railroads. Within a distance of twenty-five or thirty miles around the metropolis, we see constantly springing up a crop of these neat little cottages. Men find that they can do business in town, and yet enjoy the pure air and free elbow-room of the country, for the residence of their families, far away from the smoke and dust, and noisy streets of the city. This practice, sir, you will find, will prevail more and more. It has not only healthfulness to recommend it, but it is in consonance with the deepest sentiments of our nature, which bind us by the strongest associations to the homes of our childhood and to the graves of our fathers. There is a charm even in a single visit to one's native spot. I do assure you, sir, that I have not been able, even for this single day, to breathe the air of these fields where my fathers lived and acted their humble part for two hundred years, without experiencing emotions that words fail to describe.

"I feel the gales, that from ye blow,
A momentary bliss bestow,
As, waving fresh your gladsome wing,

My weary soul you seem to soothe,
And, redolent of joy and youth,
To breathe a second spring."

I look to this growing custom of returning to the native village, after the meridian of life is passed, as a circumstance tending greatly to the improvement of our agriculture. The effects are already seen in the multiplication of fine farms, neat and even elegant dwellings, spacious barns, substantial and permanent enclosures, fields under the highest cultivation, and avenues of trees, planted for ornament and shade. This last point is worth the particular attention of our fellow-citizens in the country. Till lately, perhaps, this generation, following the had example of the last, has not done quite so much in this way as might have been wished. It is a kind of instinct in the settlement of a new country, to destroy trees; and it takes a good while to restore to the community a disposition to spare, protect, and propagate them. Some public-spirited individuals, however, in our country towns, began to think of this matter, in the middle of the last century. There are in the interior of New England a great many noble trees, planted eighty or one hundred years ago; and most certainly nothing grows out of the earth, and man can put nothing upon it, so beautiful. I hope, my friends, we shall let our children and grandchildren enjoy the great comfort to be derived from this source. Sir Walter Scott represents one of his characters as saying that his father used to tell him to be always putting down a tree. "It will be growing, Jack, when you are sleeping." It will be growing, sir, when we are sleeping to wake no more. The acorn which you cover with a couple of inches of earth, the seedling elm which you resene in your garden from the spade, will outlive half a dozen of our generations. Cicero speaks of it as a kind of natural foresight of the continued existence of man, that men "planted trees which were to benefit a coming generation." Yes, sir, and if every man, before he goes hence, would but take care to leave one good oak or elm behind him, he would not have lived in vain. His children and grandchildren would bless his memory.

I am afraid I have spoken too long, sir, in this rambling way; but if you will allow me one other word, I will say that there is a species of culture more important than any within the range of material husbandry,—I mean the culture of the mind. But I need not say much on this topic. You have yourself, sir, in your instructive discourse, placed its importance before the company in a clear light. Still more, sir, am I led to spare my remarks on this subject, when I reflect that I am speaking in the presence of one (Mr. H. Mann) whom I may without impropriety call the very apostle of this uninspired gospel. He has told you over and over again that education is the great interest of every class in the community. I will only say, sir, that if the women of New England wish their principles to prevail, or their influence to be perpetuated over the country, the only way in which they can for any length of time effect this object, is to educate their children to understand those principles, and firmly and effectually to maintain them.

Allow me, sir, in taking my seat, to thank you and this company for your very kind attention, and to express my best wishes for the prosperity of the Norfolk Agricultural Society.

Will Good Bread ever be a Common Blessing in this Country?

We fear not till some more efficient steps are taken by the managers of the various agricultural societies than they seem as yet to have even dreamed of. Something more is needed to reach the root of the difficulty than the award of a premium for the best bread at an exhibition. Particulars are as important in such a case as a minute description of the process of making butter, such as has frequently been given to country societies by successful competitors for prizes. The kind of practical knowledge that shall enable others to attain the desired result, is the very thing most needed, and which seems thus far to have been overlooked.

A recent exhibition in London shows that in this matter of bread making as well as many other of the arts of life, "knowledge is power." It was by a French firm in that city, showing the method by which, by a peculiar modification of the fermenting process, the amount of bread from a given weight of flour could be increased at least fifty per cent. Two sacks of flour were used, one being manipulated in the ordinary way, the other by the French manufacturers. The first sack converted into bread by the usual method, produced ninety loaves weighing 360 lbs. The second bag of flour placed in the hands of the French bakers, produced one hundred and fifty-four loaves, weighing 520 lbs.—an increase which, it is asserted, could not have arisen from any weighty substance being mixed with the dough, by the French bakers, as no extraneous ingredient could be discovered in the loaf by the most rigid chemical analysis.

There is unquestionably a great lesson to be learned in the economy of the use of flour, as well the production of a palatable and wholesome article of diet made from it, of our French neighbors. It has for years been the uniform testimony of travelers in all parts of the country that at all public houses, and even in the meanest way-side inns, the bread furnished is invariably of excellent quality. It follows as a matter of course that their knowledge on this subject is very superior to that of the great majority of our own people, and that a friendly interchange of ideas would very much promote our comfort and increase our happiness.—*Cambridge Chron.*

The best outlay of money is on good deeds.

Miscellany.

[For the California Farmer.]
"ALL IS NOT DARKNESS YET."

Though shadows drear, should cloud our sky,
And griefs our inward peace destroy,
Some rainbow tint may soon come by,
And bring to us sweet drops of joy.

Though brightness may depart awhile,
And darkness shroud the present roll,
A star may rise, with happy smile
illumine the desert of the soul.

The gorgeous shades of sunset hour
Dissolve in twilight's sombre wave
Till Luna, radiant in her power,
Wakes, Phoenix-like, from Sol's dark grave.

The friends of youth's own sunny throng
May all depart, one after one,
Yet in the hours of manhood's prime
New forms supply the hearts now gone!

When flowers of gay, delicious spring,
Soon wither 'neath an early doom,
The summer days profusely bring
A richer and more lasting bloom.

When fondly cherished hope decays,
And dreams dispelled in waking thought;
When treacheries black, our trust betrays
Our friendship, by a traitor sought;

Even in this time, 'neath sorrow's sway,
When heart, and soul, and mind are bowed,
A hand may chase the gloom away
And show bright living to the cloud.

So cheer in life, though in its sea
Our bark by storm and tempest tossed,
Upon its prow, this truth shall be,
"All that's in danger is not lost!"

And when our voyage here is past
And Charon's boat will guide our oar,
Oh! may we anchor safe at last,
Our haven, Heaven's eternal shore.

MARY MAY.

[For the California Farmer.]
OUR LITTLE DAUGHTER ELLA.

We had one little daughter,
Sent to us from above,
Our darling little Ella
Was formed to bless and love;
So peaceful, innocent, and true,
So gentle and so dove-like, too.

She came, our home to gladden
For two short fleeting years;
She's gone, our hearts will sadden,
Our eyes grow dim with tears
Whenever we think of that dear one,
So early called, her sweet life done.

She filled our hearts with sunshine,
She filled our home with love,
Before the Angels called her
To dwell with them above;
Before we laid her down to rest,
Within her little "cotton chest."

Dear Ella looked so sweetly
When laid upon her bier,
We thought her far too lovely
To be a dweller here;
Too fair to be of mortal birth;
Too fair to be a child of earth.

Peeps Behind the Curtain.

Domestic happiness! thou only bliss
Of Paradise that has survived the fall!
Though few now inside thee uninspired and free,
Or, tiring, long enjoy thee; too infirm,
Or too incutious, to preserve thy sweets
Unmixed with drops of bitter.

Cooper's Task.

Home, sweet home! around which centre the
hopes, the holiest aspirations, and the dearest af-
fections of the human heart!

To be homeless, the greatest calamity; to pos-
sess a home, in the true sense of the word, the
greatest happiness of earth!

There are happy homes, hundreds of them, in
our land; and alas! there are also hundreds of
homes seemingly happy, where selfishness, or
willful waywardness, a want of forbearance, or a
teasing, fretful, fault-finding spirit, in one or
other of the married pair, has destroyed all love
and all happiness, and the matrimonial fetters are
eating like a canker into the very soul.

Not most frequently, by great derelictions from
duty, is domestic happiness destroyed; it is by
the trifles of daily life, those little things, scarcely
noticeable as they occur, one by one, yet, in the
aggregate, making up the sum of happiness or
misery. Little attentions or little neglects, inci-
dental approvals or slight fault-finders, an ap-
preciating sympathizing spirit or an ill-disguised
contempt, nay, even a distaste for the beloved sen-
timents and pursuits of a companion, will fill to
the brim the cup of happiness, or cause the foun-
tain of domestic love to become as the waters of
Marah.

The great remedy for all these evils is to begin
right. It is true, there may be domestic reforms
as well as any other, but more seldom than the
reform of an inebriate is that of a capacious, ex-
acting, fault-finding husband or wife. Therefore
not for the benefit of the long married shall we
presume to lift the veil of the inner temple of do-
mestic life, but for the benefit of those young,
loving hearts to whom home and affection are al-
most synonymous with heaven. Those who
really desire to avoid the rocks of domestic dis-
cord, and the equally dangerous shoals of indif-
ference, should be allowed a peep behind the cur-
tain, that they may draw their own inferences
and treasure up their own appropriate warnings.
It is not intended to give veritable daguerre-
types of married friends; but if any one fancies
a picture and thinks it a good likeness, there will
not be the slightest objection to the individual
appropriation.

I.—THE GOON HOUSEKEEPERS.

"I have brought home a new book to read to
you this evening, dear Mary," said Edward Her-
vey to his young wife, as they rose from the tea-
table, "we are fairly settled now, and can begin
to enjoy our home."

"Oh, I shall be so glad if you can only spend
your evenings at home," exclaimed Mrs. Hervey.
Her husband smiled at her enthusiasm—it
nearly equalled his own. "I must sometimes be
gone an hour or two after tea," he said; "but
most of these long winter evenings I hope to
spend at home. Home! How sweet that word
sounds. It is a long, long time since I have had
a home, and now—" Hervey's emotion prevented
his completing the sentence. Thoughts of his
long years of orphanage—his struggles with the
world—and his heart-loneliness, contrasted with
the present blissful fruition of all his fond day-
dreams, choked his utterance, the crystal tear-
drop bedimmed his eye—and turning abruptly
away he left the room.

Mary Ellsworth, the object of Hervey's choice,
his "gentle Mary," as he fondly called her, was
a woman of warm affections, and not one of the
varying shades of thought that passed quickly
but eloquently over her husband's face had escaped
her notice, and her heart throbbed joyously at
the thought that it was to be her delightful life-
task to bless him whom she loved most de-
votedly.

She knew she was well instructed in those do-
mestic duties which are indispensable to home-
happiness, and she looked around her on her
little domain with the satisfaction and pride of
an empress.

Half an hour later, and the shaded lamp, the
easy chair and slippers, the brightly blazing fire,
and the smiling wife with her work-basket, pre-
sented to the eyes of the returning husband the
fac simile of his ideal domestic Eden.

"Now for the book," said Hervey, when fairly
escorted among the cushions of his luxurious
chair; and he proceeded to remove the wrapper
from an elegantly bound volume.

"What have you there?" asked his wife, at-
tracted by the beautiful appearance of the book.
"Let me look at it a moment—Cowper's Poems."
Well it is very handsomely bound; and after
carelessly turning over the leaves a few moments,
she returned the book to her husband.

Hervey took it with an indefinable feeling of
disappointment—a half conviction that he ought
to apologize for—he knew not what.

"I am anxious to possess the works of all the
standard poets," he said at length, "and thought
we would read them together this winter; and
it seemed to me Cowper's 'Task' would be an
appropriate beginning. I believe you like poetry
—do you not?"

"Oh, yes, very much," was the reply; "why
don't you begin to read?"

Hervey commenced reading, and for a time his
wife seemed interested, and her appreciating
glance, as he commented on the poet's fancies,
banished all feelings of disappointment. But an
hour passed and Mary became more absent-
minded, and so deeply absorbed in her own
thoughts that she heard not the reading; and
when a remark from her husband roused her, a
half-uttered response plainly told that her mind
was otherwise occupied.

At length he paused.

"What would you like for breakfast, Ed-
ward?"

Alas! how that question destroyed every ves-
tige of one scene in his ideal panorama of a mar-
ried man's existence.

"She's a fool!" was his first indignant thought;
but the second cooler reflection was—"I have
read too long; I have wearied her; and 'twas her
very love for me prompted that question."

A few more attempts on succeeding evenings,
and the "standard poets" were read in silence
and without comment. Mary had discovered
that she did not like poetry.

Time passed on. Mrs. Hervey was a pattern
housekeeper, a good wife, and an excellent mother,
so far as all things relating to physical well-being
were concerned. The home of the Herveys was
a quiet, well-ordered house, but the husband and
wife were not happy. They never quarreled;
but there was no congeniality of feeling. Mrs.
Hervey was a good housekeeper, and nothing
else.

Did her husband seek himself for a quiet even-
ing at home, he was entertained with the details
of domestic management and domestic troubles;
and if a more ennobling topic of conversation was
introduced, Mrs. Hervey was too busy or too
much fatigued to listen.

Gradually Edward Hervey withdrew from his
home to spend his leisure hours alone in his office.
With too much principle to fall into vice, he be-
came a cold, stern man, burying his warm affec-
tions so deep in his own bosom, that none would
have dreamed that Judge Hervey had ever loved.
And he believed woman to be mentally inferior
to man.

It took years to effect this change—years to
convince the fond husband that, for his sake, and
for the sake of her children, his wife would not
spend her leisure moments in developing, discip-
ling, and strengthening her mind; that she
would not seek a higher aim in life than the daily
answer to the questions, "What shall we eat?
what shall we drink? and wherewithal shall we
be clothed?"

But she was bound to her idols. To be mis-
tress of a well-ordered house, to keep her children
neatly clothed, and to prepare excellent dinners
for her husband and friends, were to her the sine
qua non of existence.

Yet she was unhappy. She knew nothing of
what progress the world was making beyond the

gossip of the day, or the chance remark of her
husband or his guests; nor did she care to know.
She was well aware of the uncongeniality of
thought which existed between her husband and
herself, but she made no effort to lessen the dis-
tance. She considered herself the aggrieved
party, and looked upon a man who would not
relinquish books and intellectual improvement,
for the society of his wife and children, as a most
selfish specimen of humanity.

And thus they continue to live. Outwardly
all is calm, and they are called happy. But there
is no soul-communion—no interchange of beauti-
ful thoughts and high and ennobling sentiments.
The torch of love burns more and more dimly,
and, imperceptibly, mutual confidence is being
withdrawn; and when, at last, death shall come,
the survivor will scarce mourn the departed.

One hour, nay, even half an hour—each day,
devoted to self-improvement, with woman's native
intuition and love's gentle teachings, would have
made Mary Hervey a congenial, though less ad-
vanced intellectual companion; would have so
united husband and wife, that each could have
vied with the other in self-sacrifices; and the hour
of dissolution would have found the hymeneal
torch burning with a purer, brighter flame than
on the day of their espousals.—*Life Illustrated.*

LIME WATER IN BREAD MAKING.—In bread
making, the vinous fermentation sometimes
passes into the acid, thus rendering the bread
sour and disagreeable. Liebig has lately per-
formed a series of experiments to improve the
preparation of bread, from which he comes to the
conclusion, that the only effective and innocuous
means of improving the qualities of wheat and
rye bread, is lime water. In making dough he
advises one pint of clear lime water to be used
for every pound of flour. The lime water is first
added to the flour, after which a sufficient quan-
tity of common water is added to work the whole
into common dough—the lye being mixed
with the water. The lime water prevents the
bread becoming sour, and is a healthy ingredient.
Lime water can be prepared by stirring some
quick lime in a vessel containing pure cold water,
then allowing the sediment to settle. The clear
is then poured off, and kept in bottles for use.
No care is required respecting the quantity of
lime to be stirred in the water, as the water will
only take up a certain quantity of lime, and no
more. Those who use saleratus (bicarbonate of
soda) in the making of bread, are recommended
to cease its use, and employ pure baker's yeast
and a little lime water. Our bones are composed
of the phosphate of lime, and those who use lime
flour require for their health a little more lime
than is contained in their food. Cream of tartar
and carbonate of soda are far inferior to common
yeast in making healthy bread.—*Scientific Am.*

SUBSTITUTE FOR POTATOES.—For the last
four years considerable attention has been paid
at the Museum of naturally history in Paris, to
the cultivation of a plant coming from China, and
known under the name of *Dioscorea Japonica*.
This plant, says the writer of a paper sent to
the Central Agricultural Society, may, by its
size, weight and hardy character, become exceed-
ingly valuable for the potato. Its tubercles, like those
of the Jerusalem artichoke, resist in the open air
the severest winter, without sustaining any injury.
Several specimens of these roots, of very large
size, were presented in 1852 to the Society, one
of which, of cylindrical form, was three feet in
length; another presented in 1853, weighed three
pounds; the former having been in the earth
twenty months and the latter sixteen. The fla-
vor of this vegetable is more delicate than that
of the potato.—*Galignani.*

**NOVEL MODE OF MOUNTING A HORSE IN
PERU.**—The women do not all work, and the men
are a good-for-nothing set of gamblers and thieves.
The women ride on the hind quarters of their
horses, without a saddle, cross-legged, with the
load on the horse in front. They mount the ani-
mal by taking hold of his long tail, making a
loop by doubling it up, and clamping with one
hand the upper part of the tail, then putting one
foot in the loop, and the other foot on the joint
of the horse's leg, they ascend as if going up
stairs. They usually stand erect on the horse
before sitting down. The horses never kick or stir.

GOOD MORNING.

"Oh, I am so happy!" a little girl said,
As she sprang, like a leaf, from a low trundle bed;
"The morning—bright morning! good morning, papa!
Oh, give me one kiss for good morning, mama!
Only look at my pretty canopy,
Chirping his sweet good morning to Mary;
The sun is peeping straight into my eyes—
Good morning to you, Mr. Sun, for you rise
Early to wake up my blide and me,
And make us as happy as happy can be."
"Happy you may be, my dear little girl,
As the mother struck softly a clattering curl—
"Happy you can be—but think of the One
Who awakened this morning, both you and the sun."
The little girl turned her bright eyes with a nod—
"Ma, may I say, then, good morning to God!"
"Yes, little darling one, surely you may,
Kneel as you kneel every morning to pray."
Mary knelt down, with her eyes
Looking up—earnestly—into the skies;
And two little hands that were folded together,
Softly she laid on the lap of her mother,
"Good morning, dear Father in Heaven," she said—
"I thank thee for watching my snug little bed;
For taking good care of me all the dark night,
And waking me up with the beautiful light;
Oh, keep me from naughtyness all the long day,
Dear Father, who taught little children to pray!"
An angel looked down to the cradle and smiled,
But she saw not the angel, that beautiful child!

Ladies' Department.

The Standard of Female Education should be Raised.

We are pleased to notice that the importance
of raising the standard of female education and
of making provisions for that end, is beginning to
attract the attention of some of the legislatures of
the States, and of the more intelligent classes of
citizens throughout the country. It seems to be
thought by many that our daughters should have
the opportunity of acquiring an education of as
high a grade intellectually, as our sons have had
procured for them in the several colleges through-
out the Union; and that it is not wise nor in ac-
cordance with a just sense of the best interests of
society, that the latter institutions should receive
State and other patronage and material aid, while
the education of females is left almost wholly to
the contingency of female enterprise. The happy
improvement in public opinion which is indicated
in the demands made in our legislatures for Fe-
male Seminaries is evident in several other forms,
and especially in the increase of the number of
females sent to the various Union Schools, Nor-
mal Schools, Academies and other seminaries
provided for them.

We hail this improvement in public opinion as
likely to be productive of much good. Even if
schools and colleges for females should be mere
copies of those provided for the education of young
men, there would be much good, along with a
drawback of some evil, from such an education as
the female mind would thus receive. But we
trust that female higher schools, seminaries and
colleges will not be modelled after the pattern of
collegiate institutions as they at present exist,
and as they have been since their first organiza-
tion in a remote ago. The course of study pur-
sued in colleges two or three generations ago,
might be well enough for the wants and the cir-
cumstances of those times, but that course, re-
ceived by tradition, inheritance or otherwise from
our fathers, is very far from being adapted to the
wants and interests of the present age. We
could have education, both in schools and colleges
have a more direct bearing on, and connection
with, the practical business of life. And when a
course of study and a plan of culture are adopted
for female colleges we trust that very little re-
gard will be paid to the mould in which almost
all our present colleges have been cast.

But we are wandering from our purpose, which
was to state a consideration in favor of raising
the standard of female education, which has been
suggested by the perusal of some facts and statis-
tics of adult crime and juvenile delinquency. In
the briefest possible form we will give some idea
of the tenor of these statistics, and then state the
suggestions which they originated, bearing on the
subject of female education, and especially on the
importance of a higher esthetic and ethical cul-
ture.

The connection between character and habits
and the tastes in youth, and the fully developed
character in manhood, has been so generally ob-
served to be very close indeed, that the observa-
tion has passed into the proverb which affirms
that "the boy is father of the man." There are
aspects in which this truth is of very melancholy
import. But there is, also, an aspect in which it
may be regarded, which is very cheering and
suggestive of the great importance of bringing all
possible good influences to bear on the young,
during the age when character and habits are
forming. This question was recently submitted
to a large number of city missionaries, viz: "How
many do you estimate, who have lived an honest
life up to twenty years of age, have afterward
fallen away, and entered on vicious habits?"
The answer from almost every missionary was,
"Not even two in a hundred!"

While good training and virtuous habits are to
such an extent a safeguard against the inroads
of vice in adult life, the converse is also well es-
tablished, namely, the juvenile delinquency almost
always leads on to adult criminality.

The argument which may be drawn from facts
and conclusions such as those we have just named,
in favor of a very high standard of education, and
especially of moral education, for females, is one
which appears of much force, though seldom, if
ever, used by the advocates of Female Colleges,
&c. The argument may be put in this form.
Children are much more in the company of their
mothers than of their fathers, during the most
docile and impressionable years of their life, and con-
sequently mothers usually have more influence in
determining the character of their children than
their fathers have. Now if females generally had
a higher grade of culture, especially of esthetic
and moral culture, than hitherto they have had,
they would be better prepared to exert a good
influence on their children, during the period of
the molding of their tastes, dispositions and
habits. In other words, better mothers would
make better children. Vice, folly and vulgarity
would decrease, and all good and excellent qual-
ities be more generally developed. And in this
respect it appears of more importance that females
should be well and highly educated than that the
other sex should. For, however highly the edu-
cation of the male sex may be carried, it will af-
fect but little the children of the next generation.
But if the education of females is raised to a
higher standard, the results of that improvement
will very extensively, if not universally, perpetu-
ate themselves, and produce an improvement in
the manners, tastes, dispositions and moral qual-
ities of the generation which has the advantage
of mothers so educated. Elevation and improve-
ment will thus increase with every succeeding
generation, and multiply themselves indefinitely
through all the future.

FROM THE EAST.

THE Nicaragua steamship Sierra Nevada, arrived at this port Monday evening, with over 400 passengers. Dates from New York are to the 12th ult., and from New Orleans to the 13th. There is no later news from Europe.

A great uproar has been created in the New Jersey Legislature, in consequence of a bribe of \$1000 being offered a member to vote for the renewal of certain bank charters.

Fears are entertained concerning the safety of the U. S. sloop of war Decatur, which sailed from Rio Janeiro on the 26th Sept. last, for Valparaiso.

Old Nassau Hall, at Princeton, N. J., was entirely destroyed by fire, March 10, together with the books, clothing, and furniture of the students. The gallery of pictures, however, a choice and valuable collection, was rescued.

Bill Poole, the pugilist, who was so savagely assaulted and shot at Stanwix Hall, N. Y., in the latter part of February, died at his residence, on the 8th of March, from the effects of his wound.

Governor Wright, of Indiana, has vetoed the Free Banking Bill.

The members of the Mexican Boundary Commission appointed by the Government of Mexico, had at last accounts left Guaymas for the Rio Colorado.

The entire business part of the town of Monroeville was destroyed by fire on the 3d ult. The loss is over fifty thousand dollars.

The famous Kinney Expedition, it is said, "has exploded."

The Ostend Conference, which convened last summer, and the object of which was never fully understood, it now appears was assembled at the request of the President, and composed of Messrs. Buchanan, Mason, and Soule, our Ministers at the Courts of St. James, St. Cloud, and Madrid. A publication has been made of their proceedings, which decides that Cuba ought to be purchased, and if Spain refuses to sell, wrest it from her. Mr. May replies to the report, and recommends a resumption of peaceful negotiations, at which Mr. Soule takes offence, asserting that such a course would be humiliating to his self-respect, and so resigns.

U. S. SUPREME COURT, March 10.—No. 72; John Charles Fremont vs. the United States. On appeal from the District Court for the Northern district of California. Chief Justice Taney delivered the opinion, reversing the decree of the District Court, and remanding the cause for further proceedings, in conformity with the opinion of the court.

One of the boxes of gold, containing about \$20,000, lost from the shipment of Messrs. Page, Bacon & Co. about two weeks previously, had been found in the coal bunk of the Sierra Nevada, the ship which took the gold down from San Francisco. The thieves had evidently concealed it there and had not been able to remove it ashore. When the ship was being coaled, preparatory to leaving for San Francisco, the box was discovered.

Burgoyne & Co. are under protest in New York and Boston for \$175,000. It is said they expect to be able to pay their debts in full, but leaving their drafts entirely unprotected has been the cause of a great deal of dissatisfaction and hardship.

SUTTER CLAIM.—The Sacramento Union learns that in the event of the departure of Commissioner Felch for the Atlantic States, his written opinion on the Sutter claim will be left with the remaining Commissioners. It says the speedy adjudication of this claim has been determined upon, and the decision will unquestionably be made public in a few days.

LARDER STRAWBERRY.—We have received a cluster of "Honey's Seedling," from Ed. Cornett, Esq., from vines grown in his garden in Bryant street, in this city. One of the strawberries measured 3 3/4 inches in circumference.

As we go to press, a fleet of clipper is entering our harbor—more goods, more freight to pay, more money to leave our shores, and more hard times, until we stop this ruinous system that is eating out our life blood.

WE have received the first number of the Fireman's Journal, which made its first appearance on Saturday last. It presents a lively editorial tone.

FREMONT'S CLAIM.—It is said that a great majority of the citizens of Mariposa are favorable to the confirmation of this claim, from the fact that when quartz mining companies can get title to their claims, a large amount of capital will be brought into the county. The richest quartz veins in California are in Mariposa county.

DECIDED LAND TITLES.—The Alta gives a statement of the whole number of land titles decided by the former and present U. S. Land Commissioners, as follows: Former Board, 72; Present Board, 510; of which Commissioner Felch decided 273; Commissioner Campbell 83; Commissioner Thompson, 103; and Commissioner Farwell, 42.

ASSIGNEES' BONDS.—In the 4th District Court Monday, an order was issued requiring assignees of Adams & Co., Messrs. Roman, Jones & Cohen, to give bonds for the faithful discharge of their duties in the sum of \$1,000,000 for Adams & Co., and \$250,000 for I. C. Woods.

ACKNOWLEDGMENTS.—We return our thanks to Messrs. Murray & Co., Montgomery Block, and the proprietors of Noisy Carrier's Hall, No. 77 Long Wharf, for late New York and Boston papers received per the steamer Sierra Nevada.

We are indebted to Wells, Fargo & Co. for files of eastern papers by the Sierra Nevada. We also received from their attentive messengers, by the steamers from Oregon and the Southern Coast, full files of Oregon, San Diego and Los Angeles papers.

The Pacific Express Company have kindly furnished us with up-river papers, daily, and files of Oregon, Southern and Eastern papers.

REV. FREDERICK T. GRAY, the late pastor of the First Unitarian Church in this city, died in Boston on the 9th of March. Mr. Gray was born in Boston in 1804, and was consequently fifty-one years of age. The disease which brought this good man's life to an end in this world was a cancer in the stomach.

A NEW DRESS.—The Southern Californian has improved its typographical appearance, with a suit of new and beautiful type. Several of its columns are now printed in the Spanish language.

MARRIED.

On the 1st April, in this city, by Rev. Mr. Wirde, Wm. H. Hule and Hannah A. Fowler.
On the 4th April, in this city, by Rev. S. H. Willey, Luther Knight and Miss C. D. Oliver, all of this city.
On the 1st April, in Placerville, by Rev. Bishop Low, Daniel Gelwick, Esq., editor of the "Mountain Democrat," and Miss Bridget Delaney.
On the 1st April, in Marysville, by Justice Nagrada, Howell Davis and Mrs. A. C. Armstrong, all of Marysville.
On the 25th March, in Sonoma, Dr. T. Thompson, late of St. Louis, Mo., and Miss Kate York, late of Buffalo, N. Y.
On the 5th April, in Placerville, Wm. A. January, formerly of Kentucky, and Miss Mary H. Murgutson, late of Indiana.

DIED.

On the 4th April, in this city, of phthisis pulmonalis, Anton Ruseenthal, a native of Riden, Germany, aged 40 years.
On the 3d April, in Sacramento, of consumption, Mrs. Mary Gotcher, wife of Wm. Gotcher, in the 35th year of her age.
On the 5th April, in Columbia, Mr. John Penabody, of Potomac, Canada East, aged 26 years.
On the 5th April, in Columbia, a daughter of Mr. and Mrs. Terry, aged 10 years.
On the 31st March, on Sutter Creek, Catharine, wife of Jonathan Jones, aged about 45 years, formerly of St. Joseph, Mo.

SAN FRANCISCO MARINE LIST.

ARRIVALS.
April 4.—Bark Desdemona, Fallley, Oregon, 8 days; lumber.
Sch. Walter Francis, Scudder, from the wreck of the bark W. T. Whetton.

Between Clay and Commercial streets.
Pay particular attention to the preparation of
Physicians' Prescriptions,
and the dispensing of Family Medicines. The public can rely
upon all articles prepared in this establishment as being of the
Purest and Best Quality,
and at reasonable prices.

MEDICINES AT MIDNIGHT.
Medicines can be obtained at all hours of the Night.
French, German, Spanish and Italian spoken. [v3-15]

"Take no thought for the morrow."
THIS TEXT MEANS, BE NOT UNREASON-
ably anxious or disturbed by future cares. It is an advice
readily adopted, if we take such steps as prudence suggests.
Suppose we are troubled with Coughs or Consumption, the
temper is sour, and the good dispositions of the soul languish,
the mind suffers; but obtain bodily relief from the use of Dr.
DEVINE'S COMPOUND PITCH LOZENGES, and the mind
and soul repose in that angelic reliance on Divine Providence
which the text commends. Price 50 cents a box, or 3 for \$1.
Sold by
LITTLE & CO., Apothecaries,
137 Montgomery street. [v3-11]

Southwick & Co.'s Grand Raffle.

IN consideration of the extreme difficulty which enterprises
of all kinds have to contend against at the present time,
owing to the scarcity of money in this city, and all parts of the
mines, and feeling sure that Southwick & Co. have not had a
fair chance to dispose of their tickets, through times of unpar-
alleled depression and stagnation in the business community,
as well as with the laboring population in this city and all por-
tions of the mining region, we are induced to come forward
and purchase the tickets of Southwick & Co., so as to insure
the drawing coming off at an early period. They have already
sold a large portion of their tickets, and in soliciting the for-
bearance of those who hold their tickets, we have every cause
to defend in assuring them, that they run no risk in consenting to
a further postponement of thirty (30) days, at the expiration of
which time, we feel assured, they will have disposed of most of
their tickets; we feel they call upon all who may feel favor-
able to the Scheme, to come forward at once and purchase
tickets without delay. This postponement, we feel sure, will
be more satisfactory to the ticket holders and the public gener-
ally, than that the proprietors of the Raffle should retain a large
quantity of tickets themselves. Under these circumstances the
proprietors have fixed the day of drawing for
Monday, 30th of April,
from which there will be no further postponement.
Heartily concurring in the above, and recommending the
Scheme to the favorable notice of the public. We are, &c.,

HOTELS.

Orleans Hotel,
Second, between J and K streets, Sacramento.
THE above Hotel, occupying a space of 85 by 150 feet,
in the most central part of the city, built of brick and
three stories high, offers inducements to travelers not surpassed
by any establishment in the State.
The ground floor is set apart for Dining Room, Reading
Room, Billiard Room and Bar Room.
The Table will be found at all times supplied with the choicest
of the market.

At the Reading Room can always be found the daily papers
of the State and the latest dates from the Atlantic and Europe.
The Billiard Saloon is furnished with five excellent tables,
superintended by a competent keeper.
The Bar will be supplied with the best liquors and Wines.
The second and third stories of the building are set apart for
Parlor, Family Rooms and Chambers, comfortably furnished.
We have also leased the large brick building corner of K
and Front streets (formerly known as Sackett's Hotel) set apart
for Lodging Apartments, which are furnished in a superior
manner, which, added to the Hotel, will afford ample accommo-
dations.
The "Orleans" is also the Depot and Office of the California
Stage Co., from which place Stages leave daily for all parts
of the State. [v3-2] HARDENBURGH & CORSE, Proprietors.

Russetto House,
SAN FRANCISCO, CALIFORNIA.
THIS HOTEL offers inducements to persons visiting
San Francisco, unequalled by any on the Pacific Coast.
Gentlemen can be accommodated with single rooms, or fami-
lies with suites of rooms.
The House is entirely new, built of brick; all the rooms are
furnished in a style of comfort hitherto unknown in the Hotels
of California, and the House is capable of accommodating over
five hundred boarders. [v3-3m]

Murray's Fifty-cent Western House,
Corner of Second and D streets, SAN FRANCISCO.
THIS HOUSE is entirely devoted to the wants of the
travelling public and to all who will favor us with a call,
entire satisfaction will be given. [v3-17] R. J. MURRAY.

American Hotel,
NAPA CITY, CALIFORNIA.
L. A. & W. W. CHAPMAN, Proprietors.
GOOD accommodations for families, and on reasonable
terms. Stable and buggy horses kept for hire. Horses
kept on hand, by the day or week, and well taken care of. [v3-28]

California Stage Company.
Office at the Orleans Hotel, Sacramento.
STAGES leave regularly for the following
places: Nevada, Ophi, Auburn, Yanco
Jin's, Georgetown, Placerville, Mormon
Island, Coloma, Drytown, Jackson, Mukhehine Hill, Stockton,
Sonoma, Marysville and Shasta, and all parts of the Northern
and Southern Mines, every morning, as follows:
Nevada and intermediate places, at 5 1/2 o'clock A. M.
Georgetown " 6 " "
All other places " 6 1/2 " "
Accommodation line for Mormon Island, 1 1/2 o'clock P. M.
All passengers will be called for in their residences, and the
utmost attention and care paid to them and their baggage.
Stages arrive in time every day for the San Francisco boats.
JAS. HAWORTH, President C. S. Co.
J. P. DEIGMAN, Secretary. [v3-14f]

Travis & Van's International Hotel Stage.
PASSENGERS will be taken to the inter-
national Hotel free of charge, and to any part
of the city for One Dollar. The proprietors will, in all cases,
be responsible for baggage, after it is put in their charge. Any
orders for the stage left at the International Hotel will be
promptly attended to. Our stage may always be known, hav-
ing the name of International Hotel on the sides, and in the
night time it will be seen on the lamps. [v3-10d]

PACIFIC EXPRESS COMPANY.

Take notice.—Adams & Co., in consequence of the
disruption of that firm, have organized themselves into a
joint stock company, under the above name and title, for the
purpose of conducting a General Express and Forwarding
business in all its branches, throughout California, Oregon and
the Pacific Coast generally.

The business will be strictly and solely a forwarding one,
having no connection with banks and bankers, and will be con-
ducted on safe and economical principles.
The Expresses will leave the office at the north-west corner
of Washington and Montgomery streets, daily, at regular hours,
for Sacramento and the Northern Mines, Stockton and the
Southern Mines, San Juan, San Joaquin and Santa Cruz, Mon-
terey, San Pedro and the Southern Coast generally, as well as
to the Northern Coast of California and Oregon.

We will also run a regular Express for Freight, Small Par-
cels and Letters to and from the Atlantic States by every
steamer.
The parties who have organized this company are well
known in the community as old and experienced express men,
and hope it will be acknowledged generally, understand their
business thoroughly. They think they are not saying too much,
when they attribute much of the success of the late firm of
Adams & Co. in the express business to their exertions and
personal energies.

In conclusion they would solicit a fair share of the favors of
the public, pledging themselves to exert their best endeavors to
transact such business as may be entrusted to them in a prompt
and business-like manner.
Collections of all kinds will be promptly attended to at any
of the points mentioned above.

San Francisco, March 1st, 1855. R. G. NOYES, President. [v3-10]

THEODORE PAYNE, SQUIRE P. DEWEY,
THEODORE PAYNE & CO.,
REAL ESTATE AND STOCK AUCTIONEERS.
OFFICE AND SALES-ROOM CORNER CALIFORNIA AND MONTGOMERY STREETS.

THEODORE PAYNE, AUCTIONEER.

Messrs. PAYNE & CO. respectfully inform the public that they have established themselves as above, for the purpose of transacting the

Real Estate business, in all its branches. For the conducting of which they esteem themselves peculiarly qualified, by having given it their special attention for over two years past, and made themselves familiar with all questions affecting titles, &c. &c.

They will give their special attention to the public sales of estate, by Administrators, Assignees, Receivers, Mortgagees, &c., carefully complying with the terms of law.

A Register for Property, at either public or private sale, always open at their office. 20 613

Ingham's Improved Smut Machines.

These Machines combine all the apparatus necessary to cleanse Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the purest samples of Smutty Grain, also remove short straws, white caps, seeds and other foul substances in the most perfect manner. All of the official rubbish is collected in a reservoir, while the grain and light dust are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient, without being unloaded. It is a California improvement and designed to meet the wants of this country; eastern machines having been found to be inadequate in that respect. It has received the highest recommendation from all using them, among whom are Pettit & Hillebrand, Brighton Mills, Sacramento; Brooks & Hull, Happy Valley Mills, San Francisco; Wm. Sharp, American Mills, San Francisco; Babbitt & Hale, Sierra Nevada Mills, San Francisco; H. S. Hill, Washington Mills, San Francisco.

These building Mills can save expense and room by using this machine, as they will unload all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHOP on L street, between Front and Second, Sacramento. H. B. INGHAM, N. B.—All information given, and orders left at WARREN & SON, San Francisco, will be attended to.

The following certificate is among the number received others can be referred to in quantities:

This is to certify that I have one of H. B. Ingham's Improved Smut Machines, and believe it to be superior to any other. I need no other fixture for cleansing grain, except the machine itself; it makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before.

WM. SHARP, Agent American Mills, Pine street, San Francisco. v3-5

INDIAN MUMMY.

ONE of the most interesting specimens of preserved humanity is now open for exhibition at the office of the CALIFORNIA FARMER. The residents of Dr. Evans, U. S. Geologist, furnishes sufficient data to prove its authenticity and value; the certificates of five of our most distinguished men furnish facts that should awaken a general interest in our community to see this valuable and positive proof of the earlier races of the aborigines of California.

The Mummy now exhibited is supposed to be a highly distinguished chief of some tribe of the "Flat-Head Indians." This race have left no record, and the present tribes have no knowledge of the race of which this is a representative. Capt. Russell, the discoverer, is familiar with the Indians of the same vicinity, speaks their language, and has been years with them; yet neither they nor himself can find any trace by which to recover the history of the present relic.

The Chief now measures 5 feet 5 inches in length—full size—the feet are 9 inches long. The body presents a natural appearance, and, as it lays in the casket, surrounded by the materials usually deposited with chiefs, together with other bones and skulls found with the Mummy, it is indeed a most interesting specimen.

Captain Russell has expended much in bringing this specimen to the city and preparing it for the States, and it is now offered for exhibition in hopes that a sufficient sum can be raised to retain it here, as it is a record of the early history of California.

The Mummy will be exhibited at the office of the CALIFORNIA FARMER, for a short time. Admission 50 cts.; Children half-price. The Press, Medical and Scientific men, and Clergymen, are invited free, as the object is diffusion of knowledge.

C. J. W. RUSSELL, Proprietor. v3-4

Artesian Well Boring.

WE would respectfully inform the public that we are fully prepared to take contracts in the above operations in a manner to guarantee satisfaction or no charge will be made.

SMITH & VAN DYNE having associated themselves with an old and experienced operator from the East, who challenges the world to compete with him in all the branches connected with the above business, are fully confident to guarantee success in all contracts that we may undertake, and warrant the work for one year. We have also implements for boring through stone to any depth, and all work done on the most reasonable terms.

For the satisfaction of those wanting anything in the above line, we would refer to Thomas Fulton, San Jose; Rufus S. Ellis, of Hawthorn & Fell; N. A. Sullivan, New Custom House; Wight & Co., 137 Jackson street, &c., &c.

We can do work cheaper than any other operators, for two reasons:

1st. Because we are prepared to work on a most extensive scale.

2d. Because we understand all branches connected with the above business, and are, therefore, able to work with certainty.

All orders left at the What Over House will be promptly attended to.

SMITH & VAN DYNE, Contractors, 118 Sansome street.

N. B.—We also refer to Warren & Son, publishers of the "California Farmer," who have seen and known the character of the work done.

Pottery! Pottery!!

San Francisco ahead of the World!
Ever on, on apace with the Age and Times!

Hurrah for Vance's new Daguerrean Gallery!
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to VANCE's who wishes best arranged Gallery on the Pacific Coast, and not to his own? Because he has the largest light in the world, from which he can form three distinct lights—top, side, and back light—thus giving him the most perfect and the most difficultly obtained in this city has to contend with—namely: in order to obtain perfect likenesses, different facial features require differently arranged lights.

3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for it is well known, the shorter the time the more natural the expression.

4th. Because every plate is carefully prepared with a coating of pure silver which produces the clear, bold and lasting picture that is so much admired, and which cannot be produced on the common plates, as they are now used by other artists.

5th. Because he has of late, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in the art, which enables him to produce perfect likenesses, at every sitting, with that clear, soft and beautiful tone, so much admired in all his pictures.

All these striking perfect likenesses will do well to call before sitting elsewhere, and judge for themselves.

Prices as reasonable, and work superior to any in the city.

Don't forget the place.
New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Astin's.

TREADWELL & CO.,
Corner of California and Battery streets, San Francisco.

Varieties.

SUNNYSIDE.—The following interesting particulars of "Sunnyside," the residence of Washington Irving, we find in the Detroit Tribune:

The house at "Sunnyside," in which Washington Irving resides, is one he built some three years ago. It is about two and a half miles below Tarrytown, directly on the banks of the Hudson. It is built on the site of the "Van Tassel House." In fact, the new structure includes a portion of the old walls. At an earlier day it was called Wolfert's Roost—Wolfert Acker being one of the Priory Councilors of the renowned Peter Stuyvesant. Afterward it came into the possession of the Van Tassels. It was here that the quilting party and dance took place so graphically described in the Legends of Sleepy Hollow. It was here that the unfortunate Ichabod Crane and Brom Bones unequivocally met, both being suitors for the hand and heart of Kate Van Tassel. Your readers will recall the amusing incidents of that story, and especially the last appearance of Ichabod Crane. A weather cock of miserable appearance is perched upon the gable end of the main building. It was once the ornament of the old Stadt House of New York, in the time of the old Dutch rule. The House is surrounded by trees—some wild and some planted by Irving. The buildings are nearly covered with vines and creepers. The Trumpet-flower and Ivy-rine are the most conspicuous of them. The ivy, that grows unusually rank, has a peculiar interest. It was brought from Melrose Abbey, near Abbotsford, Scotland, some twenty years ago. It was brought by a Mrs. Trenwick, an intimate friend of Mr. Irving, and planted at "Sunnyside" by her own fair hands. This lady was a Miss Jean Jeffrey. Her father was a minister, and it was of this lovely girl, then about 17, that Burns wrote the beautiful stanzas among the gems of his poetry.

SOMETHING TO BE REMEMBERED.—We should make it a principle to extend the hand of friendship to every man who discharges faithfully his duties, and maintains good order—who manifests a deep interest in the welfare of general society; whose deportment is upright, and whose mind is intelligent—without stopping to ascertain whether he swings a hammer or draws a thread. There is nothing so distant from all natural claim as the reluctant, the backward sympathy, the forced smile, the checked conversation, the hesitating compliance, which the well off are apt to manifest to those a little lower down, with whom, in the comparison of intellect and principles of virtue, they frequently sink into insignificance.

"Now," "Now" is the constant syllable ticking from the clock of time. "Now" is the banner of the prudent. Let us keep this little word always in our mind; and whenever anything presents itself to us in the shape of work, whether mental or physical, we should do it with all our might, remembering that "now" is the only time for us. It is indeed a sorry way to get through the world by putting it off till tomorrow, saying—"Then I will do it." No! This will never answer. Now is ours; then will never be.

"Ma," said an inquisitive little girl, "will rich and poor people live together when they go to heaven?" "Yes, my dear, they will be all alike there." "Then, ma, why don't rich and poor Christians associate together here?" The rich mother did not answer.

A CHAP stopping at the one of the hotels of the city of New York, being asked by the waiter whether he would have green or black tea, said he didn't care what color it was, if it had plenty of sweetnin' in it.

The average of human life is about 33 years. One quarter die previous to the age of seven years; one-half before reaching 17; and those who pass this age enjoy a felicity refused to one-half of the human species.

To one who said, "I do not believe there is an honest man in the world," another replied, "It is impossible that one man should know all the world, but quite possible that one may know himself."

The President, in his speech to the Veterans of 1812, who recently visited the Executive Mansion, en masse, said:—"You are welcome to this house, of which you are the proprietors, and I but the tenant."

BETTER AND BETTER.—A candidate for county clerk in Texas, offered to register marriages for nothing. His opponent undismayed, promised to do the same and throw a cradle in.

There is no right, without a parallel duty; no liberty, without the supremacy of law; no high destiny, without earnest perseverance; no greatness, without self-denial.

Somebody says a wife should be like roasted lamb—tender and nicely dressed. Somebody else wickedly adds—"and without sauce."

"RACHAEL, is your mistress out of spirits this morning?" "Yes, yer honor, she's jest taken the last drop from the decanter."

To some men it is indispensable to be worth money, for without it they are worth nothing.

"What is treason," asked a wag, "but reason to a t?"

GOVERN your thoughts when alone, and your tongue when in company.

HORTICULTURAL, &c.

17,000 Premium Strawberry Plants!

From the Shell Mound Nurseries and Fruit Gardens, Near San Antonio, Alameda County.

WE offer for sale the following list of Plants, viz.:

1,000 Boston Pine,	at	\$70 per 100
5,000 British Queen,	"	35 "
1,000 Burr's New Pine,	"	35 "
500 Rival Hudson,	"	35 "
5,000 Large Early Scarlet,	"	15 "
2,000 Hovey's Seedling,	"	15 "
1,000 Double Highbury,	"	15 "
1,000 Black Prince,	"	15 "
500 Crimson Cone,	"	15 "

Plants from "Shell Mound" received a premium at the late Fair of the California State Agricultural Society. Several of the varieties above named are believed to be remarkable for their fruitful qualities, having been cultivated for several years by Mr. Sniffler, at his gardens in Wayne county, N. Y., with special reference to the production of fruit.

Orders received for any number of plants, (not less than 100) and promptly executed. On invoices of \$500, and over, a discount of twenty per cent. from the above prices will be allowed.

Address, J. L. SANFORD, Cultivator, Shell Mound, near San Antonio; or, R. W. WASHBURN, Proprietor, Care of Wells, Fargo & Co., San Francisco.

Fruit Trees! Fruit Trees!

WE have received an invoice of fresh Drum-head Cabbage from Philadelphia—about 200 lbs., and guaranteed fresh, will be sold low by the entire invoice.

13-10 WARREN & SON, Montgomery street.

New Invention!

BULKLEY'S STEAM DRY KILN.

THE undersigned takes this opportunity to offer to the citizens of California, Oregon and Washington Territory, the valuable invention hereby announced. One of the greatest wants of California and vicinity, for years, has been the means of preserving their products so as to have a continued supply during the late months. The vegetable products to an immense amount are annually lost at the approach of the rainy season, its long continuance, and the exposure that necessarily results to those products from the season; and the vast quantities that are exposed and accumulated in warehouses and elsewhere, have demanded some method of preserving these immense and valuable crops, that otherwise would be a loss to the producer and to the State. The loss of the Potato and Onion crop last year would amount almost a million of money, and the loss by present year will be heavy, without preservation.

The undersigned, holding the "Patent Right of the Steam Dry Kiln," offers this invention with the confident assurance that it is the very thing needed—that it is the *ne plus ultra* for this very want. It has been thoroughly tried and approved, for these products, out for trials also. It has been tried for Lumber, to which it has been more particularly applied in the States, for the Vegetable products do not require so much care as here. To shippers of Grain this invention removes all the difficulty in handling Grain on long voyages, and under the drying process of this valuable invention our Grain growers can now send their Grain to New York with safety.

The proprietor needs only to append the following certificates. The name of Henry L. Ellsworth, Esq., carries a weight that is convincing to intelligent men, and the other evidences should be satisfactory.

The model machine will soon be placed on exhibition at the office of Warren & Son, where all information can be had.

JOSHUA BUTTS, Proprietor of Patent.

A Diploma and Silver Medal

Was awarded to the inventor at the last New York State Agricultural Fair, held at Rochester, as a testimonial of its superior merits.

Letters from Hon. H. L. Ellsworth.

LAFAYETTE, January 7, 1853.

DEAR SIR: I congratulate you on the completion of your Dryer. I have for a long time urged the importance of extracting the moisture from grain and flour before shipment, to prevent fermentation. Your plan will obviate the difficulties hitherto experienced. There can no longer be any doubt, that 18 pounds of water can be taken from a barrel of meal, and 15 pounds from a barrel of flour without affecting the taste or appearance of the same. Experiments at Lafayette show this. Nor is it a less gratifying circumstance that when the flour or meal is cooked, it reabsorbs proportionately more water, thus saving freight and the purity of the article. If the moisture is extracted, it must be obvious this meal will keep for long voyages, passing through the hottest climates. To the Navy, your invention is invaluable. The world has become somewhat skeptical on the subject of patent rights. The simplicity and compactness of your machinery enables you to exhibit a working model, to remove in a moment any doubts as to your ability to sustain your patent and prove its utility. One feature in your plan deserves particular notice; in fact, this constitutes the main claim, viz., not drying by common steam, or by fire heated pans, as has been done hitherto, but by using heated steam. Few persons are aware of the small expansion of steam, and how easily it can be heated to a high temperature with little confinement. You will be able to raise a stream to the point of ignition, say 600 or 700 degrees, through a far less heat will answer all your purposes. I will only say that European prejudice against Indian corn is fast dying away, and we may anticipate large shipments both for man and beast. The great fertility of the West, and the reduction of freights both inland and on the ocean, justifies this anticipation. Wishing you success, I remain, yours respectfully,

HENRY L. ELLSWORTH, late Commissioner of Patents.

To Henry G. Bulkeley, Esq., Kalamazoo, Michigan.

LAFAYETTE, March 20, 1853.

DEAR SIR—I am highly pleased with your Dryer for lumber by heated steam. It seems almost incredible how soon green lumber can be prepared for use. Twenty-four hours is all that is required. Steam has hitherto been used to advantage, but heated steam has not been applied for this purpose before your improvements. Every manufacturer of lumber would find it profitable to erect a cheap dryer on your plan. Pull one-third of the weight of some kinds of lumber is removed by drying; the swelling in cartage will more than repay the expenses of drying. When the difference between seasoned and unseasoned lumber is considered, no one who regards good work will regret the trifling expense of preparing the raw material.

Yours respectfully, HENRY L. ELLSWORTH.

To H. O. Bulkeley, Esq., Kalamazoo, Michigan.

HARRISBURG, Pa., July 12, 1853.

I hereby certify that I have had charge of one of W. O. Hickok's shops where the most of his wood work is done, that I put up and have used H. O. Bulkeley's Patent Kiln, and heartily approve of everything W. O. Hickok has said about it, and am certain that no recommendation can be too strong in praise of said kiln.

W. H. SOLLERBERGER.

NURSERIES, &c.

Golden Gate Nursery,

Corner of Folsom and Fourth streets, San Francisco.

OFFICE—No. 170 WASHINGTON STREET.

THE attention of the public is requested to a large collection of the flowering Plants, now for sale at this Establishment, embracing the most extensive assortment in the State; among which may be found—

Camellia Japonica, in seventy varieties; Perpetual blooming Roses, of all the classes; Moss and climbing Roses, do do; Fuchsias, a choice collection; Heliotropes, in variety; Rose and Lemon Geraniums; Lemon-scented Verbena, flowering do, Arbutus, Azaleas, Orlandera, Passifloras, Honey-suckle, Carnations, Dahlias, Bulbous Roots, &c., &c.; and a general collection of Green-house plants and ornamental shrubbery.

Catalogues for 1855 will be ready on the 1st of December, and will be forwarded on application.

Orders for any part of the State, will be promptly attended to, on application to D. Nelson, No. 170 Washington street—or to the proprietor, (7-3m) W. C. WALKER.

Smith's Pomological Gardens,

Banks of the American River, two and a half miles from Sacramento city.

THE proprietor of the Gardens would respectfully invite all who are engaged in "Nursery and Gardening" to visit his grounds. He will be happy to show to them, ready for sale, this fall, as fine a collection of

Fruit Trees, Ornamental Trees, Grape Vines, Shrubs,

Flowering Plants, and Green House Plants,

as can be found in all the great Sacramento Valley.

The proprietor would call particular attention to his collection of Poaches, believing that the specimens exhibited by him in Sacramento and San Francisco markets have been unsurpassed in size, quality, or flavor.

The collections of Pear Trees will equal any in the country; these, with all the new varieties, will be offered this autumn.

The undersigned believes his collection worthy a visit to his grounds of all who are interested in Gardening and Orcharding.

The subscriber will offer this autumn Five Tons Vegetable Garden Seeds, that have been raised upon his own grounds. These seeds have been grown with care and will be sold at wholesale for the present, at the Gardens.

Persons in want are invited to call upon us, and we will make reasonable terms.

Fruits, Rogues, &c., will always be furnished at short notice at the Gardens.

The proprietor returns his thanks for the liberal patronage of the past, and hopes for a continuance of such favors.

10 A. P. SMITH, Proprietor.

San Jose Nursery.

WE are prepared to supply the trade with the best varieties of Fruit Trees, Grapes, Vines, Roses, Plants, &c., in all their varieties; and are disposed to sell at a low price, that we may suit the times. Our Trees are cultivated with great personal care. Those who desire to make Nurseries and Gardens will do well to visit and ascertain for themselves our ability to supply what we advertise. Trees will be carefully labelled and packed for any season or distance.

The following Trees are offered this season:

Peach Trees, 44 varieties;	Strawberries, 7 varieties;
Pear do 44 do	Figs Trees;
Apple do 54 do	Pomegranates;
Plum do 15 do	Mulberries;
Apricots 6 do	Chestnuts;
Almonds 2 do	Loam Trees, very large
Quinces do 2 do	Rose Acacias, } for hedges.
Cherry do many do	Orange Orange,
Grapes, 12 do	

In addition to our Fruit and Ornamental Trees, we offer ten thousand fine Roses, comprising more than one hundred varieties, all of the best known kinds. Our plants are too numerous to specify in an advertisement. Hoping visitors will come and see us, we refer them to our agent in San Francisco, Mr. DE LAUNGS, 121 Sansome street, where we shall have a collection of plants in this season as samples. The nursery is situated in the city of San Jose, immediately above the City Mills.

We are also permitted to refer to Warren & Son, who have examined our grounds, and who can testify of the character of our nursery, and who will receive and forward orders to us.

Every order promptly and speedily attended to.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself principally to his office, where he proposes to treat all

Surgical Diseases,

feeling assured as he does that his former connection with Medical Schools and Hospitals, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the affections to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and malignant growths, occurring on any part of the body, Disease of the Spine, Chronic Ulcerations, Cancerous Affections, Dropsies, Disease of the Bones and Joints, Diseases of Eye, Ear and Skin, Affections of the bladder, Uterus, Seminal and Testis (or in other words, all diseases of the Genito-Urinary Apparatus); and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly healed Fractures, Contractions of the Limbs and loss of substance about the knee, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.

Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.

[For the California Farmer.]

Improving Our Social Condition.

NO. III.

COL. WARREN: Since furnishing you with our
second article on the Female Emigrant project,
we have had the pleasure of perusing our Gov-
ernor's message to the Legislature, and we are
much, very much, pleased at finding our views
so nearly identical, as regards the introduction of
proper companions for the enterprising men so-
journing among us. We are more convinced of
the necessity of our measure, and that if carried
into effect would be of more real value to Cali-
fornia than any other one measure, or project,
that could be adopted, not excepting the inter-
oceanic railroad.

Supposing Gov. Bigler to be well posted as to
the history and condition of California, we take
pleasure in quoting some of his language and
conclusions. He says: "Situated as California
is, on the confines of a continent, midway be-
tween the Indies, Asia, and the millions of Eu-
rope—with a population unequalled in intelli-
gence, enterprise, and progressive spirit—she
cannot fail to take the lead of the nations of the
old world, and bids fair soon to rival in commerce
her sister States of this mighty Confederacy, as
she already surpasses them in mineral wealth
and fertility of soil." And we add—in the beauty
of her scenery, and salubrity of her climate.

These are the ominous facts, and should prompt
every patriot, every lover of social order, to
do their part, to make California *viz* with even
the best of other States, in moral worth and social
condition.

"THE FAMILY CIRCLE, and the blessings of
HOME," the Governor sets down as "the only
sure basis of State prosperity and permanent
welfare;" and that in consequence of the ineffi-
cient traveling facilities, and the expense now
necessarily incurred, in getting to and from our
sister Atlantic States, "many are compelled,
either to forego migration, or to leave behind
them" the only conservator of men's character,
comfort, and happiness. And that the pretty
little sum of "ten millions of dollars is now being
annually remitted to the Atlantic States, or a
sum nearly equal to one-fourth of the entire
monthly shipments, for the support of families
residing there, the heads of which are now labor-
ing in our mines, and engaged in various voca-
tions throughout the State." And he adds—
"Most of these families, I am induced to believe,
would gladly become residents of the Pacific
country, if possessed of means sufficient to defray
the expense of the journey. And instead of
being the recipients of the proceeds of labor"
here, and exported "for their support, they would
become consumers of the products of our own soil,
and share in common with us the responsibilities
and blessings of this HIGHLY-FAVORED LAND."

To facilitate such a desideratum, the Governor
recommends the speedy completion of a safe and
convenient over-land route to the Atlantic States.
And while we would God speed every such mea-
sure, we aim at organizing a Society that will not
only be ready to appropriate all increased facili-
ties to the common good, but to induce the
better halves of men to come to our Pacific
shores—even while better facilities are being pre-
pared.

All reasonable doubts, as to the immense and
permanent wealth and value of our State being
removed, good citizens may safely venture now
to make California their permanent home.

Says the Governor—"Actual observation and
experience of the past, have satisfied me that
fifty years hence—when most of those now prom-
inent on the stage of action, shall have passed
away—it will be said, that mining operations in
California, have but fairly commenced. And
notwithstanding the immense mining operations
being carried on over a district of country "six
hundred miles long by forty-five wide," a busi-
ness is being done too, in the development of our
immense agricultural resources. Already we
have an ample supply for our own consumption
—we measure wheat and barley by the millions
of bushels, while corn, oats, potatoes and other
vegetables are almost the spontaneous growth of
our valleys.

The Governor says: "Immense farms have
been cultivated, and have yielded their fruits and
grains with a productiveness unrivalled in other
parts of the world; and, with labor comparatively
insignificant. Large sums of money have
been expended in fencing, ditching, and improv-
ing those farms, and are unmistakable proofs of
the prosperity of our people. And also, that
they are no longer mere sojourners in the land,
but have determined to make this really and
truly, the State of their adoption. From the ex-
treme north to the extreme south boundaries of
our State, this same spirit of enterprise marks
the progress of our people, in rearing and devel-
oping all the true greatness and enduring worth
of our State. Southern California is destined to
equal France or Spain, for grapes and olives—
wine and oil, of good qualities, are already being
manufactured."

SUCH IS CALIFORNIA—by dame nature blest—
To outshine, out-vie, and to eclipse all the rest!
And the wretch that would ask more, should not be forgiven;
Surely not by man on earth; if, by God in heav'n.

From the spirit of the Governor's message it
is clear to be seen that if such a Society as the
one we propose, were in existence, that he would
have recommended it to the favorable considera-
tion of the Legislature, as it would be the means
of saving to the State a goodly portion of the
ten millions alluded to above; and improving in
yet a larger proportion, our moral and social
condition.

The assisting of married ladies, with their
families, in getting to their husbands already
here, would of course come within the sphere of
our operation. We should also encourage the
marrying of our single men as fast as opportunity
and prudence might permit; and as some are
puzzled to know how we should get immigrant
females introduced to candidates for matrimony,
we will give an outline of our prospective ar-
rangement.

It will be remembered that we propose the
Society to be governed indirectly by a Directory
of Ladies and Gentlemen of San Francisco, of
the best class, and directly by a Governor and
Governess, who shall have charge of the receiv-
ing and boarding house; which house should be
large and convenient, with a laundry, drying
yard, &c., so that the immigrants may have room
to show their working habits and neatness—first,
in washing and doing up their own clothes, and
second, in doing any other work that might be
offered, for themselves or others. We propose
that the forenoon of each day be spent indus-
triously, and in the afternoon, say from 3 to 5
o'clock, they should be dressed and prepared to

receive visitors, when and where any Director or
Directress, or member of the Society, could in-
terduce, personally or by letter, such persons as
might seek an introduction to the immigrants.
We propose to have a suitable parlor for the pur-
pose, furnished with a piano, guitar, accordi-
on, and music books, hymn books, &c. &c.,
so that each one may enter at once into a hearty
glee of amusement, show out their character, and
break all spells of monotony, moroseness, hash-
illness, and disposition to stall—at "popping
questions." In such a concert, some would play,
and some sing; while others might be conversing
more seriously. These concerts might be con-
tinued from 7 to 9 in the evening, if thought ad-
visable, or by consent of the Governor and Gov-
erness, who should always be consulted and ad-
vised with, as to points of order, propriety or
utility; and who should have power to reject or
eject from the house any who might be, or be-
come, unworthy of confidence and respect—sub-
ject to an appeal to the Directory, who should
meet once a month or oftener, to attend to the
interests of the Society. Such arrangements
would be for those immigrants who might be on
hand, or in the city; those for whom situations
may have been obtained, would of course find
amusement along with their employment.

We design being particular—first, in requiring
the best showing possible as to the moral char-
acter of immigrants, requiring a brief history of
themselves in writing, to be filed for reference;
second, in requiring the same from visitors, or
those who might aim at drawing a prize in the
"lottery." By which means the Governor could
the more easily decide for the best, or advise for
the best, upon being consulted by either party.

These concerts would not be exclusively for
courtships, but to give an opportunity for all
parties concerned, to see and be seen, on other
business matters—where the employer and em-
ployee, may introduce such business contracts as
might be desirable. And for the sake of con-
venience and dispatch, we propose that the Gov-
ernor be authorized so marry such as prefer it,
and such as he could advise to enter into the
"HOLY ESTATE."

Such is the arrangement we have figured out
unadvised, or unassisted, and subject to the con-
sideration of those who may feel disposed to en-
gage in the enterprise. We are down on long
courtships—constitutionally so; and we cannot
promise to favor such, especially in the *fast*
times! We annex a slip from our scrap-book
containing the narrative of "a business-like
courtship" which occurred in England, and
which we heartily recommend to the serious
consideration of young and fast Americans, as
well as old bachelors:

"A BUSINESS LIKE COURTSHIP.—There is a
story extant about a five minutes' courtship be-
tween a thriving and busy merchant of a water-
ing place in England, and a lady, of whom, in
conjunction with a deceased friend, he was trustee.
The lady called at his counting-house, and said
that her business was to consult him on the prop-
riety or otherwise of her accepting an offer of
marriage which she had received. Now, for the
first time occurred to the Bristol merchant the
idea of this holy estate in his own case. 'Mar-
riage,' said he, listlessly, turning over some West
Indian correspondence; 'well, I suppose every-
body ought to marry, though such a thing never
occurred to my before. Have you given this gen-
tleman an affirmative answer?' 'No.' 'Are
your feelings particularly engaged in this matter?'
'Not particularly.' 'Well, then, madam,' said
he, turning round his office stool, 'if that be the
case, and if you could dispense with courtship
for which I have no time, and think you could
be comfortable with me, I am your humble ser-
vant to command.' 'There were people who
thought the lady had a purpose in going there,
but, if so, she promptly dismissed it. She said
she would consider the matter.' The Bristol
merchant saw her out with the same coolness as
if she was merely one of his correspondents, and
when she was gone five minutes, was once more
immersed in his letters and ledgers. A day or
two after he had a communication from the lady
accepting his offer, very considerably excusing
him from an elaborate courtship, and leaving him

to marry the 'most convenient day.' They were
married."

Though—

"Many a flower is born in bluish unseen,
And waits its sweetness on the clearest air,"
We'll pluck the fairest, for better luck—we mean
LADIES' LOVELINESS is better fate than mine,
As ever,
T. J. HADVEY.

P. S.—Those familiar with Phrenology, or An-
thropology, need but little time to select a good
companion—out of an assortment of characters
and living habits.

Sonoma Agricultural Society.

PURSUANT to public notice, a meeting of the
citizens of Sonoma County favorable to the for-
mation of a County Agricultural Society, was
held at Miller's Hotel, in the city of Sonoma, on
Saturday, April 7, 1855, and organized by select-
ing Dr. John H. Hill as Chairman, and John A.
Brewster as Secretary.

The object of the meeting was announced by
the Chairman, and suggestions offered for a plan
of action.

On motion, Resolved, That a committee of
seven be appointed to draft a set of rules for the
government of the Society, to be reported at the
next meeting.

The Chairman appointed on the committee
Messrs. W. P. Ewing, M. G. Vallejo, J. H. Jen-
kins, Julio Carrillo, Ph. R. Thompson, Fredk
Fitch, and Jasper Q. Farrel.

On motion, the Chairman of the meeting, Dr.
Hill, was added to the committee.

On motion, Resolved, That a committee of
eighteen, from throughout the county, be appoint-
ed to present the objects of the meeting to the
citizens of the County, and advocate the forma-
tion of the Society.

The Chairman appointed on the committee,
Messrs. Daniel Grayson, James Cooper, of So-
noma; Capt. Smith, Samuel Potter, of Bodega;
Alex. Copeland, Wm. Hagnus, of Vallejo; J. H.
Pine, M. Gilliam, of Annully; H. P. Mollison, of
Mendocino; Wm. Bond, Martin Hudson, of Gull-
neous; Robt. Smith, Mr. Wright, of Santa Rosa;
Lambay Carson, Dr. J. Ormsby, of Russian River;
Calvin Rohen, John Merritt, of Petaluma; A.
Gouldwin, of Washington.

On motion, Resolved, That when this meeting
adjourn, it shall adjourn to meet at Santa Rosa,
on the first Saturday (5th) of May next, at 2
o'clock, P. M., and that the Secretary notify the
members of the committee thereof.

On motion, Resolved, That the Secretary fur-
nish a copy of the proceedings of this meeting to
the "Sonoma Bulletin," the "California Farmer,"
and the Secretary of the State Agricultural So-
ciety.

On motion, Resolved, That the thanks of this
meeting be tendered to Mr. G. W. Miller, for the
attention extended to us to-day.

On motion, adjourned.

DR. JOHN H. HILL, Chairman.
JOHN A. BREWSTER, Secretary.

Messrs. Editors: Herewith please receive a
copy of the proceedings of a preliminary meeting
held at Sonoma, for the formation of a County
Agricultural Society.

At the next meeting at Santa Rosa, the county
sent, in May, a large attendance is expected, and
all interested are of opinion that there will be
manifested a zealous and favorable spirit to the
formation of the new Society.

Your obt. servt.
JOHN A. BREWSTER, Sec'y.

SONOMA, April 19, 1855.

DURATION OF VEGETABLE LIFE.—Lord Lind-
say states that, in the course of his wanderings
amid the pyramids of Egypt, he stumbled on a
mummy, covered by its heretofore pious to be at least
2,000 years of age. On examining the mummy
after it was unwrapped, he found in one of its
closed hands a tuberous or bulbous root. He was
interested in the question how long vegetable life
could last, and he therefore took that tuberous
root from the mummy's hand, planted it in a
sunny soil, allowed the rains and dews of heaven
to descend upon it, and in the course of a few
weeks, to his astonishment and joy, the root burst
forth and bloomed into a beautiful dahlia.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, APRIL 19, 1855.

STATE AGRICULTURAL CONVENTION.

At a meeting of the Executive Committee of the California State Agricultural Society, held on the 2d inst., it was unanimously

Resolved, That a Convention of the Agriculturists of the State be called, to assemble in the city of Sacramento, at 11 A. M., of Wednesday, the 25th of the present month.

The objects of such Convention are numerous and important to every cultivator of the soil, every grower of stock, and every manufacturer, in the State. It is hoped that public mass meetings will be held in the evenings of the days which may be occupied by the sittings of the Convention. Such meetings will be seasons of free discussion, and public speaking by the best talent available.

It is earnestly desired that every County or Town Agricultural Society will send delegates, and that where no such societies exist, the inhabitants of the several towns, villages, and precincts, will meet and appoint representatives. Where no such representation can be obtained, it is desirable that the members of the legislature from said districts should be considered, *ex-officio*, such delegates.

The call is issued at this day in order to give time for every part of the State to be represented.

O. C. WHEELER,

Rec. Sec. Cal. State Ag. Soc.

SACRAMENTO, April 3, 1855.

The Surplus Produce of California.

What shall be done with the surplus produce of California? These questions are daily propounded in the various journals of our State; but none seem to give a very satisfactory response. It has been said by some that California could not export produce; that there were no places on the coast, no islands, no commercial marts to which the surplus produce of California could be sent with profit. Is such the fact? Wheat, wool, mustard seed, besides the old articles, "hides and tallow," have been shipped to New York, with good profit. Harley and other grain have been sent to Australia, with profit. Large quantities of potatoes have been sent to the Islands. These are but the beginning of the exports of California.

One reason why there are no more exports, and why there are not more profitable results, is from a want of correct information relative to the crops raised here and the markets abroad. People ship to try the markets—an adventure merely. They are not so well advised upon these subjects as upon other matters.

We need a regulation of our markets; some plans by which we can be fully advised of the quantity of produce of all kinds grown in the State; and also the conditions of the markets abroad. This can be effected in only one way. In Europe they have a corn exchange, a grain market, committees, registers, boards of trade for all given articles of produce, and at short notice every species of produce arriving is known, the price it brings, its rise and fall, &c. Such plans are being adopted in the East, and such should be adopted here.

We would suggest, as the quickest means to accomplish this in California, the organization of societies among the producers of grains of all kinds, and to have one central board and branches in all the counties. These could embrace in their reports, not only grains, but produce of all kinds, and the central board could be advised of all happening in foreign markets, and thus know the time for prosperous shipments.

California can and will become an exporter of all kinds of produce. It only needs organization and system, so as to enter wisely into a fair competition with other producers. A true knowledge of the wants of this State, with a correct knowledge of the conditions of other markets, through such a board of trade as is suggested, and California can compete with the world. The fertility of her soil and climate guarantee this.

NEW WORK ON BOTANY.—We perceive a new work upon the science of Botany has just been issued from the press of D. Appleton & Co., New York, under the title of "An Analytical Class Book of Botany," designed for academies and private students. Mrs. Frances H. Green is the author. It has also a copious Flora of the Northern States, by Joseph W. Congdon. It is highly spoken of. We hope to have editions here soon.

The Dark Side of the Picture.

Amid all the changes that are daily taking place around us, there will be found circumstances pleasant and agreeable, as well as those that are adverse and painful. These are the "lights and shadows" of California life; they are the necessary consequences of progress in human affairs.

The steamers weekly bear away near and dear friends, and these events cast a shade over the household and social circles of many; but there is a light breaks through the cloud that darkens that sky, in the hope that ere long they will return to gladness and make happy those who are beloved by them. But there is at this present time a cloud of deeper shade and darker omen than that which has usually spanned the sky of California history.

The departure of so many wives, mothers and daughters, so many families, many of them, to come back no more, is a "sign of the times," that casts a shade so sombre as to hide the light beyond the prospective, is so dark, the human eye cannot yet penetrate it. The sailing of the Golden Age, on Tuesday, taking away nine hundred of our citizens, many of whom were the earliest pioneers in California history, together with entire families who leave us to return no more, are events that shade the picture too darkly.

When our business men leave us for a brief season to prosecute their legitimate calling, and again return to their families; when the miner goes hence, and on his return brings a family with him; and the mechanic and the artisan also make a visit and return, accompanied by hosts of kindred friends, to make California their homes—that is a picture whose light and shade are sure to give all pleasure. But when we see our population leaving our shores, and those who make our homes worth possessing, taking their families with them to return no more, we cannot but exclaim, "the picture is too darkly shaded."

The departure of so many of those identified with California; the breaking up of so many families; the export of so much gold, and the certainty that this drain both of citizens and wealth will continue for some time to come, is a matter of so much moment, of so much import, that every true friend of California should make it a matter of serious inquiry. These questions must be met. There is no dodging the truth that this continual drain of the life blood will soon leave the patient too feeble to recover. Consumption of the blood is a terrible disease. If neglected too long, doctors cannot save, and the patient dies. The tonic must be administered in early season. When this is done, new blood is made and the patient is saved—and so with California. We need a tonic, life blood, more population, and we must have them. The chief aim or effort now is, "To keep what we have got, and get more if we can."

Why are so many leaving us? The answer by the mass is, "the depression of business" and "the cost of living here." The enormous rents of stores and dwellings, the cost of help and every other expense has so eaten up the substance of men that there is no alternative but to close up business and leave. It costs less to be absent six months, and do nothing, than to remain here and do nothing, and this is the inducement to leave. These things ought not so to be, and they cannot long continue without serious and lasting evil to our State.

Prompt measures should be adopted to remedy the evil. Public meetings should be called for the vast interests at stake demand it. The evil can be remedied. "When the people will," the thing is done. The government! corporations! real estate owners! merchants! manufacturers and mechanics, all see it and wish a remedy, but do not act. That something should be done all will admit. What shall that remedy be? We wait an answer.

The Convention.

BEFORE another issue of our paper, the Convention which has been called will have assembled. And what shall be the RESULTS? Will Santa Clara and Santa Cruz, San Jose, Alameda, Sonoma, Napa, and the many other agricultural counties be represented? Will the Stock Raisers, Rancheros, Farmers, Grain Growers, Millers, Manufacturers—all these—be present? All are interested; they should be acquainted with each other, and no better place and time than at such a Convention.

Favors—From Wells, Fargo & Co. and the Pacific Express; the usual favors; from the clerks of the Southern and Oregon steamers, full files of papers; from Assembly and Senate, many valuable reports, which we cannot notice till next week. The report on internal improvements is a valuable document.

State Convention.

THE Convention of the Farmers of the State will meet at Sacramento city on the 25th of this month, as will be seen by the call of the State Society. It is not only desired, but anticipated, that every section of the State will be represented fully. Matters of great interest will come before the Convention: the plans of the State Fair the coming autumn, with the Stock Show, the Exhibition of Manufactures and the Mechanic Arts, will all be subject matter of discussion.

All who are engaged in the Home Industry of California should become interested, and should enlist those in their neighborhoods to join them, and make delegations from every section of the State. If those who are engaged in Agriculture, Manufactures, Mechanics, the Arts and Sciences, will not meet and consult for the advancement of their own interests, it cannot be expected others will do it for them. All professions have their organizations, and they watch with a jealous eye everything that endangers their interests; and shall not the Farmer, the Manufacturer, and the Artisan? Let the coming Convention prove they will.

Sonoma County.

WE are glad to notice the action of the Farmers of Sonoma county. They are beginning to realize the importance of action in order to save and protect their own interests. There are many considerations which should arouse every county in the State, and every Farmer in every section of the State to immediate attention to their own profession and to all connected with it.

The Agriculture of California is assuming an importance and having an influence upon the markets of many other sections of country, and if the Farmers of the State would but regard their interests in a true light, every county would immediately organize its association and co-operate with the State Agricultural Society for the advancement of the general good.

In Sonoma county a lamblable interest is evinced, and they call upon their friends to meet them at Santa Rosa in May next. We trust a large attendance will prove there is an abiding interest. Other counties should send delegates, so there might be an interchange of thought; each receiving and each bestowing some good on the other. It is to be hoped Sonoma will be represented at the State Convention to be held at the Capital on the 25th April, at 11 A. M. Sacramento city.

MESSRS. EDITORS: Circumstances beyond my control prevented me from arriving in the city in time to make the necessary effort really to commence our desired project in time to have secured a charter from the present legislature; and indeed considering the present embarrassed state of our commercial and financial affairs, I deem it most prudent to postpone the matter until next winter, hoping that confidence and stability may be in a great measure restored. In the meantime, however, permit me to earnestly select others to take up the cause and assist us, in maturing and developing the very best scheme possible—to secure so desirable an object. We consider the ice fairly broken and the field open, while every interest of society demands that something permanent in the premises be done.

The above was received too late to add to the communication of our correspondent from San Louis Obispo published on the outside.

The Mails.

WE received a communication purporting to come from citizens of San Louis Obispo, relative to the mails due there, stating that no mails had been received for three months. Some of the names attached to the document we recognized as our subscribers, and their complaints were loud and bitter, and so well stated that we were on the point of sending it to press, when the former Post Master, just from that place, called on us and handed us the following communication. Wishing to do all in our power to extend information, we publish the annexed, explanatory for not publishing the first.

SAN FRANCISCO, April 16.

EDITORS FARMER: We of San Louis Obispo county have just cause of complaint we think, that we cannot be accommodated with mail facilities, but I have made myself acquainted with the facts in the case, and have asked for a remedy without effect; however the department at Washington authorized me to contract for a land service, but did not offer enough to secure the service, and so the matter will rest we presume for a season. The communication left on your desk by some unknown person, purporting to be from San Louis, and which you were on the eve of publishing, we believe to be from some meddling fellow, and the signatures to it forged.

T. J. HARVEY, P. M.

The document to which the Post Master alludes was in a different hand from any of the signatures, and if hereafter necessary to publish, and any good will come of it, we'll cheerfully do it.

United States Agricultural Society.

WE think we cannot subserve this cause of Agriculture in California better than by publishing the full doings of the United States Agricultural Society, recently held at Washington, D. C. The various and important themes acted on will be matters of interest to this State, and should lead to thought and to action among all. Most especially do we commend to the careful perusal of every reader the preamble and resolutions which were passed touching the importance of AGRICULTURAL LEGISLATION AND PROTECTION.

THE third annual session of this society commenced February 21, 1855, in the "East Room" of the Smithsonian Institution. Twenty-six States were represented by credited delegates from State and county societies, and there was also a large number of individual members of the society.

The Hon. M. P. Wilder, of Mass., President of the society, on taking the chair, delivered a pertinent address, in which he recapitulated the operations of the society during the past year, including the cattle show at Springfield, Ohio. The address was received with applause, and has been printed for distribution in pamphlet form.

On motion of Mr. King, of New York, a committee of one from each State represented was chosen by the President, to nominate a board of officers for the ensuing year.

A letter was read from Col. Selden, resigning his office as treasurer, and accompanied by securities for the funds of the society deposited in the bank, was referred to Messrs. Wager, of New York, Calvert of Maryland, and Worthington of Ohio. They subsequently reported, complimenting Col. Selden for his integrity, and expressing confidence that the funds are secure.

Resolutions were offered by Messrs. Holcomb of Delaware, and Kemmel of Maryland, which were sustained by Messrs. Calvert, Peck, and Kennedy, of Maryland, King of New York, and Jones of Delaware, and then laid on the table for future discussion.

Messrs. Wager of New York, Kennedy of Pennsylvania, Proctor of Massachusetts, Steadman of Ohio, and Jones of Delaware, were appointed a committee to receive and report on amendments to the constitution.

Mr. Calvert, of Maryland, offered a resolution recommending political action on the part of agriculturists, and supported it by able remarks.

He was followed by Messrs. French of New Hampshire, Dyer of Connecticut, and Kennedy of Pennsylvania, and the resolution was laid on the table for future discussion.

Mr. Jones, of Delaware, presented a memorial, showing the effect of legislation upon agriculture, and embracing a mass of historical facts.

After having been read, it was on motion of Mr. King, of New York, placed on the files of the society.

Mr. Clenson, of Maryland, introduced a resolution recommending agricultural education.

An informal discussion of the potato rot, deep plowing, and other matters of great agricultural interest, followed, in which a large number of gentlemen participated. Many facts of importance were elicited, as gentlemen from various sections related their "experience," and the debate was continued until 4 o'clock.

In the evening the society was favored by a lecture from their vice president from Virginia, the venerable George Washington Parke Custis. His eloquent narrative of the illustrious "Farmer of Mount Vernon" was listened to with marked attention by a large audience, and was warmly applauded.

After the lecture, a large number of ladies and gentlemen were introduced by the President to the orator.

After the lecture, the officers and committees were unexpectedly entertained at the National Hotel, by Colonel C. B. Calvert, the proprietor of "Riversdale." A sumptuous repast graced the festive board, and the festivities were prolonged until a late hour.

SECOND DAY.

This morning the society met at 10 o'clock, and, after the report of Mr. King, of New York, chairman of the nominating committee, elected the following

OFFICERS FOR 1855.

MARSHALL P. WILDER, of Massachusetts.

VICE PRESIDENTS.

John D. Lang, Maine,	J. T. Worthington, Ohio,
H. F. French, N. H.,	B. Bratz, Ky.,
Fred. Holbrook, Vermont,	M. Gentry, Tenn.,
B. V. French, Mass.,	Jos. Orr, Ind.,
Jos. J. Cooke, Rhode Island,	J. A. Kimbrell, Ill.,
John T. Andrew, Conn.,	Toos. Allen, Mo.,
Henry Wager, New York,	T. Flournoy, Ark.,
Isaac Cornell, New Jersey,	J. C. Holme, Mich.,
Isaac Newton, Pennsylvania,	Jackson Morton, Fla.,
C. H. Holcomb, Delaware,	T. G. Rusk, Texas,
H. G. S. Key, Maryland,	J. W. Grimes, Iowa,
G. W. P. Custis, Virginia,	B. C. Eastman, Wis.,
Henry K. Burgess, N. C.,	J. M. Eastman, Cal.,
James Hopkinson, S. C.,	Jos. H. Bradley, D. C.,
D. A. Reese, Georgia,	S. M. Baird, New Mexico,
A. F. Hatch, Alabama,	H. H. Sibley, Minn.,
A. G. Brown, Mississippi,	Joseph Lane, Oregon,
J. D. B. DeBow, Louisiana,	J. L. Hayes, Utah,
Gen. Whitfield, Kansas,	Mr. Giddings, Nebraska,

EXECUTIVE COMMITTEE.

John A. King, New York,	B. Perley Moore, Mass.,
C. B. Calvert, Md.,	A. White, Ohio,
A. L. Elwyn, Penn.,	John Jones, Del.,
J. Westworth, Ill.,	

SECRETARY.

WILLIAM S. KING, Boston, Mass.

TREASURER.

B. B. FRENCH, Washington, D. C.

On a report of the executive committee, Dr. Edwin of Penn., Henry Wager of New York, Dr. W. T. G. Morton of Mass., Col. Anthony Kimmel of Md., and Chas. L. Flint of Mass., were appointed

ed delegates to attend the coming Industrial Exhibition at Paris.

After the election, the discussion upon the resolution offered by Mr. C. P. Holcomb, of Delaware, on the "Reciprocity Treaty" as injurious to the agricultural interests of the Republic, took place. Messrs. Holcomb, Peck, King, and Jones, participated in the discussion.

This evening the Hon. G. P. Marsh lectured on "Notices of the Rural Economy of Continental Europe."

THIRD DAY.

After the election yesterday, the Society discussed a resolution offered the day previous by Mr. C. B. Holcomb of Delaware, denouncing the "Reciprocity Treaty" as injurious to the agricultural interests of the public. Messrs. Holcomb, Peck, King, Waters, Elwyn, Kennedy, Steadman, Gowley, and other gentlemen participating. The resolution, as finally amended and passed, reads:

Resolved: That we object to the doctrine of free trade for agriculture and protection for other interests.

Col. Galvert, of Maryland, offered the following preamble and resolutions, which he supported in an able and earnest manner, deprecating all applications to Congress, and urging action on the part of agriculturists, as calculated to command success.

The resolutions, after having been discussed by Messrs. Kennedy of Pennsylvania, Jones of Delaware, and King of New York, were carried:

Whereas, The prosperity of a country is in proportion to the improvement of its agriculture, therefore,

Resolved, That agriculture should be the first interest considered in legislating for the general welfare, and that such legislation should be had as will foster and protect this interest, which is paramount to all others.

Resolved, That the time has arrived for the agriculturists of the whole country to meet in convention, and determine for themselves what legislation is necessary for their protection.

Resolved, That such a convention, to be composed of delegates from each State of the Union, be earnestly recommended by this society, in order that an agricultural platform may be established, which will meet the views of, and be sustained by the whole body of agriculturists as a profession.

Mr. Wager, of New York, submitted a report on the proposed amendments to the constitution, which was discussed by Messrs. Fay and Waters, of Massachusetts, Cook of Rhode Island, King of New York, Hamilton of New Jersey, Calvert of Maryland, and Worthington of Ohio.

The constitution was so amended as to have the payment of ten dollars constitute life membership, and to change the time of holding the annual meeting to the second Wednesday of January.

Various reports were read, among them one on the *Chess in Wheat*, from the Smithsonian Institution; on *Agricultural History*, by B. P. Poore; on *Mr. Glover's Collection*, by Mr. Peck; and on *Western Fruits*, by Dr. Warden.

Mr. Peck, of Maryland, reported that the committee appointed to urge upon Congress the purchase of Mr. Glover's collection of modelled fruits, had had an interview with the proper committee of Congress, and received assurances that the matter would receive their attention.

A communication from Professor Henry was read, detailing experiments on the culture of the "Oregon Pear," made under the direction of the Smithsonian Institution, at the request of the society. The results at Savannah proved it worthless for that region.

A paper on "Alderney Cattle," by Dr. W. J. C. Morton, was read and referred. Also, a paper on the "Potato Oat," from New York.

Dr. Warden, of Cincinnati, exhibited over thirty different varieties of Western apples, which he descended upon with his wonted accuracy.

An invitation was received and accepted, inviting the Society to visit the Metropolitan Mechanics' Institute to-day, at 11 o'clock. Invitations to visit the office of the Coast Survey and the agricultural room at the Patent Office were also accepted.

After some remarks by Mr. Custis, giving his experience in growing wheat in Virginia, the society adjourned until 7 o'clock, when the Hon. G. P. Marsh had been invited to address them on the *Rural Economy of Continental Europe*.

The lecture was listened to with great interest, embodying, as it did, a great amount of original information, and its publication will constitute a valuable addition to agricultural literature.

Dr. Warden followed, with an eloquent lecture on Hedges, replete with practical information.

FRIDAY MORNING, MARCH 2.

The society met at 10 o'clock, and passed an hour in familiar conversation on agricultural subjects.

After a discussion on the appointment of Commissioners to the Industrial Exhibition at Paris, the matter was referred to the Executive Committee.

On motion of Mr. Poore, of Massachusetts, it was unanimously

Resolved, That the thanks of the United States Agricultural Society be presented to the Regents of the Smithsonian Institution, for the facilities afforded for holding this session. The utility of this Institution, in thus serving as a nucleus, around which all useful associations can rally, at

the capital of our Republic, shows the wisdom of the course pursued by the present Regents.

Col. Kimmel, of Maryland, read a curious extract from the Maryland Gazette, of September 8, 1748, showing that "cattle shows" were established at Baltimore in that year.

On motion of Mr. Waters, of Massachusetts, it was unanimously

Resolved, That the thanks of this Society be proffered to Hon. Geo. P. Marsh, for the very beautifully written and exceedingly interesting lecture he was so good as to present to us last evening, and that Professor Henry be requested to wait on him and request a copy for publication.

On motion of Col. Calvert, of Maryland, it was unanimously

Resolved, That the thanks of this society be presented to Dr. Warden, for his interesting lecture on the cultivation of Hedges, and that he be requested to present a copy of the same for publication in the transactions of the society.

At eleven o'clock, in accordance with their acceptance of the invitation, the society adjourned to visit the exhibition of the "Metropolitan Mechanics' Institute."

After visiting the Exhibition yesterday, the society returned to the "East Room," and on motion of Mr. King, of New York, it was

Resolved, That the thanks of the society be presented to the officers of the Metropolitan Mechanics' Institute, for their polite invitation to attend their exhibition, which we have visited and examined with great pleasure.

After some debate, in which a strong desire for concerted action on the part of American Agriculturists was manifested, it was, on motion of Col. Calvert, of Maryland,

Resolved, That the first Friday after the next annual meeting of this society, be fixed for the assembling of the Agricultural Convention, and that the Press be requested to urge the importance of the subject.

Resolutions were passed complimenting the Agricultural Press, and urging its conductors to consider political economy, and urge united action on such matters connected with it as their judgment may suggest.

On motion of Mr. Taylor, it was

Resolved, That the thanks of the National Agricultural Society be tendered to the Hon. Mr. Morton, of the United States Senate, for his able report upon the subject of an Agricultural Department.

Resolutions were passed complimentary to President Wilber; to the Regents of the Smithsonian Institution; to Lient. Maury (for an invitation to visit the Observatory); to Mr. King, the Secretary of the society, and to Mr. Poore, of the executive committee.

Adjourning, after three days' session, in which agriculturists from twenty-six States participated with great harmony of feeling, the members of the Society felt encouraged by this renewed and increased manifestation of the great interest of the Republic to assert its position.

In the evening many of the officers and members called upon Mr. Clayton, to thank him for his speech of the previous evening.

NEW ORANGE WATER MELON.

THE editor of the "Soil of the South," and distinguished horticulturist of Columbus, Ga., Chas. A. Peabody, Esq., thus speaks of this interesting novelty:

"Considerable curiosity having been aroused throughout the horticultural world, in relation to this beautiful melon, we were determined to test its qualities. We last year planted a few seeds, some few entirely beyond the influence of any of the melon tribes, some among other melons, some near other melons. Those planted entirely secluded, have remained pure, whilst both of the other plantings are ringed, streaked, and speckled.

The pure orange melon is, without exception, the most beautiful of desert fruits, that can grace the table. To cut it, make an incision around the stem, until you reach the flesh; take out the circular piece; now draw the knife lengthwise of the melon, just through the rind, and so continue until the whole melon is sliced through the rind. Now take out the pieces of rind; if the melon is just ripe, they will peel off like the skin of an orange, leaving the pulp in a lobated mass, looking like the work of some fairy hand, so delicate its net work tracery, sparkling in the light, as if frozen. By cutting between the lobes, the melon is separated without showing a seed. The flavor is superior to the best of the common melons, and its beauty is unrivalled. They are very productive, roundish form, medium size, and should be planted in very rich soil. To see this melon in all its beauty, it should be brought to the table in cut glass dishes, after the rind has been taken from it; the glass fruit dish, standing on a pedestal, is the most showy. It should be separated as served up."

Experiments in this vicinity the past season confirm Mr. Peabody's account of it, and show that it will ripen quite as well, and be equally delicious, raised here, as in the "sunny South."

TEMPERANCE MEETING.—Rev. Mr. Cummings will deliver a temperance lecture at the Sons of Temperance Hall, on the north side of Washington street, between Montgomery and Sansome, next Sabbath afternoon commencing at 2 o'clock. The public are respectfully invited to attend. Seats free.

NEW ADVERTISEMENTS.—Please notice the cards of Messrs. J. C. Duncan & Co., auctioneers and commission merchants; the tobacco warehouse of Messrs. Green, Heath & Allen, and several others in our columns to-day.

DEPARTURES BY THE GOLDEN AGE.—A very large concourse of citizens thronged the steamers decks and the wharves on Tuesday, to take parting adieux with the many distinguished Californians that left in this noble steamer.

Among the number were Rev. Mr. Willie and family. No one citizen could leave our shores bearing with him warmer wishes for his health, prosperity and happiness than Mr. Willie. His residence of nearly six years has endeared him and his family to thousands, and his labors as a pastor will shine pure and bright long after the present generation shall have passed away. Mr. W. goes east with his family for rest and the recruiting his health, and will return in about six months. Earnest prayers and the kindest wishes go with them on their journey, and many hearts will be ready to give them a hearty welcome back again to their home and labors of usefulness.

Theo. Payne, Esq., and family, also left in the Golden Age. Mr. Payne is one of our earliest pioneers, and most influential and valuable citizens, and his absence will long be missed. Though it may be necessary to spare such men for a while, we cannot spare them long. Mr. Payne and family are endeared to a large circle of friends; many were present to bid them "Good bye," and a happy voyage and a safe and speedy return.

Gen. Burgoyne, the banker, was also a passenger. I. M. Seranton, Esq., an early Sacramento man, also left. His enterprise, energy and generosity in the early history of Sacramento, endeared him to many friends by whom he will never be forgotten.

There were many others also we met. It was a busy and touching scene,—kindred near and dear were parting; tears were falling, and many were sorrowful; but we ever love to hope that though clouds darken the present sky

Clouds that rise, must pass away,

Sorrow will not always stay.

We wish brightness to all.

THE TOUR.—We make the following extract from the N. Y. Tribune, and we hail with much pleasure the great zeal that is beginning to be manifested for the prompt introduction of valuable stock of all kinds into our State. Recently, some extra animals have been introduced. They are such as reflect great credit upon their owners whose wealth will never decrease so long as it is devoted to such enterprises. The gentleman to whom we allude in the annexed article will be amply repaid for his enterprise:

BLOOD HORSE.—Mr. B. F. Fish, of San Francisco, commissioned, some time since, Mr. A. J. Easton to visit the Atlantic States for the purpose of purchasing the best stallion to be found east of the Rocky Mountains—one that was the embodiment of beauty, speed, blood and all the other qualities constituting a perfect animal for breeding. Mr. Easton has been fortunate enough to secure the possession of such a stallion, upon paying the sum of \$5,000. He is beyond question the best horse in the country that was in the market for sale, and we congratulate the citizens of California upon the possession of such a stock, to lay the foundation for a superior breed of horses. Mr. Easton leaves to-day with his charge, in the steamship Illinois, via Panama, for San Francisco, where he will arrive just in time for the opening of the season.

BOSTON DEPARTMENT.—We have received a long communication from our corresponding agent at Boston, enclosing several advertisements and valuable memoranda connected therewith. They were received too late for this issue. We call attention to the advertisements in our columns, and shall speak more fully in our next. We have other advertisements also from the same source. We are glad to note that we can make it for their interest to advertise with us. Manufacturers and shippers in the Eastern States will do well to note the columns of our journal. It is a medium for extensive circulation of business news.

SACRAMENTO CITY LANDS.—The claim to the lands of the city of Sacramento made by the authorities has been rejected by the Board. This decision does not affect the Sutter title, but rather pre-supposes that Sutter's claim is prior, and will be confirmed; by late decisions of the Fremont, Weber and Ritcher claims, it cannot now be doubted that a full confirmation will be made of the Sutter grant.

CHINESE PLANTS AT WASHINGTON.—A collection of plants and flowers was made by Com. Perry in China, which has just arrived in New York upon the Lexington. A few withered on the voyage, but they are generally in good condition. A list of them is given for the sake of such as are interested in Chinese horticulture. They were accompanied by a gardener, whose name is given as Oqui, who will superintend their planting in the public grounds at Washing-

ton city. It is stated that he will introduce the Chinese style of trimming shrubs, which is so curious. By it any desired forms are represented. A deer, for instance, is fashioned from four stems representing the legs; while the leafy branches tripped around a concealed bamboo frame, and suitably trimmed, assume the contour of the animal. The ears, the tail, and every part, are so handsomely adjusted, that one might almost imagine the art of the ancient sorcerer to be verified; that the vital blood had been drawn out, the juices of plants introduced, and the living creatures covered with a coat of leaves.

Several individuals of each kind were shipped to secure their preservation. Seventeen large cases in all were brought. The following is the list:

4 yellow or tea roses; 4 light red roses; 4 pink roses; 4 lavender, or flower; 4 blue magnolia; 4 quail, 4 China grafted black roses; 4 loco or small magnolia flower; 4 China yellow arum; 4 hymenocallis; 4 lungau; 4 guavas fruit; 4 loquat fruit; 4 custard apple, fruit; 4 sweet whampee, fruit; 4 sweet enriumbola, or China gooseberry; 4 acid carambola, or China gooseberry; 4 acid Whampee; 4 pambalos, fruit; 4 mangres, fruit; 4 large mandarin oranges, leuc skins; 15 black tea, two varieties; 4 small mandarin oranges, leuc skins; 4 China mandarin oranges, hard skins; 4 enriumbola, fruit; 4 large yellow persimmon; 4 large round rose apples; 4 large round red persimmon; 4 small round red persimmon; 5 small myrtle; 4 large rose apple; 4 small long rose apple; 4 laichis, fruit and flower; 4 papayas, fruit; 4 very fine leuc skin mandarin orange, 4 nondescript, blue lily; 4 red double-head star lily; 4 China red lily, many heads; 4 China yellow lily, many heads; 4 China, single head white lily; 4 cymbidium.

The following plants are inclosed in boxes:

12 nondescript, white small flower; 20 lemon grass; 12 Peruvian erythra; 20 small hymenocallis; 20 yellow day lily; 20 Benjamin flower; 3 blue magnolia; 1 round rose apple, large; 2 China dates.

The Lexington also brought one case containing a variety of plants collected in Japan and in the island of the Great Loo Choo, also one large Loo Choo plant not in case, and four tubs of water lily; one of sugar cane from Java; and another of exotic plants from St. Helena; all collected by Dr. James Morrow, agriculturist to the Japan expedition.—*Oriental*.

FROM EUROPE.

The Palmerston ministry, within ten days from its formation, had fallen to pieces—the Chancellor of the Exchequer, the Home Secretary, and the Chief Lord of the Admiralty having resigned. The ostensible cause of their resignation was the success of Mr. Roebuck's motion for a committee to inquire into the mismanagement of the war. Mr. Roebuck and his supporters have secured their committee, and rumor says that they will not rest satisfied without the impeachment of "certain parties"—meaning Lord Raglan and one or more of the ex-Ministers.

At Sebastopol the weather was moderating, and the condition of the troops improving. It was believed that the assault would soon be made.

The news from the Crimea is embraced in the accounts of two night sorties by the Russians.

They occurred on the 13th and 14th of February, and resulted on the part of the Allies in the death of forty Frenchmen.

On the 17th, the town of Eupatoria was attacked on the Eastern side, by eight pieces of artillery, six regiments of Cavalry, under the command of General Korff, and twelve regiments of Infantry, consisting of about 25,000 men, under the orders of General Osten Sacken. The combat lasted from 5 1/2 o'clock until 10 o'clock in the morning. The Russians were vigorously repulsed. Their loss is estimated at five hundred killed, and the wounded in proportion. The Turks had eighty-eight killed, two hundred and fifty wounded, and lost seventy horses. Selim Pasha, General of the Egyptian division, and Col. Rusten Bey, were killed. Eighteen French were killed or wounded in shipboard. The attack has not been renewed by the Russians.

A NEW POTATO.—A. B. Grey, Esq., during his recent explorations across the continent for the purpose of ascertaining the practicability of constructing a railway to the Pacific, discovered a remarkable plant at the head of the Gulf of California, it being found in abundance through a range of naked sand-hills skirting "Adair Bay." It is described as a parasitic plant, with a large and fleshy root, and has been called "Ammbroma Sonora," signifying Sand Food of Sonora. The fresh plant is cooked by roasting upon the hot coals, and resembles the sweet potato in taste, having much saccharine matter about it. It is likewise dried and mixed with less palatable kinds of food, such as musquit beans, &c. It is represented to be a very delicious vegetable, and could it be transported, Mr. Gray believes that it would constitute an important acquisition to the sweet potato or asparagus.—*Boston Journal*.

THE ARTESIAN WELL AT CHARLESTON.—*Getting Fat on the Water*.—The Charleston News, of Jan. 19th, says: "The progress of the artesian well is most satisfactory. We were informed this morning, by Mr. Welton, that a depth has been attained of 1,225 feet, having penetrated another layer of rock. The water is gushing out at the rate of 25 to 30 gallons a minute, and has greatly improved in quality. An elderly gentleman, who has attended the recent operations, has increased seven pounds in weight, as well as in appetite. The water is supposed by him to possess medicinal qualities."

Horticultural Department.

Practical Gardening, and Rural Aesthetics.

BY AUGUSTUS HEPP, LANDSCAPE GARDENER.

SHOW a man the pleasures of a home, and he is sure to appreciate them; give him the opportunity, and he is almost certain to enjoy them. Let his domestic circle be filled from the circumference to the centre with endearing associations, and he ceases to be a wanderer from his own fireside; he will refrain from the fiery inspirations of strong drink, shun the drinking-saloon, and avoid its inebriate attendants. The flimsy, superficial and transitory pleasures of fashionable society become only a secondary consideration to him, for home is his first prize, and "home is where the heart is," viz., his own "lot" and family. Be his circumstances never so different, here is a solace to his mind. The venturesome broker, while distracted upon the agitated ocean of speculation; the cautious merchant, who calculates his risks and profits; the pent-up clerk, who from morn till night drives the pen; the hard-working mechanic and the toiling laborer, who earns his bread by the sweat of his brow; each and all are enabled to stem the current of difficulty, to overcome their multitudinous cares and accompanying vexations, by the thought of home and its comforts. It becomes, then, a matter of consideration, how home may be made to furnish these advantages. In the first place, a frugal, honest, and affectionate partner has a great deal to do with it. A comfortable, well-adapted, and appropriate dwelling, with the surrounding precincts, be they large or small, neatly laid out both as regards usefulness, beauty, and healthfulness, is another great addition. Poets have written, and bards have sung, of the beauties and ennobling effects of the garden, but twice-told are the advantages to be derived from this source. Its influence upon the morals, physical power, intellectual development, and general health of the human system is immense. A well-kept and attentively cared-for garden conduces likewise much to the orderly and systematic movements of a household. Show me a man's garden, I will tell you if there be order in himself or his family. There is perhaps no better teacher of order than the garden. All its products require periodical and exact attention; this careful application begets punctuality in other matters, and finally, a well-regulated action in all things.

Although the above advantages are sufficient to show the importance of this subject, there are others of a pecuniary and healthful nature. Any person who owns one fourth of an acre may grow enough vegetables, excepting, perhaps, potatoes, to serve an ordinary family all the year round, besides the having a patch set aside for flowers; and even one city-sized lot is sufficient for a supply of salad, soup-herbs, and a few flowers; even this small spot will give a great gratification, and may be made to save many a shilling.

The hygienic qualities of vegetable diet are of great importance, and more especially in a family of children. Nature seems to constantly remind us here, and we too frequently neglect her warnings. Unless we force a child, it will, if left to its own inclination, generally ask for vegetable food, and nothing but frequent compulsion will get it to relish animal diet. Are we not reminded in the fondness of children for sweet puddings, and the asking for bread or fruit? Who ever hears a child of its own free will, and in its earliest inquiries for food, ask for a piece of flesh? The thing of itself seems unnatural, and the little importunist would be looked upon as a monster. It may be said that it is customary to give a piece of bread to a child, and consequently this confirms the choice; but the custom has resulted from natural idea: and how heavily would be thought the appetite, if beef were to be chosen in preference to an apple, or hog's flesh to a pear! The thing is clear enough, and speaks for itself; and if more mature human beings were to more generally choose the same aliment, there would not be so much sale for quack nostrums in the form of patent medicines; doctor's bills, which form too frequently a considerable item in domestic expenses, would be very much retrenched, and general health would be promoted.

In speaking of vegetable diet, I would not wish it to be understood to mean such as we see too often exposed for sale. The half-decayed cabbages, whose putrescent odor contaminates the surrounding air, and poisons our vital organs; the lettucees, over which the *Croton* jet has poured a limpid stream for the last two days before the green-grocer's door; the radishes which have lain beside them until they have imparted a portion of their now voluble noxiousness to their neighbor's decaying structure; nor the once fleshy and crisp, but now shrivelled and sticky beets. No, it is not such cholera-promoting articles as these that we would recommend, but the lettuce which has been well watered whilst growing in the garden, and recently cut, that would snap into fragments if you should have the misfortune to let it fall; the burly cabbage recently decapitated, in the base of whose leaves lie nicely secreted the pure dews of heaven, or the crystal drops of the last shower; the crisp, bright-colored radish, just pulled from its fertile supporter, Mother Earth. These have the qualities that will benefit human digestion, and which can rarely be had unless from the garden direct.

Besides the supplying of wholesome vegetables as food, the garden has its claims upon our attention for the health-producing properties in a physical light; every operation requires movement of the body, a kind of gymnastic exercise; this exercise to be performed in the open air, and most pleasing in the morning, which begets early

rising. These movements, if not persevered in to too much fatigue, assist greatly to brace the system, to strengthen the muscular power; they cause the blood to flow regularly, and, as a natural consequence, to invigorate both body and mind. The most lucid ideas that ever flowed from the writer's brain, have occurred when he was working with the spade, and many times has he lamented that he had not at the moment the opportunity to pen them down. Exercise in the operations of the garden is more particularly important to the fair sex; most of the movements are neither innoxious nor indelicate, and the labor is of that character just suited to eradicate their too frequently physical debility. I would not have them "dig and delve," nor yet handle the plow; but what should hinder them from handling the hoe, carrying the watering-pot, or raking over a border? Let them do this to a reasonable extent, and eat the produce of their exertions, and they may throw Female Pills and Townsend's Sarsaparilla over the garden fence; their cheeks will bloom like their own cultivated roses, and their firm tread and buoyant movements will truly show "the elastic step of Woman." Neither is there any thing degrading to the female character in tending the garden; nothing but a mock-modesty will for a moment think so. Is it not a portion of a woman's better disposition to be fond of flowers? Do they not become her more than the opposite sex? Are not their fair proportions and lovely forms an exact portraiture of what she really ought to be? Could a greater compliment be paid to a lady, than to acknowledge her as like to one of the fairest of Flora's diadems? Now, then, can the garden be otherwise than a part and parcel of herself? The picture is only perfect when she is there, and her mind can be far better employed in the garden, where the body is stimulated by healthful exercise, than by idling inanimate as it were upon the downy sofa, reading voluptuous and exciting novels. Woman's organization is not suited to this state of bodily inactivity; by it she weakens the natural action of the body, and brings on nervous irritation; the result of which is a vexed temper, and general ineffectuality of the mind. The study of flowers, and the cultivation of the garden, produce opposite results; the general health of the body is assisted, the mind is invigorated, the observing faculties are employed and improved, the beauties and usefulness of creation are portrayed in simple characters, and we are led on to contemplation and religion, without being trammelled by bigotry or sectarian bickering. Here is the guiding-star to good morals, the means that will educate the psychological faculties, a teacher that will direct the way by which the Creator may be worshipped, and lead us to correctly see his greatness, benevolence and boundless power, in the beautiful organization and mechanism that he has constructed, and made so suitable to supply our wants and give us pleasure.

If we look around as we travel along, and see the beautiful and picturesque villages which are springing up in the outskirts of our large cities, we might, at first sight, be led to think that our mechanics and small tradesmen had begun in right good earnest to have home as it ought to be,—a pretty and well-planned house, in which there is both beauty and comfort; a neatly-kept and well-arranged garden for the useful and beautiful, where the gems of Flora were shielding their brilliance and perfume; the surrounding glade of bright green grass nicely mowed, and showing as even a surface as the best Brussels; where the tasselled corn, the glaucous cabbage, the cooling lettuce, and the sugary pea, were luxuriating in straight lines and right angles, free from weeds, inviting us to accept health and enjoyment; the clean and convenient poultry-house in one corner, with its accompanying netted-in yard, and from which alighting peals out his delightful song; the hive, the tenement of the busy bee, from which we may learn habits of industry and foresight, and other details, which one and all, tend to make "home, sweet home," endearing. These are features which we often anxiously look for, but do not always find realized. There is here and there an example, it is true, where our admiration is drawn forth, before which we halt with pleasing reflections, and upon the inmates of which enclosure we cast a passing blessing, to be reiterated again and again as we renew our pleasing visit and admire each little paradise, well knowing that it is from such homes that the clean rosy face and happy child sallies forth to meet its welcome father on his return from labor and the anxieties of business, while in the door-portal smiles the endearing and love-beaming face of an affectionate wife, whose real and material portrait is surrounded, not by a frame of gilding, but by nature's more lovely bordering of fragrant eglantine or homysuckle, or the luscious fruit of the grape-vine. Such a home, and such comforts, are within the reach of most of our population, if the right method be adopted to secure them; and at a future opportunity, I will endeavor to give some practical information for the guidance of the amateur in the laying out and after-management of the garden and its accompaniments.—*Am. Phren. Jour.*

OYSTER FRYING.—Strain a quantity of fresh oysters from their liquor, and form a thin batter, with a couple of eggs and some fine family flour. Stir the oysters in, and heat some butter and good lard, hot, in a suitable dish, and put in the fritters. Fry, till well browned, and in turning be careful not to break them.

The total number of hogs packed at Cincinnati this season is 355,000, a decrease of 75,000 from last year.

The Gardens of the South.

BY ANDREW GRAY, SAVANNAH GA.

IN my last communication I gave you some account of the grounds and lawn at this place, briefly describing the ornamental trees; two or three, however, I omitted to mention, which I shall here notice, ere proceeding with another section of our place. The spruce and balsam firs, both natives of the mountain ranges, have stood here for some twelve or fifteen years, but have made very slow growth, as neither of them now exceeds nine feet in height, which the Cedrus *Deodara* has grown six feet during the last three years; but Cedrus Libani, instead of being that gigantic object I have seen it in the grounds of Hopeton House, Scotland, would readily pass for Juniperus prostrata. It probably has not advanced in height over eighteen inches during ten years. Araucaria imbricata and braziliensis both stand out in the South; the former I think will make a very handsome tree, but the latter grows too straggling. Our deciduous trees, of any importance, are the Catalpa, Pecan nut, Walnut, and Pride of India tree, (*Melia Azedarach*.) The latter, when in flower, is an object of considerable merit. It grows to about thirty or forty feet high, of a spreading habit; leaves bipinnatifid, deeply serrated; flowers, racemose; color, light purple. When these, in profuse masses, are pendulous from its twigs, it is indeed a most ornamental object; and in addition, it answers well as a shade tree; in fact, it is planted on some of the streets of Savannah for that very purpose.

The further outlines which I shall notice at present is an avenue from the stables which forms almost a circle, but has a branch leading out at each end of the lot, and a set off which leads to the front door of the mansion; one half of this circuitous avenue divides the lawn from the orchard, and is lined on each side with the *Cerasus carolinensis* and orange trees.

I shall now speak of the orchard, and I hope you will not be disappointed if I cannot tell you of heavily laden trees, with luscious fruits of the "sunny South." At the same time it may not be wholly barren of interest to know what experiments have been made here, and what results have been accomplished. There are oranges, lemons, pears, plums, peaches, pomegranates, apples, apricots, olive and fig trees all planted on the same piece of ground; but their remunerative value will be seen from the sequel.

ORANGES AND LEMONS are nearly of the same nature, the lemon being a little more tender than the orange, but both grow here luxuriant and would bear fruit abundantly were it not that we at times feel a little too much of the cold North. Our thermometer generally indicates 12 and 14° of frost sometime during every winter. The orange trees will stand 12° of frost with merely shrivelling the leaves; 14° turns a good many of the leaves yellow and destroys the tender twigs; anything above that greatly injures the tree, and 18° is their death blow. For a number of winters previous to 1851-52, the temperature had not reached that low point; consequently the orange trees had attained a good size, and were bearing fruit pretty well; but that winter, all the trees here and in the neighborhood were cut down to the ground. One tree, from which I pulled in one season nearly two bushels of good oranges, and the trunk of which was nearly eight inches in diameter, was killed to the ground. Their roots, however, survive, and they sprang up with surprising vigor, making shoots sometimes eight feet in one season, and are again in bearing condition in three or four years, if no further mishap occur.

PEARS.—Several varieties have been planted out here, but they have not, as yet, matured any fruit; they come into blossom at uncertain seasons of the year, according to the weather; if the winter keeps pretty regularly cold, they do not bud out until a proper time to blossom; but it is sometimes so mild in January that they bloom and get destroyed with frost in February and March. When the summer has been so dry as to severely check their growth, they come into blossom in October, and are soon lost in the cold gusts of November.

PLUMS.—The imported varieties have never done any good, and are subject to the unnatural phenomenon described above. There is a native plum which bears abundantly, but it is smaller in size than the Royal Gage, and inferior in flavor to the Damson. It is also subject to falling off before ripe; by cultivation it is greatly improved.

PEACHES.—There are several varieties of this fruit; such as have been raised from seed here succeed very well; they grow very rapidly from seed, and in three years are large trees bearing fruit; but the trees generally are short lived.

POMEGRANATES.—This shrub thrives very well in this latitude, and indeed seems to be of easy culture, bearing fruit freely where there is any cultivation bestowed.

APPLES.—Those raised in northern latitudes do not succeed here; but several varieties, natives or raised from seed here, mature for summer use; but I believe there are none adapted for keeping.

APRICOTS, like foreign plums, have never done any good; the trees live, but make very stunted growth. I have not even seen them blossom. There are two things which act unfavorably on this fruit, viz., the extreme hot sun and the drought, which I have no doubt will ever keep them from maturing.

OLIVES.—So far as the experiment with this South-of-Europe plant has been tried, it seems to give the hope that olive oil may be produced in this country. We have one tree which has been planted out several years and is growing vigorously; neither the cold of winter nor the heat of summer seems to affect it.

FIGS.—This is the fruit of the South which we

are certain of having one crop per annum; and if the spring is mild, the first crop matures in June, the second or reliable crop in August and September; as an extra bit of fructification they bear a third crop, but, like the first, seldom matures, being cut off by early frosts.

Such is my report on the orchard. It might be somewhat better if our mode of culture was not at fault.—*Mag. of Horticulture.*

THE following list, composed of the best peaches in cultivation, has been compiled from experiments commenced in 1843, as suited for the district of Louisville or St. Louis:

Mrs. E. Oakes Smith.

THE editor of the New York Mirror having inadvertently published a note from this gifted woman, in which she privately acknowledged the authorship of the *Newsboy*, one of the most popular and touching stories of the day, she takes the delinquent editor gracefully to task, in a letter of characteristic power and beauty. The following extract embodies the heroic spirit and the fine philosophy that pervade every production of her pen:

"I do not consider the public at large has anything to do with my private experience. The man or the woman who is not equal to the many contingencies of life, is too weak and cowardly to deserve comment. The man or the woman who whines over misfortunes is maddened with poverty, which is as bad as any other kind of drunkenness. The man or the woman who is afraid to utter the truth revealed to the soul, because of institutions or professions, is a recreant to God and man. The man or the woman who makes no advance upon the age, is a drone in the busy workshop of our humanity, and must be cast aside as all drones are."

The editor of the *Mirror*, in the course of some courteous remarks, pays a very happy tribute to the authoress and her last work. "That the author of the *Newsboy*," he says, "is full to overflowing with all the 'bitter elements' of humanity, the book itself affords indubitable evidence. Who that has wept with the beautiful 'Imogen,' or solaced over the sorrows of poor 'Bob,' or suffered almost the real pangs of imprisonment and death with 'Flashy Jack,' will deny to the fair authoress of the '*Newsboy*' the possession of a heart touched with the feeling of human infirmities, and strengthened and cheered by the tonic and the glow of human hopes? The '*Newsboy*' palpitates with all the sensibilities, the passions, the sorrows, and the joys, that make up the subtle issues of eternal life." We have not seen the "*Newsboy*," but its author well deserves this earnest praise. Mrs. Oakes Smith is one of the truest as well as one of the most fearless interpreters of humanity that has yet appeared. Her insight is equally delicate and profound, and her utterances ring out upon the murky cloud of selfishness that envelopes the race like the clear tones of a bugle upon the evening air. Her mind is a charming compound of instinct and philosophy, inspired by an exquisite poetic sense, and luminous with divine intuitions of all that is holy and beautiful in the potential relations of man. She is among the sweetest and noblest of the priestesses who minister at the altar of poor, fallen, yet radiant human nature. Her writings have indeed been censured by the careless and unappreciative as wanting in artistic completeness or in practical aim or even in fidelity to religion, but the truth is widely different, for, beyond the great masters of fiction, she has few rivals in artistic skill—her teachings are all as practical in their tendency as they are pure and refining, and her devotion to religion has something of the romantic simplicity and saintly passion of the cloister. Her sympathy with the unseen and the spiritual is vivid and intense, but while the summits of her faculties are gleaming in the light of the "coming time," her feet are upon the solid earth, and her voice is laden with messages of wisdom and of peace for the sorrowing throng that begird her. She promises to possess a wide influence in her time, and to exert it all in the direction of man's loftiest ideal. We advise those who doubt her to procure her works and read them.

CURE FOR SCROFULA.—Nicholas Longworth, a well known citizen of Cincinnati, Ohio, has discovered the following certain cure for scrofula. He requests editors in all parts of the Union to publish the recipe quarter yearly:

"Put two ounces of aquafortis on a plate on which you have two copper cents. Let it remain from eighteen to twenty-four hours. Then add two ounces of clear, strong vinegar. Put cents and all in a large-mouthed bottle, and keep it corked. Begin by putting four drops in a teaspoonful of rain water, and apply it to the sore. Make the application three times a day, with a soft hair pencil, or made of soft rags. If very painful put more water. As the sore heals apply it weaker."

Miscellany.

THE WORLD WOULD BE THE BETTER FOR IT.

If men cared less for wealth and fame,
And less for battle-fields and glory;
If wit in human hearts, a name
Seemed better than in song and story;
If men, instead of nursing pride,
Would learn to hate it and abhor it—
If more relied
On Love to guide,
The world would be the better for it.

If men dealt less in stocks and lands,
And more in bonds and deeds fraternal;
If Love's work had more willing hands
To link this world to the supernatural;
If men stored up Love's oil and wine,
And on bruised human hearts would pour it;
If "yours" and "mine"
Would once combine,
The world would be the better for it.

If more would act the play of Life,
And fewer spoil it in rehearsal;
If Bigotry would sheathe its knife
Till Good become more universal;
If Custom, gray with ages grown,
Had fewer blind eyes to adore it—
If talent shone
In Truth alone,
The world would be the better for it.

If men were wise in little things—
Affecting less in all their dealings;
If hearts had fewer rusted strings
To isolate their kindly feelings;
If men, when Wrong beats down the Right,
Would strive together and restore it—
If Right made light
In every sight,
The world would be the better for it.

THE SILENT LAND.

Into the Silent Land!
Ah! who shall lead us thither?
Clouds in the evening sky more darkly gather,
And shaggy woods lie thicker on the strand!
Who lead us with a gentle hand,
Whither, O whither,
Into the Silent Land!

O Land! O Land!
For all the broken-hearted,
The mildest heart by our fate allotted,
Beckons, and with inveterate torch doth stand,
To lead us with a gentle hand
Into the land of the great departed,
Into the Silent Land!

—Von Solle, (translated by Longfellow.)

The Crime of Delay.

You ask, dear Jim, why I took so much interest in that boy? I will tell you, but mark me, you must never allude to the subject again. I had thought, that for my own credit, no one should ever know the reason of my solitude concerning him, or why his death has affected me so deeply. But he is dead now, and lest you should misconstrue my interest in him to my prejudice, I will tell you frankly all that I know of him, so far as it affects myself.

I was not always, you are aware, dear Jim, the man you have recently known me. I once had position and influence, and when you first knew me, had never done any act to bring a blush of shame to the cheek of friend or relative.

But of this, enough. It is sufficient, that one year ago, or thereabouts, as I went to my office on a beautiful morning in March, I noticed a boy walking down the street, just ahead of me, looking pale, emaciated and yet beautiful. There was a peculiar—an exceedingly anxious look, that I had never seen before. There was the face of a boy with the anxiety of a man. It struck me as peculiar at the first glance, and I stopped to look at him. I perceived that it was with difficulty he could restrain himself from sobbing aloud. When he saw me, he repressed his emotion, and spoke up with an obvious effort of unconcern.

"Please, Sir, are you not the editor of the —?"

"I am," said I, "my fine fellow, and what can I do for you?"

"Mother's sick, sir, and we are very poor, and I want to get a place to work."

"What can you do," said I.

"O, I will try to do anything," he replied, "but I don't know what I can do, for I always went to school before I came to California; I will try to do anything."

"The boy had interested me, and though I am a callous man, whom bustling with the world has hardened prematurely, I could not allow him to leave me, till I had given him a word of comfort."

"My fine fellow," said I, "can you come to my office at seven o'clock this evening?"

"I will," he answered—"I will do anything to earn some money for my poor, sick mother."

I took a five dollar piece from my pocket, and put it into his hand. Had I a right to do it? I had often said I ought to pay my honest debts, before I thought of charity. Had I a right to do it? Yes.

The boy looked at the money; then he looked at me, and then—burst into tears.

Dear Jim, believe me, I had a great mind to cry, too. Said he, "Did I act like a beggar?" As he spoke the word "beggar," he burst out again, and the tears gushed forth afresh.

"No, my lad," said I, "but take that to your mother, and this evening I will have a place for you, so that you can earn the money, and when you have enough of it, perhaps you can pay me back."

He held the coin towards me and said, "Take the money—I am not a beggar, and as my father,

who is dead, and my mother, who is dying, told me to starve sooner than beg—I shall not take it."

He was so earnest, that to have refused, would have offended him the more, and so requesting him to call on me at seven o'clock in the evening, I told him to go home to his mother, and tell her that he had found a friend who would get him a situation.

He tripped away with a lighter heart. I went my way, thinking how I could and would befriend him. It was only the day before, that a friend had told me he wanted a boy of about his years, and if he was faithful and trustworthy, would pay him a liberal salary. I resolved in my own mind, I would go and see him immediately after breakfast. But,

The slight purpose never is o'ertook,
Unless the deed go with it.

At the breakfast table I got engaged in an angry, political discussion. The Senatorial election was on the tapis, and we had got news that morning, that a revered Senator, belonging to our side, had sold out and gone over to the enemy. I went down town after breakfast to learn the facts of the matter. I talked with one and another, till the case of the poor boy was quite driven out of my head. Before I returned, the dispatches began to arrive from the Capital, and what with talking to interested friends, and writing for the next morning's paper, I quite forgot the pale-faced boy and his dying mother.

At seven o'clock he came. My heart smote me when I saw him, for I had neglected and forgotten my promises. But I told him,—God forgive me,—not so much for the deception as the neglect,—that I could, not see the man whom I thought would employ him, but if he would come the next day at two o'clock, I would get him the situation, and pay him the first month's salary in advance. Dejected, he turned upon his heel and left the office. The next morning I went to my friend's store; he was out for a few minutes. While I was standing in his door, an acquaintance with a fine horse and buggy, came along, and asked me to ride with him to the Mission. I at once consented, thinking to call as I came in. We went to the Mission, from there to the race-course. Time flew swiftly, and before I was aware of it, two o'clock had passed, and I came home to find that the boy had been to see me and had gone away. I did not suppose I would see him again that night, and would put off the matter—so important to him—till the next morning. But he came again in the evening, and I had to tell him that I had been away. The next day, at twelve, however, should see him in his new place.

It was nearly twelve of the next day, when I bethought myself of my promise. I hastened down to see my friend, and found that I was too late; the vacancy had been filled about an hour before. Conscience smitten, I returned to my office, and I met the boy's anxious look as I entered the door. I told him I had just been to see about the promised situation, and it was taken. Yet, I thought I could get him a place soon. He thanked me, but his heart was bursting. I saw that an anxiety, terrible for one so young, was wearing his life away.

The next day I found him a place, and engaged it for him. I sat in my office writing, when the door softly opened, and he entered. He was pale, but calmer than I had before seen him.

"Well, my fine fellow," said I, "I have got you a place at last. You are to have twenty-five dollars a week, and you shall have a whole month's salary in advance, if you like."

He came towards me and handed me a slip of paper. It was a notice for the newspaper, and announced the death of his mother!

I have had many severe crosses, my dear Jim,—I have felt that all was lost, and that my life was not worth a rush. I have seen my fondest hopes crushed by one fell blow and I have felt to cry out in an agony at the cruel fate that pursued me. But all that I have ever suffered, was nothing to what I felt when I looked upon that pale, calm, intellectual boy, with his bright, big, blue eyes, gazing supernaturally into mine, and thought how that, perhaps, but for that neglect, his mother might then have been alive. I know not how I looked, or how I acted, but I know that man never suffered more in a short space of time, than I did. I have never got over it yet, and I never shall. You may not be able to realize the full force of it, but "I would not have the same touch of heart-break again,—no, not for all the lands ever owned by McGrigor."

After that, I tried to do, what I could to drive away the deep melancholy, that seemed to have settled upon him. But he would not be comforted. He seemed to be impressed with the idea, that here, in San Francisco, where so many live in extravagance and splendor, his only friend, his beloved and affectionate mother, had been allowed to perish in abject poverty and neglect. I attended the funeral, and interested some of my friends in the case, so that she had a decent burial. But the boy thanked me not. He could he? Could he feel gratitude, that I had shown an interest in the dead, which I had denied to the living? He seemed disinclined to receive any favor from me, and his clear, calm, mild eye, was too much for me to look at. I quailed before it, as I never quailed before. That he might not suppose that it was I who was acting in his behalf, I got a friend to offer him a situation, where he could earn more than his support. But he did not keep it long. He grew paler and paler each day, and soon was too weak to attend to his duties at all. I watched him with more than fraternal interest, and I often went to see him at his room. It was evident that he would soon die. I procured a watcher for him, for my own presence seemed to trouble him, and when I went the next

day to see him, I found that he was dead. He died, as he had lived cursing me, I believe, in his heart. I felt, while he lived, that his curse was justly upon me, and have often recalled the terrible lines of Coleridge:

"An orphan's curse will drag to hell
A spirit from on high;
But oh, more terrible than that
Is a curse in a dead man's eye."

He is dead now, dear Jim, but this lesson I have learned; never again to put off the business of another for the sake of my own. Life or death may depend upon his, while mine, you know, is of little importance; for though life be at stake, I ask why I should perpetrate so fitful an existence.—*Pioneer for April.*

How to Get a Coat Mended.

BY KATE BRADFORD.

"Pshaw! a woman keep a secret! Who ever knew one to keep anything twenty-four hours?"

"That's a libel upon the sex, Mr. Hill—invented, I'll be bound, by some, thrice-rejected bachelor, who could think of no other mode of revenge. Let anybody put a secret in my possession, and if I cannot keep it till the day of judgment, then I was not christened Laura, that's all."

"Guess I will try you, sometime," said Mr. Hill, applied a match to his cigar, and walked out. Proceeding to a confectioner's, he purchased a mammoth sugar heart and two smaller ones. These he took to his shop, and cut a piece of shingle the exact size of the large heart, and placed the wooden counterfeit in the paper with the small ones, that the packages might look as nearly alike as possible.

Nearly tea-time, Mr. Hill entered the sitting-room where Laura and her friend Mary were busy plying their needles. Seating himself near by, he drew two small bundles from his coat pocket, and presenting one to each of the girls, remarked that he had long contemplated making them some presents, but hoped as an especial favor to himself, that they would not tell each other what the papers contained.

Laura and Mary readily promised obedience, at the same time casting uneasy glances at the mysterious gifts.

"Remember, the first one who breaks her promise will forfeit her claim to the title of secret keeper, and mend this coat by way of penalty," added Mr. Hill, rising to exhibit more fully a most sorrowful looking garment, so "tattered and torn," that a tailor would have been puzzled to decide what was its original shape.

The girls considered themselves safe concerning the coat, and elided the wearer for being so skeptical in regard to their ability to keep a secret. Curiosity was only half satisfied, however, after ascertaining that Mr. Hill's generosity had bestowed a heart. It was not long ere the donor overheard Mary and Laura in the kitchen, teasing one another to reveal, by some sign, at least, the forbidden secret.

But each stood her ground wonderfully, and Mr. Hill feared his coat would remain tattered.

The girls' sleeping apartment was contiguous to the one occupied by Mr. Hill and a Mr. Telfair. As only a thin partition separated the rooms, it was easy to hear without the folly of listening.

The two men were snugly ensconced in bed, when Mary and Laura entered the adjoining room. The door had scarcely closed, when the former exclaimed,—Now, Laura, do tell me what was in your paper. It looked just like mine, and I verily believe it is the same thing. I shall not sleep a wink to-night, if you don't. Come, do tell that's a good girl, and then I will tell what there was in mine."

"Well," replied Laura, slowly, "there were two sugar hearts in mine."

"And there was only one in mine," said Mary, in a disappointed tone.

At this point a respectable portion of the bolster went into Telfair's mouth, while Hill took refuge beneath the bed-clothes, to smother his laughter as best he might.

At breakfast table the next morning, while Laura was pouring the coffee, Mr. H., turning toward Mr. Telfair, said very gravely, "Well, there were two sugar hearts in mine."

"And there was only one in mine," responded Telfair, so exactly imitating Mary's tone that she almost fancied herself speaking.

The coffee-pot dropped, to the great confusion of sunbry cups and saucers, and then came a burst of laughter from the four that fairly made the di-hes dance.

"I will take that coat, after breakfast, if you please, Mr. Hill," said Laura, quietly, when the mirth had somewhat subsided.

Mr. Hill declares that said coat was returned to him in a few days, so nicely mended that he should never have recognised it without an introduction.

The New York Times says a cargo of several tons of turnips has just arrived in that port from Glasgow in Scotland. This is a singular incident. We well remember the impression produced upon the public mind by the introduction of European wheat into this same port of New York, in 1837, and the importation of potatoes from Ireland in 1839. These Irish potatoes were landed at New Orleans, and found their way up the Mississippi river, as far as Pittsburg. They sold for one dollar per bushel, then an enormous price, but now considerably below the average throughout the fertile and productive West. Verily, we have strange events in these latter days.

Do not for one repulse forget the purpose you resolved to effect.

Moral and Religious.

THE DYING MOTHER.

We were weeping round her pillow,
For we knew that she must die;
It was night within our bosoms—
It was night within the sky.

Oh! be kind to one another,
Was my mother's pleading prayer,
As her hand lay like a snow-flake
On the baby's golden hair.

Then a glory bound her forehead,
Like the glory of a crown,
And in the silent sea of death
The star of life went down.

Her latest breath was borne away
Upon that loving prayer,
And the hand grew heavier, paler
In the baby's golden hair.

FRIENDSHIP.

For if there is an earthly doom
That naught can ever atone,
It is to feel in wo and gloom
Forgotten and alone.

Place me on some lone, barren isle,
Encircled by the wave,
Where nature never wears a smile,
And tempests wildly rave,—

Bear me where mortal ne'er hath been,
Beyond the ley zone,
Far from the busy haunts of men,
But leave me not alone.

Give me one friend to share my lot,
One heart that clings to mine,
Come weal or wo, it matters not,
All others I'd resign.

Love Your Enemies.

Our Saviour points this out as the characteristic duty of his religion. But it may be asked, how can we comply with this precept; to love our friends is easy; but to love our enemies is unnatural. The answer is, that we must take means with ourselves to overcome the feelings of dislike, or the impulses of passion. We must not dwell upon malice which others have shown; we must not make it the subject of discourse and complaint. We must call to mind all the excuses that may be found for them. We must above all, pray for a forgiving spirit; pray that a sense of God's mercy, and of the goodness of Christ, may be so fixed and rooted in our hearts, that they may expand in love to all mankind. Such are the grounds of this temper and conduct.

And one great motive to it is, that this is the way in which God acts towards men; and therefore the way in which men ought to act towards one another. God sends the blessings of his providence upon all; upon the just and the unjust; upon those that serve him and those that serve him not. We have daily experience that he does. For what a spectacle is this world!

In arms against God, their righteous Governor! refusing his laws, opposing his dominion! Even in a country like ours, so particularly enjoying the means of grace, how small is the number of those who really live to his glory; every trifling amusements, engages them, and God is forgotten. Worse still, he is defied; by open sin; by cursing; by blasphemy. Yet God, though "strong," is "patient;" though "provoked every day," he does not bring down that vengeance upon his enemies which they incur, or even imprecate upon themselves. He bears long with them; so long, indeed, that men are emboldened to continue in their wickedness, instead of using God's mercy as he intended. "The long suffering of God leadeth to repentance." "Sentence against an evil work is not executed speedily." He "is not willing that any should perish;" and therefore he makes his sun to shine upon the evil and the good, and sendeth rain on the just and on the unjust. This thought should incline all Christians to bless those that persecute them, to pray for those who despitefully use them. A blessing often accompanies such a spirit of meekness, as was signally exemplified on an occasion which deserves to be recorded, when the simple prayer of a negro slave for his master, which the master unexpectedly overheard, was the means of converting his heart "from the power of Satan unto God."—*Bishop Sumner.*

Said Richelieu: A virtuous and well-disposed person is like good metal—the more he is fired the more he is refined; the more he is opposed the more he is approved. Wrongs may well try him and touch him, but they cannot imprint on him any false stamp.

BLESSINGS which we have slighted when in our possession, are more highly prized when there is danger of our being deprived of them; and our hearts are more keenly touched by the anticipations of loss than by the fulness of enjoyment.

PATIENCE is the key of content.—*Mahomet.*

TO PRESERVE IRON AND STEEL KNIVES FROM RUST.—Procure some melted virgin wax—the purer the better—and rub it thoroughly over the blades of the knives. After it has dried, warm the knives, and having carefully removed the wax from the surface, rub them briskly with a dry cloth, until the original polish is fully restored. This will fill all the pores with the unctuous and minute particles of wax, which will adhere firmly, and prevent the intrusion of water or moisture, which is the cause of rust. They will retain their brilliancy for weeks if used.

FROM THE EAST.

The steamer Golden Gate, arrived at this port Thursday with 512 passengers, a very large mail from New York and New Orleans, and over 1200 packages of merchandise and freight. She brings New York and New Orleans dates of the 20th ult., and news from Liverpool and St. Petersburg to the 2d and 3d ult. The startling intelligence is received by this arrival of the death of the Emperor Nicholas, at St. Petersburg, on the 2d March. This event was announced to the English Parliament by the Ministers of the crown as having taken place, and the sensation which it produced in both branches of the Legislature was not greater than that which it will cause throughout Europe and the world. Of the certainty of the Emperor's death no doubt need be entertained. Lord John Russell, who is now in the Prussian capital, first telegraphed home that he had been struck by apoplexy—was on the point of death, and had just taken leave of his family. This was shortly followed by another telegraphic message from the British Minister at Berlin, to the effect that he actually expired at St. Petersburg March 3d, at one o'clock.

The steamer Northern Light arrived at New York from San Juan on the 19th March, transmitting the intelligence of the great financial panic which commenced in San Francisco on the 22d February, but no panic was produced and matters were moving along quietly.

Col. Benton in a letter to the St. Louis Democrat, calls attention to the fact that he has got a clause inserted in the general post road bill for a direct route between St. Louis and San Francisco, by the mouth of the Huerfano and the little Salt Lake to Stockton, on the San Joaquin River in the valley of San Joaquin, where it will connect with the permanent steamboat navigation of the river of San Francisco, and also of the Sacramento River.

He also states that auxiliary to this he secured another provision granting a pre-emptive right in stations to the extent of 640 acres, at the rate of one for every twenty miles. This is (he says) a most important provision under many aspects.

First, it enables this important mail route to go into operation and to be maintained and carried on. Secondly, it will make a chain of stations across the Continent, which will quickly become a line of settlements. Thirdly, it recognizes the existence of the central route to the Pacific; and, in my opinion, virtually establishes it for the railway.

THE INTRODUCTION OF CAMELS.—It appears that the appropriation of \$30,000 to test the experiment of introducing camels and dromedaries into this country, for military purposes, has passed. The appropriation has repeatedly passed one House of Congress, and been rejected in the other, and this was its fate at first at the session which has just closed; but in the confusion of the end of the session, when so many bad things are crowded into the appropriation bills, some good things get in; and among them this appropriation of \$30,000 escaped.

LAND TITLES.—The great Weber claim has been confirmed by the Land Commissioners. This includes the city of Stockton, and makes Mr. Weber one of the wealthiest men of the State.

SAN FRANCISCO MARINE LIST.

ARRIVALS.
 April 11—Clipper ship Water Witch, (Hawthorn), New York, 120 days; midco.
 Clipper ship Western Continent, (Barnham), New York; 120 days; midco.
 Clipper ship Boston Light, (Callaghan), Boston, 102 days; midco.
 Clipper ship Golden City, (Callaghan), New York, 120 days; midco.
 Brig Susan Abbott, (Corno), Oregon, 4 days; produce.
 Schr. Surereign, (Watman), Monterey, 30 hours; wood.
 Schr. Orlin, (Thomas), Monterey, 30 hours; oil.
 Schr. Laura, (Gregg), Puget, 30 hours; produce.
 Schr. Ortolan, (Robinson), Puget, 24 hours; produce.
 Schr. Eagle, (Miller), Central Bay, 2 days; midco.
 April 12—A schooner ship Golden Gate, (McLennan), Panama, 113 days; passengers, midco.
 Clipper ship Chalmers, (Lucas), Boston, 114 days; midco.
 Clipper ship Sunny South, (Gregory), New York, 110 days; midco.
 Clipper ship New Hampshire, (Hartling), New York, 145 days; via Valparaiso 33 days; midco.
 Clipper ship Samson, (Barry), Boston, 146 days; midco.
 Clipper ship Morning Light, (Knight), New York, 112 days; coal.
 Ship Maudslayi, (Pouland), New York, 152 days; coal.
 Ship Chalmers, (Johnson), New York, 137 days; midco.
 Clipper bark Julia Ann, (Parr), New-Castle (N S W), via Honolulu 11 days; 230 tons coal.
 Bark Elmwood, (Haskell), Cardiff, 146 days; coal.
 Bark Clara, (Cook), Glasgow, 151 days; midco.
 Brig Columbia, (Dennis), A. Louis, 5 days; lumber.
 Schr. Lady Jane, (Hooper), Honolulu, 13 days; midco.
 Schr. Cyclops, (Gregory), from a sailing bark, and 10 days from San Pedro, 15 days; produce.
 Schr. Francisco, (Miller), 15 days; produce.
 April 13—Clipper ship Flying Arrow, (Woodwell), New York, 136 days; midco.
 Ship (Greenwich), (Bourne), Philadelphia, 161 days; coal.
 April 14—Clipper ship Reliance, (Barker), Boston, 156 days; midco.
 Ship Spaulding, (Ward), (Hagblund), Philadelphia, 123 days; coal.
 Brig Geo. Emory, (Tracy), Puget Sound, 14 days; pilos, etc.
 Ship Columbia, (Dall), Oregon, 5 days; midco, etc.
 April 15—Ship Aurora, (Haley), San Diego, 24 days; midco.
 April 16—Ship Lucas, (Daggett), Hong Kong, 15 days; midco.
 Dutch ship Gerardo, (Marla), Spickberg, Cardiff, 153 days; with coal.
 Child ship Juan Guzman, (Cannon), Valparaiso, 50 days; midco.
 Clipper bark Frances Palmer, (Pau), Honolulu, 27 days; midco.
 Dutch bark Machtilde Cornelius, (Lundgreen), Cardiff, 149 days; with coal.
 Brig J. S. Cabot, (Wood), Carmel Bay, 3 days; granite.
 Schr. Smeaton, (Draper), Ashby, Australia, 17 days; midco.
 Schr. Joseph, (Harris), Lopez, Tongareva, 25 hours; produce.
 April 16—Horse ship Queen of the Isles, (Clapman), Honolulu, 34 days; 130,000 oranges.
 Schr. Frances Helen, (Lard), Port Orford, 64 days; lumber.
 Schr. Sunora, (Hanson), Hongkong, 24 hours; with potatoes.

CLEARANCES.

April 15—Bark Eliza Hurlock, (Marshall), for Hong Kong; schrs Mary W. Gould, Melbourne; Laura Devins, Morton, San Pedro.
 April 15—Ship John N. Gossler, (Emerson), Hong Kong; brig Sylvia, (Kulp), Sydney.
 April 14—Ship Gull, (Faulstich), for Crescent City; ship Neptune's Furrow, (Lane), Shanghai; Humboldt, (Lunt), Hong Kong; brig Metropolis, (Sullivan), Portland.
 April 10—Steamship Golden Age, (Watkins), for Panama; ship Spindle, (Arey), Hong Kong.
 April 17—Ship Aurora, (Horton), for Manila; Gov. Morton, (Burgess), Calcutta; bark Chalcidion, (Lorcy), Puget Sound; Melina, (Bor), Manoa, (Hua Kong); Dr. brig Gloria, (Kirk), Callao; bark Loo Choo, (Hodges), Unipqua River; Kate Hill, (Parker), Monterey.

MARKET REPORTS.

The condition of the markets is anything but favorable. Grain is at a low figure; produce of all kinds is low. Flour is pouring into our markets by millions of pounds from Chili; efforts are making to ship to Australia, to relieve the market.

The condition of the business in our city is anything but encouraging. Clippers in scores are overloading our warehouses, draining the specie of the country for goods we do not want, and impoverishing the State. Dark as is the prospect, courage and perseverance will overcome it, and better days will follow. *Nil desperandum*, should be the motto of all.

SPECIAL NOTICES.

Wistar's Balsam of Wild Cherry, the great remedy for Consumption and all other diseases of the pulmonary organs. The greater the value of any discovery, the higher it is held in the esteem of the public, and so much in proportion is that public faith to be imposed upon by the spurious imitations of ignorant, designing and dishonest men.

Now that this preparation is well known to be a mere certain cure for Incipient Consumption, Asthma, Liver Complaint, Coughs, Bronchitis, and all similar affections, than any other remedy known, there is no man more so villainously tricked as to connect a spurious, and perhaps a poisonous mixture, and try to palm it off as the genuine Balsam.

This is to caution dealers, and the public generally, against purchasing any other than that having the written signature of I. BUTTS, on the wrapper.

Prepared and sold, wholesale and retail, only by SETH W. FOWLE, Boston, Mass., to whom all orders should be addressed, and for sale by his agents. r3-16

Opinion of the Press.—The following is from the New York Evening Mirror, May 25:

"WISTAR'S BALSAM OF WILD CHERRY.—Among all the Panaceas advertised for the cure of human ailments, there is none in which we have more confidence than 'Wistar's Balsam of Wild Cherry.' We regard it as one of nature's own preparations—simple, safe, pleasant to take, and almost certain to cure all bilious and pulmonary affections. We have witnessed its wonderful effects, in cases that were regarded as hopelessly desperate, and we can confidently recommend it as one of the best medicines in the world."

It has proved more efficacious as a remedy for Coughs, Colds, Influenza, Bronchitis, Asthma, and Consumption in its incipient stages, than any other medicine.

Always signed I. BUTTS on the wrapper. r3-16

To Purchasers of Implements for Harvesting Grain.—We shall keep ourselves advised of the very best implements that are imported into this country, and those who wish to purchase, by writing or calling on us, can be assisted in their purchases materially. We can find orders to any extent for machinery, and will be happy to do so for a commission, and we know we can do so with great advantage to the purchaser. r3-13

WARREN & SON.

Native Pines, Oaks, &c.—Comes of the Native Pines, Acorns from our Mountain Oaks, Seed of all our Mountain Shrubs, and of every species of Valuable Tree or Shrub; for these the full price will be paid, if satisfactorily labelled, classified and arranged, at the

Office of the "CALIFORNIA FARMER," Masonic Hall Building, Montgomery street.

MARRIED.

On the 10th April, in this city, by Rev. Mr. Williamson, Samuel Snapper and Mrs. Harriet Wright.
 On the 21st April, in Shasta, by Wm. Mayhew, Esq., Mr. A. M. Barnard and Miss Sarah McIntosh.
 On the 3d April, in Shasta, by Judge Hall, C. Wheeler and Mrs. Mary Stockpole.
 On the 2d April, in Yreka, by G. Waterman, Esq., John J. Kelly and Miss Amanda C. Shores.

DIED.

On the 14th April, in this city, James, son of Capt. Ludlow, of New York, aged 18 years and 5 months.
 On the 5th April, in Los Angeles, of hemorrhage of the lungs, Major Rabi, Baronet, of the San Francisco Bar, aged 37 years.
 On the 6th April, on board steamship Golden Gate, at sea, C. W. Keller, aged 26 years, from Tientsin, Nc.
 On the 11th April, in Sacramento, Oliver, wife of S. P. Barnes, formerly of Boston, aged 43 years.
 On the 8th April, on board Greenleaf, at sea, David Walkie Scott, reaman, of Leth, Scotland.

OBITUARY.

"Death leaves a shining mark."

Charles Fielding Cooke, a lovely boy of two years, the only child of fond parents, has been suddenly called from the earth to heaven. While on a visit to his grandfather, in company with his mother, that fearful disease the croup made him its victim, after an illness of three days. He died at the residence of his grandfather, near Oregon City, O. T., on the 3d inst.

This promising boy was the hope of his parents, C. W. and R. E. Cooke, of Stanislaus county. The child's father, Hon. C. W. Cooke, of the Assembly, came to San Francisco to meet his wife and child. We remember well the anticipated happiness of that meeting. We could sympathize with our friend in his hope, for we are a parent. We remember also too well the agonized grief of that friend, when the fond wife told him they were CHILDLESS. It was our privilege to utter a word of sympathy in that dark hour; we could do so, for we had been there each flower faint, and we knew the value of sympathy then. It is only those who have been like afflicted, that can speak comfort. It may be some consolation to these parents to know there are hearts that offer their true sympathy. Fare!

Grief may bear thy spirit low
 Grief may dull thy hearing ear,
 But Hope dispels thy spirit's gloom—
 A voice speaks from the silent tomb.
 Behold!

That bud torn from the parent stem
 Is now in Heaven, a heavenly gem;
 There with the angels shall it bloom,
 And shed above its sweet perfume.

COSTA COSTA FERRY NOTICE.

Until Further Notice.
 ON and after WEDNESDAY, Nov. 29, the Costa Costa Ferry will run as follows:

SAN FRANCISCO. OAKLAND. SAN ANTONIO.

FLOWER POT.

JUST received ex "Spitfire"—3,000 Flower Pots, assorted sizes. For sale low. HAYNES & LAWTON, 122 Sansome street, bet. Washington and Clay. r3-16

MISCELLANEOUS.

IT IS A FIXED FACT.
CONSUMPTION CAN BE CURED!

SUR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Lassar and other pathologists." Dr. Casswell, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis." (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or embarrassing falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry, has cured hundreds of cases of Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Consumption can be cured.

Dr. Boyden, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Consumption had taken place, the Wild Cherry effected a cure."

Dr. A. H. MacNAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

Dr. Wm. A. STAW, of Washington, D. C., says: "I wish heartily success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity."

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes us as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the restoring power of Wistar's Balsam of Wild Cherry."

Hon. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful."

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry. "This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its name has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and untroubled on the lungs, than I anticipated, and, indeed, conceived myself cured of the most distressing ailment."

Argus Office, Portland, March 26, 1850.
 Fifty Thousand Persons die annually in England of Consumption. In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York six-sevenths die in two weeks, in December, of this disease. The more fit that such a disease is ever curable, uttered by such unimpeachable authority, should inspire hope and resolute fading courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations.—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine.

Dr. Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

SETH W. FOWLE, Proprietor, Boston, Mass.

Agents for San Francisco, B. B. THAYER & CO., Montgomery street. r3-16

A Lady's Praise of Spalding's Oil.

As the shadows of evening began to fall,
 A Lady was dressing her hair for the Ball;
 Soft rure the accents that fell from her tongue,
 And this was the song that the lady sung—
 "Array with Pompadour and Bandoline,
 No aure in my room shall Bury's Glycer be seen,
 The hair's soft texture they truly spoil;
 Oh, give me the Castor and Rosemary Oil—
 It's so lovely my tresses look cool and bright,
 And my hair keeps its curl tho' I dance all night.
 No more of grease or strong oil for me,
 But Spalding's mixture of Rosemary Oil."
 Sold by B. B. THAYER & CO., Montgomery street, San Francisco. r3-16

Virginia Manufactured Tobacco.

GREENE, HEATH & ALLEN have removed from California street to the corner of Washington and Battery streets, where they offer for sale the largest and best assortment of Manufactured Tobacco ever brought to this State. The selection was made by Mr. Heath from the best factories in Virginia; and the trade generally are respectfully invited to call. Among the brands offered are the following:

200 boxes Crumpton's Four Aces;
 75 half boxes do. Medals;
 60 packages do. Sovereign of the Seas;
 100 boxes do. Bride of the Pacific;
 100 boxes Hager's Four Aces;
 100 do. Semblers' Harry of the West;
 50 do. James Bay's Gold Leaf;
 50 do. do. Ann's Hishop;
 25 do. A. Thomas' Club House;

a few fine Merino Rams.
Communications by mail, post-paid, will be responded to
promptly. WARDEN A. ROY.

Varieties.

In one of the factories in Maine recently, the proprietors reduced the wages, whereupon there was a general determination to strike, and as they were obliged to give a month's notice before quitting work, they have meanwhile issued a circular to the world at large, in which is the following interesting paragraph: "We are now working out our notice, and shall soon be without employment; can turn our hands to most anything; don't like to be idle—but determined not to work for nothing where folks can afford to pay. Who wants help? We can make bonnets, dresses, puddings, pies and cakes, patch, darn, knit, roast, stew, and fry; make butter and cheese, milk cows, feed chickens, and hoe corn; sweep out the kitchen, put the parlor to rights, make beds, split wood, kindle fires, wash and iron, besides, being remarkably fond of babies, in fact can do anything the most accomplished housewife is capable of, not forgetting the scoldings on Mondays and Saturdays. For specimens of spirit, will refer you to our overseer. Speak quick. Black eyes, fair foreheads, clustering locks, beautiful as a Hebe, can sing like a seraph, and smile most bewitchingly! An elderly gentleman in want of a good housekeeper, or a nice young man in want of a wife—willing to sustain either character; in fact, we are in the market. Who bids? Going, going, gone! Who's the lucky man."

AMERICAN SENTIMENT.—I encountered to-day in a ravine some three miles distant, among the gold washers, a woman from San Jose. She was at work with a large wooden bowl by the side of a stream. I asked her how long she had been there, and how much gold she averaged a day? She replied, "Three weeks and an ounce!" Her reply reminded me of an anecdote of the late Judge Bruce, who met a girl returning from market, and asked her, "How deep did you find the stream? What did you get for your butter?" "Up to the knee, and ninepence," was the reply. "Ah!" said the judge to himself, "she is the girl for me! no words lost there!" turned back, proposed, and was accepted, and a more happy couple the conjugal bonds never united. The nuptial lamp never waned, its ray was steady and clear to the last. Ye who pad off and on for seven years, and are at last perhaps capsize, take a lesson of the Judge; that "up to the knee and ninepence" is worth all the love letters and melancholy rhymes ever penned.

THE BEST THING OUT.—A friend has furnished us, says the Spirit of the Times, with the following copy of a sign over the door of a respectable looking house near Chichester, England: "HER LIFE I DO GUARANTEE A GOOD ONE." Any joker that can translate the above, at one reading, can "take our hat!" We have frequently published "the march of the schoolmaster," but recollect nothing equal to this. Now, if you desire to have some fun, just "turn down the leaf," and ask a friend to translate it. We subjoin it: "HER LIFE ONE WHO CURES AGUES."

At a camp meeting last summer, not more than fifteen hundred miles from Boston, the trumpet had called the congregation together, but a crowd of idlers and rowdies stood outside the range of seats and would not come in. The presiding elder invited them twice with no effect. Then, after singing a hymn, he turned to the crowd and said: "As many of you as have not got the itch, or small pox, or any other cutaneous disease, we shall be glad to have come forward. All others will remain outside." No one was left out.

NOVEL MARRIAGE CEREMONY.—A correspondent of the Staunton Spectator writes that the Rev. M. Brown, of Bath county, Va., married a couple a few days since across a river—that is, the parson was on one side, and the bridegroom and his dulcinea on the other. This mode was resorted to on account of the water being impassable. The license was thrown across the stream by the bridegroom, after having wrapped it tightly around a stone.

HAPPY MARRIAGES.—An English paper publishes the following official table, giving a view of the connubial bliss in the city of London:

Runaway wives,	1,132
Runaway husbands,	1,348
Married persons legally divorced,	4,175
Living in private misunderstanding,	13,279
Mutually indifferent,	55,340
Regarded as happy,	153
Nearly happy,	27
Perfectly happy,	13

As a preventive of anger, banish all tale bearers and slanderers from your conversation for it is these who blow the bellows to rouse up flames of rage and fury, by first abusing your ears, and then your credulity, and after that steal away your patience, and all this perhaps for a lie. To prevent anger, be not too inquisitive into the affairs of others, or what people may say of yourself, or into the mistakes of your friends; for this is going out to gather sticks to kindle a fire to burn your own house.

It is said that North Carolina produces within its boundaries the staple of every State in the Union, and is the only one that does it. We say she is not the only one that does it; California produces not only the "staple of every State in the Union," most abundantly, but that of nearly every country or clime on the globe!

If you would be pungent, be brief, for it is with work as with sunbaths, the more they are condensed, the deeper they burn.

EXPRESSES, &c.

E. W. TRACY & CO.'S EXPRESS
TO SHASTA, WEAVER, YREKA, JACKSONVILLE,
AND ALL INTERMEDIATE PLACES.
CONNECTING WITH THE
PACIFIC EXPRESS CO.

To the Atlantic States and Europe.
For the purpose of accommodating the business community, the undersigned commenced on Wednesday, Feb. 28, to travel from Shasta to San Francisco, carrying Money, Letters, Packages and Valuables, and attending to all matters of Express Business.
The Express will be dispatched regularly as heretofore, in charge of careful messengers, and the whole business will be under the direct management of E. W. Tracy. We have no security to offer except business capacity, and for that refer to the annexed card, signed by the business men of Shasta.

Card.
We, the undersigned, Traders, Merchants and Dealers, in Shasta, do hereby recommend to all who have business to be transacted between this place and San Francisco, E. W. Tracy, as a person in whose honesty, integrity and business capacity, the utmost confidence can be placed.

Tomlinson & Wood,	J. Weber,
Benjamin Shurtles,	J. Van Schadel,
Goldstone & Bro.,	John E. Church,
F. M. Edie & Co.,	Wm. A. Mix,
Hall & Luce,	C. E. Church, Att'y.
M. Jackson & Co.,	C. Reiche,
T. Levy & Co.,	Wm. S. Fitch,
A. S. Solomon,	W. S. Dargatz,

Van Wic & King,	J. N. Chappel,
Simon Selig,	Ja. W. Dornhor,
M. Shloss & Co.,	G. W. McMarty,
A. Kuman,	James Long,

Freight and packages forwarded with dispatch and at greatly reduced rates.
Collections attended to promptly, and returns made in coin or draft.
E. W. TRACY & CO.

PACIFIC EXPRESS COMPANY.

THEIR employees, of Adams & Co., in consequence of the disruption of that firm, have organized themselves into a joint stock company, under the above name and title, for the purpose of conducting a General Express and Forwarding business in all its branches, throughout California, Oregon and the Pacific Coast generally.
The business will be strictly and solely a forwarding one, having no connection with banks and bankers, and will be conducted on safe and economical principles.
The Expresses will leave the office at the north-west corner of Washington and Montgomery streets, daily, at regular hours, for Sacramento and the Northern Mines, Stockton and the Southern Mines, San Jose, San Juan and Santa Cruz, Monterey, San Pedro and the Southern Coast generally, as well as to the Northern Coast of California and Oregon.
We will also run a regular Express for Freight, Small Parcels and Letters to and from the Atlantic States by every steamer.

The parties who have organized this company are well known in the community as old and experienced expressmen, and hope it will be acknowledged generally, understand their business thoroughly. They think they are not saying too much, when they attribute much of the success of the late firm of Adams & Co. to the express business to their exertions and personal energies.
In conclusion they would solicit a fair share of the favors of the public, pledging themselves to exert their best endeavors to transmit such business as may be entrusted to them in a prompt and business-like manner.
Collections of all kinds will be promptly attended to at any of the points mentioned above.
R. G. NOYES, President.
San Francisco, March 1st, 1855.

Southwick & Co.'s Grand Raffle.

IN consideration of the extreme difficulty which enterprises of all kinds have in coming up to the present time, owing to the scarcity of money in this city, and all parts of the mines, and feeling sure that Southwick & Co. have not had a fair chance to dispose of their tickets, through means of unparalleled depression and stagnation in the business community, as well as with the laboring population in this city and all portions of the mining region, we are induced to append our names to this card, calling upon the public generally to come forward and purchase the tickets of Southwick & Co., as to be sure the drawing ending off at an early period. They have already sold a large portion of their tickets, and in soliciting the forbearance of those who hold their tickets, we have many considerations in assuring them, that they run no risk in consenting to a further postponement of thirty days, at the expiration of which time, we feel assured, they will have disposed of most of their tickets; inasmuch as they call upon all who may feel favorable to the Scheme, to come forward and purchase their tickets without delay. This postponement, we feel sure, will be more satisfactory to the ticket holders and the public generally, than that the proprietors of the Raffle should retain a large number of tickets themselves. Under the circumstances the proprietors have fixed the day of drawing for

Monday, 30th of April,
four which there will be no further postponement.
Heavily concurring in the above, and recommending the Scheme to the honorable notice of the public, We are, &c.,

SIMMONS & CO.,	J. M. RHODES,
W. S. COTHRIN,	IRHAM KELLY,
NEEKER & CO.,	JAS. ANTHONY,
RIVETT & CO.,	E. P. FIGG,
LANDERS, OLIVER & CO.,	M. D. CORSE,
THOS. N. WARD,	WM. H. WATSON,

MOREHOUSE & BRAINARD.

Ingham's Improved Sizing Machines.
THESE Machines combine all the apparatus necessary to clean Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the entire crop of Spring Grain, also remove chaff, straw, and other foreign matter, and produce a fine, clean, and pure product. All of the official receipts are collected in a register, which the first and light duty are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient, without the necessity of moving it. It is a California improvement, and designed to meet the wants of this country; and our machines having been found to be inadequate to that purpose, it has received the highest recommendation from all leading firms, among whom are Pratt & Hodgekins, Brighton Mills, Sacramento, Brooks & Hall, Happy Valley Mills, San Francisco, Van Sleet, American Mills, San Francisco; Babbitt & Hall, Sierra Nevada Mills, San Francisco; H. S. Hill, Washington Mills, San Francisco.
These building Mills are very expensive and roomy using this machine, as they will afford all the machinery ordinarily needed for that purpose.
Orders filled on short notice. SHOP on E street, between Front and Second, Sacramento.
H. B. INGHAM,
N. R.—All information given, and orders left at WARREN & SON, San Francisco, will be attended to.

The following certificate is among the number received others can be referred to in quantities:
This is to certify that I have one of H. B. Ingham's Improved Sizing Machines, and believe it to be superior to any other. I need no other fixture for cleaning grain, except the machine itself. It makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before.
WM. SHARP, Agent American Mills,
Pinto street, San Francisco.
San Francisco, Jan. 11, 1855.

"Take no thought for the morrow,"
THIS TEXT MEANS, BE NOT UNREASONABLY
anxious or disturbed by future cares. It is an advice easily adopted, if we take such steps as prudence suggests. Suppose no one is troubled with Coughs or Consumption, the trumper is secured, and the good dispositions of the soul brought to the mind's surface; but what a deadly relief from the use of Dr. DEVINE'S COMPOUND PITCH LOZENGES, and the mind and soul repose in their tranquil liberty and Divine Providence which the text commands. Price 50 cents a box, or 3 for \$1.
LITTLE & CO., Apothecaries,
137 Montgomery street.

HORTICULTURAL, &c.

These are all Fresh Eastern Seeds, from the seed store of Thorburn & Co., New York, and for sale by
H. McNALLY,
Agricultural Warehouse, 84 Washington street, opposite the New Merchants' Exchange, San Francisco.

17,000 Premium Strawberry Plants!
From the Shell House Nurseries and Fruit Gardens, Near San Antonio, Alameda County.

WE offer for sale the following List of Plants, viz.:

1,000 Boston Pine,	\$70 per 100
5,000 British Queen,	" 35 "
1,000 Bar's New Pine,	" 35 "
500 Royal Hudson,	" 35 "
5,000 Large Early Scarlet,	" 15 "
2,000 Hovey's Seedling,	" 15 "
1,000 Prolific Hovey,	" 15 "
1,000 Black Prince,	" 15 "
500 Crimson Cone,	" 15 "

Plants from "Shell House" received a premium at the late Fair of the California State Agricultural Society. Several of the varieties above named are believed to be remarkable for their fruitful qualities, having been cultivated for several years by Mr. Sanford, at his garden in Wayne county, N. Y., with special reference to the production of fruit.
Orders received for any number of plants, (not less than 100) and promptly executed. On invoices of \$500, and over, a discount of twenty per cent, from the above prices will be allowed.
Address, J. L. SANFORD, Cultivator,
Shell House, near San Antonio;
or, R. W. WASHBURN, Proprietor,
Care of Wells, Fargo & Co., San Francisco.

Flowers! Flowers!!
GOLDEN GATE NURSERY,
Corner Fourth and Folsom streets,
Office 170 Washington street, San Francisco.

PERSONS desirous of embellishing their gardens or conservatories, will find at this establishment the largest stock and greatest variety of plants to be found on the Pacific coast. Among which are:
Camellia Japonica, in 70 varieties; Perpetual Roses of all the classes; fuchsia and fancy Geraniums; Passifloras, Heliotropes, Verbena, Honey-suckle, Abutilons, Mirabilis, Oleanders, Jasmines, Fuschias, Dahlias, Dahlias, Bulbous Roots, Oriental Shrubbery; and a general assortment of Green House and Hardy Plants.
Orders for shipment to any part of the State will be carefully executed by addressing D. Nelson, 170 Washington street, or the proprietor, Box 1,927 Post-office.
W. C. WALKER.

The Upland Bell Cranberry.
WE have just received, per last steamer, the famed "Upland Bell Cranberry," to which we call particular attention of the cultivators of California. They are put up in barrels of 100 and 200, at \$10 per hundred. Only a few are received, and an early call only can secure them. Please notice the character of them, as described in an article in another part of this paper.
WARREN & SON,
23 Masonic Hall Building, Montgomery street.

Surgery.
R. B. COLE, M. D.,
Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.
Office—Albion Building,
South-east corner of Montgomery and California streets, opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, which this community is well known, he will in future confine himself principally to his office, where he proposes to treat all

Surgical Diseases,
feeling assured as he does that his former connection with Medical Schools and Hospitals, together with the extensive practice he has enjoyed for the past ten years, particularly qualify him for the successful practice of surgery. Of the attention to which Dr. Cole has devoted much of his attention, may be mentioned: Fractures of the spine, chronic Ulcers, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of the Eye, Ear and Skin, Affections of the Bladder, Uterus, Seminal and Testis (in either sex), all diseases of the Genito-Urinary Apparatus, and Derivatives, whether congenital or the result of accident, amongst which may be mentioned, Club-Foot, Badly-treated Fractures, Contractions of the Limbs and loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.
Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.

State Agricultural College in Michigan.

We publish to-day the Bill (in part) passed by the Legislature of Michigan establishing an Agricultural College. Its provisions are liberal, means will be abundant, and the interest manifested is of a right character, as will insure for it a speedy execution and a successful commencement. An act of this kind by the legislators of Michigan, reflects the highest honors upon them. Many of our States are now blessed with institutions of this kind, and we hope California, with such wonderful resources in Agriculture, will not long wait for an institution of this kind:

A Bill for the establishment of a State Agricultural School.

Sec. 1. The People of the State of Michigan enact, That the President and Executive Committee of the Michigan State Agricultural Society be and are hereby authorized to select, subject to the approval of the State Board of Education, a location and site for a State Agricultural School; within ten miles of Lansing, and subject to such approval, contract for and purchase for the State of Michigan such lands, not less than five hundred acres, nor more than one thousand acres, in one body, for the purpose of an experimental farm and site for such Agricultural School: *Provided*, That the amount to be paid for such farm and site shall not exceed fifteen dollars per acre, and that the conveyance or conveyances be made to the State of Michigan.

Sec. 2. There is hereby appropriated twenty-two sections of salt spring lands, or the money arising from the sale thereof, referred to in article 13, section 11, of the constitution of the State of Michigan, for the purchase of land for such site and location, and the preparation thereof, the erection of buildings, the purchase of furniture, apparatus, library and implements, payment of professors and teachers, and such other necessary expenses to be incurred in the establishment and successful operation of said school.

Sec. 3. Upon the execution and delivery to the Secretary of State of the proper conveyance or conveyances of the land, the purchase of which is provided for in the first section of this act, and the certificate of the Attorney General, that he has examined the title of the same, and finds it unencumbered; and that the conveyance or conveyances are executed in due form, and certificate from the President and Secretary of the Board of Education, that the same is in accordance with the contract or contracts for the purchase of the same, and that the location has been approved by them; the Auditor General shall draw his warrant or warrants on the State Treasurer for the amount of such purchase, in favor of the party or parties to whom such sum or sums shall be due, payable out of said salt spring lands, or money accruing from the sale of the same, and the said certificates in this section mentioned, shall be filed and preserved in the office of the Secretary of State.

Sec. 4. Upon the purchase of such location and site, there shall be established on such site, under the direction and supervision of the State Board of Education, an Agricultural School, by the name and style of the Agricultural College of the State of Michigan; and the chief purpose and design of which, shall be to teach the science and practice of Agriculture.

Sec. 5. The course of instruction in said College shall include the following branches of education, viz: An English and Scientific course, natural philosophy, chemistry, botany, animal and vegetable anatomy and physiology, geology, mineralogy, meteorology, entomology, veterinary art, mensuration, leveling, and political economy, with book-keeping and the mechanic arts which are directly connected with agriculture, and such others as the Board of Education may from time to time see fit to prescribe, having reference to the objects specified in the previous section; and the said Board may establish such professorships and employ such professors and teachers, to be called the Board of Instruction of said College, for the instruction aforesaid, as they may judge best for such object: *Provided*, The sum paid such professors and teachers for the first year after said College shall go into operation, shall not exceed the sum of five thousand dollars, and for the next year not exceeding the sum of six thousand dollars; and for any years thereafter, such a sum as the State Board of Education may deem necessary for the successful operation of the institution. Tuition in said institution shall be forever free to pupils from this State, and any number of pupils may be admitted who shall apply from any part of this State: *Provided*, that in case more pupils apply than can be accommodated or taught, then said Board shall adopt some equitable plan, giving to each county a number according to the ratio of population, as it shall appear from the census last taken, and in that case, those from each county shall be admitted in the order in which they shall apply, until the quota of such county shall be full. * * *

Superior Dairy Cows.

THERE is quite an excitement going on among a portion of stock raisers and dairy men in Ohio, relative to the merits of certain famous cows now prominently before the public. These cows are all of very high standard, and their milking qualities are of almost an incredible character. We make extracts—one from the Ohio Farmer, of the cow "Giantess," and one from the Michigan Farmer, in response, for the "Aunt Fanny's Cow." Both these specimens are worthy any State, yet Ohio takes the lead. We hope California will give some such examples:

[From the Ohio Farmer.]
THE BANNER MILK COW.
"WILLOTT FARM," West of New Petersburg, O.,
November 16, 1854.

Messrs. Editor: At your request, and in the fulfillment of promises made other agricultural friends of some half dozen States, I present you for publication the following statement of the banner milk cow of the Union! honored with first premiums at our State and National Fairs in October last.

"Madame Giantess" is a thorough bred cow, of the Patton and Short Horn cross, an orange red and white, variegated with clusters of beautiful spots on the back, resembling the English grape. Her horns are symmetrically fine, with a slight inclination upward. Age, 7 years; weight in last fifteen months, owing to condition, from 1,600 to 2,000 pounds!

Milk and Butter Record.—In June, 1854, in ten successive days, Giantess gave 768 pounds of milk, her calf then four and a half months old, 26 pounds making a pound of butter. In May she gave on the average, being grain fed and let to grass, 88 pounds of milk per day. On one occasion she produced 20 pounds of milk in six hours!

Gross Beef Record.—Giantess has raised two calves this year, her own, a bull calf, and an orphan, a heifer, he being calved January 30, 1854, she March 16, 1854. The weight of the calves on October 1st was 1,425 pounds, his weight 925 pounds. The calves, until the first of September, had not been fed anything in the shape of or the nature of grain, reared entirely upon milk produced by Giantess, with the grass found in their lot. I think I might challenge the world to a comparison!

Treatment of Cow.—Since I purchased her in August, 1853, Giantess has had plenty of grain-feed when necessary, and in grass season a variety of the best grasses, with the liberty of ranging over some three or four fields of about 50 acres, at all seasons. I use no hay in winter; fodder, with plenty of corn in it, is Madame's principal diet during the winter season.

If the above facts are worth a place in your excellent paper, you are at liberty to publish them.

J. W. BROCK.

[From the Michigan Farmer.]

MICHIGAN AGAINST THE WORLD.
FRIEND JOHNSTONE: I thought that some months before now I should tell all your readers of "Aunt Fanny's cow." But I've waited, though vain, for a great light to shine from those high-blooded men who pay hundreds for line;

Who pay dollars for beauty, and times for the size, But cents only for milk, which is last in their eyes. Hence the silence that reigns, while Ohio peals forth That she's queen of all Cowdom, yet native by birth.

"Aunt Fanny's Cow," as she is often called, was seven years old last spring, and as near as we can judge, is purely native; as her grandam was brought from Ohio, and the blood has been in the family ever since. She is of the middling size, and her build indicates great milking properties.

In the summer of 1853, while kept in a pasture not the best, it having been seeded eight years, and without running water, her milk for one week yielded 13 pounds and 14 ounces of butter, besides the new milk eaten by a family of three persons once a day, and cream used by two families of three persons each for tea and coffee. The other cows were dry at the time, and thinking it a good yield we weighed it out of curiosity. But we have frequently weighed her milk and found her to give 22 pounds in the morning, 28 at night, making 50 pounds per day. At one time, butter was made from her milk alone on a Monday morning, and one week from the next Saturday she had a calf.

We have raised two cows from her, one four, and the other three years old last spring. The four year old has been farrow one season and has had three calves. The three year old has had three calves, and for the last spring's, a heifer calf, \$20 have been refused. Mr. Walker has also left a standing offer of \$60 for its mother. The old cow is now owned by Col. H. A. Walker, of the Everhart firm in Cambridge; he asks double the price he paid for her, being \$100.

Judge ye between Michigan and the "World's Cow of Ohio!"
B. C. BENSON.
Moscow, Jan. 8, 1855.

Turnips from Glasgow.

In last evening's paper was announced the arrival of a vessel from Glasgow with a number of tons of turnips on board. This certainly is a curious thing—turnips from Glasgow! Where is Long Island? Is Oysterpond Point snowed under? Or have Southfield farmers made money enough, and retired from turnip raising. Times were different when we were young.

In the old times—say ten years ago—there was no such place for turnips as the east end of Long Island. Late in the fall—not until the frosts had withered the tops, yet before the ground was so frozen as to anchor what was in it for the winter—the farmer kept all his boys home from school, and spent the day, or several of them, in pulling turnips. It was not an occasion much coveted by the boys. Jack Frost, at other times a myth, then was a solemn reality, always standing behind the turnip puller, nipping his nose, pinching his ears, and often fetching him a hard slap as he bent to his task that brought tears between his eyelids. It was a dirty job. You would get dirt under your nails, and your fingers would feel the worse a week for the job. The tops of the little ones would twist off in your hand, and the stubborn roots often would utterly refuse to come out. We used to wonder if they would never get a machine to pull them. But they did not. In those days machines were very costly, and new-fangled ones were not popular.

The turnips pulled and measured up were then carted to the beach, off which lay the sloop that was to take them to the city. That sloop—it was bigger to our eyes than the Great Republic would be now—and to command her was a greater honor than to control the English fleet that went up the Baltic. Happy was the boy whose father went "hand" in her, and the little black cook, who fried the pork and stewed the onions in her cabin, might have found some white boys of his size, who, for his berth, would have swapped colors with him.

The long boat draws near to the shore, as near as may be consistent with the state of the tide and the shoalness of the beach, and the team was driven in, to meet these conditions. The horses never fancied much this late November job. They would stand pawing the pebbles and striking at the seaweed, probably to their own great satisfaction, but wetting us down somewhat unpleasantly. And so the sloop was loaded, not by one man, but by a dozen, though in those days, as now, many a small farmer raised enough to freight the sloop—but then the venture! It was safer to divide the risk. Loaded, the good sloop only waited for a spell of fair weather, and a light wind from the north or east. Nor waited long—not over a week or two generally. The turnip-sloop did not often take passengers, because they did not return early; but if she did take down Aunt Polly or Mrs. Burnell to see her married daughter, there was one big baking done in the village, you may be sure, and more than one big basket full of "relishes" went on board. Seizing a fair day, when the tide ebbed early, the sloop

would slip down the bay, through the Gut, and and go scudding through the Sound, hoping all the way for a good breeze to go through Hell Gate with, and, hauling into Rutger's slip, or Tyson's. Next morning a board hoisted in the rigging and chalked in indifferent letters, "Long Island Turnips for Sale," would announce to New York housekeepers and grocers where the prime bargains were to be made. The little sloop would lay in her slip all winter, selling enough some days to pay wharfage, and some days doing so well that all hands would feel justified in going on a "bust"—the Captain up to the Chatham Theatre, and the black cook treating himself to a long nine that nobody had smoked before. The owners of the vegetables took for their share just what they "stood them in"—that is the price that they brought less the cost of peddling them. They were sold for a shilling and eight-pence the bushel! and no better turnips were ever mashed, buttered and set before a King, than those same ruta bagas, which sold cheaper than dirt. They were too cheap for people to eat. Now that they sell as high as potatoes by the wholesale, and are related at two shillings the half peck—(half a marvellously little peck, too)—we wake up to their excellence as an article of diet. Salt, they say, develops the odor of flowers; silver certainly brings out the flavor of vegetables, and makes us appreciate them. We venture that, with a load of turnips in town, all the way from Glasgow, and a price upon all in the market so high, compared with the cost of production, that farmers put down the latter at nothing—we venture that turnips will rush into unprecedented popularity, and thousands of poor families discover that they cannot get along without them.—N. Y. Times, Feb. 24.

Butter and Lard.

SOME very fine samples of Butter and Lard were exhibited at our late Fair, says the Southern Cultivator, by a lady friend of Tennessee, whose husband has obligingly furnished us with the following directions for making these indispensable household articles:

"The butter is six months old. It was churned as it is usually done; the milk washed out of it, then salted and set away in the spring house till the next day, when, with a wooden paddle all the water is worked out; set it in the spring house again for several days, when it is again worked, and one ounce of pulverized loaf sugar is added to each pound of butter; then put into a stone jar, laying a cloth over it, and salt on the cloth, and set in the spring house, where it may be kept through the summer.

The Lard was soaked for twelve hours in water and then thoroughly washed in tepid (warm) water; it is then rendered by cooking it until the cracklins are beginning to brown; it is then nicely strained and set away in a cool cellar."

Clean Grass Seeds—Quantity to the Acre.

In my early days, passed in one of the Eastern States, and daily working on a farm where the plow-fields abounded in rocks and small stones, I was taught, that when a field was to be newly seeded down, it was all-important to have seed that in growing, would prove the truth of the name given it by the seller. This item I have too often seen overlooked by many in Ohio. The additional twenty-five or fifty cents, between the seed purporting to be Timothy, and that proving to be Timothy, is often the rock upon which many farmers have foundered. A little forethought will convince any of us, that if we put good seed upon our land, we are more likely to get good grass, and that its added value will, in one crop, more than twice pay the extra price of pure, over impure seed.

Another thing I was told when a boy, and have thus far seen no reason to doubt its truth, viz: that if we did not sow upon the land a sufficient quantity of good grass seed, weeds would come up and occupy vacancies, and soon overpower even the grasses. Rich, clayey and loamy soils should have not less than half a bushel of Timothy and eight quarts of Clover seed to the acre. Lighter, or sandy soils, or poor clays, require a less quantity of seed.—Cor. Ohio Farmer.

A GREAT DAY'S WORK.—Mr. Edward Ryan, of this village, on a wager, cut, split and packed four cords, one foot and eight inches of wood, between sunrise and sunset. The work was done in Smithfield. The wood, which was mainly chestnut, was cut four feet in length, the logs split, and the whole left in marketable condition. The wager was that Mr. Ryan could not cut four cords, but he exceeded that amount by nearly two feet. Sixty dollars changed hands by the exploit. The day was the coldest of the season, and our hero wore nothing but a cotton shirt and a pair of thin pants, but we reckon he kept as warm as a bug in a rug.—Woonsocket Patriot.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, APRIL 26, 1855.

The California Farmer.

This issue we send to many who may have never before received the FARMER, or may not have known that such a paper was published. We send it to such here, and in the various sections of the old States, whom we believe and trust will be pleased to receive it, peruse it, and learn the success that is now beginning to flow upon this new country. We believe that many of our distinguished Agriculturists and Horticulturists will not only be pleased to see our journal, but will cheerfully aid in its dissemination, by their subscriptions and that of their friends. By such a measure they will become familiar with California Agriculture and its rapid progress, and they can also communicate to us; by such interchange of knowledge, good will result to all.

We ask their kind aid and influence in every State of our Union; we ask all who are interested to communicate to us or to inquire of us, and we will as freely respond. Societies abroad will please make their address known by their corresponding secretary, and we shall be happy to forward them important data and exchanges.

Our citizens of the old States can have but little conception of the advance that has been made in Agriculture the past two years—it must be seen to be realized. It is important that every section of our country, every State in the Union, should become better acquainted with the resources of California. When California is better known, when her real condition is understood, we feel assured we shall have an increase of population of the right kind; families, whole families will find this the place to build a home; and it is the great object of the proprietors of the CALIFORNIA FARMER to make known the true condition of our State, its resources, agricultural and mechanical, its manufactures and its home industry, and we ask those who desire to build up our State, to aid us in diffusing this information, by extending the circulation of our journal.

Valuable Documents.

We have been favored with a valuable package from the Hon. M. P. Wilder, President of the U. S. Agricultural Society, to whom we return thanks. Among the works were the doings of the Massachusetts Horticultural Society, U. S. Agricultural Society, full reports, and the "Proceedings of the Third Session of the American Pomological Society." Each of these works contains valuable statistics, and important data, from which we shall, from time to time, make extracts.

The whole United States is largely indebted to President Wilder, for his zeal and devotion to the Science of Agriculture, Horticulture, and Floriculture; not only the United States should we say, but his good influence crosses oceans and is felt the world over. Such men are true patriots and benefactors of a state and nation.

From the examination we have made of the proceedings of the Pomological Convention, we find valuable reports upon all the principal fruits grown in each State, the varieties best adapted to that State, the climate, seasons, and soils, and many other particulars relating to Pomology, each State report forming a valuable and interesting document of itself. We regretted not to find California embraced in the list. We trust another year will find California not only reported, but represented by her delegates and her fruits. By reference, we find reports from thirteen States, and from the District of Columbia; also from several city and county societies. Some of these reports are lengthy and very able. Massachusetts, New York, New Jersey, Pennsylvania, and Maryland, send full detailed reports. Oregon sends an excuse for a report, but will speak another year.

In the reports made of fruits and in the discussions upon their relative character in the several States, we find a wide difference in fruits. The varieties most successful in New England are not grown in the West or South, and so vice versa; the soil, climate and productions are as various as the varieties of fruit grown. We notice however one suggestion that meets with universal approbation by all good Pomologists—the great importance of raising fruits of all kinds from the seed, thus producing native fruit for each State. We have urged this action for years here, and believe California can beat the world.

The committee on native fruits report nine new seedling grapes, two new seedling pears, one new

seedling apple,—all good, or very good. Four varieties of native wines, and one of brandy, were exhibited.

We note that in several States wines are made for domestic use, from the grape and currant, and in considerable quantities. In Ohio immense plantations are being made, and wine manufacture established on a large scale. Ohio takes the lead, and her Longworth's sparkling Catawba and Hock are acquiring name and fame the world over. Far better will it be for our country when pure wine shall take the place of the vile compounds that now lead men to ruin and death.

From this Report we intend next week to copy Dr. Harris valuable treatise upon the various insects that infest fruit trees.

Pacheco Valley.

During the last week we passed from Benicia over to that beautiful spot that lies embosomed amid the hills, that miniature city "Martinez." We were most kindly attended to by the proprietors of the Ferry, Capts. Swain & Coffin, who very promptly furnished us with a fine saddle horse, and with Capt. Coffin for a guide, we commenced a trip to the famed Pacheco Valley.

To those who have never been among the hills and valleys that so beautify and enrich our State, no just estimate can be had, or any conception of the real magnificence that is scattered in the many valleys now under the highest state of cultivation. Martinez is indeed a pretty place, and its beauty cannot be fully appreciated by those who merely pass it on their trips up river. Surrounded by fertile hills, it is protected from the winds, and lies sheltered from the sun by fine evergreen trees. The soil is rich, and soon, with the attention given to cultivation, will become one wide spread garden. Upon the outskirts of the city are many gardens and nurseries, rapidly advancing in every department of Horticulture and Floriculture.

We visited the original settlement of the late Col. Wm. M. Smith, and found a very fine fruit garden—apples, pears, peaches, plums, quinces, apricots, grapes and strawberries, were all in a high state of cultivation, and promise fruit this season. The vegetable grounds are in good order and promise well. A long ride gave us but little time to examine as minutely as we desired; but we had time to note a spirit of enterprise along the entire route.

We visited the garden and nursery of Mr. Strentzel, and found a well selected assortment of fruit trees under cultivation. Mr. S. is a thorough bred gardener and understands his business, and in a short time will have for sale a complete stock of the most desirable kinds of fruit trees in this State. We can cheerfully recommend all to visit this garden and purchase with confidence of Mr. Strentzel.

We found many fine farms, stock ranches, and an increased attention seemed to be given to cultivation. But we found here, as elsewhere, the great hindrance to progress and improvement arose from the unsettled condition of titles.

The large farm and stock ranch, to which allusion is made in the notice of the splendid animal; and the large and fine grain farm of Judge Worcester, with some dozen we noted in a circuit of a dozen miles, give certain evidence of a prosperous future.

Returning, we called upon Col. W. W. Sift, of the land office. The Colonel has selected one of the finest locations we have seen in the country, and, in the brief time he has been upon it, has made it to speak years of labor. One would hardly believe that a single year could have done so much. Yet the wild prairie has been converted into a cultivated field of waving grain, with a handsome residence erected, a beautiful garden and orchard, and every prospect of an abundant harvest. We found here fruit trees of every kind, and by hundreds; an excellent vegetable garden, cotton, tobacco, and other new species of plants; and, added to this, a very handsome flower garden in full bloom, giving its sweets upon the atmosphere around. Truly the Colonel has done well and his example is worthy of imitation. We found him with his coat off and harn at work himself, and left him with regret, for we love his enthusiasm and devotion to this science, and feel confident his efforts will be completely successful.

We were not able to note all we could, for "time and tide wait for no man," and on our way back we called at the fine mansion of Mr. Bush. Here we found a fine garden under a high state of cultivation. Our time prevented us from so full an examination as we could wish. We shall examine this beautiful spot some other time.

We returned to the hospitable residence of our friend Capt. Coffin, and after being bountifully refreshed in the inner man, we again crossed the

Ferry to spend a while upon the other side. But stay where we shall, we cannot forget the kindness of all those who made our journey so pleasant and agreeable.

Rev. Dr. Scott's Opinion of California Climate and Prospects.

We find the following in an eastern exchange, and, coming from so high authority, we cannot better subserve California than by giving it wings and sending it abroad again to bring more citizens to our State. The picture is so true—however dark the present, the future is full of hope:

1. This State is in a very depressed condition at present. The emigration to it is greatly diminished; but the emigrants now are chiefly such as come to stay. A large proportion are women and children, and returning Californians, who find that they cannot be content to remain in their old homes beyond the mountains.

2. The present depressed state of business may continue for a year or so; but better times are before us. Improved facilities for communication with the older States, by an inland road, and by propellers, will aid the settlement of the Pacific shore. A vast population is to live on this side of the continent. You may depend upon a glorious future for this whole coast.

3. The climate is more salubrious and delightful than any other part of the continent. The lands are better and more productive than any in the West. There is no such climate, and there are no such lands anywhere East of the Rocky Mountains. I speak advisedly, I have seen with my own eyes a considerable portion of the State. I have tried its climate in the valleys, on the mountains, and on the sea-beach; and I have some knowledge, by experience, of other continents, and I have no hesitation in saying, that I believe the climate of California better than any on the Mediterranean, and its soils as fertile as the best spots of Egypt.

4. In a commercial point of view, and as a base from which to operate on all the islands and nations beyond, there is no need for me to say a word. Its importance in this way is second to no other on the globe.

4. As to the gold giving out. There are no signs yet. The exports are increasing rather than diminishing. It will not be exhausted in our generation, and probably not before the end of the world. The surface mining, creek washing, caving, placer digging, and the like operations, may become somewhat exhausted; but the quartz mining, which will probably be the most productive in the end, has not yet gotten into successful operation. The quicksilver mines and mineral springs, the shipping interests connected with our whalers, and the internal and coast trade, are of themselves sufficient to make this one of the best States in the American Union. Nor is there any reason, that I can see, why this should not become a great manufacturing State. Water facilities can be had. The climate is favorable, neither too cold nor too hot for mechanical work. Here our wares and "notions" can be sent to the Orient before London and New York can get round the Cape or the Horn. But I must forbear for the present.

The Boston Corn Exchange.

In our last issue we spoke of the necessity of associations of grain growers and grain dealers, and urged their importance as a measure of safeguard and aid to a prosperous result to all interested in the great staples of our State. We annex the following, which comes to us by last mail, corroborative of all we have said. We copy it from the Boston Journal:

OPENING OF THE BOSTON CORN EXCHANGE.—In accordance with previous notice, this recently organized body of merchants formally opened their fine rooms on Commercial street, opposite South Market street. The attendance of dealers in flour, grain, &c., was very large, and a great degree of interest was manifested. The Boston Corn Exchange commenced operations under the most favorable auspices. Numerous samples of grain, flour and meal were exhibited on the tables, and several sales were made and bargains for future operations were consummated conditionally.

At about the hour of closing, the President, Alpheus Hardy, Esq., called the company to order, and congratulated the subscribers on the high success which had thus far attended their efforts. He was glad to see so many present, and expressed the hope that every one would keep in mind the importance of maintaining an interest in the matter. So long as the present interest is manifested, there can be no danger but that Boston, as well as New York and other places, will support a Corn Exchange, creditable not only to the members, but to all New England.

Mr. Hardy concluded his remarks, which were received with applause, by inviting the company to complete the formal ceremony of opening the Boston Corn Exchange by partaking of a bite of cracker and cheese, a cup of coffee, &c.

The Corn Exchange will be open from 10 A. M. to 11 A. M., every day, Sundays excepted.

BENICIA SEMINARY.—We have been much interested in the Seminary at Benicia, under the care of Miss Atkins and other accomplished teachers. It is in a very flourishing condition, and is rapidly gaining favor in the surrounding country. We have notes of a very pleasing exhibition of the pupils, which we are obliged to defer till our next issue.

Pure Wine.

READ the following and see if there is not an urgent necessity for the manufacture of something better. We are glad to learn that lately several vintners of high reputation have arrived in this country to take charge of some of the manufacturing departments of our Southern plantations. This will rapidly advance these interests and add wealth to our State, by checking importations and preparing for exportation.

A London paper gives the following account of the manner in which port wine is manufactured:

"When port is required to be manufactured, two separate processes are deliberately and systematically gone through; first, the wine itself is made, and then the bottles are prepared into which the liquor is to be transferred. When the mixture itself is deficient in the fragrance peculiar to the grape, a bouquet is contributed by means of sweet scented herbs, by orris root, elder flowers, or laurel water. A vinous odor is sometimes imparted by small quantities of the liquid known as the 'the oil of wine.' The pleasant juice of the sloe imparts a port-like roughness to the compound, and sawdust or oak bark effect the same purpose. A fruity taste is given by a tincture of raisins, and the rich ruby color has probably once flowed in the vessels of the sandal-wood tree.

But the bottles have to be crusted. This is done by tincture of catechu and sulphate of lime. The corks are steeped in a decoction of Brazil-wood, and the very casks are prepared with a layer of cream of tartar, which is formed at the bottom in glittering crystals. Thus a pipe of port, which was young in the morning, is made to fall into extreme old age in the course of the afternoon. These are no exaggerations, and the following has been given as the chemical analysis of a bottle of cheap port wine, though for obvious reasons we suppress the quantities: spirits of wine, cider, sugar, alum, tartaric acid and a decoction of logwood. In most instances, when the wine is not manufactured in this country, the consumer is victimized by a three-fold adulteration. The exporter adulterates, the importer adulterates, and finally the retail dealer adulterates.

Diseases of Poultry.

In our travels in the country, we had many inquiries relative to a particular disease which carries off great numbers of the various kinds of poultry; and being desirous to make known a remedy which we believe effectual for this disease, we reprint the following communication from Dr. J. B. Phinney, and call the attention of those interested to it, at the same time requesting from those who experiment, to send us the results:

Messrs. Editors: It may surprise you that a physician should undertake to prescribe for any thing but human beings; but those of us who take an interest in our profession are apt to notice disease wherever we may see it.

The mortality amongst poultry has long attracted my attention, and, knowing their great value in this country, I was, out of mere curiosity, led to investigate the matter by repeated dissections of those that have died. I found they all had inflammation, and in most cases ulceration of the crops and bowels. This inflammation may exist for some time and attract little notice, but when ulceration has progressed so as to penetrate the crop or the bowels, the fowl dies almost instantaneously. Having ascertained this, I next wished to know what would cure such a state, and I gave with success sulphate of copper (blue vitriol) in doses of from one-twelfth to one-twentieth of a grain twice a day. The medicine may be made into a pill, with bread, and either fed to the chicken or forced down its throat. Hoping I may have given some useful information to the subscribers of your valuable journal,

I remain, &c.,

J. B. PHINNEY.

A SPLENDID ANIMAL.—In our recent trip to the Pacheco Valley, we made a call at the fine farm of neighbor Boss. Here we found a good farmer and his four sons in a most prosperous condition, enjoying the comforts of good living. We had but a little time to spare, but we saw enough to satisfy us they were "doing well." At this farm we saw a most beautiful entire horse, a large and noble animal, almost black. We could not learn his correct pedigree, but as near as we could find, he was sired by Medonak, from a cross of Rainbow and Dolan—some of the favorite bloods of "Old Kentucky." This was one of the finest animals we have ever seen in the State—so thoroughly broke as to be used in harness or at the plow, yet so proud and graceful an animal that one would think a line had never touched him. We hope such animals may be sought for and valued properly. We shall be glad to render any aid for the advancement of these interests.

PURIFICATION OF BUTTER.—One of the most important results that could be attained would be a knowledge of the means to restore sweetness to the butter that has been injured by the long voyages of importation. If those who are engaged in our dairies have any information upon the subject, and can communicate, they will confer a favor by addressing us. We shall be glad to make such facts known.

The Chinese Question.

The able report of the Hon. Wilson Flint, upon this subject, is a document of great value, and gives evidence of much labor and research in its preparation. It is published in full in the Herald of the 18th. We make extracts touching the most important feature of this document,—we mean the value of the services of the Chinese as cultivators of our vast tule and swamp lands. We have often alluded to them in this connection, and shall ever believe that they are to be a most valuable means of restoring vast portions of our waste lands to the highest degree of fertility. We annex the following extract from the report, and shall give more at some future day:

"In short wherever intercourse is expedient between any two parts of China, no natural impediments are too gigantic, no labor or expense too great, to overcome them. I appeal to the reflecting men of California not to drive out of our borders this mighty labor power. Is it not better, with modern skill in engineering to put tools into these fifty thousand pairs of willing hands, and in place of *trickling ditches*, have torrents rushing along to make the miners glad, and people rich."

The Mormons of Utah have sent emissaries to China to encourage these people to emigrate to their New Jerusalem, and the gold fields of the eastern slope of the mountains dividing California from that Territory are already attracting attention, and should this State adopt a system of persecution, the spectacle might be presented of these barbarians taking up their line of march over our snowy sierras, to share the hospitality of a people but too ready to receive them. Utah, with her new and strange doctrines, presents an ugly barrier between California and the United States.

Viewing the employment of the Chinese in the mines as of temporary expediency, the undersigned would further suggest, that the State is proprietor of millions of acres of alluvial lands, partially overflowed during the spring floods, and which can be cheaply reclaimed. These lands are unsurpassingly fertile, being the washings of the mountains through many ages, and for the culture of sugar, cotton and rice, have no equal in the world. Sugar, requiring for its most perfect maturity a warm, moist, rich soil, would find, in our reclaimed tule lands, an atmosphere peculiarly adapted to its luxuriance, and the early period at which it would commence to grow in the spring, together with the total absence of rain during the time of its secretions of saccharine matter, will obviate the danger which attends its culture in rainy countries, where whole crops are often ruined by incorporating water, in long storms, succeeded by sultry weather, causing fermentation to take place, not only whilst standing in the field, but when undergoing process of manufacture. Experience demonstrates, in all sugar growing countries, that the seasons which are dry during the latter part of the maturity of the crop, are those in which the most productive one is harvested, not only of quantity, but also of a superior quality. Instead of being an importer, our State should raise a home supply of sugar and molasses, and become, in time, a large exporter. The value of sugars consumed by California, and the trade dependent upon her for supplies, amounts to many millions of dollars yearly.

The growing of cotton has been already experimented upon by one of our eminent citizens, with the most gratifying success; and it has been found that the absence of rains, (which, in the Atlantic States, often produces mildew,) and the worm, renders this climate peculiarly favorable for the growth of this article, now become one of the first necessities of the commercial world. From the first opening of the bolls in June, through upwards of five months of picking season, uninterrupted by rain, it will be seen that we can defy competition in the production of this great staple; for, while, from the peculiarity of our soil, the plant never would suffer by drought, the uninterrupted fair weather will afford opportunities for picking, drying and baling, not possessed by any other cotton growing country. Add to this the fact that navigable streams meander through every portion of these lands, thus presenting facilities for cheap and expeditious shipment.

Glancing from her sierras, beneath which lie buried stores of gold, overlooking fabled Ophir, the eye may yet look down upon the bosom of broad valleys, reflecting, amid the din of busy husbandry, a whiteness, vying in its purity with the peaks of her eternal snow-clad mountains. No country in the world presents so successful a field for rice culture, and our State should long since have raised not only her own supply, but largely for export. Objections will be urged against the employment of large numbers of Chinese in these pursuits, and the stereotyped cry of "monopoly," which is always in the mouths of demagogues, has already been sounded. Reflections show that the only successful monopolist under our institutions is he who possesses talent, worth, genius, enterprise, fortitude and industry. And shall the drones of society cast their lethargic chains over the limbs of the restless, and force upon them a midday siesta? Even now, while "commerce is king," the boom, the arail, and the sturdy locomotive are, by the instantaneous language of the electric spark, answering to each other all over the world, telling us of the mighty things labor is doing.

Whilst viewing it as against the true policy of the State to drive out any species of labor, the undersigned would further suggest that, in his opinion, a heavy commutation tax would not afford the remedy desired, the present law upon

the subject of immigration being vague and indefinite. Older States, with the experience of three-quarters of a century, have found this subject one presenting the greatest difficulties to special legislation, and the tax there imposed has been paid, rather as a charity than a constitutional enforcement."

The Powder Magazine at Benicia.

One spark and all is lost! On a recent visit to the Arsenal, or Armory as it is termed, at Benicia, we learned the astounding fact that the U. S. Government has not yet provided for the safety of the life or property that is now congregated at this important station. We learned these facts by a visit to the building styled "Powder Magazine!" and here in a *wooden building*, exposed to almost every danger, were stored *twelve hundred barrels of gunpowder!* One can hardly find words to express the astonishment felt at such neglect on the part of our Government to shield life and property. Within a few yards are buildings containing families; a little distant the costly buildings stored with almost millions of ordnance, and a little further the Pacific Works, counting in numbers the largest figures; but more than all this, are the citizens, whose lives are priceless.

We stood near to this little wooden building, and there seemed no danger; but one flash from a sportsman's gun, in the dry grass of summer,—one wicked thought from an evil breast—the careless tread of the unshod laborer, and where would be these homes and families, where these massive buildings of the "Arsenal," where the gigantic works of the Pacific Company, and where, O where, those who a moment before were in active life? The living heard the earth tremble, they saw the sky darken, and all is still again—they list, as the cloud passes away, and quickly on the ear falls the wail of sorrow and suffering and a cry of—"The magazine, the magazine!"—and the story is told.

We write this not to alarm, but to warn, to awaken every heart to the fact that our Government in this case has permitted an evil to exist that is without a parallel in the whole United States. *Twelve hundred barrels of gunpowder* exposed in a wooden building! Should any possible contingency arise to cause an explosion, we venture to assert, not a building in Benicia could escape injury, nor a brick or stone building stand; the public works would be levelled, ships and steamers upon the waters would be sunk—and this danger is there.

The citizens that know this feel safe however, amid such chances, for they know that however great the neglect on the part of the United States, the eagle eye and watchful care of the able and efficient commandant at the station will guard every avenue of danger; with almost the power of ubiquity, he will be sure to be the first to guard, to warn, to save. It may be that our Government feels, that with such faithful officers, magazines are useless. They forget, however, that everything in nature needs rest; and constant care and watching, as well as dropping, will wear away a Stone.

We have brought this subject before our community, to show how reckless our Government is in some instances. We shall, in a brief sketch of this arsenal, show how much of its present prosperity is owing, not to the U. S. Government, but to those into whose care it has been intrusted.

COURT HOUSE AT MARTINEZ.—While on a trip to this beautiful spot, last week, we had a few leisure moments, and devoted them to the examination of this fine county edifice. It is built after the style of the Sacramento Capitol building—the form and order the same outwardly—less in size, grandeur, and finish. It is very handsome without and within; yet not costing one-third that of the one at Sacramento. The rooms are very tastefully finished and furnished, having reference to convenience, comfort and durability, and reflect great credit upon the authorities of the county, the builders, the citizens and the place.

STATE AGRICULTURAL CONVENTION.—The Convention of Agriculturists of the State, which has been called to meet at Sacramento, was to commence its session yesterday. The prospect was favorable for a good attendance. As our paper goes to press Wednesday afternoon, we can give no account of the meeting till our next, when we shall have full reports. The Convention will probably continue two or three days.

BENICIA ARSENAL.—This extensive department under the care of the able and accomplished commander now at that station, presents a most interesting view of the immense works now under progress, and of which we shall speak hereafter.

The Wine Trade of France.

LETTER FROM DR. GOODRICH U. S. CONSUL AT LYONS.

I PROPOSE to give you, in this communication, some account of the staple productions of France, that may be of interest to many of the readers of the Merchants' Magazine, and especially so, as the vine culture is beginning to attract attention in the Southern and South-western sections of our own country.

As you are aware, the two principal products of France are wheat and wine—both entering largely into domestic consumption, and the latter yielding a surplus for exportation.

The most productive wine districts of France are the South and South-western, and the least productive is the North-western. The vine grows not only on the level and undulating lands, but also on the hill-sides and mountain summits. These lands are mostly stony, sandy, sterile, worn out, and unfit for wheat growing. During the last three or four years a destructive disease has attacked the vine not only in France, but in Italy, Spain, and Portugal. This malady is of a fungoid character, and its preventive or remedy has hitherto eluded the vigilance and researches of the chemist and naturalist.

In the statistics I shall give you—and they will be official—I will, for brevity, avoid the smallest numerals, as my object can be attained without them. The number of acres of land under vine culture in France differs but a little from 5,000,000. There are about 2,000,000 of persons (mostly females) employed in the cultivation of the vine and the manufacture of wine, exclusive of 250,000 engaged in the transportation and sales of wines. The average annual product is a little more than 800,000,000 gallons—for obvious reasons I give you American rather than French terms. The domestic or home value varies of course with the supply and demand, say from ten to twenty cents a gallon. For the last two years, owing to the "disease," the price has augmented from one to two hundred per cent. on former prices. The annual value may be set down in round numbers at \$100,000,000.

In the year 1849, which is probably the best for several years, the number of acres under cultivation was 5,500,000, producing 925,000,000 gallons of wine. This was an increase of 115,000,000 over that of the last decade, 1839. Nearly 50,000,000 gallons are annually exported as French wines. In 1849, 41,000,000 were exported; in 1850, 42,000,000; in 1851, 49,500,000; in 1852, 53,200,000; in 1853, 43,500,000. Ninety millions of gallons are annually distilled into brandy, although for the ensuing year, owing to governmental restrictions, there will be but little French brandy exported to the United States except that made from American whiskey imported into France. One-seventh, or about 133,000,000 gallons of wine, are annually exported from France, either as wine or its distillations. The excise duty on wine and its productions paid into the French Exchequer during the past year was \$22,800,000. This includes the ordinary excise, as also the "Octroi" or city duty. There are, by estimate, 220,000,000 gallons of wine manufactured into spirits, inclusive of the 90,000,000 made into brandy. This leaves more than 700,000,000 gallons of wine for home consumption, or about 21 gallons for each inhabitant for the year.

Wine, as a beverage, is universally used here by all classes. The strong liquors are chiefly for exportation; hence, you see very little drunkenness in *la belle France*.

The disease of the vine in France has for the last two years been very destructive, and it has greatly diminished the production of wine. This is on the increase, and fears are entertained that it may totally destroy the vine. Under this apprehension, may not the subject of vine culture legitimately and appropriately attract the attention of our Southern and South-western planters? Many of our Southern lands, I opine, are peculiarly adapted to the vine, and from natural sterility or other causes are unsuited to products requiring richer and stronger soils. The lands of southern Europe employed by the vine are light and sterile, unsuited to wheat and other grains.

If our Southern farmers would, at this time more especially, turn their attention to this subject, would it not ensure to their own individual interests, enhance the national wealth, and be promotive of national temperance by the introduction into general use of a cheap beverage, that would ultimately root out those "villainous spirits," whose baneful influence is felt throughout the length and breadth of our land?

In regard to the vine and its diseases in Europe, should the present condition of things continue for a few years, would it be the strangest fact in the history of commerce, if our favored country should become the exporter instead of the importer of wine? and may not the vine yet prove one of the sources of our national wealth, as well as the promoter of a sound national morality?

Such a result would restore the vine to its pristine value, as one of the "good gifts of God."—*Hunt's Mer. Mag.*

AGENTS AT BENICIA AND MARTINEZ.—Benj. Dodds will act as Agent of the CALIFORNIA FARMER, to whom we refer our patrons and friends at Benicia, and trust they will call and enroll their names. Messrs. Worth & Sturgis will act for us at Martinez; their office is at the Alhambra. We most cordially ask the friends of Agriculture in this beautiful valley, to call and add their names with others who are now favoring us in that district.

FROM EUROPE.

Dates from Liverpool are to the 10th of March. The previously reported death of the late Emperor Nicholas, is fully confirmed, and his successor, the Emperor Alexander II., has succeeded peaceably to the Russian throne.

The new Emperor has issued a manifesto stating that he will adhere to the policy of his father, Constantine and his other brothers and officers of the Empire had taken oaths of allegiance to the new Emperor.

The hopes that were entertained throughout Europe of a peace policy, in accordance with the supposed personal character of Alexander, were becoming more faint. The influence of the powerful party at the head of whom is the Grand Duke Constantine, it was feared would urge the Czar forward in a course opposed to his better judgment. His first appointments of the Ministry were, however, regarded favorably for peace. Meanwhile, the allies determine to seize the opportunity of the uncertainty which the news of the death of Nicholas must occasion, to prosecute the war with vigor. There has been fighting on the Crimea, and more threatened. The French stormed a redoubt which had been skillfully erected by the Russians during the night, and several hundred of the Russians were killed, and there was a general rumor that the Grand Duke Michael was among the wounded, and that he had subsequently died at Sebastopol.

Alexander has confirmed, as Diplomatist at the Peace Conference, Gorchakov, whose previous instructions are also confirmed, and the first Conference has been held at Vienna.

THE NEW POSTAGE LAW.—We give the following synopsis of the new postage law, which will be interesting to every one who writes and receives letters: Under this law all single letters mailed for any place that does not exceed three thousand miles, three cents; and exceeding three thousand miles, ten cents. Half an ounce in weight will constitute a single letter; and double, treble and quadruple letters to be charged in the same proportion. All letters must be prepaid, except such as are to or from a foreign country, or those addressed to the officers of the government on official business. The law is to take effect from and after the fiscal quarter. A registration of valuable letters is required to be made upon the payment of a fee of five cents in addition to the prepaid postage, but the government will not be responsible for the loss of any registered letter or packet. The franking privilege is to remain as heretofore. Selling postage stamps for a larger sum than the market value is to be punished as a misdemeanor.

DEATH OF A VETERAN CITIZEN.—Mr. Samuel Adams, one of the oldest inhabitants of Boston, died at his residence on the 21st March, at the advanced age of about 96 years. The Traveller says: "He was a witness, and no doubt sometimes a participant, in the many exciting street scenes which occurred in Boston previous to the actual commencement of hostilities. He had in his possession as a relic of those glorious days, a flag which was hoisted on the liberty pole near Essex street, and which has of late been frequently displayed in this city. Mr. Adams was a mechanic, a wire worker by trade, and followed his business until within a few years. In religious matters he was an atheist, and in older times a close attendant upon all town meetings and public gatherings, where his rather ultra democratic sentiments caused his opponents to taunt him with being a 'French Jacobin.'"

OLD CALIFORNIANS.—By the Cortes we see noted the arrivals of one hundred and ten old Californians—ninety males and twenty females. Among the passengers we see Hon. Sam'l Brannan and family, Hon. J. B. Weller and family, and Hon. C. K. Garrison, with many other citizens, to whom will be extended a hearty welcome back.

MR. DAVIS, the agent of Mrs. C. N. Sinclair, who has been on a professional visit to the Atlantic States, returned a passenger on the Cortes, and reports his success in procuring the services of several dramatic artists of eminence who will make their appearance on the San Francisco boards during the coming season.

MERCED COUNTY.—Jack W. Smith, formerly travelling agent for the San Joaquin Republican, is a candidate for the office of County Judge, in the new county of Merced. The election takes place on the 2d Monday in May. The Republican speaks very favorably of him.

THE HUNGARIAN archbishop recently made a cardinal, at Rome, is in the enjoyment of a salary of \$1,000 per day, or \$365,000 per annum—a sum sufficient, we should think, to furnish bread and butter for one poor mortal.

DEATH OF AN OLD PRINTER.—Mr. Joseph Warren, who has been a compositor in the Boston Evening Gazette office for thirty-six years, died lately. It is of rare occurrence that a compositor remains so long in one situation in the same office.

HIGH PRICE OF WHEAT.—A sale of 7000 bushels of Genesee wheat was made in New York on Thursday at \$2.70 per bushel. This is the highest price which wheat has been sold at for many years.

CRIME IN BOSTON.—During the ten days, ending on the 23d March, no less than fourteen violent deaths occurred in Boston.

Six inches of snow fell at Norfolk, Va. on the 22d March.

Horticultural Department.

Improved Varieties of the Shellbark.

BY E. HALE, KEENE, N. H.

ALTHOUGH it may not be possible to improve the qualities of our indigenous fruits by cultivation merely, yet the skill and perseverance of man may assist nature to produce new and improved varieties. If the luscious plum is, as somebody has said, a lineal descendant, by a fortunate line, of the sloe; and if the trees, which bear what is called the English Walnut, may trace their remote parentage to the same ancestor as the trees scattered over Europe, in forests and hedges, bearing small and thick-skulled nuts, there is good reason to believe that the fruit of our own wild walnut or hickory may be at least enlarged in size, and its shell made thinner.

If it can be done by any aid furnished by man to nature, it ought to be done, and begun to be done quickly, though the chief benefit may be enjoyed by those who shall come after us.

Reason, enlightened by experience, tells us that it can be done, and how it can be done.

The farmer has ascertained that large, plump and heavy grain produces better plants and a larger kernel than such as is shriveled and light. And the gardener, if he wishes to raise large seed or fruit of any kind, peas for instance, selects and sows large peas only; and after several successive crops, at each time selecting the largest peas, obtains a larger variety than he began with.

A similar course should be pursued with the shellbark. The largest nuts only should be planted, and these should be planted in appropriate soil and in a chosen locality. As the young tree sends out but few side roots, and as these run far without rootlets, it does not bear transplanting well; and if the nuts are planted in a nursery, it might be expedient to cut these off, a foot or more from the stem, to force out rootlets. None, (certainly not the most vigorous,) should be grafted.

The nurseryman, who should make the experiment proposed, would probably be more than compensated for his trouble and expense by the sale of his trees. The shellbark hickory ranks high as an ornamental tree. Its buds, when swelled in the spring, are quite large, conspicuous and beautiful, and when opening, still more beautiful. Its leaves are of a deep green color and of large size, and its shape always good looking and sometimes graceful and elegant. Emerson and Downing commend it highly. When it becomes too tall, or stands in the way, its value in the arts, or for fire wood, would be greater than the first cost and *lawful* interest.

I hope, Mr. Editor, that you will try the experiment, and if you do, "may you live a thousand years" to crack and eat nuts produced by the shellbark hickory improved.

But you need not live so long to begin to crack and eat. Last fall I gathered the fifth crop, a full peck, from a tree transplanted by myself from a neighboring town. The nuts were larger than I had been accustomed to see, many of them measuring three inches in circumference—half an inch more than Emerson's maximum.—*Mag. of Hor.*

Importance of Forest Trees.

(The following is an extract from a paper read by Dr. Hawks, before the Geographical Society of New York.)

Civilization uses a vast amount of wood, although for many purposes it is being fast superseded; but it is not the necessary use of wood that is sweeping away the forests of the United States, so much as its wanton destruction. We should look to the consequences of this. Palestine, once well-wooded and cultivated like a garden, is now a desert—the haunt of Bedouins; Greece, in her palmy days the land of laurel forests, is now a desolate waste; Persia and Babylon, in the cradles of civilization, are now covered beneath the sand of deserts produced by the eradication of their forests. It is comparatively easy to eradicate the forests of the North, as they are of a gregarious order—one class succeeding another; but the tropical forests, composed of innumerable varieties, growing together in the most democratic union and equality, are never eradicated. Even in Hindostan all its many millions of population have never been able to conquer the phoenix-life of its tropical vegetation. Forests act as regulators, preserving snow and rain from melting and evaporation, and producing a regularity in the flow of the rivers draining them. When they disappear, thunder-storms become less frequent and heavier, the snow melts in the first warm days of spring, causing freshets, and in the fall the rivers dry up and cease to be navigable. These freshets and droughts also produce the malaria which is the scourge of Western bottom-lands. Forests, although they are first an obstacle to civilization, soon become necessary to its continuance. Our rivers, not having their sources above the snow line, are dependent on forests for their supply of water, and it is essential to the future prosperity of the country that they should be preserved.

HOOF BOUND.—Dr. David gives the following directions for this disease: "In all cases, we must endeavor to give the frog a bearing on the ground; and, in order to do this, the shoe ought to be removed. A dry, brittle, and contracted hoof may be improved by repeated poulticing with soft-soap and rye-meal, applied cold. So soon as the hoof softens, let it be dressed, night and morning, with turpentine, linseed oil, and powdered charcoal, equal parts. Yet, after all, a run of grass in soft pasture, the animal having nothing more than tips on his feet, is the best treatment. A

very popular notion exists, that cow manure has a wonderful effect on a contracted hoof; but it is the candid opinion of the author, and no doubt the reader will coincide, that filth and dirt of every kind are unfavorable to healthy action. Such a remedy, aside from its objection on the score of decency, savors too much of by-gone days, when live eels were sent on an errand down horses' throats to unravel their intestines. If any benefit belongs to such an objectionable application, it is due to the property it possesses of retaining moisture; therefore, cold poultices and water are far superior. Clay and moist earth, placed in the stall for the horse to stand on, are far inferior to stuffing of wet oakum, which can be removed at pleasure. In order to keep it in contact with the sole, we have only to insinuate two strips of wood between the sole and shoe; one running lengthwise and the other crosswise of the foot. It affords considerable pressure to the foot, is cooling and cleanly, and is far superior to the above articles."

TO CLEAN KID GLOVES.—Ladies will be glad to learn that alcohol will wash kid gloves without either straining them or leaving unpleasant odor about them. The gloves are simply drawn upon the hand and carefully rubbed with a piece of clean flannel, wet with alcohol, until the soil is removed, then hung up to dry, and afterwards slightly stretched, when the original color reappears. This we have from one who has tried it successfully.

The spontaneous gifts of heaven are of a high value, but the strength of perseverance wins the prize.

The Muse.

(For the California Farmer.)

"TRUST IN PROVIDENCE."

FOREVER TRUST! oh! let not doubt e'er come,
To shade thy vision, or obscure thy train;
Believe I above in God's eternal dome
Are edicts made, creating loss or gain.
Forever trust! e'en when the golden light
Of prosperous days seems all forever spent,
And when the darkness of adversity's night
Has to our lowly way new shadows lent.
Forever trust! though hope's bright star be dim,
And eypress wreathes the shrine, where once we knelt,
Where now ascends in solemn tones the hymn
O'er by-gone days, where once joy's pathos peeled,
Forever trust! though time and place have changed,
And forms have gone, that gathered 'round our hearth;
Though hearts once true, from thee forever estranged,
And sorrow's wail supplants the voice of mirth.
Forever trust! though grief has crowned thy head
With silvered threads, e'en in thy life's full prime;
Though youth's light blossoms all are faded, dead,
Their incense smothered in the waste of time.
Forever trust! and hope for from above,
Where God e'er reigns, will mercy sweet descend;
Our trials lessened by his boundless love;
Before His will, our human wishes bend.
Aye trust! forever trust; a light will come,
An emanation from a source divine,
To illumine the darkness of our earthly home,
And lead us on, 'till in yon Heaven 'twill shine.
Jan. 13, '55. MARY MAY.

A SOMETHING TO LOVE.

BY JOHN HYDE, JUNR.

WE may roam away from the homes of our youth,
Through nations unknown we may rove;
Yet our bosoms will warm at virtue and truth,
And long for a something to love.
The gushings of hearts may seem frozen and chill,
Nor beauty nor kindness may move;
There still is a chord that will achingly thrill,
And yearn for a something to love.
The soul that's unwarmed by friendship for earth,
May seek it in mansions above;
The stern brow of thought, and the light smile of mirth,
Will wish for a something to love.
Cursed indeed is the wretch no feeling can cheer,
Where liking with love never strove,
Cold, frigid and fed by the grasp of despair,
Who wants not a something to love.
The child and the man, and the tyro and sage,
This yearning and longing will prove;
The bosom will swell, and the brain it will swim;
And burn for a something to love.
Hopes and dreams may be nursed, and, blighted, consume,
And in wreath of sad eypress be wove,
And the heart may seek peace alone in the tomb,—
Still it aches for a something to love.
Deep down in the fount of humanity's heart,
Though blasted and eared as we rove,
The feeling, the yearning, the passion may start;
We must have a something to love.

THE PILGRIM MOTHERS.

Ye taught to spurn the tyrant's claim,
And bow to God alone!
Ye knelt in their breasts the flame
That trembles in your own!
In after years flowed purple gore,
And fields were strewn with dead—
Firm hands the starry banner bore,—
Aggression trembling fled.
Oh! Pilgrim Mothers! though ye lie
Perchance in graves unknown,
A memory that cannot die,
Hath claimed ye for its own.
A sacredness to that bleak shore,
Your dust shall we impart;
Your requiem—the ocean's roar!
Your shrine—a nation's heart!

Miscellany.

Heart-Leaves,
GATHERED AT UNCLE JERRY'S.

BY VIRGINIA F. TOWNSEND.

WHAT a quiet, Eden-life I am leading, up here, among the hills! Somehow my whole nature seems steeped in the beauty and the repose of all about me. A great calm has come down upon my heart.

I can see now how the Father's hand led me off here. I was very blind, though, and the covenant of his love was at first written on "tables of stone." Thank God! my heart is this no longer.

Uncle Jerry and aunt Esther are as kind to me as if I were their own child; indeed I am this now.

Sometimes I long to go and sit down by papa's grave, in the suburbs of the great city; but I comfort myself with thinking he is not there. It is ten months, next week, since he said to me, "Good bye, Maggie, for a little while."

Ten months! Oh! I am twice as many years older now in experience, and in that knowledge of the world which is true wisdom.

If it had been an enemy, I could have borne it; but it was mine own kin—aunts and uncles and cousins—who deserted me when they found papa had left his orphan girl—his own spotless name! But I must not be bitter. After all, they could not have done me a greater favor, for, otherwise, I should never have come up here—never have read the beautiful translations of His love that lie around me.

Yesterday, had a letter from aunt M——, and a formal invitation to pass the winter with her. I suppose conscience wrung it from her reluctant pen. She may make herself easy about my accepting it.

It is morning, and the breeze that is plating my chamber curtain is twisting shadows among the clover patches out yonder, and frilling up long, green breadths in the far-off meadows.

This morning the milkman brought us two quarts of large, delicious strawberries. I made aunt Esther promise I should prepare the pudding for dinner. I have really taken pride in culinary achievements. Uncle Jerry used to take my hand in his large brown one, and say, looking roguishly in my eyes, "It's plain enough to be seen, Maggie, those little fingers were moulded for nothing but silver forks and pianos." He didn't know my biscuit though, last night, from aunt Esther's.

I must not forget my walk to-night, between sun-down and star-coming. * * *

Well! such an adventure as I have had. Who would have dreamed of it too, up here in this green cleft of the hills, that seems to me shut off from the great bustling world—a little edge of Paradise saved from the general wreck and dropped down in New England.

But about my adventure. I went out as I had promised myself, for an hour's walk before supper. Nature seemed just waking up from her afternoon's siesta, and the light winds had come over from the far off sea, and were gambolling through the meadow grass. The clouds, too, were tucked all around the setting sun—heavy rolls of crimson and gold.

"Now, Carlo, we'll have a good time all alone," I said, drawing a quick breath of gladness, as I tied on my straw bonnet, while the dog's great paws drew down the latch of the wicket.

I took the road that leads across Maple land, and wandered on, I don't know how far. I remember repeating to myself occasional fragments of poetry, as I roamed dreamily along, my heart heavy with that intense exquisite appreciation of the beautiful, which they tell me poets can alone understand; a feeling so akin to pain that it always fills my heart with the mist of unshed tears. I came at last to the foot of a hill, in the middle of which was a cleft, covered over with wild roses—the large, and red, and rich, blushing against the deep green all around them. The hill was, however, almost inaccessible on account of its steepness.

"Now, Carlo, what's to be done?" I soliloquized, twisting my fingers in the dogs shaggy hide. "I can't go home without a good vase full of those beautiful flowers, and how in the world am I to reach them! If we can only pick out a path through this underbrush—no matter for the thorns, if we get hold of the roses;" and I was attempting to make my suggestion practical, when a voice a few rods distant so startled me, that it almost upset my equilibrium.

"Allow me, Miss, the pleasure of gathering you those flowers."

The tones were deep, and richer than any I had ever heard. I turned quickly, and saw a gentleman standing under a tree, where he probably had been sitting. He was a young man, not more than twenty-eight, I should think—tall, not handsome, but very noble looking. He lifted his hat, and there was a courteous grace in the simple action, which is the result only of that rare physical and mental refinement so few attain. I blushed like a bashful school girl. That one year's experience of fashionable life effected little change in the natural timidity of my character.

"Thank you," I answered, hesitating. "I want the flowers extremely, but then I do not like to trouble you."

He smiled one of those rare smiles which light up grave features with such beauty, and sprang lightly through the bushes. In less than two minutes he returned, bringing with him more of the rich blossoms than I could well carry.

"Now, don't thank me, please," he said, for my lips had parted to do this; "because, then you will be no longer my debtor, and I shall not feel

authorized to solicit the favor of you I was about to ask."

"I shall be happy to repay you, by granting it," I answered.

"Then permit me to accompany you till our paths diverge, and meanwhile to relieve you of part of your flowers."

We walked slowly through the lane. The sun had gotten behind the mountains, and the glowing was coming on, and the sweet voices of evening were walking up in the woods on either side of us. I believe we conversed most of the way, and yet I can hardly remember what we said. But I know the gentleman's words and manner impressed me with a very high opinion of his attributes of heart and mind. He was leisurely making a tour of New England, he said, and had, two days previous, chanced upon the village of M——. The picturesque valley had quite enamored him, and he had already lingered here three days. "You, now, have not always resided here? Forgive me for asking a question, which our slight acquaintance does not authorize."

"Certainly. But how can you tell I have not always resided here?" Somehow, his manner had placed me greatly at my ease.

"Because," he smiled again, and his fine eyes were fastened significantly upon those I lifted seriously to his face.

"Well shows the gentle lady's mien,
That courts and clings she has seen."

"Does it? I am sorry for it; so I cannot accept what perhaps you intended as a compliment. My happiness is identified with this valley; I would not go out from its quiet beauty for all the world could offer me."

"Oh! you are young now," he said, smiling, and looking at me half enviously. "All young, romantic natures have just such episodes in their experience, when they are meadow and mountain struck. Still, I am glad to hear you say it. Nature always speaks loudest to the hearts that are freshest and purest."

"But you mistake my feelings altogether. I am not so very young; that is, I was twenty in June, and I at least know somewhat of the world, for I had one year's experience of fashionable life. And—forgive me again—adured it altogether of a sudden—and came out here and turned hermitess. Not exactly—there were other circumstances,—my father's death." I could not proceed.

"Forgive me," he said, earnestly. "I did not mean to surprise you into any personal disclosures. Those breakers of crimson are very rich, up yonder."

"Yes; but there is uncle Jerry in his wagon coming up the road. I shall have a ride now."

My uncle's features sufficiently expressed their astonishment as the old family vehicle came lumbering toward me and my companion.

"Well, Maggie, will you jump in?" he asked, bowing to the gentleman, and preparing to alight.

"Don't dismount, sir; I will assist the lady," and he took the flowers from my hand and assisted me to the side of uncle Jerry before I could speak, though I thought there was a little shade of disappointment in his face.

"Uncle," I said, smiling, "I cannot present you to this gentleman, but I am indebted to his kindness for my beautiful bouquet, and he procured it at some risk of his neck."

Uncle Jerry put out his hand in his hearty, hospitable way. "Happy to see you, sir. Up here in this country we don't consult ceremony much. Won't you ride home with us?"

"Thank you, not this evening, sir; but with your permission, I will do myself the honor to call before I leave M——," and he placed a card in my hand.

"I promise you a cordial welcome, and as for Maggie, here, I'm sure she'll be thankful enough to see somebody but old folks, like aunt Esther and myself," and the old man looked at me very tenderly.

We bowed our adieus. Uncle Jerry did nothing but tease me in his pleasant way, all the ride home, about my absent-mindedness, declaring, after all, that my romance wasn't for nothing, if it raised such a fine looking gentleman as that.

Of course the whole had to be detailed to aunt Esther at supper time, and she, dear soul, was as interested in the matter as any girl of nineteen.

The card has been duly inspected, and this has resulted in the important discovery that the gentleman rejoices in the cognomen of Harvey Willard. Well, as aunt Esther says, it's a sweet name. I wonder if he will remember his promise. Psaw! quite likely he has forgotten it. I have been very foolish to devote so much time to so small a matter.

Well, after all, I was mistaken; he did come, and what's more, he's coming again. Last evening, I was just seating myself at the piano, when I heard the gate open, and peeping through the shrubbery, for it was a moon-bright evening, I could distinguish three figures coming up the garden-walk. Something whispered me it was he, and instead of going to the door and receiving them, as I should have done, I searched up aunt Esther, and she did this. Mr. Willard was accompanied, and presented by the minister and his wife, with whom we are on intimate terms. It seems his father and the parson were old school fellows, but Mr. Willard did not discover that his parent's friend was settled here, until yesterday. Uncle Jerry is deacon, and of course he came in when he learned the parson was here, and aunt Esther and Mrs. Mills were soon discussing the comparative merits of blackberry Jam and peach jelly; so Mr. Willard and I were left quite to ourselves. I think we got along very well, though Mr. Willard certainly possesses very rare conversational powers. He has traveled in Europe, too, and his information seems inexhaustible. He

must have thought me rude, I fear, gazing into his face so constantly; but there is a charm in his fine eyes, and his earnest features, when they are lighted up with the eloquence of his soul, which strangely attracts me. How unlike other men he is.

"We were speaking of Longfellow last night," I said. "I like him better than any other American poet, because I love him more."

"Ah!" Mr. Willard's eyes swept a glance, quick and searching, at my face. "One could not be lightly indebted to Longfellow; but go on."

"There has been a season in my life, an episode of darkness and weakness when the day grew night about me, and the waters went over my head. And oh, I owe it to Longfellow, (God bless him,) that I did not come out of that trial-hour 'wanting.' To the clarion call that sounded through the dark places of my soul,

"Let the dead past bury the dead,
Act, act, in the living present,
Heart within and God overhead."

I owe whatever of strength of purpose and earnestness of life there may be in me. Friends, hope, faith, had deserted me. I sat down and prayed for death; but those grand soul-psalms came to my heart, and her weakness became strength—why, what have I been saying, Mr. Willard?"

The fervor of my feelings had unconsciously carried me away. I had forgotten that I was laying bare my heart to a comparative stranger. In my first surprise and embarrassment, I buried my face in my hands. Another was laid gently upon my curls, and a voice, low and rich, said, "I thank you for this beautiful revelation of your character, Miss Marshall; do not fear to trust me."

At that moment aunt Esther called my attention to the pattern of Mrs. Mill's collar, and after this the conversation became general.

We accompanied our guests to the gate, and just as they were leaving, Mr. Willard whispered to me, "I have a new edition of Longfellow, containing his longer, and, I believe, all of his fugitive, poetry. You will permit me to bring it to you to-morrow, and read you some of my favorite passages?"

"Thank you, Mr. Willard, I shall be happy to hear them."

The hand that I gave him at parting was held a little longer, and the fingers clasped a little tighter, than courtesy demanded.

"Well, sis, you and that city gentleman seem to be getting along nicely together," said uncle Jerry, patting my chin, after we had returned to the parlor.

"I say, mother, wouldn't it be rather funny if our little Maggie had really picked up a—ahem!—you understand, off here in the backwoods?"

"Now, Jerry, don't torment the poor child," said aunt Esther, winding her arm about my waist. "Mr. Willard is certainly such a man as one does not meet every day; but then just to look at our Maggie, I beg to know if she isn't handsome, and good enough for him?" and she looked at us with her fond, motherly eyes.

There, I'd quite forgotten writing the history of last evening, that we are to have peas for dinner, and I promised to shell them. So good bye to Mr. Willard till to-night, for I presume he'll come with it.

It is late evening again, and the summer stars are looking down on me—golden letters scattered thickly over the dark blue page of the night. With her good-night kiss, aunt Esther whispered an injunction that I should retire at once; but I can't do this without telling somewhat of my morning misadventure. I can't help laughing now, though it was serious enough then, I can assure you.

Aunt Esther was in the garden, pulling some beets for dinner, and I had donned one of her aprons, and just established myself snugly in a low chair, in the kitchen, with an earthen dish in my lap, and a half bushel basket on one side of me, when I glanced up at the clock, and discovered the hands were in the vicinity of eleven.

"Come, Bridget," I called hastily, "leave your work this minute, and sit down here and help me, or these peas will never be ready for dinner."

Bridget, poor soul! is a real specimen of Erin veridancy, and her three months' experience of American life has not greatly sharpened her obtuse wits. I supposed she was rubbing the brass door knobs in the sitting room; but she did not answer me, and I was growing impatient, when her round, good-humored face appeared at the door, while she exclaimed triumphantly, "Plase, sir, and here is herself that ye axed for;" and behind her, a look of amused perplexity on his face, stood the elegant Mr. Willard.

"Why, Bridget!" I sprang up, revealing the clean apron and all. The sudden motion dislodged my curls, and they rolled in a heavy shower over my shoulders, while I felt the blood washing up to my cheeks. Mr. Willard saw my confusion, and approaching me, he said, "I perceive, Miss Marshall, that Bridget has shown me into the wrong room; but, after all, her mistake has resulted in my gain, for I should not otherwise have seen how charmingly you look in dishabille;" and there was a world of admiration flashing through the lurking good humor in his fine eyes, as he gave me his hand. I recovered my self-possession immediately, and after a hearty laugh, in which the gentleman joined, I intimated that if he would walk into the parlor, I would be with him in less than ten minutes.

"No, thank you," he said; "I am not going to take you from your work; but, with your permission, to occupy Bridget's place myself. I ought to apologize for calling at this time. To tell the truth, I could not wait till afternoon; but I will not prove an unprofitable visitor;" and he drew

a chair to my side; and lifted a handful of peapods.

"I looked at him, the courtly-accomplished gentleman, and the simple grace with which he adapted himself to these circumstances, elevated him greatly in my estimation. There is so much soul-nobility shining out of his smallest word and action.

"It would only be affectation in me to refuse your offer," I said, seating myself and placing the platter on a chair between us. "Bridget, bring a towel for Mr. Willard." And Bridget brought it, and laid it in the gentleman's lap, with a look of blank astonishment, which it was really ludicrous to behold. So we sat there, laughing and chatting, in the old-fashioned kitchen, with the country sun-light smiling along the white walls; and the earthen dish filled very rapidly under our busy fingers.

"Sakes alive, Maggie! What does all this mean?" Aunt Esther's voice broke in suddenly upon us, and there she stood in the back door, her large sun-bonnet pushed back from her head, half a dozen beets, holden by their long tops, in one hand, while she stared at us in dreamy, bewildered astonishment. I explained the whole to her in a few words, and, laughing at Bridget's awkwardness, she immediately offered to relieve both of us; but we found our employment altogether too agreeable to resign it. And so Mr. Willard remained to dinner with us, aunt Esther laughingly assuring him he had earned his meal. He would have prolonged his visit till morning, but an engagement with Mr. and Mrs. Mills, whom he has quite fascinated, prevented his doing this. He read to me this afternoon for two hours Longfellow's Evangeline, and other poems, and the great thoughts seemed to gather new beauty as they came to me in the rich, mellow tones, whose sweet echoes still haunt my heart. Mr. Willard certainly realizes, more nearly than any other man ever did, my ideal of physical and intellectual manhood. I have promised to rife out with him to-morrow. But hark—the village clock has struck twelve!

"Tis night again, starry and beautiful, the transcript of its predecessor, and yet what a new page in the great life-fohio have I unclasped since last evening. I have promised to be his wife, and a week ago we did not know each other. No matter; soul has made its mighty revelation to soul, and we understand each other as though we had been intimate from childhood. I am very happy; so happy, that the great joy, in my heart is over breaking over my lips with the grateful cry, "My God! I thank thee!" I cannot indulge in any school-girl sentimentality—the joy at my heart is too deep and holy for that; but can only say, how fervently, how entirely, the angels can understand, I love him! Not much writing will be done by me to-night, either, for my hand trembles, and I am constantly tempted to throw down my pen and pace up and down my room, in the still, solemn, blessed enjoyment of thought and feeling—but must tell very briefly how all this came about:—We had a long, delightful ride, just at sun-down. We did not return until starlight, and had a motherly chiding from aunt Esther, who feared her biscuit had grown cold because they had waited an hour and a-half for us.

After supper Mr. Willard came into the parlor with me. We sat down awhile by the window, and listened to the sweet voices of evening, katydids and crickets. At last he rose up and walked two or three times across the room; then he came back and leaned on me.

"What are you thinking about?" I said, looking up and smiling. His voice was very grave as he answered,—"That perhaps he would leave me—to-morrow. But it is for you to decide. Will it trouble you to have me go?" There was simple frankness in the question, which solicited my confidence, and my answer was, "Yes!"

"Well, then," and he leaned a little nearer, "You shall decide whether I go now, or remain with you always. Miss Marshall—Margaret, you know it is not any way to speak lightly of these things; you know there is no sentimental softness, no romantic lover's vows of eternal constancy to make you; but to say to you as I never again can say to another woman, "Margaret, I love you."

There was a long pause. Having tried to collect my thoughts from such a surprise, the words would not leave my lips, and I sat there shivering from head to foot. He leaned over and looked into my face. My heart was throbbing very quick. "You are not offended?" he asked, and his tones could not have been more eager if he were pleading for his life. "Don't answer me, only move your head."

After shaking my head, he sat down on my chair-arm, and drew my head close to his heart. Neither spoke for a long time; but oh! we seemed very happy, and my heart was all the time fashioning prayers of gratitude to the Great Father, with the sweet tears ever and anon rolling down my cheeks. Afterward we talked a long time. Having told him of my motherless but happy childhood—of the father who made me his one idol—of my school life; and of that one year of fashion and flattery, when suitors thronged around the rich heiress, and the world called her its favorite,—of my father's death—of the fraud and failure of his partners—of the desertion of all my kin, and how, at last, the noble old man, my father's uncle, hurried to the city when he heard of my misfortune, and said to me, "Maggie, we offer to you our home and our hearts; will you come to them?" And Harvey answered me, while his first kiss dropped like a blessed baptismal upon my forehead, "I have wealth enough for us both, Margaret, my beautiful, my beloved!"

A week has passed; a week of such intense happiness as I never expected to realize out of

heaven. Last Monday, having told uncle and aunt, the same evening uncle Jerry put my hand in Harvey's, saying in a hoarse voice, "She is our child, Mr. Willard—oh! be very tender of her." And what he answered, the tears that are coming prevent me from writing.

Could I only but feel as I did last night. If this mocking, hunting, torturing doubt would only leave my heart. I dare not, cannot tell what is my fear—oh! its memory will madden me! He must be noble, and pure, and good,—my Harvey, my glory, my incarnation! Sometimes it seems like a dream, and, putting out my hands to strain my eyes to awaken, sink back again and feel it is real.

'Tis all happiness to-night. Harvey had been passing the evening with me, and we had been talking about our one future. He had risen to leave, for 't was late. Accompanying him to the front door, there we stood, chatting in the moonlight.

I read this morning a short but very pathetic tale in the newspaper, and somehow it has haunted me all day. The tale was about a young man, intelligent, accomplished, wealthy, and recently wedded to a young and beautiful woman, who adored him. Recent facts have come to light which prove that two years previous to his marriage he was guilty of forgery, and he has fled the country.

"Oh! Harvey," I said, drawing closer to him, "how much worse than death to the heart of a woman must be such a revelation! And to make idols and to find them clay! Thank God, that between you and me there lies no such darkness. For you could not be loved by me, if you were not looked upon with pride. There is no stain upon your past, the shame of no crime on your soul. Betwixt us there is perfect confidence." Again my feelings triumphed over my timidity, and, for the first time, ventured to lay my lips to the hand that rested on my shoulder. He drew it away, as if a viper had stung him. Looking up in his face, in the clear moonlight, it was very white, and working fearfully.

"Harvey! Harvey!" was the reply, "speak to me; don't look at me like that." But he only turned away and groaned. My limbs refused to sustain me, for they sank down upon the door-sill. I was sinking into unconsciousness when his voice aroused me. "Maggie!" it whispered huskily, "there is a dark page in my past, and to-morrow night you shall know everything. To deceive you was not meant; the angels are my witness that it was not. But pure and noble as you were, the thought occurred that it was not best for me to bring to your gaze an hour that has been striven to forget, and this made me weak, for your love was more precious than life to me. And now, what if this is lost to me forever? better even so than that you should wed me, believing a lie. But oh! pity me! Margaret Marshall, pity me!"

His lips dropped one long, burning kiss upon my bowed forehead, and he was gone!

Oh! there seems an eternity of suffering between this time and to-morrow. How can it be borne! How can smiles and light words be gathered to my lips, from a heart over which surges great waves of agony that is exceeding, unpeakable. Aunt Esther's loving eyes will not be deceived to-morrow.

I love him still, deeply, entirely, as I once did. This truth stands out clear and solemn amid all the wild struggling in my soul. And he, oh! I cling to him with the old faith yet. His nature is noble and true, and good, howsoever he may have been tempted to do evil!

Well, at last all is known, and Harvey is loved—oh, if it were possible, better than ever. Thank God, this fair summer's day went down into the darkness, only to have the great light poured into my heart. "Now, darling, go right to bed," said Aunt Esther as we met on the stairs; "it pleases me much to see you looking well again." Dear heart! she little dreamed that my malady had been more of the mind than of the body.

Watched for him by the parlor window for a whole hour to-night, and at last, when I heard his step ringing up the gravel-walk, my heart seemed to stand still; could not rise up to meet him when he entered the parlor, but held out both hands, and said to him, "I am very glad you are come at last, Harvey."

He kissed me gravely, but very tenderly, and looked with his proud, mournful eyes into my face a moment, and bade me to go out and sit with him under the shadow of the great butter-nut tree on the lawn. It might be a fancy of his, he said, but he could make the mournful disclosure better with the solemn stars looking into his soul, than he could anywhere else.

"Of course his request was complied with. We sat down on the rude bench which Uncle Jerry had placed there, and then I was very bold, laid my hand on his heart and said, "Now, Harvey, don't fear to tell me all."

He drew his arm around me, and—I shall write it briefly as he told me: his father died; he was his mother's only son, and great was the dismay of the widow when she discovered that some speculations in which her husband had become involved, left her and her child well nigh penniless. Harvey was not one to yield lightly to misfortune. He obtained a situation as clerk in a large mercantile establishment, and for a year supported himself and his mother by his employment; it was not a pleasant life. Harvey's heart was with the musty folios piled up in dim old galleries, and the yellow walls of the little office grew to him a kind of prison, and it was only for his mother's sake he stifled the strong cry for mental aliment. One afternoon a head clerk came to him, stating that he had become greatly embarrassed in his financial relations, and wished

the loan of five hundred dollars. This was all that Harvey and his mother possessed in the world. At first he refused, but the clerk was an intimate friend, and he painted his unhappy position in such terms that Harvey's heart was touched, and against his better judgment he yielded, and the last dollar he and his widowed mother possessed was placed in the clerk's hand. Two days later he came to him with another story, whether true or otherwise Harvey never knew—the whole speculation had proved a failure—his money was lost, Harvey's and all. "Oh, my mother! my mother!" groaned the wretched youth, and he sank down upon a chair and prayed to die. His agony seemed to touch somewhat the heart of his betrayer. "Willard," he said, "the keys of the 'strong box' are in your possession; lighten it of a cool five hundred, and on my oath, in less than a week you shall be repaid all you lent me, and you can replace it." How his high nature scorned the base proposal, how he sprang to his feet, the hot blood of honest indignation burning up into his cheeks—but alas! alas!

"Harvey, my boy," said Mrs. Willard, as he came in to dinner some three days later, "our old friend Mr. Allen has been here, and he told me if we would take a few shares in the —, he would pledge his honor that in less than one year it would pay us two-fold. I promised him our five hundred, and this afternoon I intend going down to the bank. Oh! Harvey my precious boy, how often I have thanked God that he saved the widow this mite!"

And her son looked into her face, and he saw the deep tenderness that flashed through her tears, and he could not tell her.

"That evening—my pen stops, I cannot write it. There was other eyes that saw him, and the next day Harvey Willard was arrested, and his mother—but he, too, pined there.

"Two more days went by, and then a brother of Mrs. Willard's, a rich man and a bachelor, whom they had thought dead, came from the Indies.

In less than two hours Harvey was free—money bought his release and secured the matter from publicity. He and his mother never knew the need of money again. Harvey was his mother's heir—the grass grows green over two graves now.

"And is that all?" I whispered, as his voice dropped into silence.

"All! Is it not enough, Maggie, to part us forever?"

"No, no; only to draw me closer to you, my beloved," and I laid my head closer upon the heart, where, thank God, it will lie through life.

"Maggie! no reproaches, no scorn, only these tears!—are you woman or angel?" He rose up, and stood gazing into my face a moment, then trembling in every limb, shuddering like a child, he sank at my feet—his proud head dropped into my lap.

I wound the dark, rich curls around my fingers; and lifted the bowed head and pressed my lips to the shaggy, broad forehead, and murmured, "We will never speak of it again, Harvey."

"Never!" he said, fervently, lifting his eyes to my face, and the unspeakable tenderness in their shining depths brought fresh tears to mine. "Henceforth, betwixt you and me there shall be perfect confidence."

"Yes, perfect, perfect, Harvey," I murmured, and a sweet echo seemed to gather up the blessed words, and rolled them through the bright uplift of my future; and now, in this midnight silence, it floats softly back to my heart, "There shall be perfect confidence."

HOW TO SELL YOUR OLD TEA POT, OR HOW ONE WAS SOLD.—A gentleman doing business in Boston, took an easy lesson the other day in the selling line, that is too good to be lost, and so he has given the benefit of it to his friends and the public. Messrs. Cut & Crump keep a boot and shoe store on Hanover street, "wholesale and retail, a large assortment of seasonable goods, at the lowest cash prices, &c." On a bright and airy morning, a short time since, an elegantly dressed lady called in, and placing a rich and beautiful looking silver tea pot, nicely enveloped, except the nose and handle in tissue paper, on the counter, inquired for "nice gaiter boots, thick soles; can you fit me? my size is 5." "Oh, yes, most assuredly, we never fail to do that same thing," replied Mr. Cut who was behind the counter; and he did his best to fit his fair customer to a first class boot, of the kind and quality desired. After a few trials, "a fit" was found, and the price (\$2.50) fixed, and the boots finally packed up, but not paid for. The lady being about to leave, says, "I am down town shopping and have two or three more calls to make, and I guess I will leave the tea pot, for it is not very convenient to carry, and take the boots, and when I return I will call for it, and pay for the boots." Mr. C. very politely consented to "this nice little arrangement," and the lady with a very pleasant smile and "good morning," left the store to finish her shopping. Mr. Crump, who was just inside the counting-room, and had heard and seen all after a hearty laugh immediately cries out, "Out, you're sold! by thunder you're sold, and no mistake." "Don't believe it," replies Cut, holding up the tea pot "no sired, it is the pure sil—" tearing off the wrapper, when lo and behold, an old bruised and battered Britannia tea pot was revealed, with nose and handle polished to perfection. "There! there! I'll give it up. I'll pay for the oysters," says Cut, "but—but I'll never trust a woman again as long as my name is Cut." It only need be added that the hot supper came off at Parker's, and that Mr. Cut is as fond of relating the joke as any one.

FROM THE EAST.

By the steamship Cortes, which arrived at this port on Sunday morning, one week's later intelligence was received from the East.

We hear from St. Louis that the advices of the California failures had been received there, and produced but little excitement. There was no run upon Messrs. Page & Bacon, and the impression was general that the news of Messrs. Page-Pacon & Co.'s resumption would be received by an early steamer.

The New York money market was in a sound position, stocks continued to improve, and all signs of financial difficulties had disappeared.

California securities appeared to be gaining confidence. State 7's were quoted at 91 1-2.

HARK TIMES ALL GONE.—The Mirror thinks that the clouds so gloomy and oppressive, that recently lowered upon New York city, are breaking, rising and scattering. The radiant bow of hope gleams upon their departing skirts; and glimpses of clear skies give promise of milder, brighter and better days. The soup houses are no longer thronged by the famishing poor; and the beggars in the streets are subsiding. We hear of no more clamor for bread, or for work; and as all departments of Trade and Industry are reviving, we believe every honest, able-bodied, willing laborer may find something to do at a rate of wages that will enable him to live comfortably.

THE OVERLAND MAIL TO THE PACIFIC.—Col. Benton's letter, published in the papers, has carried a misapprehension upon the subject of the overland mail to the Pacific. The route has merely been made a mail route; no direction has been given by Congress to establish service upon it. In this case, as in the case of all new mail routes, the Government will adhere to its custom of advertising for the service, and accept the bid appearing the most satisfactory.

The New York Journal of Commerce has official accounts from Marañham, Brazil, South America, giving remarkable accounts. Rich gold fields equal in value to those in California having been made by explorations of a corps of scientific geologists, by aid of a steamer, &c. These rich "places" are said to exist chiefly between the rivers Tuquassu and Gurupy.

SPECIAL NOTICES.

Wistar's Balsam of Wild Cherry, the great remedy for Consumption and all other diseases of the pulmonary organs. The greater the value of any discovery, the higher it is held in the esteem of the public, and so much in proportion is that public faith in its efficacy upon the spurious imitations of ignorant, designing and dishonest men.

Now that this preparation is well known to be a more certain cure for Consumption, Asthma, Liver Complaint, Coughs, Bronchitis, and all similar affections, than any other remedy known, there are found those so ridiculously reckless as to concoct a spurious, and perhaps a poisonous mixture, and try to palm it off as the genuine Balsam.

This is to caution dealers, and the public generally, against purchasing any other than that having the written signature of L. BUTTS, on the wrapper.

Prepared and sold, wholesale and retail, only by **SETH W. FOWLE**, Boston, Mass., to whom all orders should be addressed, and for sale by his agents.

Opinion of the Press.—The following is from the New York Evening Mirror, May 25:

"**WISTAR'S BALM OF WILD CHERRY.**—Among all the Panaceas advertised for the cure of human ailments, there is none in which we have more confidence than 'Wistar's Balsam of Wild Cherry.' We regard it as one of nature's own preparations—simple, safe, pleasant to take, and almost certain to cure all bilious and pulmonary affections. We have witnessed its wonderful effects, in cases that were regarded as impudently desperate, and we can confidently recommend it as one of the best medicines in the world."

It has proved more efficacious as a remedy for Coughs, Colds, Influenza, Bronchitis, Asthma, and Consumption in its incipient stages, than any other medicine.

Always signed **L. BUTTS** on the wrapper.

To Purchasers of Implements for Harvesting Grain.—We shall keep ourselves always advised of the very best implements that are imported into this country, and those who wish to purchase, by writing or calling on us, can be assisted in their purchases materially. We can find orders to any extent for machinery, and will be happy to do so for a commission, and no know we can do so with great advantage to the purchasers.

Native Pines, Oaks, &c.—Cones of the Native Pine, Acorns from our Mountain Oaks, Seed of all our Mountain Shrubs, and of every species of Valuable Tree or Shrub; for these the full price will be paid, if satisfactorily labelled, classified and arranged, at the

Office of the "CALIFORNIA FARMER," Masonic Hall Building, Montgomery street.

Religious Notice.—There will be Public Meetings held at the "Hall of the Sons of Temperance," on Washington street, between Sanson and Montgomery, every Sabbath Day, viz: A Prayer Meeting at 10 o'clock, A. M., and Public Lecture at 3 1/2, P. M.

The REV. MR. SEXTON will lecture next Sabbath, April 29, at 3 o'clock, P. M.

American Hotel, Benicia.

THIS HOUSE has been established five years, with out interruption or change of proprietorship, and is beloved by the travelling public to be one of the best conducted Hotels in the State.

A Lady's Praise of Spalding's Oil.
As the shadows of evening began to fall,
A Lady was dressing her hair for the Ball;
Soft were the accents that fell from her tongue,
And this was the song that the lady sung—
"Away with Pomatum and Balmoline,
No more in my room shall Bear's Grease be seen,
The hair's soft texture they only spoil;
Oh, give me the Castor and Rosemary Oil—
It's made my tresses look soft and bright,
And my hair keeps the curl tho' I dance all night.
No more of grease or stodge spirit for me,
But Spalding's mixture of Rosemary!"
Sold by
B. D. THAYER & CO.,
Montgomery street, San Francisco.

Banking House of Page, Bacon & Co.,
SAN FRANCISCO, March 24, 1855.
WE desire to notify our friends and the public that we shall resume our business on THURSDAY, the 29th instant, at our new Banking House, corner of Clay and Battery streets, where we shall be happy to see all our old friends and customers.

Artisan Well Boring.
WE would respectfully inform the public that we are fully prepared to take contracts in the above operations in a manner to guarantee satisfaction or no charge will be made.
SMITH & VAN DYKE having associated themselves with an old and experienced operator from the East, who challenges the world to compete with him in all the branches connected with the above business, are fully confident to guarantee success in all contracts that we may undertake, and warrant the work for one year. We have also implements for boring through stone to any depth, and all work done on the most reasonable terms.
For the satisfaction of those wanting anything in the above line, we would refer to Thomas Fulton, San Jose; Rufus S. Eells, of Havorth & Ellis; M. A. Sullivan, New Custom House; Wright & Co., 137 Jackson street, &c., &c.

We can do work cheaper than any other operators, for two reasons:
1st. Because we are prepared to work on a most extensive scale.
2d. Because we understand all branches connected with the above business, and are, therefore, able to work with certainty.
All orders left at the "Well Boring House" will be promptly attended to.
SMITH & VAN DYKE, Contractors,
118 Sanson street.

Virginia Manufactured Tobacco.
GREENE, HEATH & ALLEN have removed from California street to the cor. of Washington and Battery streets, where they offer for sale the largest and best assortment of Manufactured Tobacco ever brought to this State. The selection was made by Mr. Heath from the best factories in Virginia; and the trade generally are respectfully invited to call. Among the brands offered are the following:

200 boxes Crumpton's Four Aces;
75 half boxes do Mardal;
50 packages do Sovereign of the Sea;
60 do do Bride of the Pacific;
100 boxes Halsey's Four A's;
100 do Sumners' Harry of the West;
50 do James Boyd's Gold Leaf;
50 do do Ann Bishop;
25 do A. Thomas' Club House;
50 do Ferguson's Star of the West;
50 do Miller & Crenshaw's Bluff City;
20 do Royler's Merry's Own;
40 do do Invincible;
100 do Tharrington's Cartelops;
50 do Dickinson's Whiff's Eye;
50 do Croely & Woolton's Metropolitan.

In addition to the above, we have 2,000 packages of ordinary brands; and as we sell exclusively on Commission for the Manufacturers of Virginia, we can furnish the trade with any quantity or quality required, at the lowest rates.

Southwick & Co.'s Grand Raffle!
\$48,540!!

FIRST GRAND PRIZE \$30,000!!
THE Proprietors of the above Raffle, having sold a sufficient number of their Tickets to justify them in fixing the "Day of Drawing" for Saturday, 10th day of March next, have much pleasure in informing their friends and the public generally, that the drawing will be by wheel, in which the numbers of every Ticket which has been issued will be deposited, and the first twenty drawing numbers will be Prize, the fortunate holders of which will receive the Prizes immediately after the drawing, or they will be held in trust for those at a distance by a Committee of Ticket Holders, elected by those present at the drawing, and who will superintend the same and fully represent all Ticket holders who may not be able to attend the drawing.
Tickets Sold and Valid for day and night up to the hour of drawing, at the principal office in Sacramento, or can be secured by application to the various Agents in all parts of the Northern and Southern States, San Francisco, &c.
Remember!—Monday, 30th day of April next. Secure your Tickets without delay.

(For the California Farmer.)
Historical Enigma.

I AM composed of twenty-four letters.
My 1, 15, 10, 19, was a disciple and friend of Plato.
My 14, 5, 24, 7, 13, 21, was an orator of Greece, a cotemporary of a tyrant of Syracuse.
My 22, 2, 16, 15, 14, 5, was a small State of antiquity which produced many learned men.
My 1, 20, 18, 7, 8, 9, was an oriental prince, whose name Plutarch has immortalized for his generosity.
My 16, 12, 2, 4, 17, is one of the oldest countries on earth.
My 18, 23, 24, 6, 15, 13, is one of the staunchest of modern governments.
My 12, 3, 14, 14, 20, 19, 1, is a kingdom once celebrated for its commercial and maritime power.
My 11, 18, 20, 4, 16, 7, 9, was a latter German Emperor.
My 17, 11, 18, 2, 16, 13, is probably the most extensive country, which benefits mankind the least.
My whole is a celebrated historian of antiquity.
COLFON.

P. S.—Friend Cicero gave the right answer to my last.

TAKING THINGS EASY, is very hard, but very philosophical. We have tried it, and can speak from experience, though we cannot always live up to the "take it easy" doctrine. But there is no mistake about it, that if a man wishes to enjoy himself he must take the world mixed as it is with a thousand shades—and a thousand spots of sunshine—a cloud here and there—a bright sky—a storm to-day and a calm to-morrow—the chill, piercing wind of Autumn, and the bland, reviving breath of summer. In a word, take things as they come—if you don't you are a fool. A snarling man has about as much comfort as the fellow who was confined to an overcoat of thistles.

CHAPIN UPON A FAST AGE, AND AN EPIGRAM FOR CHAPIN.—In a recent lecture at Boston, Rev. F. H. Chapin said: "We are in haste in every thing; we travel on the railway at the rate of 40 miles an hour, and regret that we cannot go by telegraph. We make fearful leaps from the shore to the ferry-boat, and in our endeavors to save two seconds many a widow has got her thirds. We are fast in every thing—fast in our dress—we rush from one extreme to another, and now we see coats on our young men whose waists will scarcely hold their skirts; and on our young ladies bonnets that cannot catch up with the heads of the fair ladies that own them. We are fast in politics—men are made governors before they hardly know they are candidates; and in our households we have children that jump from cradles to cravats—from babies to beaneaters. We have men fast in their manhood: a brotherhood of fast men exists in our age, of whom it may be said (without intending to be too particular) that their upper lips are in mourning for the loss of their brains—men who throw away a fortune in a pack of cards, and from tilting with a billiard cue go on to a bout with pistols." Not liking the trenchant dig at the monstache movement contained in the above, some epigrammatic sinner, with a monstache, sent the following to a daily paper of the American Athens:

"Nim crease their heads in mourning for their brains!"
Says Chapin, God's man! how thou lookest to oppose.
To tempo his tree, he dilly takes the pulse,
To show the world that he has none to lose.

THE RAINING TREE.—The island of Fierro is one of the most considerable of the Canaries, and I conceive the name to be given it upon this account—that its soil not affording so much as a drop of fresh water, seems to be iron, and indeed there is in this island neither river or rivulet, nor well nor spring, save that only toward the sea-side there are some wells, but they lie at such a distance from the city that the inhabitants can make no use thereof. But the great Preserver and Sustainer of all, remedies this inconvenience by a way so extraordinary that man will be forced to sit down and acknowledge that he gives in this an undeniable demonstration of his wonderful goodness. For in the midst, there is a tree which is the only one of the kind, inasmuch as it hath no resemblance to any of those known to us in Europe. The leaves of it are long and narrow, and continue in constant verdure, winter and summer, and its branches are covered with a cloud which is never dispelled, but resolving into a moisture, causes to fall from its leaves a very clear water, and that in such abundance that the cisterns which are placed at the foot of the tree to receive it are never empty, but contain enough to supply both man and beast.

ROWLAND HILL used to ride a great deal, and by exercise preserved vigorous health. On one occasion when asked by a medical friend what physician and apothecary he employed, he replied: "My physician has always been a horse, and my apothecary an ass."

ALWAYS have a pencil and piece of paper by you. Dr. Johnson said that some of his best thoughts were lost because he was too lazy to go into his study and hunt up a little foolscap.

THE Springfield Republican says there is a soap house in Westfield, where the needy get soap from oyster shells and old bones, seasoned with rum—the latter being given away, while the former is paid for.

Or all the delicate sensations the mind is capable of, none perhaps, will surpass that which attends the relief of an avowed enemy.

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SUR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise on Consumption," says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Lunan and other pathologists." Dr. CARSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis." (Pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, thus after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or emulating falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,
has cured hundreds of cases of
Consumption of the Lungs, Liver Complaints, Coughs,
Colds, Asthma, Bronchitis, Whooping Cough,
Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

Dr. BORDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, with beneficial results. In two cases, where it was thought Consumed Consumption had taken place, the Wild Cherry effected a cure."

DR. A. H. MACANNAIR, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

DR. Wm. A. SHAW, of Washington, D. C., says: "I wish heartily success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity."

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes us as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry."

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful."

(From the Boston Journal.)

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most distressing kind."
C. D. MAYNARD,
Argus Office, Portland, March 26, 1850.

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and renounce the fatal courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations.—Synops, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine.

Dr. Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

SETH W. FOWLE,

Proprietor, Boston, Mass.

Agents for San Francisco,

Montgomery street.

Surgery.

R. B. COLE, M. D.,

Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.

Office—Atheneum Building,
South-east corner of Montgomery and California streets,
opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself principally to his office, where he proposes to treat all

Surgical Diseases,

feeling assured as he does that his former connection with Medical Schools and Hospitals, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the affections to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and morbid growths, occurring on any part of the body, Disease of the Spine, Chronic Ulcerations, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of Eye, Ear and Skin, Affections of the Bladder, Uterus, Scrotum and Testis (or in other words, all diseases of the Genito-Urinary Apparatus) and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly-treated Fractures, Contractions of the Limbs and loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.

Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.

OFFICE HOURS: (Morning, From 10 till 12
Evening, " 2 " 5

Take no thought for the morrow.

THIS TEXT MEANS, BE NOT UNREASON-
ably anxious or disturbed by future cares. It is an advice easily adopted, if we take such steps as prudence suggests. Suppose you are troubled with Coughs or Consumption, the temper is soured, and the good dispositions of the soul languish, the mind suffers; but obtain bodily relief from the use of Dr. DEVINE'S COMPOUND PITCH LOZENGES, and the mind and soul repose in tranquil reliance on Divine Providence in their text commands. Price 50 cents a box, or 3 for \$1.
Sold by
LITTLE & CO., Apothecaries,

EXPRESSES, &c.

E. W. TRACY & CO'S EXPRESS
TO SHASTA, WEAVER, YREKA, JACKSONVILLE,
AND ALL INTERMEDIATE PLACES.

CONNECTING WITH THE

PACIFIC EXPRESS CO.

To the Atlantic States and Europe.

For the purpose of accommodating the business community, the undersigned commenced on Wednesday, Feb. 28, to travel from Shasta to San Francisco, carrying Money, Letters, Packages and Valuables, and attending to all matters of Express Business.

The Express will be dispatched regularly as heretofore, in charge of careful messengers, and the whole business will be under the direct management of E. W. Tracy. We have no security to offer except business capacity, and for that refer to the annexed card, signed by the business men of Shasta.

Card.

We, the undersigned, Traders, Merchants and Dealers, in Shasta, do hereby recommend to all who have business to be transacted between this place and San Francisco, E. W. Tracy, as a person in whose honesty, integrity and business capacity, the utmost confidence can be placed.

Freight and packages forwarded with dispatch and at greatly reduced rates.
Collections attended to promptly, and return made in coin or dust.
E. W. TRACY & CO.

PACIFIC EXPRESS COMPANY.

With late employees of Adams & Co., in consequence of the disruption of that firm, have organized themselves into a joint stock company, under the above name and title, for the purpose of conducting a General Express and Forwarding business in all its branches, throughout California, Oregon and the Pacific Coast generally.

The business will be strictly and solely a forwarding one, having no connection with banks and bankers, and will be conducted on safe and economical principles.

The Expresses will leave the office in the north-west corner of Washington and Montgomery streets, daily, at regular hours, for Sacramento and the Northern Mines, Stockton and the Southern Mines, San Jose, San Juan and Santa Cruz, Monterey, San Pedro and the Southern Coast generally, as well as to the Northern Coast of California and Oregon.

We will also run a regular Express for Freight, Small Parcels and Letters to and from the Atlantic States by every steamer.

The parties who have organized this company are well known in the community as old and experienced express men, and hope it will be acknowledged generally, understand their business thoroughly. They think they are not saying too much, when they attribute much of the success of the late firm of Adams & Co. in the express business to their exertions and personal energies.

In conclusion they would solicit a fair share of the favors of the public, pledging themselves to exert their best endeavors to transact such business as may be entrusted to them in a prompt and business-like manner.

Collections of all kinds will be promptly attended to at any of the points mentioned above.

San Francisco, March 1st, 1855. R. G. NOYES, President. 13-10.

Southwick & Co's Grand Raffle.

IN consideration of the extreme difficulty which enterprises of all kinds have to contend against at the present time, owing to the scarcity of money in this city, and all parts of the mines, and feeling sure that Southwick & Co. have not had a fair chance to dispose of their tickets, through times of unparalleled depression and stagnation in the business community, as well as with the laboring population in this city and all portions of the mining region, we are induced to append our names to this card, calling upon the public generally to come forward and purchase the tickets of Southwick & Co., so as to insure the drawing coming off at an early period. They have already sold a large portion of their tickets, and in eliciting the forbearance of those who hold their tickets, we have every confidence in assuring them, that they run no risk in consenting to a further postponement of thirty (30) days, at the expiration of which time, we feel assured, they will have disposed of most of their tickets; meantime they call upon all who may feel favorable to the Scheme, to come forward at once and purchase tickets without delay. This postponement, we feel sure, will be more satisfactory to the ticket holders and the public generally, than that the proprietors of the Raffle should retain a large quantity of tickets themselves. Under these circumstances the proprietors have fixed the day of drawing for

Monday, 30th of April,

from which there will be no further postponement.

Heartily concurring in the above, and recommending the Scheme to the favorable notice of the public. We are, &c.,

Ingham's Improved Smut Machines.

THESE Machines combine all the apparatus necessary to cleanse Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also remove short straw, white caps, seeds and other foul substances in the most perfect manner. All of the offal worth saving is collected in a reservoir, while the smut and light dust are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient, without being enclosed. It is a California improvement and designed to meet the wants of this country; Eastern machines having been found to be inadequate to that purpose. It has received the highest recommendation from all using them, among whom are Pettit & Hodgekins, Brighton Mills, Sacramento; Brooks & Hull, Happy Valley Mills, San Francisco; Wm. Sharp, American Mills, San Francisco; Babcock & Hale, Sierra Nevada Mills, San Francisco; H. S. Hill, Washington Mills, San Francisco.

These building Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHOP on L street, between Front and Second, Sacramento. H. B. INGHAM.

N. B.—All information given, and orders left at WARREN & SON, San Francisco, will be attended to.

The following certificate is among the number received others can be referred to in quantities:

This is to certify that I have one of H. B. Ingham's Improved Smut Machines, and believe it to be superior to any other. I need no other fixture for cleansing grain, except the machine itself; it makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before.
Wm. SHARP, Agent American Mills,
Pine street, San Francisco. 13-5.

San Francisco, Jan. 11, 1855.

Legal Notice.

STATE OF CALIFORNIA: County of San Francisco.—To the presiding Judge of the Court of Sessions, of the County of San Francisco, aforesaid: Please take notice that an application for the pardon of David D. Dunn, who was convicted in said Court of the crime of Grand Larceny, on the 22nd day of November, A. D. 1854, and sentenced to confinement in the State Prison for One Year, will be made to the Governor, on the 30th day of April next, by his mother MARY D. DUNN. Received copy of the above notice March 28th, 1855.

T. W. FREELON,
County Judge of County of San Francisco.
H. H. DRYAN, District Attorney. 13-15

MISCELLANEOUS.

TREADWELL & CO.,

CORNER OF FIRST STREET AND MAIDEN LANE,
MAYSVILLE.

Corner of California and Battery streets, San Francisco.
No. 56 Federal street, Boston.

IMPORTERS of Hardware, Iron, Steel, Cordage, Paints, Oil, Varnish and Window Glass, direct from the Atlantic States and Europe, with a COMPLETE ASSORTMENT OF TOOLS AND IMPLEMENTS for Farmers, Miners, Carpenters, Coopers, Caulkers and Gravers, Saddlers, Turners, Masons, Smiths, Painters, Glaziers, Ship Carpenters, Wheelwrights, Millwrights, Cabinet Makers, and others. 13-5

DR. DEVINE'S
COMPOUND
PITCH LOZENGE
FOR THE CURE OF
COUGHS AND COLDS
AND BRONCHIAL AFFECTIONS
LITTLE & CO
AGENTS
137 MONTGOMERY ST.
SAN FRANCISCO.

TO PREVENT COUNTERFEITS, EACH BOX OF GEN. DEVINE'S PITCH LOZENGES, will in future bear the written signature of "Little & Co."

THIS CELEBRATED REMEDY is offered to the WESTERN WORLD in full faith, as being The Only Certain Cure ever Discovered

For COLDS, SORE THROAT, ASTHMA, BRONCHITIS, HOARSENESS, PAINS IN THE SIDE AND CHEST, AND ALL CURABLE CASES OF DISEASES OF THE LUNGS. They will be found the best article in use for the RELIEF of the Consumptive Patient when past all hope of recovery, and will in many cases where lungs sufficient are left to maintain life, check the ulceration and raise the patient to health. Certificates of cures, to be relied on, can be found in the circulars left with the agents, and the public may be assured that we shall never publish anything we do not believe entitled to the fullest confidence, as truth.

"Nothing but the Truth." The world is challenged to produce such cures as are effected by faithfully using this cheap and pleasant medicine. This remedy is pronounced by Clergymen, Orators and Vocalists to be the best in use for clearing the voice and relieving the irritation of the throat, so troublesome to public speakers. Price 50 cents a Box, or 3 Boxes for \$1.

LITTLE & CO., Apothecaries, 137 Montgomery street, San Francisco.

Agents for California, Oregon and the Sandwich Islands, to whom all orders must be addressed. Observe that the written signature of "Little & Co." is attached to each box of Devine's Pitch Lozenges, without which none can be genuine.

Agents for the sale of Dr. Devine's Compound Pitch Lozenges: San Francisco, Little & Co.; Sacramento, C. Morrill; Marysville, Rice & Collins; Stockton, E. S. Holden & Co.; Benicia, J. W. Jones; Napa, Dr. R. W. Carr. Agents are wanted for this invaluable remedy in every city and town in the State. 13-9

COLLINS & CO.,
PRACTICAL HATTERS,
(PREMIUM HAT STORE.)
157 Commercial street, San Francisco.

THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at COLLINS & CO's Warehouse.

The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.

17 COLLINS & CO.

WYMAN & CO'S
SUPERFINE CLOTHING!

WM. MANSFIELD & CO.,
151 Montgomery street,
Offer their Large and Elegant Stock of
FALL AND WINTER CLOTHING,
OF THE LATEST STYLES,
AT GREATLY REDUCED PRICES.

In order to make room for an entire new stock for the Spring and Summer Season.

As so, Every description Fine Furnishing Goods; Fine Calf, Patent Leather and Water-Proof Boots. W. M. & Co., would also invite dealers in the country and the city generally to call and examine their stock. 13-12

month, the increase of names and the prospects, together with
the amount due the office.)

[From Journal of the U. S. Agricultural Society.]

Cultivation of Oil-Yielding Plants.

Translation of an article of Prof. Schlipf—furnished by Lieut.
Thornton A. Jenkins, U. S. Navy, and Secretary Light House
Board.

The following article on the culture of Rape or Colza is translated from Professor Schlipf's Manual of Husbandry for the People, 3d edition, enlarged and improved. Reading, 1847. Sec.

Schlipf is (or was) the lecturer of the Royal Württemberg School of Agriculture at Hohenheim, on or near the Neckar. The Manual in question was written for a competition founded at the association of German Agriculturists at Carlsruhe, in 1850, and obtained the prize.

OIL-YIELDING PLANTS. Rape, Winter Rape, Cole-seed, Colza, Leersat, (a).—The culture of Rape, Winter Rape, Cole-seed, and Colza, have been attended with remarkable advantages in the Districts where it has been introduced. It yields the earliest crops that give the farmer a money return; it furnishes him fodder at a season when it is ordinarily scarce; and its harvest occurs at a time when he is not usually over-pressed with other work. (b)

The Rape has many insect enemies especially hurtful, among which are the flea beetle, and the turnip butterfly. (c) The last appears at the period of blossoming and hinders the pods from forming.

Soil and Exposure.—The Rape thrives principally upon a rich and deep soil, such as is suitable for Barley and Wheat, but more especially upon those which are mellow, marly, or calcareous. In a very light or a very stiff soil, it only succeeds by heavy manuring. In a wet land, such as peat and moor grounds, it does not thrive at all. It answers in all the Districts of South Germany except on the bleak mountain sides. Unseasonable weather in spring, especially extreme changes from warm to cold in April and May, are very prejudicial. Very cold and raw north and east winds are likewise very injurious when the ground is not covered with snow. Standing water is very hurtful to the soil.

Rotation of crops.—Colza agrees well with every other growth and is especially good to precede winter grain when it has thriven well. The best fore crops for Rape are feed-rye, (d) feed-vetcher, and clover, or those crops used for seedling, on the three field system. (e) It is sown usually in the summer field, so that it ripens for fallowing, (f) and the winter grain following it has then the advantage of a half fallowing. In a regular rotation ordinarily, feed-rye or feed-vetcher precede it.

Manuring.—Colza requires a very heavily manured soil and more especially loves the more liquid muck. If the manure be applied immediately, the seed often ripens unequally. Therefore, it is better to manure the preceding crop. On the stiffer soils sheep dung especially is advantageous.

Preparing the Soil.—Colza needs the utmost working and pulverization of soil, which it obtains very well from naked fallowing. After feed-rye, the ground can readily be prepared, and so too after clover, when only the first cutting has been taken. Industrious thorough plowing, harrowing, and rolling are never lost, and are especially necessary when the seed is sown with a machine.

Different Methods of Cultivation.—Colza is raised in three different fashions, viz: 1. Drilled

or sown with a sowing machine, which has very many advantages over the others, for the drilled seed, better protected against wet and cold, leaves room for the possible workings to keep the ground clearer of weeds. So too the proportionate yield is higher, for less seed is taken in machine sowing. They reckon 6 to 7 pounds per acre in Baden, 4 to 5 pounds in Hesse, and 5 to 6 pounds in Württemberg. (g) With the machine the Colza is seeded in the first half of August; often in many places already at the end of July; worked in the middle of September, with the horse hoe; and in October hilled once or twice with a hill plow. If seeded too thick, it must be thinned late in the year. The machine with one man can seed in a day from 6 to 7 pounds.

2. Broad cast seeding is done at the end of July or beginning of August. The ground must be lightly harrowed and the seed covered in. Some more pounds of seed are required for this than for machine seeding. Care must be taken to make the casts uniform, so that the plants may stand at the proper distances. Since the introduction of seeding machines broad cast sowing has gone very much out of vogue, as it is so often liable to injury in unfavorable winters.

For transplanting or planting, the seed must have been put in during the latter half of July. The field on which the rape is to be planted can be sufficiently prepared if it has borne, just before, a straw crop. One acre of rape beds will cover two or three acres of rape plants.

3. On large establishments the planting is done in the beginning of October with the plow, the plants having been drawn beforehand. A furrow is made on the steep side of which the plants are set from four to six inches apart. This setting is done by eight or ten grown boys or girls who are stationed along the whole length of the furrow, each one having a certain distance to set in, and being supplied with the necessary number of plants. The plants thus set are covered in by the return furrow, along which there is then a fresh setting. If any of the plants fail of being properly covered, they must be attended to. The cost of planting is from \$1.37 to \$1.50 per acre. On small plantations it is done with the spade and dibble, which is more costly, but often pays well.

THE HARVEST.

Harvesting.—This occurs generally at the end of June, or first of July, and is commenced when the pods are brown, and half of the seeds are found to be of a dark brown color. The duration of the harvest in most years is very short, and therefore it is necessary to watch every day the grade of ripening. The cutting is regularly done with a sickle, and this in the morning, so that but few grains may fall out. Every two handfuls are laid on the ground with the cut ends crossing and the pods spread out. These swaths are left in the field for some days, and after they are sufficiently dried are hauled in upon sheets spread in the wagon. In order that the seeds may not be wasted in loading, a long sheet is spread on the ground by the side of the wagon. The harvest women take up the swaths carefully, and lift them over this sheet upon the wheelbarrow pitch-forks of the loaders. In some parts of France colza is shocked in the field, the single swaths being laid in a circle, with the seed ends towards the centre, so that the diameter is double the length of the stalk. In building up the shocks which are made 5 or 6 feet high, this diameter is continually diminishing, so that the stalks require an inclination outward and downward. The shocks are left in this state until the seeds have fully dried, which is in 8 or 10 days. For hauling in, a sheet is laid by the side of the shock upon which it is tumbled with pitch forks. In some districts however, the seed is threshed out in the field. When hauled in it is left still some days on the barn floor, in order that the seeds may entirely ripen. After threshing, the seed partly mixed with husks and dust is left upon the floor, spread out then (2 to 4 inches high) and turned over at first twice a day, afterwards once a day until it is perfectly dried, which will be in 8 or 10 days.

Yield.—This is very variable, being subject to divers contingencies. Drilled, sown or planted seed usually gives a higher yield than broadcast.

WEIGHTS AND PRODUCT IN OUR MEASURES.

	Weight.	Oil yielded.	Oil Cakes.
Baden 1 bushel,	54 1/2 lbs.	12 1/2 lbs.	31 1/2 lbs.
Hesse do	54 1/2 lbs.	12 1/2 lbs.	31 1/2 lbs.
Württemberg do	49 1/2 lbs.	12 1/2 lbs.	29 1/2 lbs.

Summer Rape.—This crop is much more uncertain than the winter Rape, and ordinarily it is only tried to any extent when the latter has failed. It suits a light soil better, and succeeds upon black, muddy soils and dried ponds. It requires like the other heavy manuring, well working and good weather are both necessary. The seed is put in by the end of April, and there is allowed to the Morgen a quarter semer of seed i. e. one-fifth bushel per acre. The yield is from 33

to 50 per cent. less than from the winter Rape. It is sold also at a somewhat lower price. It is often injured by the flea-beetle, or black-jack, the chafer and the plant lée, or aphides.

NOTES.

(a.) The synonymy are Schlipf's. Systematic Botanists distinguish between the Rape, Brassica Napus, and the Colza (Kohlraut Germ.), which in Brassica Campestris Oleifera, and sometimes B. Oleracea. The distinction is easily marked in the young plant. The B. Napus being smooth leaved, while the B. Campestris is hispid. This latter yields about one-third more oil, and is the plant cultivated on the continent of Europe. The former is the Rape, or Cole seed, sown principally in England. This distinction is for Light House purposes, well to be observed.

(b.) This is true for Germany, where the seasons are later than ours. In middle latitudes of the United States it is probable that the Rape harvest would occur about the first of June; which is just the time of being in the thick of working the corn. Its harvest fortunately however is quickly through.

(c.) The term used here for the German (literally ground-slee, is the name given to the animal in New England. Probably, south of Mason's and Dixon's line it goes under the general name of fly. It is systematically classed among the Halielida, and the species most common here is the Haliel Striolata. Touching this insect and the means of its expulsion, Schlipf has given in another part of his Manual the following particulars:

"Among the means of avoidance, which however are not always successful in preventing extensive devastations, the following deserves to be mentioned, viz: Sprinkling quick lime, plaster, peat, ashes, slack coal, soot, brick dust, road-side dust, &c., only in the morning, while the insects are yet wet with the dew. Good results have attended a double seeding, the second being made to follow three to five days after the first. As the flea-beetles habitually resort to the youngest plants for their food, they of course attach the growth from the second seeding, and that from the first escapes. Cultivation in several adjoining fields will also lessen the damage in a single one. An early seeding in spring is sometimes a protection. The flea-beetles can do the least harm when the plants have a rapid luxuriant growth, so that the outer tissues harden themselves quickly, and the insect can make no more impression. For this behoof, the ground must be brought into a strong condition, and the soil by plowing, harrowing and rolling so prepared that the plants may shoot up soon and lively."

Schlipf then goes on to describe a machine which he says had been used in Hohenheim for some years with good results. This appears to consist of a frame some twelve or fourteen feet long, and three feet wide, carrying boards secured with tar against which the flea-beetles are caused to spring and then stick fast by the action of certain rods worked by the wheels on which the whole thing slowly moves, and chipping as it were the ground. The details are only partially and somewhat illicidly given, but they do not seem very important.

The other insect mentioned (Giang Knefer,) is probably, as I have rendered it, the Turnip butterfly—Pieris Nape. As methods of resort against these, Schlipf indicates:

1. The shaking of the fly from the trees and killing it bodily, which can be done in the morning to a large extent.

2. The turning in of pigs upon the spots where the leaves are numerous.

3. Digging and plowing the ground if it has been in meadow before, or raking the soil and carefully gathering the leaves that are turned up; then sowing clover seed, or grass and rolling.

4. Gathering up the leaves after the plow.

5. Watering the spots in question when it is practicable.

6. Paring and burning the surface of the soil, for which he gives in still another part of the Manual some more particular specifications. If the ground for instance is even and free from stones and stumps, the paring is done with a suitable plow, taking up a sod of one-half to two inches thick. If the ground is uneven it is better done with a hoe. The clods are then piled in hollow heaps with a draft opening on one side. The heaps are about three feet in height, and as much nearly in the width. They are fired with any combustible rubbish, and the ashes of the pile are scattered then over the soil and harrowed in. The fire is regulated by the draft door and must be watched. The burning is generally done in the spring.

7. Sparing the crows, rooks, magpies, &c., which are far more destructive of insects than of the grain, which they may disturb and pick at. The farmers' prejudice against these granivorous birds

is less reasonably founded, than some other of their antipathies. There is reason to believe that such birds do not frequent fields, attracted by the grain, as much by the insect food they find. London has already most emphatically and justly combated these prejudices, and says among other things very forcibly that while there are enormous devastations, and even entire destruction of crops by insects, it remains yet to find one in which any serious damage has been done by birds.

8. Finally the best remedy, says Schlipf, quickly enough is when nature has stepped in and killed the grubs by a hard deep frost.

(d.) What is translated here feed-rye, corresponds to the German Futterrogg, and is supposed to explain itself; although not a term in ordinary husbandry.

(e.) This term has to be translated literally; for we have no vernacular word for expressing a system, which coming down from the time of Charlemagne, is yet prevalent in Germany. In this the farm is divided into three fields, the word field not being taken here to mean necessarily a single self-contained enclosure. The fields or divisions are cleared into first winter crops, second summer crops, and third fallows. In this system there is no provision made for grass and hay, and therefore as the straw from the two crops will hardly hold out unless manure is imported on the farm, the land will in time be brought to a very poor condition.

(f.) The word fallow is used in several senses in agriculture. For instance it is an adjective, a substantive, and a verb. Thus we speak of land "lying fallow," which means sometimes unseeded—sometimes unplowed, and at other times (metonymically) neglected, or in our phrase "old fields." Again, a fallow is sometimes applied to mean only a "breaking up." Sometimes, and most frequently with us it signifies a fresh breaking up, to be plowed, sown, and so forth. In some districts it seems to be understood in some other sense, that of "breaking up" for a crop to be afterwards put in.

What is called in the next sentence "a regular rotation," is a version of the German word *fruchtwechselwirtschaft*, for which we have in English no single corresponding word. Its principle is that two crops of a kind are not to succeed each other. Thus for instance a grain and straw crop like wheat is not to be followed by a crop of oats, but intervening will be clover or potatoes.

(g.) The proportion of seed required in various districts per acre is as follows:

	Per acre.	Per acre.	Average produce.
In Hohenheim,	11, 35, 47 lbs.	0.92, 1.40 bush.	32 1/2 bush. 621 bush.
In Hohenheim, 12, 35,	" 0.92, 1.70 "	" 21 1/2 "	" 132 "
In Württemberg, 13, 46,	" 0.92, 1.60 "	" 22 1/2 "	" 125 "

(1.) The Morgen in the three States named, varies between five and seven-eighths of an acre. Supposing as is most likely the Hohenheim Morgen to be here meant the work of the machine would be between 6 1/4 and 7 acres per day.

(2.) The Württemberg Morgen is 0.7789 acre, and the florin 38, 85 cents. The prices stated then will vary between \$1.37 and 2.50 per acre.

(3.) The quantities in this paragraph become when reduced to our measures as follows:

	Per acre.	Per acre.	Average produce.
In Hohenheim,	11, 35, 47 bush.	0.92, 1.40 bush.	32 1/2 bush. 621 bush.
In Hohenheim, 12, 35,	" 0.92, 1.70 "	" 21 1/2 "	" 132 "
In Württemberg, 13, 46,	" 0.92, 1.60 "	" 22 1/2 "	" 125 "

(4.) These rates reduced to our measures are represented by 93 cents and \$2.31 per bushel. The mean price is \$1.80 per bushel.

A PINEAPPLE COW.—We have occasionally observed in the agricultural papers notices of fine milking cows, but we think Mobile, in one case at least, can surpass them all. A gentleman in this vicinity—who is too modest to have his name mentioned—has a Devon cow, six years old, running at large on the commons every day, but kept up at night and well fed on bran, hay, vegetables, &c., which gave the past year sixteen hundred and twenty gallons of milk. The dairy woman's memorandum is as follows: 1st three months, average, six gallons of milk and twelve pounds of butter; 2d three months, five gallons and ten pounds; 3d three months, four gallons and eight pounds; 4th three months, three gallons and six pounds. The milk at 40 cents per gallon, which is the common price here, would amount to \$640. This shows the importance of having a good blooded cow. In the present instance, the cost of keeping is no more than for an ordinary country cow, and yet the value of milk for one year is nearly \$650.—Alabama Planter.

TRANSPLANTING EVERGREENS.—The roots, while out of the ground should be kept moist, and they should never, for a moment even, become dried during the process of transplanting. Hence, a rainy day is recommended, in all cases, especially where the roots are denuded.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, MAY 3, 1855.

OUR PAPER.

Our readers will please notice the Circular we enclose them. It is of moment to us that we should enlarge the list of our readers and correspondents. Will not each and all of our subscribers take an interest in this matter, and do what each can to widen the influence of our journal. By such means we can command the practical results of Farmers in every county.

We will try and deserve the kindly influence of all, and those who desire to communicate with their friends East, and to invite them here, should write them a letter of invitation, and send it through the columns of the FARMER.

During our several visits among the valleys, we often receive the names of subscribers, who cannot make it convenient to pay at that moment, but promise to remit briefly. To such we say—please remember we have always done so so to oblige you; and briefly cannot mean over two months.

Postmasters over the State are invited to act as our Agents, and we will cheerfully allow them the full commissions. We invite their attention to our Circular.

The Convention.

We publish to-day the result of the State Agricultural Convention. We have not received the official report from the Recording Secretary, which we much regret, for we anticipated a very able and detailed report for this issue. We trust hereafter we shall receive official reports of both the Executive and the Society's doings.

Sixteen counties were duly represented, and although there was not a large convention, those present were earnest. About one hundred and fifty were present at the evening sessions.

We trust each county will now call meetings and take action respecting their share of the labor. To make a State Society efficient, the counties should be active auxiliaries; and it will be observed that committees are to be selected in each county, to co-operate with the Executive, in the preparatory steps for the Fair, and as Committees to examine Farms, Gardens, Nurseries, &c. It is also expected this committee will procure members to the State Society.

The Sacramento Union gives so good a report of the proceedings of the Convention, that we have copied from it, in place of making up a report ourselves. This paper exhibits a very commendable zeal in this matter.

Sonoma County Meeting.

At a meeting called to the attention of the citizens of Sonoma county to the meeting of the Agriculturists of that county and vicinity, which is to be held on Saturday, May 5. We would urge all that can possibly attend to be present, as it is very important. Besides the organizing of a Society, many important measures for the protection and encouragement of these interests will be brought forward.

Measures should be taken to prepare for the State Fair and to correspond with other counties; also to enroll members to the State Society, to gather statistics, and various duties connected with the best interests of County and State.

We shall hope for a good report. Friends from other counties that can, should be present.

COUNTY MEETINGS should be held in every section of our State, to make preparation for the State Exhibition, and we would be glad to receive such communications as are needed, from the several counties, and give them a place in our columns.

LEGISLATIVE AID.—We notice with pleasure the passage of the bill to aid the State Agricultural Society by the Senate, and the approval of the bill by the Governor. This is well; the society needs aid to carry on its work and prepare for the coming Fair. The appropriations by the State of five thousand dollars a year, is made solely for Premiums. All the expenses of preparation for the Fair, the contingent expenses of surveys of farms and gardens, rents of rooms, books, stationery, &c., this all is borne by membership or donations, and this demands the attention of every friend of agriculture in the State.

We have received from the Purser of the Sonora J. S. Martin, Esq., M. D., a fine specimen cocoa pod, containing the seed from which the Mexicans make their chocolate. It was brought from Acapulco. We also received from Mr. Thos. Harris, the steward of the Sonora, a handsome specimen of the cotton tree containing seven balls; it contained forty when gathered, but the passengers took a portion. It was taken from a tree thirty to forty feet high at the island of Tobago. To these gentlemen we return many thanks for their politeness and interest in these matters.

The reports of the Convention and press of advertisements compel us to leave out matter we should like to have inserted to-day, but could not.

Strawberries.—Fragaria.

This most luscious fruit, which is now being presented to our citizens in its most tempting forms daily at our markets and saloons, is worthy of more than a mere passing thought. Its wondrous size, its rich fragrance, and its other excellent qualities, attract the notice of the passers by; the mouth waters, some are tempted to buy and eat, others bear away the fairest and best, as a prize; the fruit is consumed, and the circumstance, however pleasant, is soon forgotten.

But this fruit—its advent into California, its new and remarkable features, its increased productiveness in size and quantity, the habit it assumes as a perpetual bearer—these are subjects that should arrest the attention of every fruit grower in California. It is perfectly astonishing to notice among the masses of cultivators at the present day, how little they are acquainted with the character and capabilities of this fruit—a fruit that is so much needed and would find so ready a sale in every town, village, or city, at handsome prices.

In California the strawberry assumes, as we have said, remarkable features. The climate is highly favorable to its growth, the rains and mild weather of winter furnish the roots with a continuous growth of the plant, and the early warm weather sets an abundant crop. When a due attention is given to the care of the plants, the strawberry, in many varieties, yields a continuous crop from the middle of April to November. Plants set out in January and February, give fruit in May, and continue to bear. In addition to this, plants can be taken from the parent, reset, and they will yield fruit in the autumn. Climate, soil, and season—all seem peculiarly fitted for great crops of this fruit, and it will be found that this delicious fruit will still be improved both in size and quality when raised from the seed. Again would we urge upon all fruit growers, the necessity of turning their attention to raising new and improved fruits from seed.

We urge this measure as applicable to fruits of every kind. By this means we produce fruit adapted by nature to the soil and climate, in addition to the fact that when proper attention is paid to this matter, the character of the fruit is improved. Among the fruits thus raised, strawberries will be found to remarkably improve. We can give full assurance to any one, of this fact, by referring them to the gardens of Messrs. Smith, at Sacramento, upon the banks of the American. Smiths' gardens are a pattern for fruit growers, and worthy their attention.

After the close of the State Convention recently held at that city, we visited these grounds and enjoyed the courtesy of the proprietors. We were deeply interested in the examination of these grounds. In every department of fruit Messrs. Smith are rapidly advancing; their specimen orchard presents at this time the best proof of the success of Pomology; we have even seen fruit trees from the seed but one or two years, showing fruit—trees two and three years old bending with the weight of their early crops—nurseries trees the growth of which even the present year surpass almost belief. But the fruit to which we now would call particular attention is that which we have placed at the head of this communication.

Messrs. Smith cultivate a large quantity of Strawberries, of all the principal kinds, and the present year's crop will be very large. They have also a large plantation of seedling strawberries, one and two years old, in full bearing—these vines are the most remarkable we have ever seen; the form, the size, and the enormous quantity of fruit now on the vines, will sustain us in the assertion that THE LIKE HAS NEVER BEEN SEEN.

Among the many varieties raised by Mr. Smith, we noticed one of peculiar form and habit—the fruit long, very long, often two and a half inches; conical, sometimes double cones, and hanging in immense masses, literally covering the ground—such abundant bearers we think have never been produced before; the vine is strong set, leaf dark green, foliage close to the ground. We gathered several clusters, and those who desire to see them can have an opportunity by calling at our rooms. This particular fruit deserves a place in every collection, and we have given to it the name of the proprietors, as the best complement that can be paid—a deserved reward to an efficient friend to Horticulture. This strawberry will be known as SMITHS' CALIFORNIA STRAWBERRY, and we hope it may be offered for sale the coming autumn. Every fruit grower, particularly, should visit Smiths' Gardens when the city of Sacramento.

As to the quality of this new fruit, we can say

it was most excellent, for we enjoyed it much, in a generous supply smothered in the usual condiments of sugar and cream.

Shipment of Grain.

The shipment of a cargo of Flour and Wheat to New York, one year since, excited some surprise, and many doubts were expressed as to the safety or feasibility of the speculation. The present year presents the subject in a tangible and permanent form, and the matter has been begun in earnest.

We have often been asked what shall be done with our surplus produce, and our answer has invariably been—"A way will be opened." It should be borne in mind that the last season, after much exertion, plans were perfected and means provided to furnish funds, to advance on the shipments of wheat to the East. Few only tried the experiment, and they did well; had more entered into the work, a great good would have been accomplished, and the price of grain would have paid the grower.

The present aspect of our export market should give great encouragement to our farmers and grain growers. The time has come when the ports of New York, Boston, Philadelphia, and Baltimore, shall see their clippers returning with the grains and other products of California—yes, and we can send them back their own merchandise, and make money by doing so.

We call attention to the interesting facts mentioned below. A few months hence and ship after ship will be announced in Eastern ports, loaded with grain and other products of California. We cannot better present the real facts of the case than by giving our readers a plain schedule of the vessels and cargoes now leaving or soon to leave, for the Atlantic States. We copy the following from the Prices Current and Shipping List, the best and most reliable paper for all such subjects, as their data is collected and prepared with great care:

The most important feature presented in business since our last, and indeed one of the most important ever exhibited since the first shipment of gold from the State, has been the sudden and very large addition to our export trade which has brought itself into notice. California has really become a producing country;—not merely a producer of gold, but of corn, which is in reality much more important. Heretofore we have occasionally and at long intervals dispatched a vessel to the East laden with the odds and ends of trade,—old iron, junk, &c., but we have now entered upon a new era. Our crops are superabundant, and we are obliged to seek relief for our market in export to the farthest ends of the earth. In our last we mentioned the clearance of several vessels for Australia with produce; we have now to add largely to the list. As we write, the ship "Alfred" is about ready to sail with a cargo of Barley, Oats, Wheat, and Flour; the "Boston Light," a fine clipper of over 1100 tons, is on the berth for Melbourne, and has nearly half her cargo (about the same as that of the Alfred) engaged; the "Comet" has cleared for New York, with Hides, Horns, Rags, Wool, Hardware, Quicksilver, &c.; the "Charmers" will clear this week for the same port with a full cargo of Wheat, Flour, and Quicksilver; the "Telegraph" has been laid on for the same port to load Grain and Flour, and has half her capacity engaged; we also hear that the "Morning Light," a very large clipper, will be put on the berth immediately; the "Water Witch" has sailed for San Blas, with Quicksilver; the "Tornado" for Acapulco, with Coal, and the bark "Cyano" leaves in a few days for the Russian American Possessions, with a full cargo of Wheat, Caudal Meal, Dry Goods, Furniture, &c. The coasting trade, particularly with Oregon and the coast adjacent to Puget Sound, has also been active, and both steamers and sailing vessels are carrying forward full freights. A new era is apparently opening on California. Markets are being established for our products not only on our own borders, but in distant quarters of the world, and throughout the next year we see no reason to doubt that by the export of the Grain of California, much of her gold will be retained within her own borders. Heretofore the rule has generally held that a gold producing country was generally a poor one. The reverse of this will hereafter hold on California.

The weather since our last has been all that could be desired either by the miner or the farmer, and the producing part of our population never was in a better position than at present. The mines are yielding unparalleled stores of wealth, while throughout the length and breadth of our plains and valleys a superabundant harvest is perfecting itself for the sickle of the reaper.

FAVORS RECEIVED.—Many obligations are due to Messrs. Wells, Fargo & Co., for papers per Sonora, with latest news. Also to Pacific Express for kind attentions. To Messrs. Murray & Co., for a generous supply of papers, magazines, &c. Also to the proprietors of the Noisy Carrier's Hall, for the latest magazines and cheap publications of the day.

State Agricultural Convention.

In accordance with previous notice the California State Agricultural Convention assembled at the Council Chamber at 11 o'clock Wednesday morning, 25th ult. The meeting was called to order by O. C. Wheeler, on whose motion C. I. Hutchinson, Esq., was appointed President of the Convention, who, on assuming the Chair, addressed the Convention substantially as follows:

GENTLEMEN OF THE CONVENTION: I thank you for this bestowal of honor in calling me to preside over the deliberations of the first State Agricultural Convention ever assembled in California. A brighter and more inviting field than this has never presented itself for occupancy. Richer and more abundant producing soils than are furnished by the rich valleys of California the world does not afford. The seasons of no section or country on this or the other continent are perhaps as well adapted to permanent or experimental agricultural pursuits as are the seasons of California.

It is appropriate then, and peculiarly so, that this great interest—the keystone of the arch of the nation's wealth, should be nourished and fostered in this new-born State of the Pacific.

For variety of grains, vegetables and fruits, as well as for excellence of quality and abundance of yield, we challenge the rivalry of the world. Under circumstances like these, and auspices so favorable, the only surprise is that the necessity exists for renewed incentive to action in this master work. The encouragements afforded by the superiority of our soil and excess of productions over those of other sections and States, are too readily regarded as matter of course events, and treated with consurable indifference. The State is cold and indifferent on this subject, and the people careless of their most important interests.

The superstructure upon which rests the high hopes of the future of the State is too little thought of and too little cared for, I fear, at the expense of a waste of time upon matters that partake too much of personal and not enough of public concern. The remedy for these evils is in the hands of the people. They can correct them if they will. Let requisite qualifications for legislators demand at least one day's devotion to the cause of agriculture during the next session of the legislature. This done, and more legislative action will have been secured to this object than has been given to it since our State organization.

There are many who feel the importance of proposed action in behalf of agriculture in California. There is enough of feeling, if stimulated to increased activity and pressed with an energetic determination that yields to no repulses. It is hoped that this organization may be established upon a permanent basis, that new life may be infused into its efforts, that among its gratifying results may be the organization of agricultural schools and colleges, and that legislative sanction may create a State agricultural department, and liberal pecuniary aid endow it with efficiency and make it promotive of the highest aims of its founders. These considerations, among others, will, I trust, engage the attention of the Convention.

The remarks of the President were listened to with intense interest, and elicited unmistakable tokens of approbation.

On motion, Rev. O. C. Wheeler was appointed Secretary of the Convention.

Mr. Stow offered a resolution to the effect that a committee of three be appointed to draft an address to be submitted to the agriculturists of the State, the same to be submitted to the Convention on to-morrow. Adopted, and Messrs. Stow, Cook, and Ware appointed such committee.

On motion of Mr. Wheeler, all who may be present at the sittings of the Convention are permitted to participate in its proceedings as delegates.

On motion of Mr. Warren, a committee was appointed by the chair to receive the names of delegates in order that their names may be registered, together with the counties which they respectively represent.

Messrs. Warren, Singley and Doughty were selected to act as such committee.

Mr. Wheeler moved that a committee of three be appointed to report the stated order of business of the Convention. Carried, and Messrs. Moore, Guber and Douglass named as members of said committee.

And on motion of Mr. Stow, the Convention adjourned to re-assemble at half-past seven P. M., at the Assembly Hall of the Capitol.

EVENING SESSION.

The Convention re-assembled at the Assembly Chamber of the Capitol, and at eight o'clock was called to order by the President.

Minutes of morning session read and approved. Mr. Geo. R. Moore, Chairman of Committee on Resolutions, reported the following:

"The undersigned committee, appointed to report resolutions and the order of business for this convention, beg leave to submit the following preamble and resolutions:

Whereas, All past experience has demonstrated that agriculture is the basis of a nation's prosperity; and whereas the greatest and best men of our country have labored with eloquence, zeal and ability, for the advancement of agriculture; and whereas California presents to the farmer a soil and climate unexcelled by any country on the globe, therefore, be it

1. Resolved, That it is the duty of every citizen of this State who has a desire for her advancement and prosperity, to enlist under the banner of agriculture and work for the furtherance of this fundamental enterprise.

2. Resolved, That in order to secure the rapid

and lasting advancement of our State, we need more permanent settlers, more families and cultivators of the soil—persons who are willing to accept the invitation to come hither and scatter their homes over our fertile valleys and identify themselves with our interests and growth.

3. *Resolved*, That in legislating for the general good of a State, agriculture is always the first interest to be considered, and that such laws should be passed as would foster and protect this great permanent interest and secure to the cultivator a reward for his toil.

4. *Resolved*, That among the primary lessons taught in our schools and academies, should be the principles of agriculture, and that to accomplish this object the Legislature of the State should pass a law to encourage the study of agriculture in such schools.

5. *Resolved*, That the convention earnestly recommend and urge upon the Legislature of this State the propriety of establishing an agricultural and mechanical bureau or college for California, where the farmer, mechanic and manufacturer can go and prepare himself for the discharge of the important duties he may be called upon to perform.

6. *Resolved*, That the convention appoint a committee of three in each county in the State, whose duty it shall be to solicit members for the State Agricultural Society, and to urge the formation of county organizations, so that the entire State may be well represented in the next State Fair.

Geo. R. MOORE,
D. F. DOUGLASS,
SHEPHERD DAY.

The resolutions were ably and eloquently discussed by Messrs. G. Penn Johnston, E. G. Buffum, Ryland, Warren, Crocker, Stow, Wier, and others.

The following additional resolution was offered by Mr. Wood, of Yolo:

Resolved, That a committee of five be appointed to draft a memorial asking Congress at the commencement of its next session, to give us additional facilities in settling the land question, and to adopt some measure by which agricultural text books may be introduced into our Common Schools.

The introducer of the resolution supported it at length.

The Convention was then further addressed ably and eloquently on the general subject of agriculture by Messrs. Pinley, Ryland, Stow, and Judge Wier.

On motion of Mr. Stow, the Convention deferred action on the resolutions until next evening at eight o'clock, to which hour the Convention adjourned.

SECOND DAY.

Convention assembled at 8 o'clock, P. M., and was called to order by the President.

Minutes of previous meeting read and approved. Mr. Stow submitted the following report from the committee appointed to draft an address to be presented to the Agriculturists of the State.

ADDRESS.

The committee appointed to prepare an address to the Agriculturists of the State respectfully submit the following:

The assembling of the first Agricultural Convention in the State of California ought to be a subject of heartfelt congratulation to its people, and regarded in the light of an incipient step in the promotion of a prominent State interest. The population of California being made up as it is of the enterprise and improving spirit of the age—being the concentration of progression—it is a matter of some surprise that the yeomanry should have deferred the holding of a convention till the year 1855. It is this very spirit of energy and enterprise that has so rapidly settled and improved this wonderful country—that has already successfully introduced all the improvements in agriculture and mining—brought to such perfection in the other States; not only this, but her few years of experience has added largely to the facilities afforded by the examples of her ancestors.

Agriculture is the great interest of the world. From its prosecution man receives his sustenance and his very being is maintained. In its prosperity wealth augments, commerce flourishes, and all branches of industrial pursuit reflect its consequences. It is the sheet anchor of a people's peace, wealth and independence. There are other interests of vital importance, particularly in California, in the foremost ranks of which we place mining. But gold does not cause the blade to grow, or prevent a famine—it does not feed the hungry, nor clothe the naked. Still we are dependent upon the miner and he upon us. He is as much interested in the success of agriculture as the farmer; and in this State, where such ruinous rates for produce have prevailed for the past two years, the miner has really been the gainer, while the agriculturist has become bankrupt. Formerly the golden fruits of the miner were gathered by the Eastern produce merchant, while now a portion of it finds its way into the hands of the California producer, and adds to the improvement and wealth of the country. The interests of these two classes are inseparably interwoven and have a mutual dependence. If foreign ports profitably invited the shipment of our rich harvests, the case would be otherwise.

Notwithstanding the intimate relationship existing between agriculture and mining, as conducted in this State, the interests of the former are more sadly neglected than any branch of business which engages the attention of our people. It is with great difficulty that a pitiful share of public attention can be drawn to the consideration of this subject, and yet no calling more favorably influences a people to morals, in-

dustry, integrity and intellectual improvement. Inseparable as agriculture is from the health and happiness, the wealth and prosperity, the industry and integrity of a people, yet it receives less attention in political circles, less legislative consideration, less executive sanction, national and State, less investigation from men of learning, research and position, than thousands of matters comparatively unimportant, or a combination of which in a high state of development, would be trifling in the opposing scale with agriculture.

How strange it is that agriculture receives so little legislative encouragement. Why is it, that since the organization of California there has been scarcely a legislative day devoted to agriculture? True, some encouragement has been rendered to the State Society; and no objection is here offered to the time and attention bestowed upon the investigation and protection of other interests, but complaint may be urged against the unimportant figure agriculture is made to occupy on the legislative record. We are apt to regard agriculture as a kind of general and matter of course subject, not entitled to high aims or the bestowal of mature thought.

While the wrongs are recounted which agriculture has suffered, it is pleasant to turn for a moment to the other side of the picture, or exhibit of outlines, which it is hoped may soon be matured into a perfect development of agricultural improvement and proportions.

From small neighborhood and township societies have arisen county, State and national organizations for the promotion of the interests of agriculture. From small beginnings have arisen flourishing schools and colleges, and the initiative of governmental patronage. The "oldest inhabitant" may recollect the novelty of a county society, and turn in astonishment to the National Convention recently held at Washington, and find upon the record of its doings the gratifying fact that twenty-six out of thirty-one States were represented by delegates. But if any evidence were wanting to justify or sanction the policy of liberal State and national appropriations for the encouragement of agriculture, it is found in the improvements made in this science in the States that have been first and foremost in this regard.

Experience proves that agriculture is as susceptible of improvement in all its relations, and with more resulting benefit to mankind than any other of the absorbing questions of life. Mankind can live by agriculture alone; as much can not be said for any other, or even all other pursuits. It is productive of less crime and more virtue than any other calling. The agricultural districts exhibit comparatively little vice, and seldom or never throw the State into commotion over frauds or forgeries. Tilling the soil renovates the system, gives it health and vigor, with increased chances for long life and the opportunity for usefulness. The sick, the desponding and the pleasure seeking flee from the town to enjoy the comforts and conveniences only to be found in the rural districts. Wealth, untainted and sullen with the sound of fashion and folly which pervade the metropolis, rears the quiet home in the country, where the young may be educated in the ways of temperance, industry and frugality.

For the credit of the age in which we live, there is a spirit abroad in behalf of agriculture, and an increasing interest has exhibited itself for its improvement during the past few years, that has afforded gratifying encouragement to the sons of this science. Some of the ablest men in the country have declared in favor of its proper consideration, and have themselves engaged, in a greater or less degree, experimentally or otherwise, in these pursuits. The man who aids in the perfection of this science, is a benefactor to his race, and will reap his reward.

An Agricultural Bureau at the National Capital has been suggested, and gives promise of support. We feel assured that the time is not distant when such a Bureau will be established. Justice to an agricultural people demands it, and sound discretion endorses the project. The Pension Agency has done something, collaterally, for agriculture, and the commendations that flow back to it from the recipients of its favors indicate the great and growing anxiety throughout the country for the establishment of a department that shall be able to respond to the wants and wishes of the people upon this subject. Such a department would serve as the receptacle and distributor, under the auspices of the nation, of scientific and useful information upon all subjects of interest to the farmer. Through its agency seals would secure that enlarged distribution only to be obtained by a well regulated system, and which is so necessary to the success of agriculture.

It is believed that every State in the Union bestows some attention upon this subject, although there is difference in degree. Annual appropriations have been made in the State of Maine by the Legislature thereof to every county in the State, for agricultural improvement, showing the awakening zeal that exists in that remote State in relation to this all-important interest. Iowa, the extreme of Maine in the north on the other side of the mountains, was recently urged by her Executive to bestow liberal attention upon this science, and at the same time strongly recommended the organization of an Agricultural Department. The action of other States might be alluded to, but the cases cited are sufficient to indicate the attention this subject is generally receiving.

The recent National Convention, assembled at Washington, the first ever held, gives additional assurances of increasing interest in the cause of agriculture.

The World's Fairs, already held at London and New York, as well as the one to be held the en-

suing season, show that not only States and nations, but the whole world is lending encouragement to the interests of agriculture.

Sensitive as our citizens are upon all matters in which we contend for superiority with the European nations, yet we are compelled to acknowledge that the United States did not occupy the position in these exhibitions to which we were entitled by our diversified soil and climate, by the genius of our people, and the spirit of the age. It was discovered that the important interests designed to be improved and encouraged by these world-wide exhibitions, found them suffering a mortifying neglect in the country of all others that ought to have stood foremost in the cause of agriculture. A country possessing resources that with any reasonable degree of investigation would have furnished abundant products and improvements for exhibition that must have surpassed, everything considered, any possible demonstration of our transatlantic neighbors. As it was, the Reapers, of American invention, by their wonderful adaptation to the uses for which they were intended, and the perfectness with which they performed the part allotted them, fairly nonplussed our national rivals, and saved the United States from the disgrace otherwise awaiting them.

Unquestionably much good has resulted to the country from the awkward position in which the United States were placed at London. This mortifying dilemma tended to arouse our countrymen to the importance of giving requisite attention to the commanding interests of the nation. It taught them that the base and source of its wealth and prosperity had been lost sight of; that an erroneous public opinion had prevailed, which must be at once and effectually eradicated, or the result would be a national malady of too much growth and strength to yield to moderate treatment. Much of the increased interest manifested in the national and several State councils, is attributable to these circumstances, and well will it be for our country that the neglect and disregard of this greatest interest prove a national mortification.

The propriety of the establishment of agricultural schools and colleges is heartily approved of by your committee, but time will not allow us to enter upon an investigation of their advantages, nor a detailed account of their success in those States where they have an existence. We cannot allow this opportunity to pass, however, without urging the agitation of early legislative action upon this subject.

The hasty glance at the action elsewhere going on, is taken with a view of urging upon the agriculturists of this State the necessity and propriety of corresponding exertions on the Pacific. California should be second to none in attention to a subject so vitally affecting her glorious future.

While a population of potential farmers in our agricultural districts, partaking of that same spirit of humble rivalry which so eminently characterizes all our people—with a soil of unrivalled richness and adaptation to the uses of the farmer—with a climate inviting the cultivation of every variety of vegetation, grain and fruit—it must be the want of efficient county and State organizations, if California does not rival the world in her agricultural productions.

In demonstration of the fertility of our valleys, of our fruitful seasons, and of our abundant harvests, we earnestly invite the agriculturists of the State to connect themselves with the State Society, and furnish the evidences that we do not over-estimate our resources. It is hoped that the State Fair to be held in the coming fall will be fully attended, and its exhibitions worthy of California.

Respectfully submitted,

E. B. STOW, Chairman.

Ex-Gov. McDougal being called upon, addressed the Convention briefly, but forcibly, confining his remarks principally to the necessity of employing Coolie labor, and particularly the industry of the natives of the Chinese and Japanese empires, in the tillage of the soil of California.

Mr. Selim E. Woodworth next addressed the Convention, dwelling upon the importance of the culture of trees by the agriculturists of the State; not so much on account of their intrinsic value, but because of the facilities they afforded towards the raising other agricultural products. There is not enough of shrubbery on the grounds of this State to condense the exhalations of the earth—the culture of the locust, maple, alianthus and other trees, were recommended to remedy, so far as possible, the embarrassments occasioned by the drought.

The Convention was further addressed, ably and earnestly, by Messrs. Flint, Warren, Douglass, Crocker and others, and after which the resolutions were read and adopted serialim.

The following additional resolutions, in addition to those published yesterday, were unanimously adopted, and earnestly supported, by Messrs. Stow, Warren and Rev. O. C. Wheeler: (These resolutions with the exception of the last one, were adopted at the United States Agricultural Societies' meetings recently held at Washington, D. C., and published in No. 16 of our paper. This should be the hearth language—the politics—the daily creed of every cultivator in our land. He should not only think it, and feel it, but act on it and up to it until our legislative halls were cleared of politicians and filled with men,—men that would legislate for the people and not for party. Farmers, read these resolutions and act upon them, and let the next legislature prove your fidelity to agriculture.)

Resolved, That, as agriculturists, we believe the time has come when we should have not only a voice in the halls of legislation, but we should have our share of legislative action and interest.

Resolved, That it is the first duty of every cultivator of the soil to see that his interests are duly cherished and protected in the halls of legislation.

Resolved, That we object to the doctrine of free trade for agriculture and protection for other interests.

Resolved, That agriculture should be the first interest considered in legislating for the general welfare, and that such legislation should be had as will foster and protect this interest, which is paramount to all others.

Resolved, That the time has arrived for the agriculturists of the whole country to meet in convention and determine for themselves what legislation is necessary for their protection.

Resolved, That such a convention, to be composed of delegates from each State of the Union, be earnestly recommended by this society, in order that an agricultural platform may be established, which will meet the views of and be sustained by the whole body of agriculturists as a profession.

Resolved, That we recommend the friends of agriculture in this State to promote the circulation of the CALIFORNIA FARMER, and extend its usefulness as far as lies in their power.

On motion of Mr. Stow, the Convention adjourned sine die.

Horticulture and Floriculture.

There is no better evidence of the prosperity of a village or a city than the improvements around home. Go where you will, that city or village where the homes are more attractive and beautiful, carries the best evidence of prosperity. That city or village where you find every mansion or cottage improved and beautified, returns into the treasury a liberal tax for the increased value of property, and this tax is again paid out to improve and beautify streets and squares, or build schoolhouses, hospitals, or other needed improvements. Thus one improvement stimulates another, and the whole public is benefited.

Compare any two cities or villages, one improved and the other neglected, and you have the evidence before you—the one rises as the other falls. We can contrast several of our cities and note the great difference. Many of our fine city residences seem entirely neglected, and such as might present a beautiful appearance outside have the ground left neglected and barren; and thus the value of property is lessened.

Sacramento is probably in advance of all other cities in the improvement of its residences. During the sittings of the State Convention we spent our leisure hours in the examination of various "neutral spots" in the city.

The Plains. The grounds of Col. Forrester & Johnson, Col. Sanders, Mr. Stephens, Judge Read, and the late Mr. Fierston, are all tastefully designed and in excellent order. The garden of Dr. B. B. Brown is a perfect gem—(the Doctor is quite celebrated, for we hear his patients all prosper too.) We passed a pleasant hour in the garden of Gen. O. C. Hutchinson, the President of the State Society. Here we found some of the finest specimens of garden vegetables we have seen in the State. We were pleased to notice the various specimens of vegetables grown from the seeds transmitted from the Patent Office; these were planted with care and gave evidence of good culture, promising well; we hope to see the products at the State Fair. The fruit and flower gardens were not only beautiful, but healthy, and gave promise of both fruit and flowers—peach trees only two feet high were in full bearing. These are the evidences we want of permanency—homes beautiful. Then the fine grounds of Rev. O. C. Wheeler, where we must say we found very great and rapid advances made in every department—high cultivation, neatness, order, and good taste displayed throughout. We do not wonder this gentleman can be so eloquent—everything in his grounds speaks. Well can he say—

"Brooks in the running brooks,
Barren in stones, and
Good in everything."

The trees, shrubs, vines, and plants are all preachers, and they speak of most excellent care. We cannot omit to mention the excellent design of the front grounds of this gentleman; the grape arbor is perfect keeping with the whole design. Such examples are what we want, and it is very gratifying to announce that the Recording Secretary of the State Agricultural Society is so thoroughly practical, for we can recommend all to visit his grounds and take lessons; and while there, we would say to them, be sure and become members of the State Society; we hope all may do so cheerfully, that feel an interest in Agriculture and its kindred sciences.

PAGE, BACON & Co.—The news by this steamer is most unfortunate to this House. We learn with deep regret that after having done all in their power to sustain themselves, that men could do, they were compelled to yield to the pressure, and close their doors. This is a public calamity, deeply to be deplored, and demands sympathy.

Horticultural Department.

Report on some of the Diseases and Insects Affecting Fruit Trees and Vines.

BY THADDEUS WILLIAM HARRIS,
Professor of Entomology of the Mass. Horticultural Society.

(From the Proceedings of the American Pomological Society, we copy below Dr. Harris' valuable treatise upon the various insects that infest fruit trees, alluded to in our last, and although only few of these have yet appeared in California, we believe we can do a great service to our orchardists by presenting this invaluable document entire, and thus lay before them a treatise for future use, for in all probability we shall find them in coming years among the trials we shall have to contend against.)

SWOLLEN BRANCHES OF THE APPLE TREE.

On the 31st of May, the Hon. M. P. Wilder sent to me some pieces of the limbs of an apple tree, which were singularly enlarged in diameter to the extent of several inches. He found the disease to prevail on the north side of the tree, while the south side was almost entirely free from it. The specimens were carefully examined by Prof. Asa Gray and myself, without insects, their punctures, or their tracks being found therein. One of the branches, measuring two and a-half inches in circumference, and the enlarged portion was eleven inches in length. The outer bark seemed perfectly healthy. When sawn transversely, the pith was not found in the centre of the piece, but nearer to one side than the other, where the layers of wood are thicker, and looser in texture. It was also evident that the thicker layers followed a spiral direction around the limb. When the bark was raised, the wood presented a singularly irregular surface, caused by numerous depressions and furrows, which were filled by corresponding elevations of the inner bark. The disease was evidently a diseased formation and irregular deposit of woody matter. It belongs to the province of the vegetable physiologist to explain the cause of this preternatural and diseased formation.

WARTS OR EXCRESCENCES ON PLUM TREES.

These have been attributed by many persons to the punctures or to the presence of insects therein. I have not been able to find either the one or the other in the incipient warts, or in their immediate vicinity. It was only when these excrescences were well grown and were approaching to maturity, that insects were discovered in them, and not always even in this stage. Some of the twigs, containing incipient warts, were enclosed in a tight vessel in May, and were examined in August, when they were entirely free from the vestiges of insects, although the tumors when cut open, presented the porous and cancellated structure peculiar to them when dry. The insects to be found in the warts in the course of the summer are of sundry kinds; such as the grubs of the plum-weevil, borers similar to those that attack peach and cherry trees, and the worm-like caterpillars of minute moths. The last seem to be the most abundant and the most common. Their presence is made known by the castings of grain-like fragments thrown out of their burrows upon the surface of the warts. These tumors also afford nourishment to certain vegetable parasites, the little black grains, half immersed in the surface, to which, when mature they give a deep black color. These little grains are fungi, which have been described under the name of *Spharia morbosa*. But neither to them, nor to the various insects before named, is the origin of the warts to be ascribed. The incipient warts can be detected, before the outer bark is ruptured, by the swollen appearance and spongy feeling of the surface. They seem to be the result of diseased action in the inner bark and new wood, while these parts are in a state of rapid formation. Upon examination, the cells of the tissues are found to be surcharged with fluid, and distorted in shape and arrangement. The plum tree has been called a gross feeder. It may imbibe fluids by its roots faster than it can exhale the superfluous moisture from its leaves; or the function of the latter may be checked by sudden changes in the hygrometric state of the atmosphere as are common in the spring. In either case, there would be likely to ensue an accumulation of fluid in the branches, and particularly in the tender tissues of the new wood, where warts are most commonly developed.

From experiments made upon my own trees, I have reason to believe that the growth of these tumors may, in great measure, be prevented by severe root-pruning, stimulating the bark in the spring, or before the buds expand, by washing it with soft soap, and by cutting off the warts as soon as formed, and applying salt or brine to the wounds.

CURL OF THE LEAVES OF THE PEACH TREE.

This affection, to which the tree is subject during the month of May, and by which it often loses all its first leaves, has been commonly attributed to the punctures of insects, such as *aphides* and *thrips*. It is, however, very doubtful whether these insects are the real cause of that diseased change in the texture and form of the leaf which is called the curl, because the insects in question are rarely seen on the affected leaves, and never in such numbers as sufficiently to account for the extensive injury sustained. The surface of these leaves is swollen into irregular and crisp tumors, often of a reddish color, and of a spongy texture, formed of thickened and succulent cellular tissue. These tumefactions present some analogy to the warts of the plum tree, and may have a similar origin. The affection has often been observed to

follow a cold storm in May, whether connected therewith or not. If sudden cold and moisture have a tendency to check evaporation from the leaves, fluids will accumulate therein, and may thus bring about the changes by which they become blasted. It is confidently stated that soaping the limbs of the trees early in spring, or washing them with a solution of sulphur and potash, will prevent them from suffering from the curl. Peach trees or plum stocks seem to be nearly exempt from this affection, perhaps because the supply of nourishment from the roots and the exhalation from the leaves are more nearly balanced in them; for the plum stock makes fewer or smaller roots than the peach on its own stock.

THE YELLOWS.

For the first time in eleven years the symptoms of this disease have appeared in my garden. It is confined to two branches on the north side of one peach tree, the fruit on which is becoming red some three or four weeks too soon, while a few wiry shoots, clothed with diminutive and pale leaves, have sprouted upon these branches. Neither borers nor the *Tomicus liminaris* have been discovered in the tree; and the cause of the disease remains as much a mystery to me as to other cultivators. I propose cutting off the diseased branches, and dressing the soil around the tree with ashes and urine, as an experiment towards checking the further development of the disease. In former years peach trees have rarely suffered from the yellows in this neighborhood, where now many trees are affected with it. Has the severe drought of the present season had any influence in producing the disease?

INSECTS OF THE APPLE TREE.

My remarks will necessarily be confined to a very few of the numerous insects infesting fruit trees and vines; there being nothing new or particularly interesting to be stated concerning the greater part of them.

Canker-worms.—There are some parts of the country in which these insects have never appeared; in other parts their visitations occur several years in succession, are then suspended for an uncertain term of years, after which they recur again as before. Thus, in the vicinity of Boston, these insects prevailed from 1831 to 1840, increasing yearly in numbers till the last date, after which they disappeared almost entirely in 1847, when they began again to attract attention, and have become more numerous every year till the present time. Their ravages during the past summer, in Cambridge and in some of the adjacent towns, have been very serious, but have not yet reached the height they attained in 1839 and 1840. Canker-worms are generally found upon the buds and leaves of the trees before or about the middle of May, and disappear before or about the middle of June, their depredations lasting nearly or quite four weeks. The parent insects, consisting of winged males and wingless females, descend from their burrows in the ground in the latter part of October, and during the month of November, and again in the spring from the middle of March to about the tenth of April. Their spring rising is sometimes retarded and prolonged a week or more by the backwardness of the season. In mild winters a few of the insects may ascend at various times between the periods for the ordinary autumnal and spring risings. It is during these same periods that our trees require to be protected against the ascent of the females. Soft tar, seasonably applied around the trunks of the trees, and frequently renewed, is the remedy which has been longest and most relied upon for this purpose. Various other expedients have been tried to prevent the insects from ascending the trees and depositing their eggs upon the branches. Those most worthy of confidence are circular laden troughs, containing cheap oil or gas-tar, secured in a horizontal position around the trunks of the trees, and the glass rings, lately invented by Mr. George Everett, of Roxbury, the efficacy of which, however, has not yet been sufficiently tested. Canker-worms are very injurious to the cherry and plum trees, and to elms and maples, all of which will have to be secured from their anticipated depredations in the same way as apple trees.

PALMER-WORMS.—In the second edition of Dr. Deane's "New England Farmer and Geographical Dictionary," published in 1797, there will be found the following account, under the article *Insect*:

"The *Palmer worm*, a wanderer, as its name signifies, is a small worm, about half an inch in length, with many legs, and extremely nimble. It appears at different times in different parts of the country. I have seen them only on apple trees and oak trees, in any great abundance. They appeared in the county of Cumberland (Maine) in the year 1791, about the middle of June, eating off the covering of the leaves on both sides, and leaving the membranous part entire. The following year there were none to be seen, and I have not known them in any place two years in succession. The seeds of them may be constant, wanting only a particular state of the weather to produce them. The spring which preceded their appearance had been remarkably dry, both in April and May. The history of this insect is so little known, that I will not undertake to say how they may be successfully opposed. I made smokes under the fruit trees, without any apparent effect. As they let themselves down by threads, they may be thinned by shaking the trees and striking of the threads. Their ravages had not any lasting effects, for the orchards, that had been visited by them, bore plentifully the following year."

During the month of June, 1853, a small worm, or naked caterpillar, whose history accords, in every particular, with the foregoing account, was observed in great numbers on apple, cherry,

and plum trees, and on oaks, throughout the greater part of New England and in the valley of the Hudson in New York. In some places, orchards suffered from these insects as much as from the ravages of canker-worms; and not only the leaves, but also the fruit was injured or destroyed by them. By many persons they were mistaken for canker-worms. The latter disappeared here about the tenth of June, at which time the palmer-worms were just beginning their depredations. These worms differed from the former in having sixteen legs, in being much more active in their motions, and in creeping without looping or arching upon their backs at every step. They were also smaller and differently colored. Towards the end of June, they came to their growth and left the trees, their disappearance, in many places, coinciding with the heavy showers which fell about the same date. Some of the insects which were secured, covered themselves with little transparent silken webs or cocoons, in which they took the chrysalis form immediately, and came forth as moths between the 8th and 25th of July. About the same time they were seen in the moth state in orchards, and in great numbers among the grass under fruit and forest trees. They soon entirely disappeared, nor have they been observed under any form since that time. In an article printed in the "Cambridge Chronicle," for July 23d, 1853, I gave to this insect the scientific name of *Rhinosis pomella*, the little Rhinosis or snout-moth of the orchard, with a scientific description of it in all its stages. The article, and another in the "Journal of the New York State Agricultural Society," for October, 1853, and also Dr. Fitch's account in the same Journal for September, 1853, may be consulted for further particulars.

THE NEW YORK WEEVIL.—In some of the Western States, apple trees, and occasionally pear, plum, and cherry trees, have been injured by a large weevil, specimens of which, taken from these trees in Michigan and Wisconsin, have been sent to me. This is the biggest weevil in the United States, measuring half an inch or more in length. It is of a grey color, striped with white, and dotted with black spots on the back. The celebrated naturalist and voyager, John Reinhold Forster, first discovered it in 1771, under the name of *Curculio Noveboracensis*, the New York weevil. It belongs to the modern genus *Rhycterus*, and has also been described by Mr. Kirby under the name of *Pachyrhynchus Shoonherri*. According to Mr. A. H. Hanford, of Waukesha, Wisconsin, and Mr. T. E. Wetmore, of North Cannon, Michigan, this weevil attacks the buds and young shoots of the trees, gnawing them to the very pith, so that they break off, or wither and die. Mr. Wetmore informs me that their numbers are greater this year than heretofore, and apprehends great injury from them should they continue to increase. They are found on the trees in May and June; appear to be active during the night, and drop off by day when the trees are suddenly jarred. I have taken them in June and July on oaks and maples, but never met with them on fruit trees. Though not a very abundant species in Massachusetts, it is by no means rare, and has a wide range through the country, being found in most of the New England, Middle, and Western States, in Canada, and in Newfoundland. There is an account and figure of it in the "Horticulturist," for August, 1853, page 386. The "Journal of the New York State Agricultural Society," for September, 1853, may also be consulted for notices of it by Dr. Fitch and myself.

ARATE BICOLORATUS.—This is the scientific name given by Mr. Say to a little beetle whose injurious habits have lately been observed in Michigan and Wisconsin. Professor S. P. Lathrop, of Wisconsin University, and Mr. T. E. Wetmore have sent specimens to me, with accounts of the depredations of the insects, which are found burrowing in the pith of the young branches of the apple tree, during the spring. The branches above the seat of attack soon die. These beetles are from one quarter to more than three-tenths of an inch long, cylindrical, dark chestnut brown, roughened like a grater, on the fore part of the thorax, with short spines pointing backwards, and armed, in the males, with an incurved spine, near the tip of each wing-cover. Besides those sent to me from Michigan and Wisconsin, I have specimens from Ohio, Pennsylvania and North Carolina; but have not met with any in New England.

The Oak-pruner (*Stenocorus putator*) occasionally attacks the small branches of the apple tree; and the blight beetle, *Scolytus*, or *Tomicus Pyri*, whose perforations blast and kill the branches of the pear trees, has also been found equally injurious to those of the apple tree.

Dr. William Le Baron, of Geneva, Illinois, has contributed some interesting observations on the *Bark-Lice*, or scale insects of the apple tree, to the "Prairie Farmer," for June, 1854. He finds that there is only one annual brood of these insects, that they are hatched in May, and that the females often produce from seventy to one hundred eggs. He thinks that remedies for the destruction of the insects should be applied soon after the hatching season.

[TO BE CONCLUDED.]

Kind words do not cost much. They never blister the tongue or lips; and we have never heard of any mental trouble arising from this quarter. Though they do not cost much, yet they accomplish much.

FORGIVENESS is the most refined and generous point of virtue that human nature can attain to. Cowards have done good and kind actions; but a coward never forgave—it is not in his nature.

Valuable Recipes.

NICE PANCAKES FOR SUPPER.—These are made of eggs, flour and milk. The just proportions are one table spoonful of flour to each egg. To make small pancakes, beat a couple of eggs thoroughly, and add sweet milk. Then take a couple of table spoonfuls of flour, work into a thin paste and ductile batter, by adding the milk and eggs and a little salt. Grease the pan with a piece of sweet lard, and stir briskly to prevent adhering to the bottom. When the under side is sufficiently browned, turn it. If this is found to be too solid, add more eggs, and use less flour. A slight sprinkle of grated nutmeg will be an addition.—*Prairie Farmer*.

SUGAR PIE.—The Ohio Cultivator has this recipe for a pie:—Cover your pan with good paste, spread over it a layer of sweet butter, then sugar enough to cover the bottom; then pour in a half pint of rich cream, in which a table spoonful of flour has been first stirred, and it is ready for the oven.

QUINCES.—Bake them, remove the skin, slice and serve with cream and sugar. Prepared in this manner, many prefer them to the peach. If you have never eaten them prepared in this way, try it, by all means, and you will thank us for the suggestion." So says the Farmer's Mirror.

The Quince is an elegant fruit and we hope to see it more common. Made into a sauce with sweet apples, in the proportion of three-fourths of the latter, with half a pound of sugar to the Quinces, and none in the apples; a cheap article produced for the dinner or even tea table, which is not to be despised.—*Prairie Farmer*.

RABBIT PUDDING.—A rabbit cut into about sixteen or eighteen pieces, and a quarter of a pound of bacon, sliced; seasoned in proportion to size, and, for a numerous family, ten potatoes and four onions, sliced, and half a pint of water; boil for two hours, or according to size. Well intermix the meat with the vegetables or rice.—*Prairie Farmer*.

TO MAKE TOUGH BEEF TENDER.—To those who have worn down their teeth in masticating poor old tough cow beef, we will say that carbonate of soda will be found a remedy for the evil. Cut your steaks the day before using, into slices about two inches thick, rub them over with a small quantity of soda, wash off next morning, cut it into suitable thickness, and cook to notion. The same process will answer for fowls, legs of mutton, etc. Try it, all who love delicious tender dishes of meat.

HOW TO REAR PIGS.—I have a fine Suffolk sow, which lately had a litter of ten pigs; in the course of forty-eight hours after the pigs were born she killed six of them, by over laying and smothering them. I was relating and lamenting the loss, in the presence of an Irish girl that lives in my family, and she immediately said, if they had been in her country, all would have been saved. I said, Mary, how do they manage pigs in your country? "Dear a me!" she replied, "we put them all in a box, so the mother can't hurt them." "Well, how do you feed them?" "O bless my soul," said she, "we put them with the mother several times during the day, until they are a week old, and then they can take care of themselves."

SETTING HENS.—In setting hens, thirteen eggs are enough to give them; a large hen might cover more, but a few stronger, well hatched chicks are better than a large brood of weaklings, that have been delayed in the shell perhaps twelve hours over the time, from insufficient warmth. At the end of a week, it is usual, with setting turkeys, to add two or three fowls' eggs, "to teach the young turkeys to pick." The plan is not a bad one; the activity of the chickens does stir up some emulation in their larger brethren. The eggs take but little room in the nest, and will produce two or three very fine fowls.

PAY YOUR BILLS.—AN INCENTIVE.—Some years ago, a farmer in Frederick county, Md., owed a neighbor of his \$50, and as soon as he could realize the sum he promptly paid it over. The morning he called to pay it, his friend appeared to be very thankful, remarking that he was also in debt to another person who needed the money, and he would at once take it to him. This remark started a train of thought in the mind of the first person, who said to himself—why here is \$100 paid with \$50. I will at once follow up this matter and see where it will end. He then followed up the payment of debts by this one note of \$50, until he traced it to the large amount of \$3,750! when it got out of his reach.

Now here is the moral: A owes B a bill, which, if he pays promptly, will be paid by B to C, and so on through the whole alphabet, and it will be surprising to every one, what a small amount is necessary to pay off hundreds of thousands by keeping the "eagle on the wing." Now, when the money market is so tight and the banks are unable to discount all the paper offered, let persons begin to pay their bills, and by doing this, they, themselves will be paid back in turn. It is a machine which feeds itself, and propels, by its own offal, the execution of great exploits. As a word to the wise is ever sufficient, we think it only necessary to give this hint to our business men, who will be able, at once, to see the vast amount of good the payment of even a small bill will accomplish in the community.

The best "life-preserver" in this world is a marriage certificate. One-half the rheumatism in the market is only rice, assuming the shapes of canes and crutches.

Miscellany.

[From the Christian Advocate.]
A TRIBUTE TO QUEEN FLORA.

BY MRS. E. A. WRIGHT.

Oh! bright is the mountain, the valley and plain,
For Flora hath come with her glittering train;
All smiling and fair,—and most happy are we
To join in the song that gives welcome to thee.

Thou comest right early thy scepter to sway,
And gladden the hearts of the grave and the gay,
Thy subjects most loyal this truth will attest,
A favorite thou art—the loveliest and best.

'Twas full six months ago when we saw thee depart,
And a tear of regret swelled up from the heart;
With ill-concealed sorrow due homage we paid
The dreary old monarch who reigned in thy stead.

We wish him no harm, if he will not intrude
In the family circle with manners so rude,
We have this against him, wherever he goes,
To the poor of his realm no lenity shows.

Unlike thy dear self—no cottage so mean
But is cheered with thy presence—thy foot-prints are seen
In the mendicant's hut—and thy carriage of state
Stands as oft at the door of the low as the great!

In age, it is said, thou art wonderful old!
Full six thousand years since thy birth! we are told;
With Adam, in youth, o'er his trust he betrayed,
On the verge of life "the river of life" thou hast strayed.

At the bridal of Eve thy fairy hand made,
A wreath for her brow; and the nuptial couch spread;
Yet no rosy-cheeked maiden, with soft golden hair,
So lovely as thou art, so blooming and fair!

Thou domo on thy palace with sun-light was gilded,
Long ere Cleopatra's or Dido's were builded;
And Old Father Time hath long since swept away
Every crumbling relic that marked their decay.

Thou hast traversed about, in thy diary I ween
Are numbered some strange and adventurous scenes;
Wast thou in the garden, whence issued that cry!
Saying "Eloi—Eloi—Lama Sabachthani!"

Didst witness that agony, travail and woe?
We scarcely can tell—yet this much we know,
Thy bounty o'er tendered bud, blossom or leaf,
To the crown there was plucked, that crimson-stained wreath.

Thou hast sighed o'er the carnage and wept o'er the sod,
The blood-drenched turf where whole armies have trod;
Thou gavest him a pillow the young and the brave,
When the hand of the victor denied him a grave.

Oh! sweeter by far than Lebanon's rills,
Is the ravishing fragrance thy gnomes distill;
How exquisite the texture! how infinitely fine!
And the hues of the rainbow are woven therein.

Thy presence dispenses gloom, sorrow and care;
Joy, pleasure and happiness follow where'er
Thy footsteps have led—Oh! divine the bliss art!
To cheer, soothe and soften, the desolate heart.

The glad happy laughter of childhood that's home
On the sweet-scented breeze of the young dewy morn,
And the rich thrilling music of birds that we hear,
Are tokens that Flora is lingering near.

The husbandman slugs, for his heart is so light
When the "fruit-bearing blossoms" are bursting to sight,
And all hearts are swelling with pleasure and mirth,
For the blessings thou scatterest, broad-cast o'er the earth.

Other Sovereigns may boast of the jewels they wear,
But their gem-studded coronets, we can compare
With the beauties of thine—even the famed Koot-noor,
Were it set in thy crown, would look shockingly poor!

What jewels so rare and so matchless are seen,
As the dew-spangled rose—set in emeralds of green!
Or the dear modest violet, that lays its sweet head,
On the little green hillock that covers the dead.

Though no rich-sculptured marble may rise there to tell,
Oh! lay me to rest where the dear flowers dwell,
Where Summer dews sprinkle my turf-covered bed,
And sweet sighing zephyrs play over my head.

Around the cross are they 'twined, on the bier are they laid,
And mystic as sweet, is the language conveyed—
They tell the despairing life's tempest to brave,
They tell of endurances beyond the dark grave.

"All hail to our Queen," cries a numberless throng!
And the soul-thrilling psalm reverberates long,
While each happy heart will invoke from above,
"Long life to your Majesty—blessing and love!"
SACRAMENTO, March, 1855.

[For the California Farmer.]

Flowers.

FRIEND WARREN: The charming thoughts that are associated with flowers, with their shapes, colors and fragrance; their poetical uses, their seasons and successions, and all that has been said about them by bookmen and lovers, lie so close at hand, and are so familiar in the aggregates to the world at large, that, like most familiar things, they are generally treated with neglect. Some people don't care about flowers, because they have them growing luxuriantly under their eyes, and because one crop of blossoms is no sooner wasted on the air than another crop comes out, and because, in fact, do what you will, you cannot exhaust the flowers, which are endowed with a perpetual vitality, and which without any artificial help, even against all sorts of unneighborly difficulties, will continue to grow and flourish, and throw off their perfumes as if it were designed in the scheme of creation to show the principle of immortality throughout the minutest works of nature. But with all their indifference—more apparent than real—every human being loves flowers. Here is a bunch of freshly cropped violets. Not to say one word about their delicate

and most exquisite aroma, it is impossible to look into their deep cups without being struck by the image of loveliness, retreating and blushing, and trying to hide itself within its darkly brilliant folds, which they present palpably to the imagination. Well, we no sooner get this idea into our heads than we begin to recollect what has been said about violets, what Shakespeare said about them, what beautiful and passionate pictures have been drawn by poets concerning them, and what loveable spots they nestle in, in the poetry of all ages and languages. In a moment of time we are thus carried away in a boundless region of contemplations, and the chances are a hundred to one that, if we have only patience enough to dream out our dream, we shall have traversed a more expanded surface of delightful associations over this little bunch of violets than we should care to do in the noisiest library in the world.

Books are great and glorious agents of civilization and happiness. They are the silent teachers of mankind, filling the mind with wisdom and strengthening the understanding for the strife of action; making us powerful and gentle, wise and humble, at the same time. But we cannot be always buried in our books; we must go out in the sunshine; and it is necessary, in order to enjoy our books, that we should also enjoy the privilege of air and light, drinking in health and vigor, to enable us to make the best and most profitable use of our sedentary hours. In direct opposition, then, to books, or rather in secret combination with them, I would place flowers—the out of door books. Nature has so liberally provided for us in such a rich variety of types and buildings, as to leave no excuse for not gratifying all our individual tastes. The lover of flowers has this advantage over the lover of books, that he never can be at a loss for variety; but we suspect the classification is somewhat arbitrary, and that there is hardly any one who loves the one who does not also love the other. The best way to enjoy either is to enjoy both; to take them alternately so that they may relieve and show each other off to the best advantage. A walk in an open field, and one hour spent in gathering wild flowers, to be afterwards grouped into a vase upon the library table, is by no means the least suggestive preparation for a morning's reading.

We have just been enjoying a walk in nature's garden, along the banks of the American river, where the wild flowers blossom in abundance, and of every describable color and fragrance. We saw so much of the beautiful, and felt such an abiding sense of the many delights with which life is fraught, that we are tempted to think that we ought to live as long as we can to enjoy them. This walk among the flowers has suggested the thoughts which are here recorded.

To love flowers is to love nature. What may not the love of nature do for man, when all other avenues to his feelings are blocked up by selfishness, or care, or worldly influence? Let him but cherish this fertile corner in his affections—fertile in hope and goodness—and we need not despair of the darkest natured of our race. He can be reached in this one point of sympathy, when all other appeals have failed. He is vulnerable here, if the rest of his organization be as a sheet of mail.

Hence flowers occupy a space in the consideration of worldly happiness, much greater than we might suspect at the first blush. They belong to the sunshine and the productive soil—to the light, to the pathways, and the banks of the streams; to the skies, whose tints they reflect, and into whose radiant depths they ultimately fade, and above all they belong to us by right of birth and possession, and the loving nurture of our hands and eyes, and scientific discoveries, which have taught us how to make perpetual summer, and to inspire the roots of sweet flowering things with additional springs of propagation. And there are some flowers, which are so beautiful in themselves, so lusty in the fragrance that pours through their delicate leaves, and so fragile to the touch, live where we cannot live, and by means unknown to us. On the loftiest mountains, inaccessible to the foot of man, they leap into the clouds; in the depths of the ocean, where we cannot see them, they blossom and flourish; on naked rocks, where there is not a particle of dust to take root in, they burst into bloom; and even amid eternal snows they clamber and work their way into the frosted air, where we find it difficult to sustain life, reproaching us by the hardness with which their slight tendrils sprinkle their buds abroad.

Who, then, would not love flowers? One need not have any knowledge of botanical names or vegetable physiology; but it is indispensable that he should have a soul and a heart for beauty and the sensible glories of the green and bounteous earth.

STUDENT OF NATURE,

SACRAMENTO, April, 1855.

Advantages of Education to Farmers.

BY HENRY S. JOHNSON OF EXETER, N. H.

Effect of Electricity on Vegetation—Plants are the best Lightning Rods—Vegetable Insulators—Plants Seek the Water—Apple Tree Roots 13 feet deep—Roots Seek and Find Food—Climbing Plants have a Choice of Direction—The Hop Trains with the Sun—The Bean the Other Way.

Among the agencies invoked by science to the aid of agriculture, electricity should not be forgotten. Surely that mysterious power, which lights up the winter heavens at midnight, making an Aurora Borealis—a northern morning—of glory in place of darkness—which, swifter than winged Mercury from Olympus, nay, swifter than light itself, conveys the thoughts of men around the globe—which bound by some enchantment—by combinations of plates of different metals, has even been compelled to labor at the wheel, and drive the engine at man's bidding—surely this power, this Protean spirit, assume what varied form he may, shall yet be held captive till he reveal some of the secret workings of nature.

It is not improbable that electricity exerts a controlling influence on all vegetation.

It is stated that a point of a blade of grass, or of the young wheat or barley, has the power of attracting to itself all the free electricity present at four times the distance that the finest point of metal will do so. Experiments in Germany and in England seem to prove that vegetation may be very much hastened by passing a current of electricity through the soil. It is gravely stated in the Gardener's Magazine, that at a dinner given by the Marquis of Anglesea, the seeds of a species of cress were sown in a glass vessel at the time the guests sat down to dinner, and that the crop from these seeds was served to them in a salad at the same meal.

"It is not good," says Plato, "to push our investigations too far. The natural sciences find their limits, beyond which the mantle of Isis covers the mysteries. Can any one reveal the nature of force, of life, or of motion?" Living, however, as we do, in a new country, having no "ancient laws" to guide us, we may be allowed to look still further on than did the ancients, for the limits of "the natural sciences," and we may yet see the day when electricity may propel the plow, and fertilize the soil, though it is obviously our part in the mean time to labor, and not to wait for such co-workers in the field.

There is a class of operations in nature pertaining to the growth of plants, the causes of which we can scarcely guess, much less comprehend, and these for want of a more satisfactory name, have sometimes been called *Vegetable Instincts*.

Among these may be mentioned, the tendency of many trailing vines to run towards water. It is said that if you place a pan of water, in the evening, a few inches from the end of a growing squash vine, the vine will turn aside from its direct course, towards the water, and be found in the morning, with a leaf floating on its surface.

The roots of all trees, seem to be in the same way attracted towards water. In a garden, last summer, where the stoning of a well had been taken up, in a dry and sandy soil, I saw roots of an apple tree which had penetrated to the depth of thirteen feet, in search of water, which could not be found nearer the surface.

The roots of plants in the same way, seem to have an instinctive power of seeking out fertilizing substances. If bones are buried at a little distance from a grape vine, the roots of the vine will find them every one, and spread a fine network of small fibres all over them, and if the bones be hollow, the roots will frequently run through them, and sometimes, after going a short distance beyond, it is said, return and seek the same depository of the food best adapted to its growth.

Climbing plants run towards poles, or other supports placed near them, and having reached them, have a strange wilfulness as to the direction in which they twine about them.

I once proposed to a learned professor a question which I should be glad to hear satisfactorily answered. Why is it that the common hop always twines about the pole which supports it, from East to West? Of the fact there is no dispute. Among a million plants, no single exception can be found. My friend, upon reflection, said he thought it might be well enough accounted for, by the attraction of the light of the sun. As the sun rises, the plant is attracted and follows his course towards the West, and so from day to day continues on. I suggested to him that to support this theory, it would be necessary that the vine should grow fast enough to go round once a day, or it might turn back in the morning towards the light.

However, accepting this as the true explanation, I proposed to him another question of a similar nature, and it was, why the bean always twines about the pole in the opposite direction? which is invariably the case. Said he, "I will not undertake to account for it. It is much easier to dispute the fact, and I don't believe a word of it." Thus have I endeavored to illustrate, in a familiar way, the advantages of education, to the cultivator of the earth, as giving him the true dignity and general influence which belongs to him who is lord of the land—as aiding him in the profitable pursuit of his business, by affording him the light of science by which to conduct his affairs—as elevating him above the mere laborer, so that he may appreciate in some degree, the mysterious processes of nature, by which she brings from the cold, dull, earth, her treasures of grain, and fruit and flowers.

I had intended to speak also of the importance of the cultivation of taste, as well as the intellect of this class—a taste for the beautiful not only in nature—in trees, and vines, and lawns, and flowers—but in the construction and management of his home, and its adorning, both within and without.

But we have, perhaps, attempted too much already—much more than could be satisfactorily treated.

At least, enough has, I trust, been said, to satisfy all, that the intelligent culture of the earth, is not a business peculiarly adapted to the capacity of men, as ignorant and dull as the oxen on their farms, but that the lady in her parterre of flowers, the horticulturist in the shrubs and trees of his garden, the Farmer in his waving grain fields, may all find new beauties constantly unfolding, and new questions in science for critical investigation, and new occasion for adoration of Him, who has clothed even the grass of the field in beauty, and made the springing grain a type of a glorious resurrection.—Country Gentleman.

"She's a Sewing Girl."

We have frequently heard the above remark, when it excited in our mind a feeling of ineffable contempt for the worthless piece of humanity that uttered it. It is a source of deep regret to us that it should ever be our duty to deal harshly with any portion of the fair sex who maintain a reputable standing in society; and there are some, and not a few, who, although their fame may be unspotted, are so deeply imbued with envy, jealousy and hatred towards those of their sex, who happened to be less favored of fortune, but not less perfectly moulded and finished by nature than themselves, that their hearts are gall, their souls are wormwood, their breath is pestilence whenever they can make it convenient to speak to them. These are they, who, with a sarcastic leer and scornful turn of the nose, stigmatize as "nothing but sewing girls," such young females as have the moral courage and virtue to work with their hands for an honest livelihood, rather than be dependant, destitute or disreputable.

It is sometimes applied approbriously to married ladies, after the following manner: "Did you ever see the like how Mrs. — dresses herself and children of late?" "La, yes, I've seen many like her—I knew her when she was a sewing girl, and her husband when he was a poor carpenter and worked for my father. Now they have got a little something in the world, they stick themselves up for mighty sombodies." "It is just so almost always with such creatures. As soon as they get a little start in the world they forget the poverty they sprung from, and begin to put on airs of gentility. I can't bear that for my part."

Reader, if you are a young man, and hear anything like the above sentiments uttered by a young lady to whom you are paying your addresses, let that be your last visit. Even if you were under promise of marriage, it would be better to break off, and incur the penalty of a breach of promise, than to be united to one so utterly devoid of that kind-hearted sympathy for those of her own sex thus virtuously struggling with adversity; and who holds it disreputable in a young lady who is without fortune or able friends, to draw for support upon her own physical facilities, in an honest and useful vocation.

We can not conceive any evidence more conclusive, that a young female possesses in an eminent degree, that innate principle of virtue which would set at defiance every seductive wile of lib-ortanism, than see her adorned with all the native graces of her sex, heroically braving the sneers of the profligate and scornful, and steadily plying her needle, as a means of independence. Such a one rarely, if ever, fails to possess an amiable disposition, and seldom, if ever, fails to make a virtuous, affectionate and prudent wife, and a good mother.

O, if I had Wealth!

It is a frequent feeling, if not utterance, "O, if I had wealth, how much pleasure it would afford me to contribute largely to all benevolent and religious objects!" To one thus expressing himself, an aged Christian replied: I am not quite so sure of that, and that for several reasons:

First, You do not seem to realize that God demands a charity commensurate with what we have, and not with that which we have not, and hence, if we do not come up to this real standard, it is not probable that we could comply with an imaginary one.

Second, It is the willing heart which is most commendable in the sight of God; and if the heart refuses when our means are small, it is in vain to excuse our delinquency by a promise of generosity in circumstances which may never occur.

Third, This prospective benevolence seems entirely to forget that, by God's blessing, the motto of the poor may go much further than the affluent gifts of the rich; and if we had no just sense of this, how can we suppose that we understand, or can ever understand, the nature of true charity?

Fourth, If the love of Christ does not impel us to show our attachment to him under one arrangement of circumstances, what warrant have we to believe that it will become influential in a different position?

And, Fifth, Charity is like a plant which must be cultivated before it will grow. If we do not, then, begin early to give it our attention, it will die out. To postpone giving until we can give largely, is equivalent to, an indefinite postponement. The last of accumulation is most unfriendly to the growth of charity; if our charity be reluctant when we are poor, it will not likely be very prompt when we grow rich. Many cases might be adduced to show that the rich, with all their imaginary wants to gratify, have usually less to give away than might have been convenient to them in their poorer days, when their wants were few and simple. If we are not willing now to cast our gifts to the Lord's treasury, let us not practice a deceit on ourselves, by supposing and promising what we would do if we were rich.

MARKET RATES OF AGRICULTURAL IMPLEMENTS.—We append the following as the market rates for implements now selling. There are many varieties and manufactures selling at less prices, but these are the known and established makers, and such as can be relied upon:

Hall's Horse Thrashers	1,000
do do on wheels	1,000
Emery's 2 horse do	400
McCormick's Reapers and Mowers	400
do do do	450
do do do	450
McCormick's Mowers	\$175 @ 200
Emery's fire-angled wire frame Cradles	90 @ 100
do do do	25 @ 50
Ray Rakes, wood	6 @ 10
Horse Rakes	20 @ 25
Hay Forks, iron prongs	8 @ 10
do do three prongs	12 @ 20

While speaking of these implements we feel it a duty to refer purchasers to the well known houses of Treadwell & Co., J. S. Paxon, and Messrs. Case, Heiser & Co., Messrs. McNally & Co., and Messrs. Bryant & Co., whose advertisements appear in our columns to-day. Importers of implements will do well to call and report to us, and to advertise the same, thus spreading them over the State.

WORTH READING TWICE.—A Tribute to Queen Flora, by Mrs. E. A. Wright. In this essay to Flora the reader will find many very beautiful ideas, and those in new forms. We have received from this gifted lady MS. copy for our next issue.

Flowers.—by "A Student of Nature,"—these two subjects so kin-like must have grown upon kindred soil. The writers both from the Queen City of the Plains, have either a neighborly acquaintance or a kindred sympathy.

The able address of Professor Harris should be twice read by every Pomologist.

The doings of the State Convention with several notices, each demand the attention of the reader.

LARGE YIELD OF CABBAGES.—We have been shown the fact of the most productive acre of cabbages we have yet known. The parties prepared one acre of ground in the best order, and selecting the best plants of the drumhead cabbage, covered the entire acre; this was near the Mission Dolores. From this acre the produce was \$3000. A large proportion of the cabbages weighed from twenty to thirty pounds each. One load of cabbages brought to market realized ninety dollars. This speaks well for California.

FROM THE EAST.—The Sonora arrived at this port Tuesday afternoon, with New York dates to April 5th. We are obliged to omit details of the news. The most important news is that Page & Bacon of St. Louis, had again suspended payment on the 4th of April. They say their assets largely exceed their liabilities. From Europe the news is unimportant.

The shipment of treasure on the 1st inst., per Pacific mail steamship Golden Gate, amounted to \$1,494,361 56.

TEA, COFFEE AND SUGAR.—How long must we import these luxuries? They can all be raised here with perfect success; all that is wanted is the cultivators that understand their character and habit of growth; and the Chinese, the poor abused Chinese, will be found to be the appropriate subjects for this. Speaking of Tea, Coffee and Sugar reminds us of some very fine examples we saw at the Grocery Store at Messrs. Coddington & Taylor, on Kearney street, between California and Bush streets. We could not but take notice of this store, from the fact that in addition to these three luxuries, we saw exhibited the largest and most complete collections of Preserves, Jellies, Pickles, Sallads and fancy delicacies, we have ever seen. We do not believe that any grocer in New York, Boston, or any other place can excel these, in quantity or quality. Families would do well to stop in and take a look.

FAMILY COMFORTS AND LUXURIES.—We feel it a duty to give all the good news we can, and among the most important to families, are the facts connected with the various comforts and luxuries that all want to make home what it should be. Were we to tell of all, our space would come short; but if our readers will please read Bradshaw & Co.'s Family Grocery List, they would be satisfied that that House had at least endeavored to do their part to provide for the wants of every family. The House of Bradshaw & Co. is undoubtedly the largest family grocery in the city, and a visit to this new, extensive and handsomely stocked warehouse, will amply repay one. We particularly recommend to our country friends to call at Bradshaw & Co.'s for family stores; and if they have Butter and Cheese, Bradshaw & Co. want all they can get of the best article. Every thing in the line of family groceries will always be found at this establishment.

MARRIED.

On the 25th April, in this city, Mr. Thomas McGeorge and Miss Mary L. Fisher.
On the 25th April, at the residence of T. A. Wakenan, Esq., by the Rev. Dr. Scott, Mr. David L. Swain and Miss Jenny Green, all of San Francisco.
On the 26th April, in Sacramento, Mr. Stephen W. Butler and Miss Ellen Miller, late of Brooklyn, N. Y.
On the 28th April, by the Rev. Bishop Kip, Mr. M. Fitzgibbon and Mrs. Louisa C. Hayward.
On the 29th April, by the Rev. Mr. Cutler, Mr. Charles Johnson and Miss Margaret Gosgrove.

DIED.

On the 30th April, in this city, Agnes H., wife of Mr. James Bell, in the 28th year of her age.
On the 27th April, in this city, Wm. McCraith, aged 33.
On the 23rd April, in this city, James A., son of Hon. James A. McDougall, aged 9 years.
On the 23rd April, in Sacramento, Mr. Thomas Singleton, formerly of St. Louis, Mo.

SPECIAL NOTICES.

The New England Washingtonian says: For incipient consumption, we know of no better remedy than WISTAR'S BALSAM OF WILD CHERRY. It is soothing and healing in its nature, and is admirably adapted to allay and disperse that annoying and distressing irritation which so much prevails at this season of the year, caused by colds, coughs and chills, brought on by frequent and sudden changes of the weather. We know of several severe cases which have been radically cured by the use of this Balsam. Some two years since a friend of ours was suffering under what was thought to be confirmed consumption—a severe cough, loss of appetite, night sweats, &c. By the use of the Balsam he dispelled these alarming encroachments, and is now in the enjoyment of comparative good health.

Sold by all druggists.
Agents for San Francisco, B. B. THAYER & CO.

Homo Testimony.—Royal Smyth, of Boston, writes that, by the use of a single bottle of WISTAR'S BALSAM OF WILD CHERRY, he was cured of a deep-seated cold and violent cough, accompanied with night sweats and vomiting, with severe pain in the side, loss of appetite, &c. His physician could not relieve him, and a friend induced him to try the BALSAM. He began to improve immediately, and in a few weeks was entirely cured. Surely, such a remedy is worthy a trial. Be sure it is signed I. BUTTS on the wrapper.

Agents for San Francisco, B. B. THAYER & CO.
Sole by all Druggists. v3-18

To Purchasers of Implements for Harvesting Grain.—We shall keep ourselves always advised of the very best implements that are imported into this country, and those who wish to purchase, by writing or calling on us, can be assisted in their purchases materially. We can find orders to any extent for machinery, and will be happy to do so for a commission, and we know we can do so with great advantage to the purchasers. v3-13 WARREN & SON.

Native Pines, Oaks, &c.—Seeds of the Native Pines, Acorns from our Mountain Oaks, Seed of all our Mountain Shrubs, and of every species of Valuable Tree or Shrub; for these the full price will be paid, if satisfactorily labelled, classified and arranged, at the Office of the "CALIFORNIA FARMER," Masonic Hall Building, Montgomery street. v3-18

Religious Notices.—There will be Public Meetings held at the "Hall of the Sons of Temperance," on Washington street, between Sansome and Montgomery, every Sabbath Day, viz: A Prayer Meeting at 10 o'clock, A. M., and Public Lecture at 3 1/2, P. M.
The REV. MR. SEXTON will lecture next Sabbath, April 29, at 3 o'clock, P. M. NATH'L THURSTON.

Combined Reaper and Mower.
We are now in receipt of Mow's Patent Reaping and Mowing Machines, as enlarged and improved by Woods (with a foot cut) expressly to meet the views, wants and necessities of our California farmers, so that neither mustard, nor any other rank weed, interferes with its operation.
BRYANT & CO.,
65 Battery street, San Francisco.
We deem it proper to mention that we have secured the right of the State for the sale of these machines; consequently, should any others be introduced, it will be in violation of the rights of the patentee, and the reader or user must be held subject to the same penalties as other parties are who violate the patent laws of the United States. v3-18

Agricultural Tools and Seeds.
PARKER, WHITE & GANNETT,
41, 53 and 63 Blackstone street, Boston, Mass., manufacturers of Plows, Ox Yokes, Store Trucks, Fan Mills, Horse Powers, Mowing Machines, Reaping Machines, Horse Powers, Churns and other farm machinery and tools; Sluice Forks, Grain Cradles, &c., &c. Also grovers and importers of all kinds of Garden and Field Seeds and Trees.
These seeds are of the very best quality, such as have always given satisfaction to our customers, and are put up for shipment in air tight cases. v3-13

MISCELLANEOUS.

WAINWRIGHT, RANDALL & CO.,

Real Estate and Stock Auctioneers,

No. 100 Merchants street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of HOUSE BROKERAGE AND GENERAL DIRECTOR, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage. As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.
This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.
This department will include a registry, (already prepared,) of all persons, (except Chinese,) within the limits of the city, by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our registry will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere. To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and addresses of forty-three thousand persons, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment. v3-18 WAINWRIGHT, RANDALL & CO.

Pitt's Double Pinion Eight or Ten Horse Power.
THIS Horse Power, or now manufactured by the subscriber, is admitted by those who have purchased and used it, to surpass, for strength, ease, durability and cheapness of repair, any Power ever offered to the public.

Their great superiority over other powers, consists in the plan of construction. By reference to the cut herewith presented, it will be seen that this Horse Power is just double the strength of any single geared power, and is the only real Double Pinion Power in existence.

Notwithstanding it is sufficiently strong and warranted to stand the full strength of eight or ten horses, it is also warranted to give as much effective or useful power, when driven by one or two horses, as any other power, whether constructed on the endless chain or lever principle.

I have for the last eight years, manufactured and sold a large number of these powers, during which time they have been thoroughly tested, and gained a high reputation over all others; I therefore challenge competition!

At the great trial of Horse Powers at Geneva, in 1842, where it was thoroughly tested, it received the New York State Agricultural Society's First Premium, "for the best Horse Power for general purposes." At Cleveland, O., in Sept., 1852, it also received the State Society's First Premium. Also, at the great Agricultural State Fair held at Pittsburg, Pa., in 1853, it was awarded the First Premium.

I deem it unnecessary to add any further testimonials to corroborate the high recommendations here given, as the best recommendation of its merits is a thorough trial.

The above machines are for sale by
CASE, HEISER & CO.,
No. 60 Sansome street, San Francisco, Cal., who are also prepared to furnish engines and extras for repairs for said machines, and are appointed my Agents to receive orders or sell my machines in future in California and Oregon.
JOHN A. PITTS.
Buffalo, April 1st, 1855. v3-18

Benicia Iron Works.
STEAM ENGINE, BOILER AND MACHINE SHOP.—This establishment is now in successful operation, and offers to the public facilities equal to any in the United States, for manufacturing or repairing Steam Engines of the largest size, Boiler Works, Brass Castings, Mill Gearing of the most approved pattern, Bloom Iron, Cast Iron Columns, Window Caps or entire fronts.

Contractors and others will do well by patronizing this establishment, as their work will be executed with greater dispatch and at lower prices than any other manufactory in the State. The company have extended their Pies, and erected a large crane for the accommodation of their customers. For further particulars apply to

FORBES & BARCOCK,
Agent P. M. S. Company,
corner Leidesdorff and Sacramento streets, San Francisco; or to CHARLES FRENCH,
Resident Engineer, Benicia Works. v3-18

California Butter and Cheese.
25,000 POUNDS new California Butter; 1,300 ditto Cheese, in store. Being supplied daily with Fresh Butter and Cheese, by five of the largest dairies in our vicinity, we shall hold out large inducements to families and others to use this kind of butter, and are selling it at a lower price than any in this State. v3-18 BRADSHAW & CO.

HOTELS.

Orleans Hotel.
 Second, between J and K streets, Sacramento.
 THE above Hotel, occupying a space of 85 by 150 feet, in the most central part of the city, built of brick and three stories high, offers inducements to travelers not surpassed by any establishment in the State.
 The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.
 The Table will be found at all times supplied with the choice of the market.
 At the Reading Room our guests may find the daily papers of the State and the latest news from the Atlantic and Europe.
 The Billiard Saloon is furnished with the excellent tables, superintended by a competent keeper.
 The Bar will be supplied with the best liquors and wines.
 The second and third stories of the building are set apart for Family Rooms and Chambers, comfortably furnished.
 We have also leased the large brick building corner of K and Front streets (formerly known as Sackett's Hotel) set apart for Lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.
 The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.
 HADDENBURGH & CORSE, Proprietors.
 v3-2

American Hotel, Benicia.
 THIS HOUSE has been established Five Years, with-
 out interruption or change of proprietorship, and is held-
 by the traveling public to be one of the best equipped
 Hotels in the State.
 Large and well ventilated, and handsomely furnished rooms,
 for families traveling or for permanent boarders, can always
 be obtained.
 A LIVERY STABLE is connected with the Hotel, so that
 travelers can have their choice, either to take the stage and
 stages, or a private carriage, to any of the beautiful valleys
 around. Stages leave this Hotel every morning for the different
 valleys.
 The daily papers from various sections of the State are in
 file at this Hotel. Everything will be done by the proprietor
 that the patrons of this House may find their stay pleasant
 and satisfactory.
 3-16 11f
 C. M. DAVIS, Proprietor.

Rassette House.
 SAN FRANCISCO, CALIF.
 THIS HOTEL is a handsome and pleasant place, with
 San Francisco, unequalled by any in the Pacific Coast.
 Gentlemen can be accommodated with single rooms, or families
 with suites of rooms.
 The House is entirely new, built of brick; all the rooms are
 furnished in a style of comfort hitherto unknown in the Hotels
 of California, and the House is capable of accommodating over
 five hundred boarders.
 22 11m

 Rakes—everything with all the small tools and
 implements pertaining to cultivation.
 N. B.—Branch House at Marysville. All orders promptly
 attended to.
 v3-5

San Francisco ahead of the World!

Ever on, on pace with the Age and Times!

Unrivalled for Value's new Daguerrean Gallery!
 Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to Vance's who wish a
 PERFECT LIKENESS? Because he has now the
 best arranged Gallery in the Pacific Coast, and not to be sur-
 passed by any in the world. Instruments containing lenses
 more perfect, and with greater power than any ever before
 used in this country.
 21. Because he has the largest light in the world, from which
 he can turn three distinct lights—top, side, and half side lights
 —that now enables him to overcome the great difficulty which
 every artist in this city has to contend with—namely: In order
 to obtain perfect likenesses, different formal features require
 differently arranged lights.
 22. Having the largest light, he is enabled to make pictures
 in half the time of any other establishment in the city; there-
 fore they must be more perfect, for he well knows, the shorter
 the time the more natural the expression.
 23. Because every plate is carefully prepared with a coating
 of pure silver which produces the clear, bold and lasting picture
 that is so much admired, and which cannot be produced on the
 common plates, as they are now used by other artists.
 24. Because he has of late, after much experimenting brought
 his chemical preparations to perfection, using compounds en-
 tirely different from anything ever before used in the art, which
 enables him to produce perfect likenesses, at every sitting, with
 that clear, soft and beautiful tone, so much admired in all his
 pictures.
 All those wishing perfect likenesses will do well to call before
 sitting elsewhere, and judge for themselves.
 Prices as reasonable, and work superior to any in the
 city.
 Don't forget the place.
 New Building corner of Sacramento and Montgomery
 streets, entrance on Montgomery, next door to Auslin's. 17

Varieties.

NO ENEMIES.

BY E. CLARKE, SEN.

"He has no enemies?" you say;
I pity his condition,
His manhood he has thrown away,
His candor and position.

"He has no enemies?" well then,
The reason is, he never
Has heart enough to act, but when
He sees, "which way's the weather,"

His principles are very light,
If he is not contented,
To be traduced for doing right,
When once he has ascended.

"He has no enemies?" Indeed,
Then what has he been doing?
Or, what on earth can be his creed,
What has he been pursuing?

A truckling—volitiating course—
Unmanly, undecided;—
His little puny soul is worse
Than expense twice divided!

Then give me one of upright heart,
Who dares the truth to utter,
And not a noble, manly part,
Though enemies do mutter—

A man of earnest, iron will,
Whose enemies are many,
And yet whose virtue, strength and skill
Is undeterred by any!

Whose fearless love for truth and right,
Keeps falsehood at its distance;
And though he may be crush'd by might,
Yet always acts consistent.

Aye! I like the sturdy, forest oak,
Through which the winds do rotte,
Stands firmer from the heavy stroke,
Prepared for Truth to battle.

Such is the man, whose noble soul,
When roused to proper action,
Disdains a sordid, base control,
Or, enemies' detraction!

Who knows, when virtue's lost or fled,
That time is really trying;
For if the man is not then dead,
He truly must be dying!

A STEAM BATTERY.—A capital joke appeared the other day in the Times. A correspondent of that journal proposed to batter Sebastopol by means of Perkins' steam-gun. This proposal has no doubt excited much laughter as the very best thing in Joe Miller. Of course it is perfectly absurd. Why? Oh, nonsense! Yes, but why absurd? Oh, fiddlestick!—pack of stuff! Nay, but, bow so? Now? why, of course, the thing is impossible—that is, impracticable—in other words, can't be done.

What a laughable idea was that of steam-navigation when first started! When it became a fact, how ridiculous was the hope of its utility to any extent! That hope, however, having been justified, how unreasonable it was to expect that a steam-vessel would ever cross the Atlantic; and how utterly preposterous was the chimera of rail-roads! Hah, hah, hah! chorused the old gentleman, and some of the young ones, at each of these anticipated failures in succession—ho-hah! The impossibilities all came to pass, though.

Nevertheless, let us laugh at the suggestion of trying Perkins' steam-gun against Sebastopol. To be sure, the son of Mr. Perkins declares that he is "prepared to undertake to supply the Government with a steam-gun capable of throwing a ball of a ton weight a distance of five miles." It is true that he adds the assurance that, "with such a gun, fixed in Brunel's large ship of 10,000 tons, Sebastopol might be destroyed without (our) losing a man." No doubt that to throw a ball of a ton weight five miles, by steam, may be a less difficult thing than to drag several tons, any number of miles, three or four times faster than a stage-coach. But, then, fancy a gun loaded with steam instead of powder! What a queer gun! And a bullet of a ton weight! Imagine such an old projectile. It strikes one as so droll. Ho, ho! Try it? Oh, pooh!

Yet we do try some things which we are by no means sure will answer. We try expeditions without knowing what force they will have to encounter. We try to batter a fortress by means of ordinary ordnance, without being at all certain that our missiles are capable of demolishing its walls. We try all this at enormous expense—and why? Because it is usual; because it is a regular thing; because we do.

If we were to try the steam-gun and fail, the Russians would laugh at us. Of course they don't laugh at us when our vessels run aground, or our shot and shell fall short.

If we fail—we fail; and it is a failure to the extent of the cost of the experiment. Is the risk equal to that of one transport in a storm—of one regiment in a battle? If we succeed—only think how much we save. What fun that would be. So let us laugh at the mention of Perkins' steam-gun—but laugh to think that it is not tried—laugh with Mr. Bright, and the Greeks, and the Russians—laugh on the other side of the mouth than the right.—Punch.

His husbands in St. Louis are models. The St. Louis papers are complaining that married men sit in church with their arms most tenderly around their wives, and suggests that "it distracts the attention of the lookers on from the preacher." Fare to St. Louis \$18. State Line railroad in excellent order. Pats on your bonnets, girls.—Albany Knickerbocker.

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise on Consumption," says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Linnæus and other pathologists." Dr. CAUSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or embellishing falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

Dr. BORDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Consumptive Consumption had taken place, the Wild Cherry effected a cure."

Dr. A. H. MACANAYR, of Tarboro, North Carolina, writes us, under date of Feb. 11, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

Dr. WM. A. STARR, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity."

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY, in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry."

HON. SAMUEL S. FENNINGS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful."

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most distressing malady."

C. D. MAYNARD.

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one to four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and rekindle falling courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine.

Dr. Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

SETH W. FOWLE,

Proprietor, Boston, Mass.

Agents for San Francisco,

B. B. THAYER & CO.,

v3-16

Montgomery street.

Surgery.

R. B. COLE, M. D.,

Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.

Office—Atheneum Building, South-east corner of Montgomery and California streets, opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself principally to his office, where he proposes to treat all

Surgical Diseases,

feeling assured as he does that his former connection with Medical Schools and Hospitals, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the affections to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and morbid growths, occurring on any part of the body, Diseases of the Spine, Chronic Ulcers, Gonorrhea, Abscesses, Dropsies, Diseases of the Bones and Joints, Diseases of the Eye, Ear and Skin, Affections of the Bladder, Uterus, Scrophulous Affections, and in other words, all diseases of the Genito-Urinary Apparatus, and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly-treated Fractures, Contractions of the Limbs and Loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.

Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.

Office Hours: { Morning, From 10 till 12
Afternoon, " 2 " 5
Evening, " 7 " 9. v3-12

"Take no thought for the morrow,"

THIS TEXT MEANS, BE NOT UNREASONABLY anxious or disturbed by future cares. It is an advice easily adopted, if we take such steps as prudence suggests. Suppose we are troubled with Coughs or Consumption, the temper is soured, and the good dispositions of the soul languish, the mind suffers; but obtain bodily relief from the use of Dr. DEVINE'S COMPOUND PITCH LOZENGES, and the mind and soul repose in that tranquil reliance on DIVINE PROVIDENCE which the text commands. Price 50 cents a box, or 3 for \$1. Sold by LITTLE & CO., Apothecaries, 137 Montgomery street.

First Premium Daguerotypes.

R. H. VANCE just awarded the FIRST PREMIUM for the best Daguerotypes exhibited at the California State Fair. Mr. V. would be happy to wait upon any one wishing a PERFECT LIKENESS. The arrangement of his Rooms and Lights are superior to any in the State.

Rooms—New Building corner of Sacramento and Montgomery streets, entrance on Montgomery street, next door to Austin's. 16

EXPRESSES, &c.

E. W. TRACY & CO'S EXPRESS
TO SHASTA, WEAVER, YREKA, JACKSONVILLE,
AND ALL INTERMEDIATE PLACES.
CONNECTING WITH THE

PACIFIC EXPRESS CO.

To the Atlantic States and Europe.

For the purpose of accommodating the business community, the undersigned commenced on Wednesday, Feb. 28, to travel from Shasta to San Francisco, carrying Money, Letters, Packages and Valuables, and attending to all matters of Express Business.

The Express will be dispatched regularly as heretofore, in charge of careful messengers, and the whole business will be under the direct management of E. W. Tracy. We have no security to offer except business capacity, and for that refer to the annexed card, signed by the business men of Shasta.

Card.

We, the undersigned, Traders, Merchants and Dealers, in Shasta, do hereby recommend to all who have business to be transacted between this place and San Francisco, E. W. Tracy, as a person in whose honesty, integrity and business capacity, the utmost confidence can be placed.

Tomlinson & Wool, Benjamin Shurtleff, Goldstone & Bro., P. M. Eder & Co., Hulsh & Luce, M. Jackson & Co., T. Levy & Co., A. & S. Solomon, E. Lewis & Co., Van Wic & King, Simon Selig, M. Shoss & Co., A. Roman, J. Weiner, J. Van Schick, John E. Church, Wm. A. Mix, by J. E. Church, Att'y, C. Kothe, Wm. S. Fitch, B. F. Dwyer, D. Callahan, J. N. Chappel, Jas. W. Downer, G. W. McMurty, James Long.

Freight and packages forwarded with dispatch and at greatly reduced rates.

Collections attended to promptly, and return made in coin or dust.

(v3-15) E. W. TRACY & CO.

PACIFIC EXPRESS COMPANY.

THE late employees of ADAMS & Co., in consequence of the disruption of that firm, have organized themselves into a joint stock company, under the above name and title, for the purpose of conducting a General Express and Forwarding business in all its branches, throughout California, Oregon and the Pacific Coast generally.

The business will be strictly and solely a forwarding one, having no connection with banks and bankers, and will be conducted on sale and commission principles.

The Expresses will leave the office at the North-west corner of Washington and Montgomery streets, daily, at regular hours, for Sacramento and the Northern Mines, Stockton and the Southern Mines, San Jose, Santa Juana and Santa Cruz, Monterey, San Pedro and the Southern Coast generally, as well as to the Northern Coast of California and Oregon.

We will also run a regular Express for Freight, Small Packages and Letters to and from the Atlantic States by every steamer.

The parties who have organized this company are well known in the community as old and experienced express men, and hope it will be acknowledged generally, understand their business thoroughly. They think they are not saying too much, when they attribute much of the success of the late firm of Adams & Co., in the express business to their exertions and personal energies.

In conclusion they would solicit a fair share of the favors of the public, pledging themselves to exert their best endeavors to transact such business as may be entrusted to them in a prompt and business-like manner.

Collections of all kinds will be promptly attended to at any of the points mentioned above.

R. G. NOYES, President.

San Francisco, March 1st, 1855. v3-10.

Ingham's Improved Smut Machines.

THESE Machines combine all the apparatus necessary to cleanse Grain, rendering it unnecessary to have any other machinery for that purpose in the mill. They are portable and occupy about four feet square on the floor, by eight and a half feet in height; and will clean the worst samples of Smutty Grain, also require short straws, white caps, seeds and other "foul substances" in the most perfect manner. All of the old world saving is collected in a reservoir, while the smut and light dust are passed out of the mill, allowing the machine to be put on the same floor with the flour chests or wherever most convenient, without being enclosed. It is a California improvement and designed to meet the wants of this country; eastern machines having been found to be inadequate to that purpose. It has received the highest recommendation from all using them, among whom are Pettit & Hodgkins, Briggs Mills, Sacramento; Brooks & Hall, Happy Valley Mills, San Francisco; Win. Sharp, American Mills, San Francisco; Rabbit & Hale, Sierra Nevada Mills, San Francisco; H. S. Hill, Washington Mills, San Francisco.

Those building Mills can save expense and room by using this machine, as they will avoid all the machinery ordinarily used for that purpose.

Orders filled on short notice. SHOP on L street, between Front and Second, Sacramento. H. B. INGHAM.

N. B.—All information given, and orders left at WARREN & SON, San Francisco, will be attended to.

The following certificate is among the number received others can be referred to in quotes:

"This is to certify that I have one of H. B. Ingham's Improved Smut Machines, and believe it to be superior to any other. I need no other fixture for cleansing grain, except the machine itself; it makes no dirt in the mill; occupies but little room; requires less power, and does the work more perfectly than any other I have ever seen or used before."

WM. SHARP, Agent American Mills,

Pine street, San Francisco. v3-5

Artesian Well Boring.

WE would respectfully inform the public that we are fully prepared to take contracts in the above operations in a manner to guarantee satisfaction or no charge will be made.

SMITH & VAN DYKE having associated themselves with an old and experienced operator from the East, who challenges the world to compete with him in all the branches connected with the above business, are fully confident to guarantee success in all contracts that we may undertake, and warrant the work for one year. We have also implements for boring through stone to any depth, and all work done on the most reasonable terms.

For the satisfaction of those wanting anything in the above line, we would refer to Thomas Fulton, San Jose; Rufus S. Ellis, of Hanover & Ellis; M. A. Sullivan, New Custom House; Wight & Co., 137 Jackson street, &c., &c.

We can do work cheaper than any other operators, for two reasons:

1st. Because we are prepared to work on a most extensive scale.

2d. Because we understand all branches connected with the above business, and are, therefore, able to work with certainty.

All orders left at the What Cheer House will be promptly attended to.

SMITH & VAN DYKE, Contractors,

118 Sansome street.

N. B.—We also refer to Warren & Son, publishers of the "California Farmer," who have seen and known the character of the work done.

MAKING ROOM FOR A SPLENDID STOCK

Fashionable Spring Clothing,

AT THE

BRANCH OF KEYES & CO'S

GOLDEN GATE CLOTHING WAREHOUSE,

Corner of J and Second streets, (El Dorado Building,) Sacramento.

CLOSING out Winter Stock at great reduction in prices, comprising the greatest variety and the best styles of the fashionable Souvenir Over Coat, decidedly the ton in New York; Paletot, Tailors, Cloaks, Winter Frocks, Opera Cloaks; with our usual large and elegant assortment of Dress Frocks, Black and Fancy Cassimere Pants, rich Velvet and Silk Vests; with a splendid assortment of Gentlemen's Furnishing Goods.

for us.
We desire our Agents to report to us on the 1st of every
month, the increase of names and the prospects, together with
the amount due the office.

hoing, care was taken to keep the ground as level
as possible, leaving only curve enough between
the rows to irrigate. The last year my po-
tatoes were planted alternately in rows of hills
and drills, throughout the whole field, being de-
termined to know for myself which was the best
method, and have become satisfied that to plant
in drills three feet apart, dropping the seed from
nine inches to a foot apart, will produce the great-
est yield.

It is my intention to test the principles of rais-
ing potatoes on a more extensive scale this sea-
son. The using of mountain raised seed and
that of the valley, has become a matter of specu-
lation with many. Some prefer the valley seed—
upon what principle I do not know. I shall try
both this season, and know for myself which is
the best.

Agricultural School.

A correspondent of the Country Gentleman
makes the following inquiries of the editor:

"Can you inform me of the whereabouts of a
good Agricultural Academy, where Agriculture
is taught in all its branches, practical and theo-
retical, applicable to the Middle States? one
where common school studies are also taught, but
where the chief study and employment is Agri-
culture; having a farm attached, which the schol-
ars are taught to properly cultivate and manage,
with proper buildings, livestock, implements, appa-
ratus, &c., amply sufficient to give the scholar a
clear and thorough knowledge of the object in
view? I mean a place from whence, after a
reasonable time of diligent study and observa-
tion, the student can come, fully competent to
manage a farm profitably and effectually? Also
the name of the principal, charges of tuition,
(which must be moderate,) and other particulars.
"If the editors of the Country Gentleman will
answer the above through the columns of their
invaluable journal, they will receive the heartfelt
gratitude of a Boy of 14 YEARS, who is bound
to be an agriculturist worthy of the name."

In reply to the above the editor says:
"We feel humbled in being obliged to inform
our enthusiastic young friend, that there is not,
on this broad continent, one solitary institution
where young men can learn the practice and
science of Agriculture. The legislature of Michi-
gan at its last session, appropriated a considera-
ble sum, and \$6000 per annum for the purchase
of a farm, not less than 500 or greater than 1000
acres, and for the erection of suitable buildings,
the payment of Professors, &c., and we shall
probably have one agricultural institution where
young men can get the knowledge they now sigh
for in vain, in the course of a year or two.
Whether anything will be done in our own legis-
lature this year for the advancement of the great
cause of agricultural education, remains to be
seen."

Draining by Wells.

MESSRS. EDITORS: You wish to know if land
can be drained by wells. I have made one ex-
periment only, and that was entirely successful.
I owned a piece of land on which there was a
basin of about three-fourths of an acre, which
received the surplus water of at least ten acres.
It would sometimes be from two to three feet
deep in the centre. The water stood in the basin
at least eight months in the year, and the basin
was still every hard rain the other four months.
On the 3d of August, 1841, I dug a well nine feet
deep in the centre of the basin, and came to
living water, which rose very rapidly, so much so
that I expected to see it run over the top in a
short time. I think the water rose at least two
feet in ten minutes and then stopped, and re-
mained at that depth until a heavy rain of three
days. I then went to look at the well, expecting
to find it full and running over; but to my utter
astonishment, there was not more than a half foot
in the well. It had risen about four feet during
the storm I should judge by the marks on the
side of the well. There must have been a great
quantity of water run into the well, as at least
ten acres discharged its surplus water into it, and
the rain fell in torrents during three days. I
then dug four open drains leading into the well,
and the land has been sufficiently dry for wheat,
corn, oats, or grass ever since. It has been in
grass for the last twelve years, and has borne a
heavy crop of first rate hay.

I should advise in all instances to dig until
you come to living water, and then the water will
pass off in the fissure of the earth. I have not
the least doubt but that almost any spring can
be drained by digging a well at a little distance,
and leading the water into it. I would state that

I filled the well full of stone, thinking it would
be cheaper to dig a new one than to stone it and
keep it covered, if it should fail to carry off the
water.—Asa Hubbard, in Conn. Gen.

Grow More Wool.

Our own experience and observation have sat-
isfied us that there is no kind of farming that
is so generally profitable as raising sheep and
wool. It matters not whether you are upon the
bleak hills of Vermont or in the fertile plains of
Texas; upon the prairies of the West, or the now
solitary mountains of the South. Everywhere
and anywhere the sheep would live and thrive,
and with proper care pay more for the capital in-
vested than any other animal, or any other sys-
tem of farming. It is one of the most useful and
economical machineries which has been given us
to convert the vegetation of the farm to money.
Were it for the first time presented to us, we
should consider the sheep one of the most
wonderful animals nature has produced for the
use of man. Its annual growth of wool, so ad-
mirably adapted for human clothing, and used in
every portion of the globe—its skin and flesh,
and in many localities its milk, all serve for the
necessaries or luxuries of man. There is no ani-
mal in which there is so little waste or so little
loss. Of all other animals the cow comes near-
est to the sheep in the profit it returns to the
farmer, for if well cared for, it will pay for itself
each year by the milk it yields, and defray also
a portion of the cost of keeping. But the sheep,
for at least seven years of its life, will give an an-
nual fleece each year equal to the value of the
carcass; and the yearly increase will be nearly
or quite equal to the cost of keeping, giving as a
general thing a profit of cent per cent.

Is there any branch of farming or any legiti-
mate business that will yield for a series of years
a profit of ten per cent? We assume that there
is none. The very idea that profits of fifty per
cent. would be realized in any branch of business,
would set the whole capital of the country in
motion. Farms would be sold, merchants would
sell off their stock, bankers close their banks,
and indeed every body who had money to invest
would rush into this gold mine.

We aver, without fear of contradiction, in truth,
that where any kind of farm animals can find
subsistence, that sheep, if properly attended to,
will give a net profit on the investment of 50 per
cent., and that with the ordinary management of
farms, it will give some 20 to 40 per cent.

That there is no danger of overdoing the busi-
ness we have shown repeatedly in previous num-
bers. The annual increase of population in the
Union, requires the wool from three millions of
sheep, so that to cloth the increased population
would require an annual increase of sheep equal
to four millions.

But when we come to consider that there is
now an annual deficiency of over seventy millions
of pounds, there can be no doubt that the wool-
growing is the most stable pursuit that can be
engaged in. We cannot glut the market, nor will
there be any long time that the market will be
depressed beyond the profitable point of produc-
tion. On the contrary, we are certain that no
farm product goes less often below this point
than wool. It has long been a source of constant
wonder to us, that so many farmers in Ohio and
the Western States neglected the sheep, for the
very precarious business of grain growing. Ev-
ery year will give them a crop of wool if they
but take care of their sheep. But there is no
certainty for wheat, prepare the good ground over
so well. If we have been rightly informed, the
wheat raised in the West, has cost the farmer
more than he has obtained for it in market. Too
much dependence has been placed upon this most
uncertain and expensive crop. We have tried
wheat growing, upon probably, as good a wheat
farm as can be found in Western New York; and
we have also tried sheep upon the same farm, and
are free to confess that although we have a good
market at our own door, yet we can raise a given
amount of money quicker, and much easier with
a flock of sheep than with wheat. But we find
it well to raise both sheep and wheat, as by that
means we find we can get a better profit than to
be confined to either alone, while indeed most
land, that can be plowed, is the better to come at
regular, and not long, periods under the plow.
With us, and in this region, four years is as long
as it proves profitable to leave land to grass.
Very few resort to naked fallows. Some mow
their clover early and let it grow till August,
when it is turned under, cultivated, and sown to
wheat; others mow the first year and pasture
with sheep the second, and then plow. Every
good farmer keeps a few sheep at least. Very
many who have been in the habit of putting up
a large quantity of pork for summer use, now
select out a few wethers, and give them extra
keep and make their summer meat of mutton—

decidedly the most healthful that can be used
fresh, and thus realize the money for their pork
fresh.

The inducements to grow more wool are, a sure
market, less fluctuation from the point of profit-
able production than any farm product, a larger
interest or profit on the capital invested than any
other business, and therefore the best business as
a general thing the farmer can follow.—T. C.
Peters, in Wool Grower.

Valuable Foreign Stock.

We have received the following Circular, which
we publish for general benefit. It came addressed
to the Cor. Sec. of Cal. State Ag. Society, and
believing great good will result from it, and
hoping it may induce a better attention to stock,
it is laid before our readers. The information
is of much importance, and valuable, by reason
of its correct description of the various kinds of
stock:

ENGLISH CATTLE, SHEEP AND SWINE.
Selected and imported on commission, to any of
the Atlantic seaports in America, by Thos. Betts
& Co. of Liverpool and of Herts, England; em-
bracing pure blood horses, &c.; mules from Spain,
&c.; Short Horned cattle, Devons, Herefords,
Ayrshire and Alderley cows, &c.; pure South
Down sheep; Cotswold, Leicester, Hampshire
South Down and Morino sheep from Spain; Suf-
folk, Essex, and Berkshire swine, &c.

The above firm having been requested by a
large number of gentlemen in America to estab-
lish an agency throughout the United States and
the Canadas, for the importation of English stock
on commission, so as to enable importers to pro-
cure any kind of stock direct from the breeders
in England at the then market price; and from
their great experience in selecting and purchasing
stock in England, and being known to most of
the best breeders of cattle, sheep, &c., in that
country, feel confident of giving satisfaction, both
as regards price and quality.

Early information will be given accompanied
by a certificate of pedigree, to our agent in New
York, of the purchase of stock, and the mode and
time of its shipment. Commission for selecting
and purchasing the stock, including traveling ex-
penses, selecting horsemen, superintending the
fitting up of the ship, and purchasing provender,
&c.; also including railway and attendance to
Liverpool and shipment of the same to America:
For one horse, - - - - - \$100

two or more, - - - - - each, 80
charge of passage by steamer, each, 125
attendance and provender from
Liverpool by steamer, - - - each, 35

For one cow or bull, - - - - - \$80
two or more, - - - - - each, 60
charge of passage by steamer, each, 105
attendance and provender from
Liverpool by steamer, - - - each, 25

For one sheep or swine, - - - - - \$20
three do do - - - - - each, 14
ten do do - - - - - each, 9
twenty do do - - - - - each, 6
charge of passage by steamer, each, 22
attendance and provender from
Liverpool by steamer, - - - each, 8

Charges for insurance across the Atlantic will
be 10 per cent. on the cost of each animal on its
arrival. The charge of passage by sailing vessel
for each horse or cattle will be \$10 less, and for
each sheep or swine \$5 less than by steamer.

Thos. Betts & Co. have been permitted to refer
to several of the largest importers in America, as
regards charges, among whom are George Vail,
Esq., Troy, and Col. Lewis G. Morris, of Mount
Fordham, N. Y., both of whom consider the
prices very low.

If preferred, the stock will be selected and pur-
chased for 5 per cent. commission on the cost,
and traveling expenses, &c., in England charged;
all other bills, such as fitting up the ship, proven-
der, passage and attendance, will be cash at the
time of shipment at Liverpool. If cattle &c., are
selected and purchased by any other person in
England, and sent to Liverpool to the care of
Betts & Co., to ship, their charges for such ser-
vice will be one-half of their purchase commis-
sion, as stated above.

Thos. Betts & Co. have in their possession a
valuable invention denominated a "perpendicular
cradle." Horses, cattle, sheep and swine may
now be shipped with safety at any season of the
year, however rough the sea may be; it will en-
tirely prevent all accidents or bruises. A model
can be seen at our agent's, I. M. Millers, 81
Maiden Lane, New York city, and at our office in
Liverpool, England.

The stock will be delivered in America in about
six or eight weeks from the time the order is
given. On the arrival of stock in America, it
will be optional with the owner, either to take

charge of the same from the ship, or give instructions to see them to their destination.

Prices of stock in England, such as should be imported to America, with good pedigrees:

Thorough bred horses.....	from \$1000 upwards.

Cotswold sheep will weigh, killed and dressed, 130 pounds, and will shear of washed wool 12 to 15 pounds; Leicester sheep killed and dressed 120 pounds, and shear 11 to 12 pounds; pure South Down sheep killed and dressed 112 pounds, and 6 to 9 pounds; Hampshire sheep killed and dressed 120 pounds, and shear 6 to 10 pounds.

For any information apply to I. M. Miller, 81 Maiden Lane, New York city, agent for Thos. Betts & Co.

Letter from a Subscriber.

"I asked for bread, and they gave me a stone."

The following is the true copy of a letter received at our office on Tuesday last. We do not, will not utter a word of reproach or complaint, but simply ask the writer, and all others who either write or think so, to pause and reflect.

The small pittance we ask for our journal, to which we devote all our means, time, strength and the cause to which we have been wedded for more than a quarter of a century, we think demands of those who receive the results of our efforts, humble though they be, a corresponding feeling on their part. We have placed the price of our paper very low—the writer himself says so, as will appear in his letter. "The paper is worth double the amount of the subscription." This we think should induce every subscriber to remit us promptly; and it is with deep regret that we are ever obliged to cut off a single subscriber. We do not rank the writer among those who are unwilling to pay, or the most delinquent, far from it; we only use his letter as a theme to many who are far more behind, and ask them, is it just either to think or act thus to us. We have thus far forgotten immediate pecuniary results, in the confidence that among the cultivators of the soil, those who were the recipients of our labors would not forget what their duty was to us, and we can most earnestly say, we have tried to do our duty to them in furnishing them, from week to week, with a paper, we know has been worth the price affixed to it.

We append the letter of our friend and correspondent, leaving place and name blank:

Mr. Editor: Will you please send my copy of FARMER to this office in future. I shall pay my subscription for this year as soon as I get the means. I hope you will not discontinue the paper, for it is worth to me double the amount of the subscription. I think I shall be able to obtain a few subscribers for the FARMER so soon as the mail to this place becomes permanently established. I have been receiving the farmer via _____, that being the nearest office to this place.

Yours respectfully,

NEW FURNITURE WAREHOUSE.—We would call the attention of all who are about preparing their "homes," hotel keepers and all that want to purchase furniture, to the advertisement of the combined houses of Howes, Newcomb & Moore. By such a union of capital, knowledge, influence and trade, it can readily be seen that they can offer inducements beyond that of any other house. We have more to say, but receiving the information of their co-partnership and card, just as we are going to press, we must delay further notice till the next issue.

DUNCAN & Co.—The real estate sales of this house have been well attended, and the property was sold in good faith and at fair prices. Their sales of flowers and fancy goods are also well attended; and the sales of diamonds and valuable watches, &c., are also well attended—bidding spirited, and the prices paid for these things was an evidence that the money is not all gone yet! Diamonds \$500, crosses \$300; watches \$200 to \$300. Oh! it is hard times, is it not?

STEAMERS ON THE SACRAMENTO.—A luxury to the weary and care-worn business men can now be enjoyed by a trip up-river upon one of our noble steamers. The New World, Antelope, Wilson G. Hunt and Queen City are all floating palaces, and offer inducements to the traveler. Every comfort and attention is promptly rendered, and it is a relief to steal away awhile. Go one and all, that can go.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, MAY 10, 1855.

Agriculture.

A HOBBY, VERSUS TRUTH.

THE steady and earnest pursuit of a great enterprise may so thoroughly imbue the mind with its importance, it may become so wedded to the heart and affections, may be so enthusiastically pursued, that the casual observer, he who never looks into the true merits of that calling, may in his ardent interest for some other pursuit, so speak of a noble science as to give a wrong impression of its value.

We plead the cause of Agriculture as a great science, one most deeply affecting all the best interests of California. We are jealous of all that shall jeopardize it, and we trust we shall be understood, while pleading the cause of Agriculture, that while we claim for it a high place, yea the very highest, in the affections and interests of every man, woman and child, we do not wish to detract from the merits of other meritorious pursuits. We are too well aware that "Agriculture," is but a dry subject to the great mass of the people of this State—the mining, mercantile, and commercial interests present themselves in more attractive form, and enlist a greater portion of the sympathies of the people; and yet, these three interests combined are not of more value, permanently considered, than the one great interest of Agriculture.

The cultivation of our beautiful valleys, the raising of breadstuffs for a whole people, the reclamation of millions of acres of waste lands, the employment of numberless thousands of laborers in this work—the stimulus given to the mechanical industry of a country, in the building of homes, workshops, farmhouses, and all the needful appliances of a new and rapidly increasing population—these again giving an increased demand for mercantile, manufactured and commercial products not yet attainable in a new country—each acting on the other, the producer of the one becoming the consumer of the other—all opening new sources of trade—the demand for home manufactures—the necessity of rapid internal intercourse, again giving demand for labor—these are but the results of the settlement of a new country—the cultivation of the soil—its "Agriculture," the one great motive power which carries all other enterprises successfully onward.

While one class of our citizens may be absorbed in mining interests that yield the shining ore, and another may present you warehouses filled with foreign goods, and a third may point you to the fleet clipper that floats upon our broad bay like a "palace on the deep"—when dark days like the present hover over all the business prospects of the land, there are those in our very midst starving for bread! Could the hungry soul grasp the weighty metal, he would quickly pass away the shining gold for bread. Could he force the over-filled warehouses, were they his own, he would give them for bread; were the ships his own, he would yield them for bread. And why these strange scenes in a land like ours? Why so much suffering of mind and body? why so much wreck and ruin? why so many out of employment? why so many homeless, hungry, starving? We answer, the utter disregard paid to the capabilities of the country, to its agricultural and mineral wealth.

Our cities are too large for the population, and the mercantile and commercial operations are altogether out of proportion to the wants of the country. Our teeming soil can produce all that is required for the present population, and export profitably. The gold in the hills and mountains has been placed there for the development of the Agricultural, Manufacturing and Mechanical interest of the people that should inhabit the land, and any act that shall derange the equal distribution of labor in all departments of demand and supply, must inevitably bring derangement, loss and ruin. The State or nation that exports its wealth, its precious metals, for that which it can and should produce, becomes as certainly involved as the individual, though not so quickly. But we need not enlarge, California must awake to her true interests. She must look with earnestness to her AGRICULTURE. This is her great hope, and lest we be misunderstood, we say that a right apportionment of labor to the great interests of Agriculture and Mining, and a proper eye to both, our State can be rescued from her present depressed condition. Every citizen must work. Labor! Labor! Labor! is the watchword. Develop! develop!—our resources are vast, our

means ample. We must cease importing almost wholly. There is no product needed, scarcely, that we could not raise or manufacture, were the wealth that is now in the country given to this work. Thousands and tens of thousands of men now idle in our cities can secure wealth in the mines; let them go. Work! work! work! If the Chinese trouble you, then let the State induce them to reclaim our "Tule lands;" cultivate rice, tea, sugar, and cease importing these articles; thus giving employment and encouragement to this class of citizens, and securing harmony and saving gold.

Other nations can build our railroads, canals, manufactories, mechanic shops, &c.; all must be in operation, there is capital enough, and this capital can be had. If men cannot earn \$5 per day, let them take \$3; that is better than idleness and poverty, and all these enterprises need be sustained by the Agriculture our country. Manufacturers, mechanics and railroad builders must all be fed, and when they are in full employment, then Agriculture will be prosperous.

But why enlarge? We could do so, and prove its great importance to California; but some would say this is our "hobby,"—and so it is, in the highest sense of the word. This word, again reminds us of a pleasant trip we made down the Sacramento with our friend Gen. Allen, the able editor of the Marysville Herald, and the present efficient mayor of that city. We feel assured he is a firm friend of agriculture, and hope the farmers of Yuba will hear him and co-operate with him in the noble work of establishing a County Agricultural Society, and thus reveal the true value and character of agriculture among themselves, and excite every county to do the same.

To close this article we append the compliment of our contemporary of the Herald, which we clip from his journal of May 3, when he describes his trip down river. After giving a glowing description of Sacramento and vicinity, he says—

"We came down from Sacramento to this city on board the Queen City, a craft so thoroughly known and so deservedly popular, that we shall be pardoned for letting her slip without further laudation. On board was Col. Warren, editor of the CALIFORNIA FARMER, whose whole soul is wrapped up in the grand idea of making California lead the world in agriculture. He scolded us prodigiously because our Yuba county farmers have not yet laid the foundation of 'A Yuba County Agricultural Society.' As was very natural, we laid the blame where it of right belongs—upon the Yuba farmers, themselves—but promised that, hereafter, we should be constant in season and out of season, in furthering a work which he and all good Californians have so much at heart. The farmers of Yuba, are therefore, hereby notified to go to work, without delay, and form themselves into an association for the promotion of agriculture, in general, and the development of their own rich soil, in particular. The Colonel had with him a large parcel of strawberries, which he had plucked in the morning in the garden of our friend, Governor Smith, of Sacramento, each one of which was a mammoth, little short of the dimensions of a good sized peach. These strawberries furnished a fruitful text for the Colonel, upon which to sermonize in favor of his great hobby—the combined glories of Agriculture and California.

We thank the General for speaking generously of us, and giving an earnest word to the Yuba Farmers, and we trust that it will be effectual, that they will now unite and prepare for the State Fair. We shall be glad to visit and confer with them, and will do so at their earliest call. Wishing them all success, and only saying to our friend the General, and all others, that in all earnestness we will plead agriculture, not as our "hobby," though it may be so; but as a great and glorious truth, which, when duly appreciated and applied, shall indeed make California "the Garden of the World."

Strawberries.

THE proprietor of Smith's Pomological Garden, at Sacramento, has given us another proof of his skill at fruit growing, by sending us a generous basket of his strawberries on Saturday last. 'Tis true they were not 6 1-2 inches, like the "mammoth specimens" exhibited above, but many of them measured 4 and 4 1-2 inches, and a few 5 inches in circumference, and a finer or more delicious fruit cannot be found. They were also the same variety we alluded to, "Smith's California Seedling."

We are very sorry our neighbor of the "Wide West" should be so great an unbeliever in the fertility of our soil, for it could not have been anything else that caused him to pen following. Poor fellow! there's no "music in his soul," yet his mouth waters for a feast. We must ask friend Smith to send him a basket, to make him believe. Hear what he says:

"Strawberry Sauce.—The editor of the CALIFORNIA FARMER, in his enthusiasm over a deli-

cious repast of strawberries, uses the following hasty language: 'We enjoyed it much, in a generous supply smothered in the usual condiments of sugar and cream.' As our neighbor does not appear to have seen it, we are forced to republish an anecdote of Tom Corwin, who, while visiting a gentleman in one of the Western States, was asked by a daughter of his host at breakfast, who wished to use language suited to the station of her father's guest, if he wished condiments in his coffee? The witty senator replied at once, 'Pepper and salt, ma'am, but no mustard!'"

Now see how touchy our neighbor must have been as he thought of our fragrant repast; and he must needs burst out in his jealousy and scatter his "pepper and salt" thoughts right and left. Pity he had not used the mustard too; it would have given him the cunning idea, that those who hunt for flaws instead of better things, may sometimes learn that the types may change the "accompaniments" of a dish of strawberries, which has been generously prepared for those who labor to find the better side, into a dish so highly seasoned, that when they taste, it will be so hot that "pepper and salt" won't save them.

The Victoria Regia or Great Water Lilly.

WE have received the colored plates of this most gorgeous flower. It is indeed a queenly one, and the plates are got up in most superb style. The plates are by that celebrated artist William Sharp, Esq., of Boston, who executed Hovey's work on fruits, and those also of the Massachusetts Horticultural Society. The whole work descriptive of this wonderful flower, its discovery, history, culture, manner and season of blooming, and all appertaining to it, has been carefully prepared by that distinguished horticulturist, I. Fisk Allen, Esq., of Salem, Mass., whose grapes, gardens and grounds, are specimens of taste and skill that bespeak a love and devotion to the science, rarely excelled.

This work is on exhibition and for sale at our rooms, where lovers of the beautiful may be gratified.

Facts to be Remembered.

VERMONT supplies her schools with Agricultural Books from the State Treasury.

New Hampshire also furnishes the public schools with Agricultural Books from the State Treasury.

The Legislators of Massachusetts devote a portion of their evenings in discussing the merits of Agriculture. Ten public meetings have been held at the State House during the present session, and every meeting was fully attended by senators and representatives, the chief magistrate also being present at nearly all the meetings. This is as it should be. We wonder what would be the result if the Legislators of California should do the same.

Maine has endorsed her State Agricultural Society and made appropriations upon a liberal scale, offering to grant as much from the State Treasury as the members will raise.

SPECIAL.—The communication from our correspondent, "Protection to Agriculture," we are well pleased to lay before our readers, and we feel assured it will lead to inquiry, to discussion, and will result in much good. We shall at all times be pleased to hear from him and all who thus prove their fealty to this glorious State.

"The Wife to her Husband in California,"—by Mrs. E. A. W., will awake tender, pleasing, and it may be also, sad reflections. It should be read and remembered.

"Materials for Paper," by A. S. T., of M.,—this is a subject of importance, to Home Manufacturers. Our able correspondent is ever on the watch to advance the true interests of our State.

The experiment in growing potatoes at Downville, from our obliging and practical correspondent, should be remembered.

Stock owners, and stock raisers and importers, should carefully observe the circular on "Foreign Stock."

The report upon the diseases affecting Fruit Trees and the Vine, in the last and present numbers of our paper, should be preserved carefully for reference.

"English Lawns,"—As much inquiry is made of us respecting a lawn or garden grass plot, we commend the article upon this subject. Having so often seen and enjoyed a walk upon an English lawn, we know how beautiful they are, and if the rules are observed, we can have the same here.

STATE SOCIETY'S PREMIUMS FOR 1855.—The Executive Committee are busily at work preparing their reports for Premiums, and their schedules for farmers, gardeners, nurseries, &c., and it is hoped they will be ready for the next issue. As the FARMER is the constituted organ of the Society to publish their doings, all who desire to

have full lists of Premiums, and to be prepared to compete for them, should at once become subscribers, and thus become familiar with the plans and operations necessary to success.

The Arsenal at Benicia.

PERHAPS some of our readers may say, what have powder magazines, or arsenals, to do with Agriculture? We can only say, that the great Washington taught—"In time of peace prepare for war"—ergo, we should have arsenals and magazines. What would our friends at Sonoma, Napa, and Suisun, do if we should, be so unfortunate as to have a general war with Europe? Then the farmers would be glad of the defence to our seaboard. But to the Arsenal:

Very few can have any possible conception of the most admirable plans now being adopted and carried out to establish one of the best military defences in our country. It is but justice to a highly meritorious officer to show what can be done by one who, feeling the nature of an honorable post, one of great responsibility, resolves to acquit himself of that trust in the noblest manner. The military stations to which we allude, the "Arsenal," has been for years under the charge of Capt. C. P. Stone, an officer universally honored and esteemed in every station of life.

The military post at Benicia owes its present high standing to this officer. With but little or no aid or sympathy from Government, Capt. Stone, with a wise foresight selected his troops from men qualified for every duty necessary to be performed in the plans he designed. He enlisted able men of every mechanical trade, skillful workmen, smiths, carpenters, masons, gunsmiths, blacksmiths, carriage makers, machinists, tinmen—in fact, men of every trade and association, and thus had those around him that could prepare, build up and beautify in every mechanical department connected with a military station of this character.

We were most kindly shown through every department of the Arsenal, and were much surprised when we learned that under the system pursued by the Commander, the stone for the buildings which have been erected was quarried, finished, and laid by enlisted soldiers; the wood work of the building prepared, framed and erected by soldiers; doors, windows, sashes, all prepared by soldiers—thus employing soldiers to erect the buildings and save the cost to the Government. In addition to all this, in the armories and in all the workshops of every description, enlisted soldiers do the work, making gun carriages, stocking guns, and repairing all the most finished work of heavy ordnance; infantry, riflemen, and cavalry accoutrements are prepared, cleaned, kept in order, and made ready for shipment to all portions of the Pacific coast, from this admirably arranged armory. An armament for 25,000 men is now ready and in the most perfect order; there is also an extra stand of 17,000 arms in the new buildings.

And how has all this been done? When public funds failed, when Government drafts were protested, the private property of this able commander was cheerfully used, that the work might go on; and for years, only about \$60,000 have been expended, including soldier's pay and all, and the new buildings, improvements, arms, and munitions, are worth millions. Handsome residences, beautified by vegetable and flower gardens, have been prepared for the officers and soldiers, but at the expense of private means, all adding to the beauty of public property. New buildings are in progress, "the hills are being laid low and the valleys filled," all preparatory for still greater improvements, to be done by the labor of enlisted soldiers; magazines are to be built, also reservoirs, wharves, and barracks. The designs and plans are all prepared by this able and efficient commandant, Capt. Stone.

It would require more space than we can spare to-day, to speak of all the valuable improvements made and the good accomplished. We invite all who feel an interest in our defences, and in according justice to a faithful and meritorious officer, to visit and enjoy as we have the courtesies extended during one of the most interesting examinations we have ever made of public works. "The half we have not told you," reserving particular data for future use.

WINES AND BRANDIES OF CALIFORNIA.—Considerable interest has been felt among owners of vineyards and manufacturers of wine, lest the passage of the liquor law should destroy their prospects. A clause in that Bill exempts "California Wine" from the operation of the law. It is our duty to note this that the law should be plainly understood, and we hasten to make this notice, as we have had many inquiries touching it.

Education.

It is one of the most cheering evidences of the future permanency of California, that amid the wild commotion produced by panics in monetary affairs, depressions in business, and political agitation, the cause of education is steadily progressing in our State. The State government, our city governments, and all our towns and villages are awake to the importance of "education." Not only public schools, but academies and private seminaries are springing up in all parts of the State, and they are promptly fostered and encouraged. We rejoice at this; it speaks well for the future.

In our last issue we alluded to the Seminary at Benicia, under the direction of Miss Atkins. We cannot speak too highly of such an institution. Not only the intellect is cared for here, but the moral and physical well being of the pupils are regarded. Intellectual training is always more perfect and durable when a proper care is bestowed upon the physical powers, and when, by a kind and affectionate course of treatment, the moral tone is nurtured and strengthened, thus training the heart, mind and body in a triple alliance, and establishing a trinity power.

We had pleasing and most satisfactory evidence that pupils make rapid advances at this institution. Very much to the credit and honor of Benicia the citizens take pleasure and interest in these subjects. We saw many persons present at a very interesting exhibition of the pupils in an evening entertainment. This exhibition consisted in representing various characters by tableau, and we have never seen a happier representation. One tableau represented Faith, Hope and Charity—three young ladies in white robes, gracefully arranged, personating the characters most admirably. Another tableau represented the cross—a young lady, with eye uplift, was gazing upon the cross, every feature speaking a full understanding of the intent and meaning of the representation. Other tableaux, and all well personated, gave a good illustration of the excellent uses that could be made of a festival scene. Many parents and friends were present and all delighted.

After the hours of well arranged study, pupils and teachers (of which there are four of the latter) walk in the fields, and while enjoying the beautiful scenery they gather flowers, making their pleasure profitable by a study of botany, and the collecting, arranging and classifying of flowers for pressing, &c.

Occasionally the generosity and gallantry of the accomplished military gentlemen arrange a pleasant "Pic Nic" for the pupils and friends, and thus give an increased pleasure as connected with their studies. Thus should it ever be, and we can with a strong faith and confidence most cheerfully recommend this well conducted seminary to the public attention. The preceptress and her able assistants, as teachers of languages, music, painting and embroidery, are all well qualified for the high stations they occupy, and we rejoice to know that this seminary is rapidly prospering.

PACIFIC IRON FOUNDRY.—The public is not aware of the extent of these wonderful works. A short time since we were kindly shown through every department, and were surprised to learn their extent, and the variety of work done at this establishment. There is no longer need of sending abroad for castings of any kind. It matters not what is required, either in size, form or quantity, it can be had at the Pacific Works. Every department is complete: the patterns are prepared, the castings made and then finished. Recently a large wheel, 10 feet in diameter, was cast—the teeth, 128 in number, of 8 inches on the face, were cut, a thing never before tried, and this was done most perfectly. Waste iron is made into scrap; waste lead into bars. The sheet iron is cut with a monster shears, and a hammer of five tons performs its delicate work. One feature, new, but most excellent, we noticed, a system of apprenticeship has been commenced at this establishment, which will result in preparing finished workmen for California. Days could we spend pleasantly in such a place, and we could tell our farmers that here plows and all agricultural implements can be cast equal, if not superior to any from the East. We enjoyed the kind attention and hospitality of the gentlemanly superintendent, Mr. French, and desire that the public should be made acquainted, especially the farmers, with the facilities they have of obtaining what is needed in this department. Messrs. Forbes & Babcock, at the Pacific Mail Steamship Company's office, are agents of the works, to whom, and their card, we refer our readers.

Material for Paper.

The Atlantic presses mention that paper has been manufactured at St. Louis, from the common swamp cane of the Southwest.

The manufacture of paper from bamboo, is like everything else under the sun, nothing new. It has been used from time immemorial in China, as the basis of all the qualities of that material; some of which, from certain varieties of the bamboo, taken when young and mixed with cotton, equals the finest qualities of Paris or Bath post. The use of envelopes is also quite ancient in China, and some of them are most beautifully figured—they open at the ends and not at the sides.

The consumption of paper from bamboo in China is immense; paper is consumed there in larger quantities than in any other country under the sun, and is made of all qualities, colors and prices, but cane is mixed with all. The Chinese shops in San Francisco invariably use it. In the "Chinese Repository," printed at Canton, may be found full details of the methods of manufacture.

It is very likely that our cane would be vastly improved as a basis for paper, by mixing it with the fibre of the tule and hemp, or with cotton. A small variety of the bamboo has been growing in Monterey for several years, and does well. Doubtless it would do better in the Sacramento and Tulare Valleys.

There is a large tree, very common in all tropical countries, called the Cottonwood Tree, (*Bombax Seiba*), which bears a fruit pod as large as a pear, and is filled with an exceedingly white, fine, silky cotton, which cannot be used in spinning, from its fibre being so twisted and obstinately curly. It is used for stuffing pillows and mattresses in India and South America, and makes an exceedingly agreeable material for these purposes.

There is no doubt this short-fibred cotton would make an excellent substance for mixing with bamboo, hemp, rye straw, cotton, plantain, cocoa nut, pine apple or linen fibres, for the manufacture of the finer qualities of paper, and particularly for printing paper. As it is exceedingly abundant in all tropical countries, and easily gathered, there is no doubt it could be afforded at very low prices.

There are now in the United States 750 paper mills, manufacturing annually 270,000 pounds of paper valued at twenty-seven millions of dollars. These use 405,000,000 of pounds of fibrous materials, which at four cents a pound gives over sixteen millions of dollars as the amount of the Old Rag business. The capital employed is nearly five millions of dollars.

So it will be seen, that this is a highly valuable branch of commerce, and the supply of its materials ought to be attended to by our long-headed men.

There is no plant which grows more luxuriantly than the common Linseed plant. It is singular our farmers don't attend to its cultivation, as it is found to be a most profitable crop, whose annual value is over four millions of dollars.

A. S. T. or M.

Protection to Agriculture.

To the Editor of the California Farmer.

Sir: As an individual member of the Mechanical class of working men and an unobtrusive observer of the many projects that from time to time have been launched on the deep sea of public opinion, I see nothing so far as my humble judgment can penetrate, more sensibly calculated to stimulate the industry, secure the prosperity and exalt the dignity of the State of California, than the conclusions arrived at by the Agricultural Convention at their meeting in Sacramento city. Sir: They first demand through their resolutions to have a share of legislative action, which, in so doing, it is nothing more or less than what they have a direct and unquestionable right to; they require as cultivators of the soil, the real developers of nature, to see their interests cherished by the community in general, and their rights and privileges guarded by fair, impartial legislation. And again, they object to the doctrine of free trade for Agriculture, and protection for other (as I conclude manufacturing) interests. Well as regards the two first resolutions: I do not believe that any reasonable mind, infused with the broad principles of honesty and justice, can attempt to dispute such moderate requirements. Secondly, it is my decided impression that no other State or country stands more in need of a general system of protection than the young State under whose legislation and laws we at present live, and with whose prosperity or adversity we are determined

to stand or fall. It will appear to every one who reads this that I am an advocate for protective laws for California; I admit it, and that in the most unperiphrastic sense. Sir, I am now a resident of this State, and determined with my family to make it a permanent home; consequently, it is my right and it becomes my duty to identify myself with what appears calculated to guide her Agricultural and Manufacturing interests to a safe and profitable port of prosperity; both these interests being dependent on each other in this country for their future maintenance and stability, call forth a mutual reciprocity of feeling one from the other, and in support of these ideas I desire to call your attention and that of the readers of your journal, if it so happens to be deserving of a place in its columns, to the many and various changes produced by the system of Free Trade in England and Ireland. Hence, in the first country being a manufacturing one, and having a superluous export trade almost through the entire globe, the doctrine of free trade was hailed by the working class with an extraordinary enthusiasm, admitting as it necessarily would and did a superabundant supply of bread stuffs. 'Tis true the landed aristocracy of England banded themselves against it in the boldest and most persevering manner, regardless of the necessities of the working men and their families. I say necessity, because England being a Manufacturing country not an Agricultural one, such legislation was commensurate with her quiet and happy futurity. However, I dare say, it is well known that the restrictions on Agricultural produce were removed through the groat and prominent statesmanship of the late Sir Robert Peel. But Sir, let us examine how that legislation and law has operated in the latter country. Ireland, since she had been unjustly deprived of her domestic legislature, rapidly run into a state of both provincialism and pauperism; robbed as she has been of every just control over her internal advancement, the country for whose naval and military prestige the life blood of her best and bravest sons had flown, and who ought to have shielded her with the sincerity and affection of a sister, enacted laws against her manufacturing industry, and so annihilated her vigorous inclinations in this pursuit as finally and systematically to force her to become a fertile grunary to the Manufacturers of England. Thus Ireland is in reality an Agricultural country since 1801, during which period to the passing of the Corn Law, she had always looked for a remunerative price for her Agricultural produce, by which the machinery of labor was kept in motion. The manufacturing class, slender and circumscribed as were the resources, though comparatively large in numbers, together with the laboring portion of the population, in fact the whole working men of the nation, all had their hopes, their half dead and alive existence, suspended on there being a moderate or high price procured for the Agricultural produce of the country. Well, a blight came on the crops, a fearful famine was the consequence, uncharitable legislators by their previous legislation made it worse, the protectionists in the English Parliament had no objection to allow bread stuff duty free into the United Kingdom during the distress, but unfortunately for Ireland the cry of cheap bread was raised, and the voices of her most popular political leaders were in favor of removing all restrictions; this caught the public mind with an almost electric impetuosity, and assisted the British Minister to repeal the Corn Law. The result is too well known to any one who has been in Ireland after that time; bread stuffs were shipped into the country in abundance, threw the home grower out of the market altogether, who of course had to sell the home produce at a sacrifice. This evidently prevented him from having any surplus money wherewith to employ the laborer on the improving of his land or residence; or the mechanic in the various branches of trade, that a successful landowner or Agriculturist is certain to require. There is no disputing that the importation of Agricultural produce without a restrictive duty, into Ireland, being as she was and is, an Agricultural country, added to the grievances and misery of that island.

Sir, my object in introducing these European topics is, I look upon California at present to be as an Agricultural country, somewhat analogous to Ireland. Every branch of manufacture she inherits is very limited; then what is to extend them? Nothing, except working her Agricultural resources, and working them with skill, energy and perseverance, and giving them that protection that their interest to the State in general requires under these circumstances. I fully believe, as a working man, that the Agriculturists have a powerful claim on the working class, particularly on those who determine to make this country their future home; and also the Agriculturists should dispose of any labor at their command to the permanent residents of the State, in preference to a class of irresponsible adventurers, and they in return, for their own benefit and that of the entire State, should rally round their standard, and assist by every legitimate means in their power, to have the Agricultural interests fully and fairly represented in the halls of legislation.

I remain Sir,

Yours respectfully,

THOMAS HAHE, Pattern Maker.

San Francisco, May 7th, 1855.

OBLIGATIONS AND FAVORS.—We are daily under obligations to the attentive messengers of Messrs. Wells, Fargo & Co., and the Pacific Company, for up river files, and for letters, and parcels, and to the messengers of the Oregon and Southern steamers, for files of papers from their several routes.

Horticultural Department.

Report on some of the Diseases and Insects Affecting Fruit-Trees and Vines.

BY THADDEUS WILLIAM HARRIS,
Professor of Entomology of the Mass. Horticultural Society.

[CONCLUDED.]

PEAR-TREE INSECTS.

THOSE most injurious to this tree are the *Slug-worms*, which destroy the leaves, the *Scolytus* or *Tomicus*, referred to in a preceding paragraph, and borers, which make their attacks on the stocks of dwarf trees that are grafted upon the quince. Pear trees likewise suffer occasionally from *barklice*. Within a few years, a new and probably introduced insect has made its appearance in great numbers on pear trees in the western parts of Connecticut and of Massachusetts, particularly in the valley of the Housatonic, and in the adjacent counties of Dutchess and Columbia in New York. This is the *Psylla*, or jumping louse, which is probably identical with the same species that infests the pear tree in Europe. Some account of it has been given in the second edition of my "Treatise," but the history is confessedly incomplete, and further particulars have been hoped for from Mr. T. Glover, of Fishkill Landing, whose opportunities for observing the habits of the insect are greater than mine have been. In some of its forms it is found on pear trees from May to October; and probably two or more broods are produced every year. These little insects live by suction, and obtain their food by puncturing the bark of the young shoots, mostly in the vicinity of the buds. They defile the shoots with the fluid which they discharge in large quantities, and which soon forms a blackish crust on the bark. The best remedy that occurs to me is a wash of strong soap suds and sulphur, applied with a brush to the branches in the spring, before the buds expand. A solution of whale-oil soap, thrown upon the trees, will kill the insects, but will have to be repeated at intervals through the summer.

PLUM TREE INSECTS.

The *Plum Weevil*, *Curculio*, or *Conotrachelus Nephthar*, continues to baffle all attempts to exterminate it. Cherries, apples, pears and peaches, and even the succulent warts of the plum tree provide for it abundant resources, in default of plums, its more appropriate food. We may save a crop of plums by covering the trees with fine netting, or perhaps by coating the fruit with whitewash; but the other fruits above named will suffer all the more for our pains, and will furnish a numerous brood of depredators for the following year. Nothing short of killing the insects, in some of their forms, will ever prove an effectual remedy.

The *Slug-worm*, *Penthredo*, or *Selandria* (*Blennocampa*) *Cerasi*, which destroys the leaves of the cherry and of the pear, is also injurious to those of the plum. It is easily killed by dusting ashes or lime upon it, or by throwing upon the leaves a solution of whale-oil soap.

CHERRY TREE INSECTS.

Those which attack the leaves are chiefly *canker-worms* and *slug-worms*, already referred to, and *rose-bugs*, which in some seasons are very injurious to them. The latter, as well as *May-bugs* or *Melolontha*, may be gathered by hand on small trees, or may be beaten off with poles and caught in sheets spread beneath the trees. The best time for doing this is in the evening or very early in the morning, when the insects are sluggish, and readily fall if disturbed. A large proportion of the fruit is spoiled every year by the grubs of the *plum-weevil*. The incautious eater doubtless does something towards checking the increase of the insects; but a remedy less repugnant to good taste remains to be discovered.

PEACH TREE INSECTS.

The *Tomicus liminaris*, which lives under the bark of diseased peach trees, and has been supposed by Miss Morris to be the cause of the yellows, has not appeared in my own trees, nor do I hear of its being found in others in this vicinity. Miss Morris' communication upon it may be seen in Downing's *Horticulturist*, Vol. IV., page 502.

The *Peach tree Borer*, (*Ageria exilis*), an entirely different insect from the apple tree borer, and operating in a different manner, namely, between the bark and the wood, is more injurious to this tree than any other insect. Great care is necessary to prevent the tree from being fatally girdled at the root by these pernicious borers. Frequent applications of urine and ashes, and of hot soap-suds, around the trunk, seem to have a good effect, being not only offensive to the fly when about to deposit her eggs, but also destructive to the young borers. After any lurking borers and the earth adjacent to the trunk have been carefully removed, a covering of strong paper around the base of the tree, tied above with a string, and secured at the bottom with a bed of mortar, has proved an effectual preventive against the attacks of the insects. I believe that peach trees on plum stocks are never injured by these borers.

INSECTS OF THE GRAPE VINE.

The vine is subject to the attacks of a very great variety of insects, differing also from each other in their operations, and in the amount of injury done by them. Most of them have been noticed in my "Treatise" on injurious insects; but there are others claiming the attention of the cultivator and the naturalist.

Grape Vine Borer.—The roots of cultivated grape vines in the Southern States have been observed, by Dr. F. J. Kron, of Albermarle, North Carolina, to be so much injured by borers as to prevent the ripening of the fruit, and finally to cause the decay and death of the vines. The insects do not spare even the native varieties, all of

which, except only the *scuppernon* or *muscadine*, are found to be attacked by them. Taking advantage of the foregoing exception, Dr. Kron has been successfully engrafting and cultivating the best foreign and native grapes on stocks of the wild muscadine, probably the true *Vitis vulpina* of Linnaeus, and of Sir J. E. Smith, in Abbott's "Insects of Georgia," and identical with the *Vitis rotundifolia* of Michaux and of Elliott. He has also favored me with samples of injured vine-roots, and specimens of the insects in all their stages, together with an account of his observations and experiments among them. This account, and scientific description of the insects, written by me at the request of Dr. Kron, have been published by me in the *Raleigh Register* for the 5th of April, 1854. The insects belong to the genus *Ageria*, and are allied to the borers of the peach tree, and to those that destroy the roots of pumpkin and squash vines. In their winged form they strikingly resemble certain wasps called *Polistes*; hence I have given to this species the name of *Ageria polistiformis*. According to Dr. Kron, they are found about the vines and on the wing from the middle of June to the middle of September, during which time they couple and lay their eggs. These winged insects are of a dark brown color, more or less tinged with a tawny orange on both sides, and banded with bright yellow upon the edge of the second ring of the hind-body. The thorax and shoulder-covers, and the fourth ring, are more faintly edged with yellow or with tawny orange. The feelers, antennae beneath, and legs are also orange-colored. The fore-wings are dusky; the hind-wings transparent, but veined and edged with black. The female has a little orange-colored tuft on each side of the tail, and the males have two tufts on each side, the middle pair longer than the other. The males are more numerous, more active, and smaller than the females; they measure from five to six-tenths of an inch in length, and their wings expand from one inch to one inch and three-tenths. The body of the female varies from six to nine-tenths of an inch in length, and her wings expand from one inch to one inch and a-half. These insects lay their eggs near the roots of the vines, and the whitish grubs, hatched therefrom, of various sizes, will be found boring into the bark and wood of the roots during the summer. When fully grown, these grubs measure from one inch to one inch and three quarters in length. They undergo their transformations in oblong oval pods, formed of a gummy kind of silk, covered with fragments of wood, bark and dirt, which will be found within or adjacent to the injured roots. The insects take the chrysalis form at various times during the summer. The rings of the chrysalis are surrounded with minute teeth, which assist the insect in coming forth from its pod or cocoon when about to be changed to a moth.

Eight-spotted Sphinx, or *Alypia octomaculata*.—There are two insects, occasionally found on the grape vine, which in their caterpillar state closely resemble each other in form, size, color and habits. One of these is the beautiful *Eudryas*, described in my "Treatise;" the other is the *Sphinx* or *Alypia*, above named. The *Alypia*, though common and occasionally so numerous as to be quite hurtful to the vine in some parts of the United States, is very rare in New England. I never saw it in Massachusetts until the summer of 1853, when a few specimens were discovered on my grape vines; and during the past summer they have appeared in greater numbers on the vines. At first they were mistaken for the caterpillars of the *Eudryas*, from which, however, they are to be distinguished by having a conspicuous white spot on each side of the hinder part of the body. These caterpillars are white, passing into blue, transversely banded with narrow black lines, with a border orange colored band, dotted with black, on the middle of each ring. The head and feet are also orange, dotted with black. The black dots on the body produce a few short whitish hairs. They were found eating the leaves of the vine in the latter part of June and beginning of July. Full grown specimens measured one inch and a quarter, or more, in length. Before the 16th of July, they left the vines, and concealed themselves in a loose web upon the surface of the ground, and soon took the chrysalis form. One of them was transferred to a moth on the 10th of August; others remained in the chrysalis state through the winter, and came forth winged in May and June. The winged insects are black, with two large yellow spots on each of the fore-wings, and two white ones on the hind-wings. Their shanks are clothed with orange-colored hairs. Their wings expand from one inch to one inch and a-half.

Grape-vine Flea-beetle or *Haltica*.—The depredations of this insect upon the grape vine seem first to have been observed in the year 1831, by the late Judge Darling, in Connecticut, and by Mr. David Thomas, in New York. An account of them by the latter gentleman was published in 1834, in the 26th volume of *Silliman's "American Journal of Science."* The beetles were found to destroy the fruit buds in the spring, and their young, in the form of chestnut-colored grubs, destroyed the leaves in summer. These grubs have never been fully described. In a recent excursion to New Hampshire, I was struck by the condition of the leaves of the black alders (*Alnus serrulata*), which, through the long extent of country, were destroyed in the same way as the leaves of fruit trees are by canker-worms. Upon examination, the authors of all this mischief were found to be certain dark-colored grubs, great numbers of which were still remaining on the leaves on the second of August, while others had already completed their transformation, and had come forth in the beetle form. The beetles were

identical with the above-named depredators of the grape vine, and were feeding upon the few green leaves still remaining upon the alders. The grubs, when fully grown, measured about half an inch in length. They were of a livid brown color above, and paler beneath, with a black head, black feet, and a double row of minute acuminate black warts, each producing a very short hair, on every ring. The body was nearly cylindrical; the feet were six in number, situated beneath the fore part of the body; and there was a little fleshy proleg beneath the last segment. It may be added that the beetles were rather more than three-twentieths of an inch in length, of a brilliant greenish blue color above, and that they leaped with the agility of fleas. The discovery of these insects in such immense numbers on the alder, and the extensive ravages committed by them on this shrub, seem to indicate that the natural food of this species is obtained from the alder, rather than from the vine; and that its resorting occasionally to the latter, may be owing to the want of the former, or to the extraordinary multiplication of the insects, in certain seasons, in the vicinity of the grape vine.

Lawns.

An English lawn! Who that loves the country,—soft grass and fine trees,—verdant turf and beautiful foliage;—who, indeed, that has ever thought or reflected upon the subject of sylvan art, has not his ideal of an "English lawn?" imperfectly formed, it may be, below its true merits, or exaggerated, and beyond what it really is; but, nevertheless, an ideal of that lawn, which, from its softness, smoothness, emerald verdure, freshness and beauty, has become so prominent a characteristic of the Landscape Gardening of Great Britain as the modern or natural style is itself a feature of the taste and refinement of the art in that country.

Few who have not seen or trod the "velvet turf" of England can fully realize its surpassing beauty; so short, so elastic, so smooth is it in every part. Spread out like a velvet carpet beneath the feet, nothing, indeed, but a brief walk on such a lawn as Chatsworth, or one of similar extent and perfect keeping, could ever convey a full impression of an "English lawn." We never recall our visit to that princely residence, without a feeling of regret that, at least, something like its fine lawn is not within the immediate reach of our own countrymen, that they might see how much might be enjoyed by the harmonious combination of two such simple elements as grass and trees. Divested of its Palladian architecture—its fountains, its rockwork, its arboretum, its Italian garden, and even its colossal conservatory—the extent of this lawn and its diversity of surface, its massive trees and their grouping and arrangement would still make Chatsworth one of the most delightful of residences. Yes, simply grass and trees, when laid down and planted under the guidance of the landscape artist, are abundantly ample, without any artificial aid, to give the greatest enjoyment to every lover of rural art.

But, notwithstanding our perfect or imperfect ideas in regard to the velvet lawns of England, of whose unsurpassed beauty we have heard so much, and whose possession is so much envied, it is a common remark, and a current belief, that they cannot be obtained in our climate: that our burning sun; our parching winds, our dry summers, and our frosty winters, forbid their possession; and but for the cloudy sky, the drizzling rains, and the mild winters of Great Britain, their lawns would be no more verdant than our own. We shall not deny that the peculiar climate of that kingdom, tempered as it is by its surrounding sea, with an atmosphere ever moist and humid, is particularly favorable to the perfection of the English lawns; but that we cannot very nearly imitate them, with the same care and attention which have chiefly contributed to make them what they are there, we also deny. When through a period of two centuries gardening shall have been pursued with the same zeal and skill here as in England, we have but little fear that our lawns will be scarcely any, if at all, inferior to what they are in that climate. The least that we can do, is to make the attempt to produce them; and, if our well directed efforts fail, we may then give up the endeavor, with the satisfaction that the seasons, over which we have no control, are the only obstacles to success.

The great errors into which nearly all have fallen who have attempted the formation of a lawn have been shallow cultivation, inferior grasses, and scanty seeding. To the first of these especially may be traced nearly all the failures to obtain a perfect lawn. The lesser errors are numerous: we omit to roll the surface often; we do not mow frequent enough, and we do not do the latter properly. All these mistakes combined, in connection with our climate, prevent us from securing that foundation, without which it is impossible to expect a smooth and verdant turf.

What then are the requisites for a fine lawn, and how shall we proceed? is a question which will naturally follow what we have said. We shall endeavor to answer it as fully as our space will allow.

First then, *deep cultivation* is the one main thing to be attended to, and without this the object might as well be given up first as last. No half-way mode of arriving at this will do: it must be thorough. It is the only resource against our summer droughts, which so seldom fail that provision should always be made to meet them. Every individual knows that there is no lack of freshness and verdure in the early and later months of the year, and our turf then vies with the greenest of England's lawns; but no sooner does the heat of summer set in, and our rains

hold off, than a sudden change takes place; the emerald green of May becomes the dingy yellow of June and rusty brown of July and August. For the space of two or more months there is scarcely growth enough to need the use of the scythe, and that necessary operation to every good lawn is omitted till the refreshing rains of autumn bring with them renewed verdure and beauty.

Deep cultivation is then all important. If the space intended for a lawn is anything less than an acre, it should be trenched—trenched deep, at least two feet, and if the subsoil will admit, three feet will be better. When of greater extent, the ground should be well subsoiled, running the plow at least twenty inches deep, that the substratum may be completely pulverized to that depth. The cost should not enter into consideration, if it is once determined on to have a lawn. The time to think of this is before operations commence. Trenching is the most satisfactory, but subsoiling is so good a substitute that in large extent of grounds it may be followed with good success. In trenching, a moderate quantity of manure may be worked into the bottom trench, which will form a reserve of nutriment for years, the after top dressings keeping the surface in the best condition. With such preparations there can be no such thing as failure. The roots of grasses strike deep into the soil, and in severe droughts, when the surface gives off its moisture rapidly, there will be a reservoir beneath, which even the "driest time" will fail to exhaust. The turf may show a very slight difference in its verdure from that of early spring, but it will still be fresh and green, vigorous and growing, and ready for the scythe throughout the summer.

The best season for planting a lawn is in August, particularly when they are of any extent; but small places may be prepared and planted at once, April next to August being the best season. We may remark, however, that when it is intended to lay down a lawn of an acre or more, the preparation for it should begin at once. The ground should be plowed and subsoiled immediately, and if it requires any grading, it should be completed at the same time: it may then be planted with any crop which will come off early, potatoes perhaps being the best; these should be taken off the last of July or beginning of August and the levelling proceeded with preparatory to sowing the seed.

The ground being well trenched or subsoiled, the surface should then be thoroughly pulverized and made perfectly smooth, for unless this is done with the greatest care, it would be impossible to mow it evenly. The stones should not only be raked off, but any there are left, even after almost the finest rake, must be gathered by hand. The ground should then be repeatedly trodden and rolled, until a firm and uniform surface is obtained. There is no half-way about this process, if you ever expect a close velvety turf. Before levelling, if the ground is not in good heart, a quantity of fine old compost may be worked in, or guano, just sufficient to give the seed a start; for too rich a surface will only give the grass a rank and coarse growth: it is steady moisture that is wanted rather than stimulating manures, and the former the trenched ground will supply. Be sure that every dock, dandelion, or other weedy root is completely eradicated from the soil.

The kind of grass seed and the quantity is the next important process. In England a variety of grasses are generally recommended and used; but, in our climate, so far as our experience goes, we do not need so many. With us, the finest Bent grass (*Agrostis vulgaris*) and white clover (*Trifolium repens*) are sufficient, though in some instances perennial rye grass (*Lolium perenne*) may be used in small quantities; but the main supply must be the two former, and of the cleanest and purest quality. THREE BUSHELS to the acre, and not an atom short, is the least that will seed an acre, the proportion being two and seven-eighths bushels of Bent grass and half a peck of white clover. To this may be added, on extensive lawns, half a bushel per acre of perennial rye grass.

Pay no heed to the advice of old cultivators, who may tell you to plant oats or barley, for the purpose of shading the young grass till it gets strong enough to take care of itself! but sow the pure seed and nothing else. Choose a still moist day to put the seed into the ground; distribute it over the surface as evenly as possible, and finish with a good rolling. The frequent showers of April and May, if sown now, or the dews and rains of August and September, if sown then, will soon bring up the tender blades, which will directly form a carpet of the freshest green, and, probably, early in June, it will be ready for the mower to show his skill in cutting.

But how shall this be done? Not by any means with the common scythe. This will never answer; the most skillful workman would fail to do justice to a lawn with such an article. It cannot be done with anything short of an "English lawn scythe," until our Yankee mechanics make as good or a better one, of the same pattern: these have a broad blade, and it should be set so as to lie flat upon the surface. It will then shave the grass as smoothly and neatly, if held by a skillful man, as a carpet. In England, machines have been invented for mowing lawns, and some of them have been imported by gentlemen in our vicinity. We have seen them worked by our gardeners, and when the lawns are rightly managed, they save a great deal of labor. At Dalkeith, in Scotland, Mr. McIntosh thinks he saves the labor of twelve men by using one of these machines. But for places of moderate extent the scythe will answer.

Thus we have shown how a good lawn should be made and planted. The real beauty of it, however, depends mostly on its after-management;

and the important points are, frequent mowing, frequent sweeping, and frequent rolling; without these, the best made lawn will soon become nothing more than a common pasture.

First, mowing. This should be done once a fortnight at the outside, and if once in ten days, the better; the latter being the average time in England. And as grasses grow quicker here, when the ground is moist, then there, ten days may be assumed as the least period to keep it in the best order.

Second, sweeping. This should always be done immediately after the mowing is finished. The cut grass should not lie upon the turf, or be slovenly gathered up, but the surface should be as carefully swept as the neatest housemaid's floor.

Third, rolling. This is a most necessary operation. The surface should be thoroughly rolled with a good roller previously to mowing; and as mowing can only be done in a cloudy or damp day or in the morning early, the lawn should be well rolled the day previous, when it will be ready for the scythe. On large lawns this may be done with a horse having shoes fitted to his feet, to prevent any injury to the surface.

It must be remembered, that rolling and mowing are not to be discontinued upon the first approach of autumn; for if neglected at that season, the grass becomes coarse, tufted and patchy, which no attention afterwards will wholly reclaim. As long as there is the least growth, these operations should be regularly performed.

These requirements, to possess a fine lawn, may appear too laborious, but they are not the less all important. Whoever would think of doing much less than this must be content with a neat turf, but cannot realize the ideal of an "English lawn."

Miscellany.

[From the Louisville Journal.]

BREATHINGS OF THE HEART.

"Though I speak, my grief is not assuaged."—Holy Writ.

Four weary years I've passed away
Far from my native shore,
And one by one my hopes decay,
To cheer my heart no more;
'Tis but a little while, and yet
The star of hope and joy hath set
In a Cimmerian gloom,
For oh! I loved them truly,
But death hath strewn them ruthfully—
Deep in the silent tomb.

Pain would I dream of days gone by,
For peerless Jennie's sake,
Where proud Ben Lomond's shadows lie
Asleep upon the lake;
But why recall those happy hours?
They passed away like summer flowers
That wither in their bloom;
Alas! she's wrapt in dreamless sleep,
And angels nightly vigils keep
Around her silent tomb.

Down by the grim crusader's grave,
Mist crumbling ruins gray,
The ivy fills the shattered nave,
Dark'ning the light of day;
'Tis where the holy altar stood,
Amidst a quietly sculptured brood,
In death she sleeps profound;
And save the plaintive cushat-dove,
Calling upon her absent love,
Silence reigns all around.

Oh! in the sunny hours of yore,
Adown that ruined aisle
I've strayed with her who nevermore
Can cheer me with a smile;
For there the sweetest flowerets grew,
And there love's aspirations true
Soured to the throne of God;
Where now the hope of weary years
Drowned, quenched in unavailing tears,
Wreath by the cheerful sod.

Oh! for the will, the power, the art
To view the past no more—
To blot remembrance from the heart
And feeling from the core!
For why recall those happy hours
That perished like the fragile flowers
That wither as they bloom?
'Tis but a little while, and yet
Life, hope, and joy alike are set
In Jennie's lonely tomb.

Louisville, January, 1855. THOS. C. MORRISON.

Model Husbands.

BY T. S. ARTHUR.

"ANOTHER day's work done, thank fortune!" said Mr. Peterkin, throwing himself, with an air of careless satisfaction, in a reclining attitude on a bench. "I'm not a lazy man, but I do feel glad, these hot June days, when the sun goes down."

A few minutes only did Mr. Peterkin remain in this position. Rising up quickly, as a thought crossed his mind, he added—

"Woman's work, it is truly said, is never done. I must hurry off home, and see how poor Mary is getting along. She did not seem at all well when I left her at dinner-time."

"You don't expect to cook your supper, do you?" remarked an employer in the establishment where Mr. Peterkin was engaged, speaking with a slightly sneering expression.

"If cook should happen to be out, and wife sick," was the smiling answer, "the kettle would not fail to reach the boiling point through my neglect or indifference. That's a fact."

"Every man to his taste," said the other, "but I'm no betty. I suppose you could dress the baby, on a pinch?"

"Haven't tried it yet; but we are never too old to learn, you know. Shouldn't object to an

experiment in that line—for I love babies—if there was no woman's gentler and more skillful hand ready to do the work," cheerfully returned Peterkin.

The other tossed his head in a half contemptuous manner, replying that his babies would go a long time without washing and dressing if they waited for him to do it. For his part, he despised woman's work.

"You don't despise women also, I hope?" said Peterkin, looking so steadily and meaningly at his companion that he appeared slightly confused.

"They are well enough in their place, and exceedingly useful," was answered in a tone, of affected gaiety. "Then he added, more seriously, as if to do away with any unfavorable impression in regard to his home relations that his word and manner might have created, 'I leave to my wife the entire management of the kitchen and nursery and never trespass an inch on her prerogative. It's as much as I can do to maintain the household. Her department is entirely distinct from mine. She never interferes with me, and I award to her a like immunity.'"

"How is it if a meal is late or badly cooked?" asked Peterkin.

"I grumble, of course—perhaps scold," said the other. "If I find the money to buy good food, and it is spoiled in cooking, I think I've a right to grumble. I should like to know what you do under similar circumstances?"

"I haven't the trial often," returned Peterkin. "You're lucky then, that's all I have to say. I suppose you raise such a storm when there is any defect, that your wife receives a lesson which she does not care often to have repeated. I think I shall try your remedy."

"It might be better, perhaps, if you would," said Peterkin, smiling.

"Well, what is your remedy, precisely? what do you say, and how do you say it?"

"When a meal is late, or badly cooked, you mean?"

"Yes."

"I take several things for granted, in the outset," answered Peterkin.

"What are they?"

"In the first place, I give my wife credit for good intentions. I know she meant to have all right. This, of course, stifles impatience and a disposition to complain. In the second place, I know that she is sufficiently annoyed by the defect. To increase this annoyance by fault-finding or fretfulness, would not only be selfish and cruel on my part, but create a state of feeling in my wife that must increase her unhappiness, and cloud the whole atmosphere of home."

"And you say nothing about it?" exclaimed the other in surprise.

"Not a word. The pleasure of mere eating and drinking do not constitute the whole of domestic enjoyment. If the meal is not quite so good as expected, so much the more necessity to increase, rather than to diminish, good feeling, which also has its office of recreating and strengthening. But I must not stand talking here," added Peterkin. "They will be looking for me at home. Mary, as I said, was not well when I left at dinner-time. She has a new girl in the kitchen, too; one, in my opinion, not much to be relied on—good evening all."

And the young man started off with a light quick step. The one with whom he had been talking felt strongly inclined to utter a sneering commentary on the declaration of Peterkin; but certain contrasts between his own home conduct and that of his business companion, were presented so vividly before his mind that in very shame he kept silent.

The day had been unusually hot and sultry, and the duties of Mr. Peterkin of an exhausting nature. Cheerful as he appeared, and lightly as he moved away, under the temporary excitement of mind occasioned by the little interview just mentioned, he found himself weary before reaching home. Hungry too, he was, and quite ready for a comfortable evening meal.

"It can't be seven o'clock, Henry," said his wife, as he entered; and she seemed slightly worried.

"Yes, and ten minutes past," answered Peterkin; and he sat down with an exhausted air, and commenced fanning himself with the broad brim of his Panama, which he still held in his hand. "What a trying day it has been," he remarked. "The hottest of the season."

"Get your father a cool drink of water, Anna," said Mrs. Peterkin to their little daughter, as soon as she perceived how weary and heated her husband was.

The glass of water was quickly brought, for love in that household was ever prompt in action.

"Thank you, dear," said the father, with a smile, as he received the water. "Ah, that is refreshing!" he added, as he took the glass from his lips. "I feel a hundred per cent. better already. Hang up my hat, Carry. How's baby?"

"Poor little dear! She's been fretful all day," replied Mrs. Peterkin. "It has been so warm; and I think she's cutting a tooth. I've had her in my arms nearly all the afternoon. Hush! There, she is awake again. I was in hopes she would rest the evening through. O dear, I'm quite worn out! Carry, go up to your sister, and try to amuse her, while I see about supper. This new girl is not to be depended upon."

Mrs. Peterkin went to the kitchen, where she found the promise of an early tea even worse than she had anticipated. But there was a kind of magic in her presence that quickly gave a new aspect to everything. A slight, but skillful arrangement of the fire caused it to burn clearer, and a few prompt directions to the cook bright-

ened the ideas of that individual wonderfully. Just as Mrs. Peterkin's hands were fairly in her work, the babe, which had at first been partially quieted through Carry's efforts, began to scream violently.

"Oh, dear, dear!" exclaimed the mother, whose nerves were already so excited that she only maintained exterior composure through the most earnest effort. "What is to be done? I can't bear to hear that poor sick child's cries; and if I leave here, there's no telling when tea will be ready."

It only needed an impatient word from her husband to destroy the equilibrium for which Mrs. Peterkin was so bravely struggling. With him, at that moment, rested the happiness or unhappiness of his little household. He was depressed in body from weariness and hunger. He had looked forward to the evening meal with pleasure, and had expected, as usual, to find it on the table. Instead of this, he found his wife in a slightly worried state, and the supper he was so fondly prepared to enjoy, far from being ready. It had cost him a little effort to hide his disappointment on discovering the aspect of affairs, when he first came in; but he gave utterance to cheerful words, and these restored cheerful feelings.

Left alone after his wife had gone to see about the evening meal, and his little daughter to quiet the baby, Mr. Peterkin's thoughts diverged into rather an unusual channel for him, and he was actually saying to himself, "A little forecast on wife's part would have prevented this," when the baby's loud screams disturbed him. It was rarely that he suffered anything to annoy him at home. Now, however, he did feel worried. An exhausted body left an exhausted mind. Over his countenance flitted an impatient expression, and a few contracting lines shadowed his forehead. For a little while he sat, the screams of the baby flustering his nerves. Then he arose, and was about passing into the kitchen, to say, half impatiently, "Do let supper along, and go up to the baby," when a better thought was born of a better purpose; and instead of doing as at first inclined, he ascended to the chamber, and, taking the child, quickly soothed it with gentle tones and loving words.

What a magic power to awaken discord or produce harmony was possessed by the husband and father in that little point of time! The good and the evil impulses were for a moment or two evenly balanced, but good preponderated, and a calmness fell upon the slightly troubled waters of his pleasant household. And such power over husband and father possess; yet how few use their influence, at all times, well and wisely!

So interested did Mr. Peterkin soon become in the now quiet and happy babe, that he forgot all about his hunger and weariness; and when supper was at last announced, he took his place at the table in a pleasant frame of mind, and communicated to all a measure of his cheerful spirit. If he noticed that the tea was smoked, or the toast burned at the edge, he did not speak of it, and so relieved the mind of his wife, who felt worried at these little defects in their evening meal.

Baby cried no more. After tea, she fell off into a natural sleep, and did not awaken until the next morning.

"Don't sew this evening, Mary," said Mr. Peterkin, as his wife took her work-basket and drew up to the table on which she had just placed a lamp.

"It's only a little mending," she replied, with a grateful look at her husband for his kind consideration; "and it must be done to-night. It won't take me long."

"Woman's work is never done," said Mr. Peterkin. "I wish I could help you; but plying the needle is out of my line."

"You can read, however," answered his wife, with one of her pleasant smiles, "and that we can both enjoy."

Mrs. Peterkin, although it was an hour before she put up her needle, experienced no weariness of body during the time, for the deep interest she felt in the volume from which her husband read.

Peace drew that night around this humble family the curtains of repose. They were not rich in worldly goods; they were not honored among men; and yet few arose with a more cheerful spirit when the day dawned, or retired with calmer hearts when night called them to refreshing slumber. And why? We need not answer the question.

"And is this your 'good model' of a husband?" we hear some fine young lady or "accomplished" gentleman say, with a captious toss of the head. "So a man must nurse the baby, and stay at home and read to his wife every night while she darts the stockings, or else he is not a good husband, according to your wonderfully elevated standard!"

And this is the spirit in which you have read? Well, we don't feel inclined to discuss the matter with you. Here is a model; we have called it a good one. It is taken from humble life. If all husbands in every social grade, from the highest to the lowliest, will bear towards their wives the same unselfish regard that Mr. Peterkin bore towards his, there will be light in many dwellings where all now is darkness and discontent.

CURE FOR THE ERYSIPELAS.—The editor of the Salem Observer gives a public cure for this distressing disorder, from which he has been a great sufferer. He says, "a simple poultice of cranberries pounded fine, and applied in a raw state, has proved in my case, and a number also in this vicinity, a certain remedy." In this case the poultice was applied on going to bed, and the next morning, to his surprise, he found the inflammation nearly gone; and in two days he was as well as ever.

Ladies' Department.

[For the California Farmer.]

THE WIFE, TO HER HUSBAND IN CALIFORNIA.

BY MRS. E. A. W.

Spring once again puts on its bloom,
And Flora don's her gayest dress;
Her richest garb the earth assumes,
And brightest smiles, her sons to bless.

Aurora comes in queenly pride,
Her radiance flushing all the skies;
But what to me her gorgeous bloom?
Without the sunlight of thine eyes.

Their brightness clearer is by far
Than dazzling gems though rich and rare;
Nor Cynthia's ves (of purest blue
Is wrought with jewels half so fair.

The rose that climbs our cottage roof
Is budding to the morning air—
Would that thy hand could pluck for me,
The first that opened its petals there.

The time is long since then we met here;
Thrice have I watched their infant bloom,
Their blossoming hath come and gone,
Thrice kept I vigil o'er their tomb.

The way-side flowers that spring within
My youthful pathway, loved and cherished,
Have like these roses, one by one,
Gone for a moment, drooped and perished.

But yet there gleams a happy light
O'er memory's waste, while gazing back,
Nor dreamed I then how much there lay
Of sunshine on my to-day track.

Ye gentle gales that fan my cheek
And sweep so lightly o'er the main,
Oh! gently kiss the swelling sail
That bears him safely back again.

Then shall our days no moments eem,
Love's golden lamp more brightly burn;
Thou thought shall cheer thee on thy way—
"One faithful heart would my return."

Lamartine's Mother.

It was the fate of the father of Lamartine, the great living French poet and orator, to be exiled up with the first French Revolution. During that stormy period, he, with a great number of his coadjutors, was imprisoned in the prison at Macon. He was not there long, before his wife, with her child, took lodgings opposite the window of the cell which enclosed the republican. She soon drew his attention to herself and his child, which though he could not speak to her for fear of the sentinel, reconciled him in some measure to his captivity, and lessened the burden of his woes. "My mother," says Lamartine, "carried me every day in her arms to the garret window, showed me to my father, gave me nourishment before him, made me stretch out my little hands towards the bars of his prison, then pressing my forehead to her breast, she almost devoured me with kisses in the sight of the prisoner, and seemed thus to wait him mentally all the carcasses which she lavished on me." At last she hit on the happy expedient of conveying him letters in the following manner:—She procured a bow and some arrows, and tying a letter to a thread, she shot the arrow, to which was attached the other end of the thread, into the window of the prisoner's cell. In this way she sent him pens, ink and paper. He then, by the same ingenious expedient, sent love-letters to her. Thus the separated husband and wife were enabled to correspond, to cheer each other's hopes, and sustain each other in their misfortunes. This was all done at night time, when the scrutinizing eyes of the sentinels remained in happy ignorance of the medium of communication. Success having inspired courage, the lady with the assistance of the arrow and thread, afterwards conveyed a file to the captive, with which he silently filed through one of the bars of his prison, and then restored it to its place. On the next evening, when there was no moonlight, a stout cord was fastened to the thread and transmitted to the prisoner. The rope was firmly fastened on the one end to a beam in the garret of the lady, and the other end to the bars of the cell; then, summoning up all his courage, the prisoner glided along the rope, above the heads of the sentinels; he crossed the street, and found himself in the arms of his wife and beside the cradle of his child. Such an adventure required the hero's courage and the philosopher's caution, and none but those who were personally interested in it can ever imagine the feelings which must have agitated their hearts! From time to time, when the night was dark, the knotted cord would glide from window to window and the prisoner would pass from knot to knot, and enjoy delightful hours of converse with her whom he loved best on earth.

GOOD DOCTRINES.—Have you enemies? Go straight on, and mind them not. If they block up your path, walk around them, regardless of their spite. A man who has no enemies is seldom good for anything—he is made of that kind of material which is so easily worked that every one has a hand in it. A sterling character—one who thinks for himself, and speaks what he thinks, is always sure to have enemies. They are as necessary to him as fresh air; they keep him alive and active. A celebrated character, who was surrounded by enemies, used to remark: "They are sparks which, if you do not blow will go out of themselves." Let this be your feeling, while endeavoring to live down the scandal of those who are bitter against you. If you stop to dispute, you do but as they desire, and open the way for more abuse. Let the poor fellows talk—there will be but a reaction, if you perform but

your duty, and hundreds who were once alienated from you, will flock to you and acknowledge their error.

BOSTON DEPARTMENT.—We most especially call the attention of the friends of Agriculture and of all its kindred interests to our columns, as a medium of making known their business in California. Here is a large field for introducing such manufactures, implements, seeds, books, wares, merchandise, as are really wanted, and while we do this, we as faithful journalists, would warn all against forcing upon this market, merchandise, goods, wares, &c., that are not required, or merely shipping as a speculation; we tell them loss and ruin will be the result. A wholesome and profitable trade can be done; a legitimate trade will be successful, but the day of wild speculation is over; everything don't sell. We therefore invite advertisers and subscribers. We can extend their business, and we are pleased to receive their favors, and to extend to them our influence to their business over the whole State, and over Oregon and Washington Territory.

Especially and most cordially do we commend our corresponding agent, our Son, J. Q. A. Warren, Esq., who will act in every department in all the States, receive advertisements, subscriptions, &c. We have letters, notices, &c., from Boston and New York, which we are obliged to defer till our next issue. The famed "Wistar's Balsam of Wild Cherry" will through our columns reach, and save a thousand lives. "Oak Hall" too, the returning Californian will find it and be clothed. "Parker, White & Gannett," will open a new and better furrow in the Agricultural trade by appearing in our columns. We shall be more able to respond to our Boston correspondent next issue, a press of matter now having been disposed of.

REGISTRY OFFICE.—We call the attention of the public to the advertisement of Messrs. Wainwright, Randall & Co. Strangers, and all wishing to learn the residences of persons or business, can readily do so by a reference to this. The registry volumes comprise nearly 50,000 names, and any one that pleases to examine them will be surprised to see how much has been accomplished already. We commend the enterprise, and shall say more hereafter.

PRICES OF PRODUCE IN NEW YORK.—By referring to the prices current, East, we find the following remarkable contrast between California and New York. The present is the propitious moment for shipping Grain and Flour, and all that goes out of the country, the better for the shipper and the country too:

SAN FRANCISCO PRICES.	NEW YORK PRICES.
Wheat, P. bushel, \$ 90¢ 20	Wheat, P. bushel, \$ 50¢ 2 75
Barley, P. bushel, 75¢ 1 00	Barley, P. bushel, 1 25¢ 1 50
Flour, extra P. bbl 6 00¢ 10	Flour, extra P. bbl 9 00¢ 10 00
do extra, 10 00¢ 10	do extra, 10 00¢ 12 00
do best, 10 00¢ 10	do extra, 12 00¢ 12 50
Meal, 10 00¢ 10	Meal, 10 00¢ 12 50
Potatoes, P. bbl, 60¢ 75	Potatoes, P. bbl, 60¢ 75
Turnips, P. bbl, 1 00¢ 25	Turnips, P. bbl, 1 00¢ 25
Cabbages, P. bbl, 5 00¢ 25	Cabbages, P. bbl, 5 00¢ 25
Beets, P. bbl, 1 00¢ 25	Beets, P. bbl, 1 00¢ 25
Carrots, P. bbl, 1 00¢ 25	Carrots, P. bbl, 1 00¢ 25

SPECIAL NOTICES.

The New England Washingtonian says: For incipient Consumption, we know of no better remedy than WISTAR'S BALSAM OF WILD CHERRY. It is soothing and healing in its nature, and is admirably adapted to allay and dissipate that unwholesome and distressing irritation which so much prevails at this season of the year, caused by colds, coughs and chills, brought on by frequent and sudden changes of the weather. We know of several severe cases which have been radically cured by the use of this Balsam. Some two years since a friend of ours was suffering under what was thought to be confirmed consumption—a severe cough, loss of appetite, night sweats, &c. By the use of the Balsam he dispelled the troubling phlegm, and is now in the enjoyment of comparative good health.

Sold by all druggists.
Agents for San Francisco, B. B. THAYER & CO.

Home Testimony.—Royal Smith, of Boston, writes that, by the use of a single bottle of WISTAR'S BALSAM OF WILD CHERRY, he was cured of a deep-seated cold and violent cough, accompanied with night sweats and vomiting, with severe pain in the side, loss of appetite, &c. His physician could not relieve him, and a friend induced him to try the Balsam. He began to improve immediately, and in a few weeks was entirely cured. Surely, such a remedy is worthy a trial.

••••• He never it is claimed I. TUTT on the wrapper.

Persons purchasing articles advertised in our columns will confer a favor by saying they observed them advertised in the "CALIFORNIA FARMER."

Bookseller's and Stationer's WHOLESALE AND RETAIL WAREHOUSE.

WE beg to call attention to the following catalogue, which comprises in part our stock of books and stationery. By the recent arrival of clippers, our assortment of goods in this line has been made very complete, and we feel sure that the public will find it to their interest to call and examine our stock before making purchases elsewhere.

Blank Books.—Ledgers, Journals, Cash, Invoice, Day and Record Books, in Russian, Sheep and Mottled Binding. Copying Books, Textual and Pencil Memorandums, Blank and Pencil Books, Diaries, &c., &c.

Paper.—Brief, Letter, Cap, Note, Envelope, Tissue, Blotting and Filtering Papers.

Stationery.—A complete assortment of Law, Counting House and Fancy Stationery.

Bound Books.—A large and splendid assortment of Law, Standard, School and Miscellaneous Books, including many in rich fancy binding, suitable for presents.

Blank.—Law, Shipping and Customs House Books, Miscellaneous—Gold Pens, Razors and Razor Strops, Pocket Cutlery, Toilet Brushes, Cash, Debt, Date, Post Office and Envelope Boxes; Portable Drills, Cases Dressing Cases, Ladies' Toilet and Work Cases and Retainers, Port Monies, Penmanship, Open Glasses, Fancy Articles, &c., &c.

On the arrival of each steamer we receive a full supply of all the leading Newspapers, Periodicals, Reviews and Magazines published in America and England, which we can furnish to all in quantities to suit.

GEO. W. MURRAY & CO., Montgomery Block.
N. B.—Particular attention paid to filling orders. v3-19

Chenier.

OFFICE OF THE "LIVING AGE."
I have 300 copies of this work now in stock, and I am obliged to sell them. The amount of capital locked up in them, over 300,000, is a great deal more than I can afford; so that we are obliged to sell them. Before doing so, we propose to print as many complete sets as may be ordered, and to sell any numbers or volumes necessary to complete the sets in the hands of our subscribers. We press this upon your attention, for the value of a complete set is very great, and well worth the expense necessary to make it complete.

Here are 40 volumes, equal in quantity of matter to 150 ordinary octavos; in other words, equal to a whole set of the Edinburgh Review for sixty years. And it is made up of the best productions of the best writers of the last ten years; not dull, dry or abstract, but instructive and full of interest and value to the reader. The interest will not diminish as the volumes grow old, and fifty years hence it will be read with as much zest as at present.

On the grounds of public good, his own profit, and his future reputation, the editor is desirous that a set of this work should be placed in every public library and school district in the United States; being convinced that its influence will be only good upon every reader, especially upon those who may be suffering under their spirits to self-instruction.

It is a wonderful acquisition in making up a library, that the works should not only contain good matter, but should be various and attractive. The editor of the Living Age is confident that this work is eminently readable, and will continually be taken from the shelves of our library, public or private, in which it may be placed. We have seen in the Franklin Library at Philadelphia, a set of the "Museum," which we edited before the Living Age was started, the volumes of which were thought to be like old spelling books. Made up of the best, it cannot be otherwise.

Your advice and assistance, dear reader, is invited, toward the accomplishment of the object above set forth; and while by so doing you will do good to all who read the work it will perhaps be pleasant to you to know that you will also benefit the person who has long and laboriously "mined the richest from the chaff," that you might enjoy the more easily.

LITTLE, SON & CO.

For Napa City, Sonoma and Mare Island.
THE new and beautiful steamer NAPA CITY, Capt. Goodrich, is now running tri-weekly to Napa City, touching at Sonoma Island and Sausal Ferry, and connecting with stages for Mare Island, Russian River and the Sulphur Springs.

MISCELLANEOUS.

Copartnership Notice.

THE undersigned have formed a Copartnership for the purpose of continuing and carrying on the Furniture Trade as Wholesale and Retail Dealers and Importers, in this city and Sacramento, under the name and style of HOWES & CO.

Resident Partner, Boston, R. HOWES, of the old firm of Hawes & Co., 180 and 182 Montgomery street.
Resident Partner, San Francisco, DAVID MOORE, San Francisco, Sacramento, 139 Jackson st. 103 K st.
Resident Partner, Sacramento, B. C. NEWCOMB, 77 K street, Sacramento City.
San Francisco, May 8, 1855.

To Our Friends and the Public.

By uniting the above three firms our capital is largely increased and our

expenses reduced more than one-half.

which enables us to offer you a greater variety of Goods at 15 to 25 per cent. less than our former rates. One of the partners will be in Boston and New York to purchase goods, and will take advantage of the markets to obtain such goods as are desirable, at the

Lowest Cash Rates.

Three years experience will enable him to select a stock that will

Defy Competition in Quality and Prices.

We are now before you with a large and DESIRABLE STOCK OF NEW GOODS, and shall endeavor to merit a share of your patronage. It will be our pride to give Perfect Satisfaction, both in quality, prices, and good treatment.

77 and 103 K street, } 180 and 182 Montgomery street, }
Sacramento, } opposite Metropolitan Theatre.

FURNITURE!! FURNITURE!!

AT REDUCED PRICES.

NEW FIRM AND NEW GOODS.

Our stock of Furniture is now complete, comprising every thing suitable for the Parlor, Chamber, Dining Room or Office. We have lately added to our stock \$10,000 worth, purchased here at low rates, which, together with our former stock, and constant additions by every clipper ship, gives us one of the largest stocks ever offered in California. We have reduced our prices to conform to the times, at least 25 per cent. as all who will favor us with a call will be convinced. By the addition of Messrs. Moore & Newcomb's stocks, here and in Sacramento, we can safely say that our stock is the most varied and complete ever offered to the public, and that we cannot be undersold by any firm in San Francisco, Sacramento, or elsewhere in this State. Call and examine our stock before purchasing.

v3-16 J. H. SHATTUCK.

A Lady's Praise of Spalding's Oil.

As the shadows of evening began to fall,
A Lady was dressing her hair for the Ball;
Soft were the accents that fell from her tongue,
And this was the song that the lady sang—
"Away with Pomatum and Blandine!
No more in my room shall Bear's Grease be seen,
The hair's soft texture they only spoil;
Oh, give me the Cusior and Rosemary Oil—
It's made up of treasuries look soft and bright,
And my hair keeps its curl tho' I dance all night.
No more of grease or strong spirit for me,
But Spalding's mixture of Rosemary!"

Sold by

The proprietors will, in all cases, be responsible for baggage, after it is put in their charge. Any orders for the stage left at the International Hotel will be promptly attended to. Our stage may always be known, having the name of International Hotel on the sides, and in the night time it will be seen on the lamps.
v3-16

AGRICULTURAL, &c.

Pitt's Double Plow Eight or Ten Horse Power.

THIS Horse Power, as now manufactured by the subscriber, is admitted by those who have purchased and used it, to surpass, for strength, ease, durability and cheapness of repair, any other ever offered to the public.
Their great superiority over other powers, consists in the plan of construction. By reference to the cut herewith presented, it will be seen that this Horse Power is just double the strength of any single great power, and is the only real Double Plow Power in existence.
Notwithstanding it is sufficiently strong and warranted to stand the full strength of eight or ten horses, it is also warranted to give as much effective or useful power, when driven by one or two horses, as any other power, whether constructed on the endless chain or lever principle.
I have, for the last eight years, manufactured and sold a large number of these powers, during which time they have been thoroughly tested, and gained a high reputation over all others; I therefore challenge competition!

At the great trial of Horse Powers at Geneva, in 1842, where it was thoroughly tested, it received the New York State Agricultural Society's First Premium, "for the best Horse Power for general purposes." At Cleveland, O., in Sept., 1852, it also received the State Society's First Premium. Also, at the great Agricultural State Fair held at Pittsburg, Pa., in 1853, it was awarded the First Premium.
I deem it unnecessary to add any further testimonials to corroborate the high recommendations here given, as the best recommendation of its merits is a thorough trial.
The above machines are for sale by
CASE, HEISER & CO.,
No. 60 Sanson street, San Francisco, Cal.
who are also prepared to furnish castings and extras for repairs for said machines, and are appointed my Agents in receive orders or sell my machines in future in California and Oregon.

v3-12

HOTELS.

Orleans Hotel.

Second, between J and K streets, Sacramento.
THE above Hotel, occupying a space of 85 by 150 feet, is the most central part of the city, built of brick and three stories high, with accommodations to travelers not surpassed by any establishment in the State.
The ground floor is set apart for Dining Room, Reading Room, Billiard Room and Bar Room.
The Table will be found at all times supplied with the choice of the market.
At the Reading Room can always be found the latest papers of the State and the latest dates from the Atlantic and Europe.
The Billiard Saloon is furnished with the excellent tables, superintended by a competent keeper.
The Bar will be supplied with the best liquors and wines.
The second and third stories of the building are set apart for Parlor, Family Rooms and Chambers, comfortably furnished. We have also a large hall leading to the rear of the Hotel, and from Front street (formerly known as Back's Hall) set apart for lodging Apartments, which are furnished in a superior manner, which, added to the Hotel, will afford ample accommodations.
The "Orleans" is also the Depot and Office of the California Stage Co., from which place Stages leave daily for all parts of the State.
HARDENBURGH & COUSE, Proprietors.
v3-2

American Hotel, Benicia.

THIS HOUSE has been established Five Years, with-
out interruption or change of proprietorship, and is frequented by the travelling public to be one of the most conducted Hotels in the State.
Large and well ventilated, and handsomely furnished rooms, for transient travelling or for permanent residents, can always be obtained.
A LIVERY STABLE is connected with the Hotel, so that travelers can have their carriages, either to take the steamers or stages, or a private carriage, in any of the beautiful valleys around. Stages leave this Hotel every morning for the different valleys.
The daily papers from various sections of the State are on file in this Hotel. Everything will be done by the proprietors that the patrons of this House may find their stay pleasant and satisfactory.
v3-16 1m C. M. DAVIS, Proprietor.

Russett House.

Thrashers, Reapers, Mowers, Fan Mills, Straw Cutters, Corn Shellers, Vegetable Cutters, Corn and Flour Mills, Sausage Cutters and Sausages, Horse Rovers, Smit Mills, Wheat Drills, Chains, Ox Yokes, Haws, Harrows, Rakes—taken together with all the small tools and implements appertaining to cultivation.
N. B.—Branch House at Marysville. All orders promptly attended to.
v3-5

San Francisco ahead of the World!

Over on, on apace with the Age and Times!

Hurrah for Vance's new Daguerrotyp Gallery!

Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets.

WHY should every one go to Vance's when there is a PERFECT LIKENESS? Because he has now the best arranged Gallery on the Pacific Coast, and not in his surroundings by any in the world. Innumerable containing lenses more perfect, and with greater power than any ever before used in this country.
2d. Because he has the largest light in the world, from which he can burn three distinct lights—top, side, and half side lights—that now enables him to overcome the great difficulty which every artist in this city has to contend with—namely, in order to obtain perfect likenesses, different sized features require differently arranged lights.
3d. Having the largest light, he is enabled to make pictures in half the time of any other establishment in the city; therefore they must be more perfect, for he will know the duration of the time that the camera takes the exposure.
4th. Because every plate is carefully prepared with a coating of pure silver which renders the plate, hard and lasting plate that is as much valued, and which cannot be produced in the common plates, as they are now used by other artists.
5th. Because his plates of late, after much experimenting brought his perfected preparations to perfection, using compounds which prevent them from anything over before used in the world, which enables him to produce perfect likenesses, at any sitting, with that clear, soft and beautiful tone, as much admired in all his pictures.
All these yielding perfect likenesses will do well to call before seeing elsewhere, and judge for themselves.
v3-7

Don't forget the place.

New Building corner of Sacramento and Montgomery streets, entrance on Montgomery, next door to Austin's. 17

APOTHECARIES HALL

LITTLE & CO.

147 Montgomery street, San Francisco.

APOTHECARIES HALL.

THIS celebrated establishment—one of the finest in the world—is under the immediate supervision of Mr. WILLIAM B. LITTLE, the pioneer partner of the late firm of Thayer & Little. Mr. Little has devoted recent years to the profession of Chemistry and Apothecary, and is a member of the American Chemical Association and of the American Pharmaceutical Association.
None but the Purest and Best Medicines are sold in this establishment, and the prices have been reduced to conform with the times.
There will also be found at this establishment a splendid assortment of Fine Perfumery, Hair Brushes, Fancy Soaps, Hair Oil, Gentian, Kuba's Extracts, Cologne Water, Bay Rum, Tooth Brushes, Shell Combs, Toilet Mirrors, Fine Pomades, and every article necessary for the Toilet. Patent Medicines, European Lotions, and all articles usually kept in a first-class establishment of this kind, will be found constantly for sale at the most reasonable prices, and invariably of the best quality.
v3-17

Varieties.

SPRING.

Oh! I love, I love the beautiful Spring,
When leaves and plants are growing;
When the joyful birds in the green wood sing,
And gales o'er the hills are blowing.
And I love, I love the musical note
Of waters that swift through the valleys float,
Their way to the far sea taking;
My spirit is thrilled with a holy thought,
And my heart with a gentle love is fraught,
Amid the young year's waking.

Oh! I love, I love the beautiful Spring,
When morn is newly dawning,
And the larks aloft on their rapturous wing,
Their praise through the ether streaming;
And I love, I love the freshening breeze,
The lowing herds, and the green, green trees,
And the fields of glistering flowers.
The sun reflects o'er valley and stream,
The mountains he tips with a golden beam,
And lights the budding bowers.

Oh! I love, I love the beautiful Spring,
When day is calmly closing,
And the flowers abroad their fragrance fling,
On the twilight air reposing.
And I love, I love from the hawthorn tree,
The gush of the nightingale's melody,
While the moonbeams quiet are sleeping—
When peace like a vale o'er the landscape lies,
And the earth smells sweet as the balmy skies
Their dew-drop tears are weeping.

FOR WHAT.—"Pa, did God make oysters?"
"Yes, my son." "What for?" "For us to eat."
"Well—but then, why do they have shells?"
This was a riddle to the little fellow—that oys-
ters are made to be eaten, and yet were made with
shells to prevent their being eaten. The same
question of the intention of God in the creation
of things, meets the student of Nature at almost
every spot. Even plant has been given some
way of resisting injury. The blades of grass have
saw-like margin. The leaves of corn are sharply
edged with flint. The heads of grass are bearded.
The kernels of all nuts are cased in by a shell to
prevent their being destroyed. And yet there
have been animals made for the destruction of all
those. Cows with rough tongues for drawing
grass into their mouths; horses with front teeth
like shears for cutting it off; and sheep that chop
it off with their under teeth against their upper
gum, as a hatchet chops on a block. The teeth
of squirrels are softest on the inside, that they
may wear sharp, and grow continually that they
may not become too short. In this they are kept
keen enough to go through the shell of a dried
butter-nut, though it turns the edge of a knife.
These self-sharpening teeth were surely made for
chiselling the shells of nuts. Every animal also
has been given some means of defence. Horses
have their teeth, and their hoofs and their speed.
Oxen have their heels and their horns. Even
sheep have their wool, and some speed, and can
butt. Oysters and turtles their shells, and hedge-
hogs their quills.

But for the destruction of these, there are the
carnivorous races, with claws to catch them, with
tusks to transfix them, and with intestines that
can be used for no other purpose than to digest
their flesh.

Fish have been given an instinct of fear, and
the use of fins with which to escape from the fish
hawk, and yet this bird was given a beak and
talons, and must live by their destruction. It
seems as though everything has been arranged to
prevent death on the one hand, and yet to effect
it on the other.—Country gentleman.

FEELING APPAL.—Shopkeeper. "That's a bad
fifty cent picco, I can't take it; its only lead sil-
vered over."

Customer.—"Well, now, admitting such to be
the fact. I should say that the ingenuity dis-
played in the deception might induce you to ac-
cept it. Admire, sir, the devotion of the earth to
the divine idea of Liberty. Liberty the idol of
us all!—Ho, having wrought her edify in humble
lead, in order to make it worthier of that glorious
impression, resorts to the harmless expedient of
silvering it over! And shall we harshly repudi-
ate his work! Oh, no, sir! you'll take it: I know
you will!"

A GENUINE Down-East essaying to appro-
priate a square of exceedingly tough beef at
dinner, in a Wisconsin hotel, his convulsive efforts
with a knife and fork attracted the attention and
smiles of those in the same predicament as him-
self. At last Jonathan's patience vanished under
ill-success, when laying down his utensils, he
burst out with, "Strangers, you needn't laugh—if
you haint got any regard for the landlord's feel-
ings, you orter have some respect for the poor old
animal." This sally "brought down the house."

AN IRISHMAN'S WILL.—I will and bequeath
my beloved wife, Bridget, all my property, with-
out reserve; and to my eldest son Patrick, one
half of the remainder; and to Dennis, my youngest
son, the rest. If anything is left, it may go to
Terrence McCarty."

THE RULING PASSION.—An eminent London
speculator, on witnessing the brilliant success of
the electric night-works at the Louvre, was heard
to exclaim, with deep feeling, "By Jove! all I
have got to say is, if I hold any share in the
moon, I'd sell out!"

A lady wished a seat. A portly handsome
gentleman brought one and seated the lady.
"O, you're a jewel!" said she.
"O, no," replied he, "I'm a jeweler; I have
just set the jewel!"

MEDICAL.

IT IS A FIXED FACT.
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to
Queen Victoria, and one of the most
learned and skillful men of the age, in
his "Treatise" on Consumption, says:
"That Pulmonary Consumption admits
of a cure, is no longer a matter of doubt;
it has been clearly demonstrated by the
researches of Lennie and other patholo-
gists." Dr. CARSWELL, who investigated
such matters probably as thoroughly as
any man, says: "Pathological anatomy has, perhaps, never af-
forded more conclusive evidence in proof of the curability of a
disease than it has in that of tubercular phthisis," (pulmonary
consumption.)

It is no Fiction.

These statements are made by men who have demonstrated
what they say, time after time, in the crowded hospital, and in
the truth telling dissecting room. They are from men who
have no possible motive for publishing what is untrue, or en-
hancing falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,
has cured hundreds of cases of
Consumption of the Lungs, Liver Complaints, Coughs,
Colds, Asthma, Bronchitis, Whooping Cough,
Influenza, &c.

Many of them after every known remedy had failed to reach the
disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

Dr. BOYDEN, a Physician in Maine, says: "I have recom-
mended the use of DR. WISTAR'S BALSAM OF WILD
CHERRY for diseases of the lungs for two years past, and
many bottles to my knowledge have been used by my patients,
all with beneficial results. In two cases, where it was thought
confirmed Consumption had taken place, the Wild Cherry of-
fected a cure."

Dr. A. H. MACANAI, of Turboro, North Carolina, writes us,
under date of Feb. 14, 1854, that he has used DR. WISTAR'S
BALSAM OF WILD CHERRY in his practice the last eighteen
months, and considers it the best preparation of the kind he
ever saw, and knows of none so deserving the public patronage.

Dr. WM. A. SHAW, of Washington, D. C., says: "I wish
heartily success to your medicine. I consider every case of ar-
rest of the fatal symptoms of pulmonary disease as a direct
tribute to suffering humanity."

SAMUEL A. WALKER, Esq., a gentleman well known in this
vicinity, writes as follows: "Having experienced results of a
satisfactory character, from the use of WISTAR'S BALSAM
OF WILD CHERRY in cases of severe colds during the past
two years, I am induced to express the gratification I feel from
the favorable effects that followed, and also the full faith I have
in the renovating power of Wistar's Balsam of Wild Cherry."

HON. SAMUEL S. PERKINS says: "For several days I had
been suffering from the effects of a severe cold, accompanied
by a very sore throat and sick headache, which completely in-
capacitated me from business. I had taken but a very small
portion of a single bottle of this Balsam, when I experienced
immediate relief. My cough was broken up at once, and my
lungs entirely relieved from the pressure which had become so
painful."

[From the Boston Journal.]

"Wistar's Balsam of Wild Cherry."
This medicine, coming from a respectable source, and care-
fully prepared by an experienced and skillful physician, is
received by the public with confidence. Its efficacy has been
proved in many obdurate cases of disease, and its fame has
rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the
following cure: "Sir—Having been afflicted for more than
thirty years with the Asthma, at times so severely as to in-
capacitate me from attendance to business, and having adopted
many medicines without any but temporary relief, I purchased
several bottles of WISTAR'S BALSAM OF WILD CHERRY,
from the effects of which I obtained more relief than from all
the medicine I had ever taken for this distressing disorder. I
have, by the repeated use of your valuable Balsam, been more
free of pressure for breath, and oppression on the lungs, than I
anticipated, and, indeed, conceive myself cured of the most dis-
tressing malady." C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

**Fifty Thousand Persons die annually in England of Con-
sumption!** In the New England States the proportion is one
to four or five. In Boston, probably, one in four. In the city
of New York sixty-seven died in two weeks, in December, of
this disease. The mere fact that such a disease is ever curable,
nurtured by such unapproachable authority, should inspire hope
and reanimate failing courage in the heart of sufferer from this
disease.

Beware of Counterfeits and Imitations.—Syrups,
and all other preparations of Wild Cherry. Remember, they
imitate in name, without possessing the virtues. Buy none but
the genuine.

Dr. Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

Surgery.

R. B. COLE, M. D.,

Late Lecturer on Surgery and the Diseases of Women; Late
Member of the Board of Censors of the San Francisco Medi-
cal Society; Member of the California Academy of Natural
Sciences, and Corresponding Member of several Medical
Societies in the South and East.

Office—Athenum Building,
South-east corner of Montgomery and California streets,
opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in
the city of Philadelphia, and for the past three years in
this city, would respectfully announce that, in consequence of
a most serious injury received some months since, with which
this community are familiar, he will in future confine himself
principally to his office, where he proposes to treat all

Surgical Diseases.

feeling assured as he does that his former connection with
Medical Schools and Hospitals, together with the extensive
practice he has enjoyed for the past ten years, peculiarly
qualify him for the successful practice of surgery. Of the af-
fections to which Dr. Cole has devoted much of his attention,
may be mentioned: Tumors and morbid growths, occurring
on any part of the body, Diseases of the Spine, Chronic Ulcera-
tions, Cancerous Affections, Dropsies, Diseases of the Bones
and Joints, Diseases of Eye, Ear and Skin, Affections of the
Bladder, Urethra, Scrotum and Testis (or in other words, all
diseases of the Genito-Urinary Apparatus) and Deficiencies,
whether congenital or the result of accident, amongst which
may be enumerated, Club-Foot, Badly-treated Fractures, Con-
strictions of the Limbs and loss of substance about the face, the
result of disease or accident. Dr. Cole has also for many years,
and continues still to pay special attention to obstetrics and the
treatment of all diseases peculiar to Females.

Patients from the interior will be provided with suitable
boarding houses and experienced and attentive nurses.

OFFICE HOURS: Morning, From 10 till 12;
Afternoon, " 2 " 5;
Evening, " 7 " 9.

"Take no thought for the morrow."

THIS TEXT MEANS, BE NOT UNREASON-
ably anxious or disturbed by future cares. It is an advice
easily adopted, if you take such steps as prudence suggests.
Suppose you are troubled with Coughs or Consumption, the
temper is soured, and the good dispositions of the soul languish,
the mind suffers; but obtain bodily relief from the use of Dr.
DEVINE'S COMPOUND PITCH LOZENGES, and the mind
and soul repose in that tranquil reliance on DIVINE PROVIDENCE
which the text commands. Price 50 cents a box, or 3 for \$1.

Collections attended to promptly, and return made in coin
or dust.
[v3-15] E. W. TRACY & CO.

PACIFIC EXPRESS COMPANY.

THE late employees of ADAMS & Co., in consequence of the
disruption of that firm, have organized themselves into a
joint stock company, under the above name and title, for the
purpose of conducting a General Express and Forwarding
business in all its branches, throughout California, Oregon and
the Pacific Coast generally.

The business will be strictly and solely a forwarding one,
having no connection with banks and bankers, and will be con-
ducted on safe and economical principles.

The Expresses will leave the office at the north-west corner
of Washington and Montgomery streets, daily, at regular hours,
for Sacramento and the Northern Mines, Stockton and the
Southern Mines, San Jose, San Juan and Santa Cruz, Mon-
terey, San Pedro and the Southern Coast generally, as well as to
the Northern Coast of California and Oregon.

We will also run a regular Express for Knight, Small Par-
cels and Letters to and from the Atlantic States by every
steamer.

The parties who have organized this company are well
known in the community as old and experienced express men,
and hope it will be acknowledged generally, understand their
business thoroughly. They think they are not saying too much,
when they attribute much of the success of the late firm of
Adams & Co. in the express business to their exertions and
personal energies.

In conclusion they would solicit a fair share of the favors of
the public, pledging themselves to exert their best endeavors to
transact such business as may be entrusted to them in a prompt
and business-like manner.

Collections of all kinds will be promptly attended to at any
of the points mentioned above.

San Francisco, March 1st, 1855. R. G. NOYES, President. v3-10.

Ingham's Improved Smut Machines.

THESE Machines combine all the apparatus necessary to
cleanse Grain, rendering it unnecessary to have any other
machinery for that purpose in the mill. They are portable and
occupy about four feet square on the floor, by eight and a
half feet in height; and will clean the worst samples of Smutty
Grain, also remove short straws, white caps, seeds and other
foul substances in the most perfect manner. All of the old
worth saving is collected in a reservoir, while the smut and
light dust are passed out of the mill, allowing the machine to
be put on the same floor with the flour chests or wherever
most convenient, without being enclosed. It is a California im-
provement and designed to meet the wants of this country;
earlier machines having been found to be inadequate to that
purpose. It has received the highest recommendation from
all using them, among whom are Pettit & Hodgekiss, Brighton
Mills, Sacramento; Brooks & Hull, Happy Valley Mills, San
Francisco; Wm. Sharp, American Mills, San Francisco; Bab-
bit & Hale, Sierra Nevada Mills, San Francisco; H. S. Hill,
Washington Mills, San Francisco.

These building Mills can save expense and room by using
this machine, as they will avoid all the machinery ordinarily
used for that purpose.

Orders filled on short notice. SHOP on L street, between
Front and Second, Sacramento. H. B. INGHAM.
N. B.—All information given, and orders left at WARREN &
SON, San Francisco, will be attended to.

The following certificate is among the number received
others can be referred to in quantities.

This is to certify that I have one of H. B. Ingham's Improved
Smut Machines, and believe it to be superior to any other. I
need no other fixture for cleansing grain, except the machine
itself; it makes no dirt in the mill; occupies but little room;
requires less power, and does the work more perfectly than
any other I have ever seen or used before.

WM. SHARP, Agent American Mills,
Pine street, San Francisco. v3-5
San Francisco, Jan. 11, 1855.

Artestian Well Boring.

WE would respectfully inform the public that we are fully
prepared to take contracts in the above operations in a
manner to guarantee satisfaction or no charge will be made.

SMITH & VAN DYKE having associated themselves with an
old and experienced operator from the East, who challenges the
world to compete with him in all the branches connected with
the above business, are fully confident to guarantee success in
all contracts that we may undertake, and warrant the work for
one year. We have also implements for boring through stone
to any depth, and all work done on the most reasonable terms.
For the satisfaction of those wanting anything in the above
line, we would refer to Thomas Fallon, San Jose; Rufus S.
Edle, of Hayward & Eells; M. A. Sullivan, New Custom House;
Wright & Co., 137 Jackson street, &c., &c.

We can do work cheaper than any other operators, for two
reasons:

1st. Because we are prepared to work on a most extensive
scale.

2d. Because we undertake all branches connected with the
above business, and are, therefore, able to work with certainty.

All orders left at the What Cheer House will be promptly at-
tended to.

SMITH & VAN DYKE, Contractors,
118 Sanson street.

N. B.—We also refer to Warren & Son, publishers of the
"California Farmer," who have seen and known the character
of the work done.

MAKING ROOM FOR A SPLENDID STOCK

Fashionable Spring Clothing,

AT THE
BRANCH OF KEYES & CO.'S

[From the Country Gentleman.]

"A Reform Needed."

Such is the title of a brief article written by the late lamented A. J. Downing, and published in the Horticulturist for October, 1851. The evil which he therein exposed to the reprobation of all lovers of decorum, good order and good taste, still exists, as it did at the time he wrote. It is the custom of allowing cows, hogs and other cattle to run at large in the streets of cities and villages, and in the highways of the country. This abomination extends all over the Union, with the single exception of the State of Massachusetts, and the town of Newburgh in the State of New York. If there are any other exceptions it would give us pleasure to be informed of the fact, and to have the public know it.

Now, Messrs. Editors, we think you would be doing something considerable towards promoting good order and good taste, and towards abating an almost intolerable nuisance if you would reprint that excellent paper from the pen of Mr. Downing, and give thousands an opportunity of perusing it, who have never seen it, and never would see it, where it originally appeared. If you should reprint it in the columns, both of your weekly and your monthly publications, it might cause the subject to be agitated and discussed in many places where the evil is grievously felt. And if the order-loving inhabitants of several of the places where the custom referred to is a most annoying nuisance should be encouraged by the example of the same class of citizens in Newburgh, and make the reform needed a matter of special effort at next town-meeting, they might probably rid themselves of an evil under which they have long suffered most grievously.

Do, therefore, Messrs. Editors, let the article referred to appear, as soon as possible, in your columns; that the subject may be agitated, and steps taken to secure the needed reform, in readiness for some action at next town meeting. Ours.

THERE is one feature in the municipal government of most of our towns and villages, indicative of so low a point of civilization, that it calls loudly for reform. It would, perhaps, hardly be worth while to call attention to it, trusting to the progress of good government and propriety to banish it, did it not appear rather to take the position of a more established fact, year by year.

We refer to the custom of allowing animals that belong to the pasture-field, and barn-yard, to run at large in the highways of the country, and streets of the cities.

We believe we are correct in saying, that this abomination prevails by toleration all over the Union, with the exception of one single State, Massachusetts—which forms a most honorable exception.

The traveler may journey from one end of Massachusetts to the other—he may visit her smallest hamlets—her lovely, elm-embowered villages—her busy manufacturing towns, or her thriving and populous cities—and everywhere he sees more order, cleanliness and good government than elsewhere. If it pains us as a New-Yorker to be obliged to express their superiority—it gives us pleasure as an American, to be able to point to one of the States where public education has been longest and most largely diffused, as a standard in these respects to other States that yet lag behind in these external marks of civilization.

We believe, indeed, that the same municipal laws governing the towns and villages of Massachusetts, which forbid the running at large of animals in the streets, are for the most part in existence in other parts of the country. But in Massachusetts these laws are enforced—in other States they are a dead letter.

The most flagrant violation of these laws, and the most unaccountable one, is in the great commercial metropolis of the country, New York. In the third largest city of the Christian world, where the wealth, luxury and refinement of the oldest and most cultivated portion of Europe prevail, the civilization is at so low an ebb in this respect, that hogs and cows have free range of the streets—that droves of fat cattle and sheep are driven through the streets at mid-day, and hardly a month passes by that newspapers do not record accidents to women and children—gorgeous and trampled upon in the very park in front of the city-hall itself. All over the country the condition of things is no better. In Washington, droves of cows and hogs, by hundreds, ramble at will over the open unimproved grounds about the city—in almost every town the traveler stumbles over swine at every corner of the street; in almost every country neighborhood the owners of gardens and orchards tremble daily for the sanctity of their premises, and guard jealously the gates, lest the domestic animals that are nobody's property in particular, but live by robbing the community in general, should make an onslaught upon our light wooden fences, and sweep garden and orchard before them.

The extra cost of fencing against these commensals, amounts to at least hundreds of millions of dollars to the country at large—as any one who has traveled through France, where no animals run at large, and there are miles without fences, will understand. Every man who owns a few acres of land, spends hundreds of dollars in shutting out animals that are not his own, and have no right to be at large to his annoyance and cost; and thus the country is both disgraced and over-taxed by a miserable shortsightedness upon the part of the community, who will not boldly enforce the law and protect their own interests.

We have called this feature a mark of a low condition of civilization, and every thinking person who gives it a few moments reflection, must agree with us.

In Ireland, the poor cottagers think it no degradation to humanity to share the best and only room of their cabins, with their pigs. In Switzerland, even wealthy farmers lodge their cattle in the basement story of their houses, and a neatly rounded manure heap is one of the scenic features that meets the eye from their front-door.

Will any American attempt to argue that this condition of things in Ireland and Switzerland, is not the index of a lower state of civilization than our own? But will not any person, either from England, France, or even Massachusetts, also feel equally shocked at the brutal aspect of the streets in most parts of the United States, and put it down as an almost equally decided mark of low civilization?

It seems to us that as there can be no question on this subject, and as no right thinking man can wish to live among cattle or share the streets and avenues with them, it is time that something should be done to arouse public attention to the barbarism we speak of. It may be thought a little matter by many persons, but so are personal cleanliness, the health of cities, the introduction of pure water in towns, and common schools—all "little matters" if the public sentiment and public intelligence are at so low an ebb as not to see and feel their value. But in fact everything which tends to make mankind respect themselves, tends to raise them in the scale of humanity. Certainly the more we live like men, the more we fulfil this condition, and it is no help to such a hopeful condition to pass great parts of our time in the streets of towns and cities when animals and men make common enjoyment of them.

There are two classes of citizens who stand in the way of wholesome reform in the matter we speak of. One of the largest, is an ignorant and indifferent class—who see nothing uncomfortable in this state of things, and need therefore to be roused and shamed into action by an expression of right feeling on the part of those who see cleanliness and decorum in their true light; the second consists of demagogues who fear to disturb the prejudices of that small class in the community, which understand by the word liberty, not a wholesome obedience of just laws made by the people—but a certain license to do anything and everything not absolutely criminal, with their own property, and that of all their neighbors.

That it is only needful for a few good citizens in every town to look at the matter clearly, and determine to have orderly and sanitary laws like these enforced, we have had abundant proof in

the town where we live—which is, so far as we know, the only one in the State of New York where animals are not joint-stock possessors of all the streets and highways. Eight or ten years ago Newburgh, which has a population of nine thousand inhabitants, was one of the least cleanly and orderly towns in the North. Droves of hogs, cows and geese, ran at large everywhere, and the possessor of a garden or even of a bit of sidewalk was always liable, night and day, to the nuisance and annoyance of a number of these commensals. At length it was determined by a few of the more orderly inhabitants, to endeavor to have enforced the law for pounding animals. The trustees of the village doubted the possibility of enforcing the law, and flinched in their duty. At the next election, however, the hog law was made the test, trustees favorable to its execution were elected by a large majority, notwithstanding a fierce opposition. When the law was enforced, so strong was the feeling of resistance, that the public pound was several times broken into at night, and the animals released. But the orderly part of the community stood firmly by the authorities, and the latter did their duty with the law triumphed. After much grumbling on the part of many who imagined that they had a clear right to prey upon the public in this manner, a general acquiescence came about. And now for five years we have had cleanly streets, free from all animals of all kinds, and such an air of neatness and rural beauty has sprung up, that the place has almost changed its character. The carriage-gates of grounds, like our own, which, under the old system of things, needed almost an armed huntsman to keep out the brute population, are now wide open day and evening, without the least plant suffering depreciation; and what is the best part of the story, so completely has the feeling of better civilization triumphed, that it would, we imagine, be very hard at the present moment to persuade the population of this town to return to the old condition of streets, overrun by mean beasts.

In order that the reform may spread, right-thinking persons must both protest and take up arms against the nuisance—and we hereby enter the lists with all our hearts, and call on our fellow citizens throughout the country to shake off this remnant of low civilization.

Culture of Teasels.

THE best soil for teasels, is a gravelly loam approaching to clay. Sandy or much soil is not good. The best course is, to turn over in April, green-sward, with a good coating of manure, harrow very fine, and when the weather is dry and the soil mellow, sow, with a drill or by hand, in rows three and a half feet apart, and so thick as to ensure one or more plants to each foot in the row. Soon as they are up, so that the rows can be seen, run a cultivator or small harrow two or three times between the rows, and thin them with the hoe to six to twelve inches apart. Keep the cultivator and hoe at work through the summer, or go over them three or four times, and suffer no weeds to grow with them. This ends the first year. The second year, run the cultivator through them as soon as the ground is dry in spring, and mellow it well. If the weeding was thoroughly done the previous year, the hoe will not be needed now.

Now for the cutting and curing. Build sheds, open at the sides like corn-cricks, with loose cross timbers, inside, about one foot above each other. Then begin a floor on the bottom tier, of narrow boards, laid one and a half or two inches apart. We are now ready to cut them. Baskets holding about two and a half or three bushels each, are best for cutting into. Shears of common size, ground to a thin sharp edge like a knife, are best to cut with.

About August 1st, they will be fit to cut. This is known when the blows, or petals have fallen. This does not occur on all at the same time, or all at once on the same teasel, but gradually for a period of several days, depending on the weather. No teasel is really fit to cut until all the blows have fallen from it. Hence it is necessary to go over them about three times. As fast as cut they should be spread on the open floors described above, so thin that they may not mould, which they are very apt to do in warm or wet weather. About three or four inches in depth is enough for each floor. The more carefully they are handled in cutting and curing, the better the article. Each cutting should be kept separate. Four to six weeks will dry them, when they are ready for market.

It may readily be seen that the crop must sell pretty well, to leave a profit to the grower. Two years' use of the land, and constant attention, are necessary to secure a crop. None but a thorough man, can try it with any hope of success. At present, prices are very low, and but comparatively few are used. Frequently the crop is on

hand from three to five years before it is all sold. Present prices, from 70 cents to one dollar per thousand of ten pounds. Average crop, about one hundred thousand per acre.—*L. H., in Country Gentleman.*

What Should be the Objects Aimed at by the Agricultural Societies.

We have received a printed copy of the able address of Mr. William Kelley, on retiring from the Presidency of the New York State Agricultural Society—delivered at the Albany meeting, February 10, 1855. There are many valuable suggestions in this address. We give the following extract:

The diversified objects of these societies, seem not to be known nor appreciated as they should be. Many suppose their whole business is to get up an attractive annual exhibition and distribute premiums to the best specimens in every department there shown, but this, though important, is but a means to an end.

I was struck lately in reading the charter of the Royal Agricultural Society of England, with the enumeration of the means it employs to advance the great object for which it was constituted—allow me to read them to you.

1. To embody such information contained in agricultural publications and in other scientific works, as have been proved by practical experience to be useful to the cultivators of the soil.

2. To correspond with Agricultural, Horticultural and other scientific societies, and to select from such correspondence all information which, according to the opinion of the society, may be likely to lead to practical benefit in the cultivation of the soil.

3. To pay to the occupier of land or any other person, who shall undertake at the request of the society, to ascertain by any experiment how far such information leads to useful results in practice, a remuneration for any loss he may incur by so doing.

4. To encourage men of science in their attention to the improvement of agricultural implements, the construction of farm buildings and cottages, the application of chemistry to the general purposes of agriculture, the destruction of insects injurious to vegetation, and the eradication of weeds.

5. To promote the discovery of new varieties of grain, and other vegetables useful to man or for the food of domestic animals.

6. To collect information with regard to the management of woods, plantations and fences, and on every subject connected with rural improvement.

7. To make provision for the improvement of the education of those who depend upon the cultivation of the soil for their support.

8. To take measures for improving the veterinary art, as applied to cattle, sheep and pigs.

9. At the meetings of the society in the country, by the distribution of prizes, and by other means, to encourage the best modes of farm cultivation and the breed of live stock.

10. To promote the comfort and welfare of laborers, and to encourage the improved management of their cottages and gardens.—*Am. Ag.*

NEW SEEDLING POTATOES.—We commend most earnestly the following plan of Mr. Bulkely, in the raising seedlings. California should begin anew in everything that it is possible to recreate. Stock thus originated will be sure to reproduce better and in larger quantities.

Mr. D. A. Bulkely, of Williamstown, Mass., has been amusing himself for several years, in raising new varieties of the potato from seed. He informs us that he has now about 600 distinct varieties of seedlings, which he designs planting the present spring, for the sake of testing their comparative qualities. One variety produced by him, called the Stone Hill potato, he states, yielded an average of 256 bushels to the acre last year, and of very superior quality. They become fit to use as early as the 15th of July, and keep good the whole year.

PERSPECTS OF THE FARMER.—The American Agriculturist alludes to the European war, and thinks that "there never was a brighter prospect opened for any class of citizens, than looms up before the United States for the coming and probably many successive seasons." It thinks every article of consumption must continue at very high prices, if they do not exceed the present exorbitant rates; under such circumstances, therefore, every farmer should set vigorously to work as soon as the frost will permit, get the best manures, the best seeds and the best implements, and adopt the most judicious system of cultivation. To enable the farmer to do this, the Agriculturist promises to give a series of articles which will tell them how "to raise the greatest quantities of produce at the least cost." Truly such information will be acceptable to us all.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, MAY 17, 1855.

State Agricultural Society.

The attention of the Agriculturists of the State is now called to this Society. "The note of preparation soundeth," the Government are at work making ready for the Annual Exhibition, and it is to be hoped that an interest will be manifested in all parts of the State to make this Exhibition one of unusual attention. Agriculture, Horticulture, or Floriculture can present specimens that cannot be excelled. The Home Manufactures in every department can present evidence of the skill that will reflect credit upon the artisan, and honor upon the State. The Artist, too, can present nature in her most beautiful forms upon the canvass, so that it shall "speak to us;" and the skillful in many branches of immediate "home industry" can add great interest by the varied products of rural life and beauty.

The State Society asks at the hands of all our citizens their aid and influence to make this Fair what it can be made by such an union of feeling and interest. Liberal premiums will be announced immediately, and it is hoped and expected that all who are identified with the permanent interests of the country will give a response to this action of the Society. It is all-important that those who desire to take part in the Exhibition, and who feel willing to aid, should become members of the State Society, and take active part in its plans of operation. Citizens are invited to enroll themselves as early as possible, that the most efficient measures may be adopted for carrying out the plans of the Society.

Generous premiums will be awarded for the best Farms, Gardens, and Nurseries, and also liberal gratuities for all new products that have been introduced and successfully grown in the State. The Society invite the co-operation of all, far and near, and solicit communications from all who desire to promote the enterprise, with such suggestions as shall seem to them necessary. All such communications addressed to the President Secretaries will be cordially received and promptly acted upon.

Donations, in money, books, or specimens, will be most gratefully received, entered upon the Society's record, and placed upon the shelves of the Society with the donors names.

Donations in money can be made for especial premiums, the interest only to be appropriated for particular objects, each medal bearing the name of the donor.

Additional Exports.

SINCE our last mention of exports several parties have come forward and large quantities of Grain have been shipped, and more is preparing.

The following vessels are up and loading, viz: The "S. S. Bishop," loading with wheat, barley and flour for the New York market.

The "Whit Cheer," for Australia, taking in flour, grain, potatoes, etc.

The "Mercedes," for Australia, has already engaged 5,000 bags of wheat, and 350 tons of flour.

In the shipment of grain and produce, the certainty of success and profit by the transaction depends upon three all-important and requisite points of knowledge:

1st. The condition of the goods shipped and their certainty of arrival in order at the port of destination. Grain and root crops being perishable in their own nature, shippers should not take too great chances, for they can be avoided; and it is all-important that this first point should be established before the work is begun.

2d. A careful estimation of all the costs of such articles, in shrinkage, leakage, ratage, and all the other "ages" that are usually found in "acc'ts sales"—so long and so numerous as to take the "edge" off the profits most generally—and calculations must be had. In ordinary shipments of beef, pork, hams, butter and lard, or merchandise generally, in barrels and boxes, little loss occurs; but in this kind of produce, in the ways we name, and in "sweatage," of which so much is heard, unless these points are considered, loss must occur. These must be estimated, so as to arrive at the probable full cost of the article, laid down at the port of destination.

3d. A wise and more careful estimate of what the market rate will be, at the time of their arrival, which is a future day, and therefore uncertain.

These three points are all-important, and we present them now, for we know inducements are being held out to our farmers to ship grains and

other products, and they are not always posted in such matters and may be induced only to look upon prospective gain, and not take the chances of a loss. We therefore feel called upon to urge attention to this matter.

We had almost said we have no sympathy for those who lose by their shipments from the other side to our ports; we confess we have but little—(we do not wish any one to lose.) But we do not wish a single shipment to go from this side without a handsome profit—and especially from the hard-working and industrious farmer.

Grains and our other products can be shipped with safety and with profit, but to do this, it requires attention to the points we have named; and if those who are immediately interested in the results have not that information, they should be willing to employ well-informed brokers acquainted with the matter, to act for them.

1st. Grains and produce can now be kiln dried and prepared with a certainty of arrival in perfect order.

2d. The costs of shipments can be arrived at with certainty, by employing proper parties; and

3d. The market for the future can be so estimated as to give the figures so that war, or peace, prices can be arrived at.

Grain growers hold now a power in their hands—a power to teach those of other States that California can raise her own breadstuffs. At the present moment there are counties that can ship 50,000 bushels of grain and have their own supply left; and will not grain growers rally, come together and protect their own interest?

We would call attention to the subject of kiln dried grain, potatoes, &c., in another column, as worthy of notice.

Potato Crop of California.

WHAT shall we do with our surplus produce?

What shall we do with our potato crop? These are questions which are continually meeting us in our walks, rides, and letters—they meet us everywhere. Our answer has invariably been—"A way will be opened."

When the mania for ship building raged in the East during the shipment of grain to feed the famishing millions of Europe in '47, careful men, cronkers, were constantly asking, what shall be done with all our ships when the shipment of grain ceases? The answer was—"A way will be opened." And what shall be done with all the foreign merchandise we are now importing in payment for the Grain we send to Europe? The answer was—"A way will be opened."

The shipment of grain ceased—ships increased at all our great seaports and lay idle at our wharves, but how long? The gold fever came, and every ship was quickly required, no matter what its age or condition; ships were wanted and with them all our surplus merchandise, and more—all that had laid long upon the shelves and in the warehouses of merchants as worthless, was quickly transformed into gold; these ships have been made into warehouses, wharves, or firewood, at San Francisco, and the merchandise has found a market in California. So much for the ships and merchandise of '47-'48, and now for the wheat, flour, and potatoes of California of '55; of the latter we would particularly speak.

With an utter disregard to the subject of demand and supply, this great staple has been raised in all our fertile valleys; men have platted them because they produced so bountifully—in '53 because they believed it was a speculation, and in '54 because they believed there would be a scarcity; the first calculation, only, was wisely or well founded. And it has been the same with wheat, and the same may be the result the present year; but be that as it may—"There is a tide in the affairs of men, that, taken at its flood, leads on to fortune;"

But should you madly wait returning tide, Regardless of its steady ebb and flow, Then downward on returning stream you glide And just as certain meet an overthrow;

and believing this, we urge attention to the facts before us.

The potato crop of '53 found California possessed of very many millions of pounds beyond her wants—they rotted in the field, they perished in our warehouses and on our wharves—they ruined hundreds—and instead of endeavoring to find a market, near or distant, the cultivators quietly let the tide turn, and loss was the result. Immense amounts of money could have been realized in various ways, from this nutritious vegetable, if a proper attention had been paid to it. Potatoes can be so dried as to ship to foreign ports, even to New York, with safety, and to the Islands with great profit. Potatoes can be made into starch, for domestic use, and for the manu-

facturers of cotton goods in England or France, and with profit too. But the greatest profit would arise from having the process of kiln drying applied so as to have them shipped to foreign markets; this done, and California could supply the world. We announce that this can be done. Potatoes can be prepared to ship to New York with safety and certainty.

We therefore answer each and all inquiries relative to the matter—"What shall be done with our surplus produce?"—with this answer—A WAY WILL BE OPENED; and if men will be wise and study the operations of nature and providence more, they will always find that an over supply, of produce in one portion of our country or the world, is as certain to find a short crop in another and if they are wise, they will see it and improve it—and this is "the way that is opened."

The rich alluvials of our valleys over produce, but the hills are sandy and barren; return a portion of that rich soil that has been taken from those hills by the storms and floods and the changes of ages, and the hills will yield equal with the valleys; so the redundant crop of one portion is prepared by a wise Providence to meet the wants of a less favored one. These figures we believe are enough to show our views.

We believe that there is energy and foresight, if properly used, in our prolific State, not only to produce the greatest crops in the world, but to find a ready market for them; for as surely as we produce, we shall find a way opened for a market, if we will see it.

Refreshing Rains.

THEIR EFFECT UPON THE GRAIN AND FRUIT CROPS. CHANGE OF THE SEASONS.

THE last two weeks we have had some heavy rains: although in years past rains have fallen in May, yet they were not so heavy nor so oft repeated. To whatever cause people may attribute these changes in the seasons, none can doubt their beneficial influence.

To grains just making joint, and some heading, these rains will give a vigorous start and healthier growth, and assist greatly in causing the grain to set strong—not only grain, but fruit and vegetables are all very greatly benefited. We have never seen grain or grasses look so well. Root crops promise to be abundant. Fruit trees give at present all the needed assurance of a generous supply.

We can assure lovers of good fruits that the crops of strawberries and peaches the present season will be abundant. Strawberries will be found in our markets, more or less the entire season. Peaches will be exhibited this year, in quantity and quality far surpassing the conception of the most sanguine or imaginative. Pears and apples will be had in largely increased quantities, while all the more tender kinds, raspberries, currants, gooseberries, &c., will make their appearance as the regular fruits of our markets. Grapes will appear in larger quantities and of better quality, the result of improved culture; and the newer varieties lately introduced into California—Hamburg, Muscats and Palestine grapes—will appear in glowing contrast and command great prices. Those choicest and delicate fruits, nectarines and apricots, will also appear among the richest fruits of the season; and the fig will come in greater abundance and newer varieties. Many other fruits will be exhibited, including rare kinds of melons from European varieties, and still more now from China and Japan.

The coming State Fair will present evidences of the capabilities of our soil to perfect the growth of every species of fruits that are needed or desired for the appetite of man, and to provide not only for his food, but his raiment.

Cultivators will do well to note the recent rains and to keep a record of the date and quantity fallen; and also note all the rains that shall yet come to refresh the soil—for come they surely will. The increased cultivation of the earth—the levelling of mountains—the building of cities, towns and villages—the generations of smoke and steam—these exhalations, together with all the gases that rise from a gathering population, busy in settling a country, must and will inevitably change our seasons, and we may look with certainty to a similar refreshing as the late rains in all coming years and at almost all periods of the year. Cultivators will please remember this.

It is a well known fact that in our very driest periods, if a person will go to his garden and hoe and cultivate two or three rows of any kind of vegetables, moving the earth well in the after-part of the day; although there be no appearance of moisture in the ground, yet the following morning he will find those rows covered with a heavy dew, while those untouched shall be per-

fectly dry. Upon this principle then, the more extended the cultivation the greater amount of moisture is excited, until it shall rise

In dewy clouds
From wide extended fields,
And fall again in copious showers
Where earth its bounty yields.

These are subjects that demand the careful attention of those who are engaged in the cultivation of the earth; and when a just portion of the time and attention of men, directly interested, shall be given to them, a vast amount of money, now expended and lost, will be saved.

Kiln Dried Grain and Vegetables.

AN INSURANCE AGAINST LOSS.

It is all important in the shipments of grain and other products from California to the Islands or any other part of the world, that there should be a prospect of success in the shipment. The greatest danger to such an expedition is the risk of injury from sweat or decay, by which all hope of profit is lost.

To remedy the evil and to avoid all risk, the process of kiln drying is the only safeguard, and a perfect security can be had from every possible chance of loss from this source. A Kiln Dryer has been invented and patented, and is now ready to be presented to the community, or to parties who desire to be secure from such risks. This invention is one of the highest moment to California. By the use of this dryer, barley, wheat, flour or any other kind of grain, can be perfectly dried in a brief moment of time. Potatoes and other vegetables can be so dried as to secure their safe transmission on long voyages. Of this the best assurances can be given.

This invention is worthy the highest consideration, and it is proposed to form a company to prepare articles for shipment. This is one of the most important inventions of the age, and capitalists and those interested in shipments are invited to consider this new patent. Fortunately it will be for our State when the capital now lying idle shall be invested in means to develop the wealth of the State, and there is no way quicker, greater, or more certain than the prosperous shipments of our surplus produce. Will capitalists look to this subject? See advertisement.

Boston Department, April 5, 1855.

FROM Messrs. Ticknor & Fields, we have received their new publications. "Westward Ho!"—being the voyage and adventures of Sir Anyas Leigh; by Charles Kingsley,—author of "Hypatia, &c." Also, "A Boys' Adventures in the Wilds of Australia," by Wm. Howitt. This book is a most interesting and accurate description of the country it describes, and is in the usual agreeable style of the author. It is full of illustrations and is a most interesting book for the young.

From Messrs. J. P. Jewett & Co., we have received the "History of California," from its discovery to the present time. This work comprises a full description of the climate, soil, &c. state of society, agriculture, resources, &c., also, a journal of the voyage from New York to San Francisco, via Nicaragua, and back via Panama with a new map of the country. This is the best and most perfect work upon California yet published, and will be interesting to every lover of the most wonderful State in the Union. Buy and read it.

Wm. Bogle, has sent us a sample of his justly celebrated "Hyperion Fluid," the best article extant for promoting the growth of the hair. It is neatly put up in different sized bottles, and when once used, will never be discontinued. It is now to be found in any part of America and even Europe, and can be had of his agents in California.

SONOMA COUNTY SOCIETY.—We rejoice to see the action of the Sonoma County Society. We publish their doings in full (for which we trust a liberal list to our subscribers roll will be added,) and hope the example of this society will be followed by every other county in the State, until in their combined action they shall make their contributions to the State Exhibitions. Every county already organized should prepare for a County Exhibition, and hold the same just previous to the State Fair. By this measure competitors can take prizes upon the same articles in their several counties, and also at the State Fair. A generous rivalry to excel will promote their interests in each county, and will cause a more extended emulation throughout the State.

The State Fair will be holden in the latter part of September, at Sacramento. San Jose is preparing to hold a Fair this Autumn. What other county follows?

SWEET AS HONEY.—Please see advertisement of Hives of Bees. Here is a chance to prove we live in a land flowing with milk and honey.

Agricultural Meeting.

SANTA ROSA, May, 5, 1855.

Pursuant to a published notice to convene a meeting at Santa Rosa, Sonoma County, for the purpose of organizing an Agricultural Society, a large and respectable number of persons were in attendance; and on motion, Dr. Hill, of Sonoma, was chosen President, and S. T. Power, Secretary.

The Committee appointed at a previous meeting to draft a Constitution and By-Laws, reported, and on motion,

Resolved, That the report of the Committee be received and adopted.

Which was accordingly adopted by sections.

This being the occasion for electing officers, the following gentlemen were chosen for the ensuing year, viz:

President—Dr. J. H. Hill, of Sonoma.
Vice President—M. B. Moody.
Secretary—S. T. Power.
Treasurer—Mr. Jenkins.
Board of Managers—Messrs. Judge Thompson, Dr. Ormsby, Major Beck, Major Ewing, A. Copeland, Hon. J. M. Hudspeth.

On motion,
Resolved, That a Committee of two persons be appointed in each Township, in conjunction with the Board of Managers, to solicit persons to become members of this society.

Committee appointed by the Board to solicit persons to become members:—

Russian River—Messrs. H. Fitch and M. Cunningham. Sonoma—Messrs. W. M. Boggs and W. Ewing. Mendocino—Messrs. J. Gordon and H. G. Heald. Washington—Messrs. M. Goodwin and R. Harris. Vallejo—Messrs. W. R. Thompson and Chas. Mock. Annally—Messrs. Seabring and W. D. Canfield. Petaluma—Messrs. Haydon and Bassett. Bodega—Messrs. Fowler and Capt. Smith. Santa Rosa—Messrs. Julio Carrillo and C. M. Hudspeth.

On motion,
Resolved, That the proceedings of this meeting, together with the Constitution and By-Laws adopted, be published in the Sonoma Bulletin and the California Farmer.

On motion, the meeting adjourned to meet in Petaluma on the first Saturday in June.

DR. JOHN H. HILL, President.
S. T. Power, Secretary.

CONSTITUTION AND BY-LAWS OF THE SONOMA COUNTY AGRICULTURAL AND HORTICULTURAL SOCIETY.

Whereas the wealth of our Nation and prosperity of her citizens depend mainly upon Agriculture: And whereas Agricultural Societies have always proved efficient agents in elevating this all important branch of industry. Therefore,

Resolved, That we, the undersigned citizens of Sonoma County do, for the more rapid advancement of the agricultural interests of our State and County, organize ourselves into a Society, and agree to be governed by the following Constitution and By-Laws:

ARTICLE 1st.—This Society shall be called the "Sonoma County Agricultural Society."

ART. 2d.—The Officers of this Society shall consist of a President, Vice President, Secretary, Treasurer, and a Board of Managers, consisting of nine members, of which the President, Secretary and Treasurer shall be *ex officio* members of the Board.

ART. 3d.—It shall be the duty of the President to preside at all meetings of the Society and of the Board of Managers, and to sign all orders given by the Society on the Treasurer, and to perform such other duties as may be required of him appertaining to his office. The Vice President shall perform the duties in the absence of the President.

ART. 4th.—The Secretary shall keep a fair and impartial record of the transactions of the Society, and register the names of all the members of the Society in a book provided for that purpose, certify all papers and records under the direction of the managers, and countersign all orders on the Treasurer; give due notice to the officers and members of the Society of the meetings; and perform all duties as a Corresponding Secretary of the Society.

ART. 5th.—The Treasurer shall receive and safely keep a correct account of all the monies received and disbursed by him—and no money shall be paid out without the order of the Society, signed by the President and countersigned by the Secretary.

ART. 6th.—The Board of Managers shall have general supervision of the affairs of the Society; they shall meet for the transaction of business semi-annually, viz: first Saturday of June and first Saturday of December; call meetings of the Society whenever the interests of the Society require it; they shall have power to fill vacancies in any of the offices, and appoint Committees to award premiums at any Agricultural Exhibition that may be determined upon by the Society. A majority of the members shall constitute a quorum for the transaction of business.

ART. 7th.—No person shall be a member of the Society unless he has signed the Constitution and paid the fee required by the By-Laws. The officers of this Society shall be elected, after the first election, the first Saturday in June, annually. This Constitution shall not be changed, altered or amended unless by a vote of two-thirds of the members present, at a regular meeting.

By-Laws.

1. Any person may become a member of this Society by signing the Constitution and paying the initiation fee of two dollars and fifty cents. The Society shall have power to admit honorary members.

2. No monies belonging to the Society shall be

used for any other purpose than for the benefit of the Society or the agricultural good of the County.

3. All elections shall be by ballot, and decided by a plurality of votes—each member having but one vote.

4. Any member may be expelled for misconduct at any stated meeting, by two-thirds of the votes of the members present.

5. No member shall be entitled to a vote in any, stated meeting until he shall have paid his annual assessment.

6. These By-Laws may be amended at any meeting by a vote of the majority of the members present.

7. There shall be an annual Fair and Cattle Show at such place and time as the Managers may designate.

Sutter Title Confirmed.

This long delayed question is at last at rest. It has been confirmed to its full extent 33 leagues. It is now hoped that all who have claims either as original holders under the Sutter title, or as settlers, will promptly meet and adjust all differences in good faith, and with a generous feeling, so that Sacramento may go on and prosper, and the cultivators of the soil now make the long delayed but much needed improvements. We rejoice for the veteran Pioneer Gen. Sutter. Long may he live to enjoy what may now be returned to him; and we trust his remaining years may be long, happy and prosperous. Thousands will rejoice with him and pray for the happiness of himself and family. A public demonstration should be had to congratulate him upon this long contested case.

RICHARD CHENERY, Esq.—This gentleman, so long at the head of the Steam Navigation Co., as its President, and who has done so much to establish and maintain the line and carry it on through many of its most trying hours of competition and loss, and place it a prosperous condition, has now resigned his office of presidency. This step will cause regret among his numerous friends and the friends of the line, for his place will be very difficult to fill. His position was one of great responsibility, and a post of honor, and well and nobly has he acquitted himself of both. His devotion to the interests of the company, his generous public spirit and gentlemanly deportment have won him hosts of friends whose high opinions will go with him in all his future intercourse with them in life. Most certainly this company, if they know their own interests, will urge his retaining his post by re-electing him at the annual meeting near at hand.

PRIZE ESSAY.—The California Academy of Natural Sciences, have, we understand, presented to Mr. Wm. Thompson, of the Mission Dolores, a premium of fifty dollars, for "the most complete and practical Essay on Californian and exotic trees, shrubs, grasses and plants, in their adaptation to the sands and soils of the sea coast and the shores of our bays and rivers, for breaking the violence of the coast winds, arresting and preventing sand drifts, and guarding against encroachment and damage by waves and floods,—with instructions." The subject is one of considerable importance, which it reflects credit on the Academy to take under their special notice. It gives us pleasure, therefore, to learn that a number of gentlemen who are not members, propose to solicit the Academy to have the above-mentioned Essay published, and also another of much reputed merit on the same subject, furnished at the same time to the Academy by Dr. W. P. Gibbons, of this city. We shall be happy to advance the interests of this Society and science generally, by publications of this kind.

SPECIAL NOTICE TO BOOKSELLERS.—The general custom of noticing advertisements often leads the purchaser astray. The notice is a mere puff, and is intended as such. It has either been written by the advertiser himself or contracted for at the time of advertising. We never yet have permitted a notice to appear that was not from our own pen, and given voluntarily and cheerfully; and what is more, we never shall. We do endeavor to make known what is worthy of notice which comes within the range of our business adventures or rambles, and among those today, we are happy to call attention to the well known house of Murray & Co., Booksellers, Montgomery Block. They have indeed a large and well selected stock of merchandise in every department of their trade. No one desiring an article in their line, from a smooth, delicate camel hair bush, for a fancy sketch, to the ponderous ledger for the most extensive commercial or mercantile house, can fail from being suited. Delicate or massive, small or great, a single article or a package, all are here. Do not take a hear-say, but go and see.

Steamer Senator.

This noble steamer is once more upon the waters of the Sacramento. This event has caused quite a rejoicing among the travelers upon the river. It is a proof too that there is no evil that befalls us without some good to break the severity of the blow. The unfortunate accident which befell the splendid steamer New World and deprived us for a time of that favorite boat and her gallant commander, calls out recollections of this pioneer of steamers upon the Pacific, and awakens in the memory of all old '49 Californians, associations of the most thrilling interest.

It was our good fortune to have been one of a gay and happy group on her first trip from Boston to Portland. It was our good fortune to be upon her decks on her first trip up the Sacramento in '49, an event that will long be remembered; and it was our good fortune to be again a passenger upon the resuming of her present course, which we trust will be a profitable and a fortunate one.

The announcement at Sacramento that the Senator was again up for San Francisco caused a general rejoicing, and a large gathering was ready to greet her new advent with a generous wish. The Senator left the Love with crowded decks, and among the passengers were many old Californians whose presence kept alive old associations. Among the passengers we noticed Col. J. B. Stur, the pioneer auctioneer of Sacramento valley, a citizen of Sacramento who has over been its true friend, and borne himself bravely amid all the trials and adversities of that devoted city.

The Senator brought down four hundred and seven passengers, a goodly number of whom were ladies. On the passage down the river the boat encountered one of the severest storms of lightning, thunder and rain that has been known for a long time, and it seemed very satisfactory for passengers to find that the brave old Senator was a guarantee of safety in any kind of a storm. She came down fleetly under the command of Capt. Poole himself, an old Californian, and whose courtly deportment has made for him a large circle of friends. Capt. P. retains command of the Senator whilst the waters run high, and the Wilson G. Hunt is laid up. The Confidence, under the command of Capt. Seymour, takes down the New World to Benicia to be thoroughly repaired under his supervision, when she will again take her place on the line.

The Steam Navigation Company, with the Senator, New World, Confidence, Antelope, and W. G. Hunt, and their able commanders and officers, are undoubtedly the best established line of steamers afloat upon any river, and we rejoice to see, by an increase of business and passengers, are winning their way to prosperity. We hope it will continue, for they deserve it.

BOOK FARMING.—HEAR WHAT JUDGE BUEL SAYS!—Few names leave behind them such enduring records of devotion to the cause of Agriculture, and few men have devoted so many years to its study and development, as the late Judge Buel, of Albany. His example and his teachings should be copied and remembered by all who desire success in their agricultural efforts.

It is an old saying, which has been handed down from father to son, that "books and learning never make farmers." We would ask those who have an aversion to "book farming," to read the remarks of Judge Buel, which we doubt are familiar to most of our readers, and which he made only a few weeks before his death: "Bred to a mechanical business, I took up agriculture more than twenty years ago, as the future business of my life; without the pretensions or conceits which we are all apt to acquire in the long practice of business, I began farming with a consciousness that I had everything to learn; and that the eyes of my neighbors would be quick to detect faults in my practice. I at once sought to acquire, therefore, a knowledge of the principles of my business, and of the practice of the most enlightened and successful farmers. These I found in books and agricultural periodicals, and by these I have been greatly benefitted. Although it does not become me to herald my success, I will venture to say, to encourage others, and particularly the young, in the work of self-instruction and improvement, that my lands, which are light and sandy, and which cost in an uncultivated state thirty dollars an acre for farming purposes; or, in other words, that the net profits of their culture exceed the interest of two hundred dollars an acre."

MONSTER TERRAPIN.—By recent arrivals large quantities of sea turtle have been brought to market. We notice some of extraordinary size upon the sidewalk, corner of Montgomery and Commercial street, there exposed to tempt the appetite of those who visit this well known lunch. The weight of the largest was only five hundred and eighty-five pounds. Our Eastern friends will see by this that California can beat in terrapins as well as "taters."

INDIAN RESERVATION AT THE TEJON PASS.

The correspondent, "E. E. H.," of the San Joaquin Republican, has sent to that paper a communication, dated Tejon Indian Agency, April 30th. The writer says that all is quietude and apparent satisfaction in that quarter. We give some extracts from his letter:

The great field of wheat, containing 900 acres, has been materially injured by the excessive drought of the present season. It is not expected that more than 200 acres will be worth harvesting, which has been preserved by means of irrigation. Strange though it is, copious and beneficial rains have fallen from time to time on all the lands adjoining the farm, but in almost every instance have left the crops untouched and to perish for the need of their sustaining influence. Aside from the farm belonging to the Agency, there are many little patches being cultivated and managed exclusively by the Indians, which are respected as their private property; these generally look healthy, and will yield well, which is owing to the fact that they are located upon rich, damp soil, that lies in such small bodies, and are so readily separated, that they are unavailable for greater purposes.

Here, as on the Fresno, it is plainly visible that the most imperative necessity exists, that measures should be promptly adopted for the protection of the Indians against the ravages of disease that are rapidly destroying their existence. The erection of a suitable hospital and appointment of an efficient physician at each of the reservations in the State, can be effected by a word, and would certainly be attended with the most favorable returns. Time and money would be saved by introducing vaccine matter.

NATURAL CURIOSITY.—The Nevada Journal gives a description of the Dry Creek Falls, situated about twenty miles this side of that place, on the Sacramento road: The falls are made by the falling of the water of Dry Creek over the spur of a lofty hill, and are really beautiful at this season of the year, when the waters of the creek are high. The upper and main fall leaps about eighty feet perpendicularly, with a stream about ten or twelve feet broad, into a beautiful basin, the sides of which are formed by precipitous and lofty rocks, entirely inaccessible on every side. Emerging from the broad deep basin at the foot of the upper falls, the water tumbles and roars through some minor rapids some two hundred yards, when it leaps the lower fall, some sixty feet, into another inaccessible basin. The direct view from the opposite mountain is the most striking and beautiful. The rough old rocks, the water flashing in the sunlight, the wooded hills rising one above another from this point are more fully embraced in one view, and strike the lover of the sublime with peculiar force.

ELECTRIC TELEGRAPHING WITHOUT WIRES! Among the most startling wonders in connection with electricity, is the announcement that M. Bonelli, of Paris, has invented a new electric telegraph, by which trains in motion on a railway are enabled to communicate with each other at all rates of velocity, and, at the same time, with the telegraphic stations on the line; while the latter are, at the same time, able to communicate with the trains. It is added, that M. Bonelli is in possession of a system of telegraph communication by which wires are entirely dispensed with.

EXECUTIVE CLEMENCY.—On Friday last Governor Bigler granted an unconditional pardon to E. W. Walton, a policeman of Sacramento, who was recently convicted of manslaughter in shooting a thief named Reid. The sentence of death passed upon Thomas Milgate for the killing of a man named Titman in a squatter difficulty, and upon John Blake for the killing of Lyman Mowry some months since in this city, were commuted, the first to one year, and the other to two years in the State Prison. The merciful interposition of the Governor in these cases, gives general satisfaction.

IMPORTANT ACTION OF DISTRICT COURT. The State Tribune is informed that on Saturday the Sheriff of Placer county, by order of the Court, paid out the sum of \$5,095 in treasury, attached by him some time since, as the property of Adams & Co. The money was distributed among those who held executions against the late banking firm.

SKETCHES OF CALIFORNIA HISTORY.—Especially attention is invited to the most valuable and interesting matters commenced to-day, from the pen of a gentleman who has devoted many months and years in collecting data which will prove not only interesting but valuable to our State, and reflect great credit upon himself.

VIRGINIA TOBACCO.—One of the largest and finest collections of tobacco ever exhibited in a mercantile house can be found at the extensive warehouse of Messrs. Greeno, Heath & Allen, corner of Battery and Washington streets.

WATCHES AND JEWELRY.—Messrs. J. Howell & Co., of Sacramento, Manufacturing Jewelers, should have a call from all who visit that city, or who wish an article unique and chaste, or a watch that can be relied upon.

See Reports of Fairs, &c., weekly. Members of County Societies are invited to become subscribers to the FARMER, that all needed information on this subject may be had.

Horticultural Department.

Vineyards, and the Manufacture of Wine.

GATHERING THE GRAPES.
CHEERFULLY the Vintner undertakes this, the pleasantest of all his labors. Remuneration for many a toilsome hour now smiles at him from out his favorite vines. So sweet is this feeling that few Vinters can wait for the proper time. Grapes should be gathered as late as is possible, and it matters not if they should even get overripe.

Many Vinters are of the opinion that the Grape, once ripe—which is the case as soon as the stems of the Grape bunches turn brown—it is useless to permit the grapes to encumber the vines any longer, as its quality will not be thereafter much improved. But experience demonstrates that while the quantity is slightly diminished, the quality is much improved. In this country, where there are never more than two, and generally but one species of grape, while in Europe from six to twenty species are often found in the same Vineyard, one reason for premature gathering is obviated. The grapes generally ripen all about the same time. Should, however,—as will happen—one species of grape ripen before the other, it is best to gather the ripe fruit, and then gather the rest subsequently when ripe.

There is one great drawback among our Vinters to patient waiting, which must be mentioned. It lies in the insecurity of their fruit against poachers. Fruit is for some reason regarded as common property, and the same person who would not take beans, cucumbers, corn, or carrots, will think any one a "stingy bugger" who does not look with gratification at any person taking his grapes without leave. The Vinters know the prevalence of this freebooting sentiment as to the fruit which has cost them so much labor and money. They will watch it for a fortnight, night and day, but it is too much to expect them to lose their night's rest much longer, merely to improve the quality of their wine a degree or two. The conclusion is too tempting to be long resisted, to put their grapes "where neither moth entereth, nor rust corrupteth, nor thieves break through and steal."

This is a serious impediment to an improvement in the quality of our Wines, but I fear it will exist for some time, at least until fruit, especially grapes, becomes more generalized, and then a "fellow feeling" will overcome the loose morality about fruit poaching. Laws which follow up this growing tendency, would certainly be useful. The following general rules are recommended in gathering grapes:

1. Gather only in fair weather, and after the dew is off the grapes.
2. Should rain or heavy fogs occur, quit gathering. It is always hard to go into Vineyards while the ground is too wet, and especially so in the fall, aside from the injury to the quality of the wine. It can be proved, that between gathering in fair or foul weather, with and without the dew drops upon the grapes, there is a difference of between five to ten ounces.
3. One should be laid not to injure the vines, while searching for the inside grapes.
4. Unripe grapes should, as already stated, be left in the Vineyard on the vines, and if there be but few, or if the season will not permit their subsequent ripening, it is a good practice to mix them with some good apples in cider making.
5. Should a few unripe berries be found on a grape-bunch they must be picked out and thrown away,—or should there be a few really ripe berries upon an unripe bunch, then the ripe ones are picked out and gathered and the unripe bunch itself is left on the vine.
6. Every thing, except the good, sound ripe berries should be carefully picked out, and particularly those dried up kernels—so frequent in this country—the result of the blue rot.
7. Leaves, which casually drop among the gathered grapes should be thrown out.

It is easy to see from the preceding rules, that gathering grapes requires care and attention. I think buckets and light barrels are better for the purpose of holding the gathered grapes, than baskets. The skins of American grapes are, to be sure tougher than in Europe, though this is fortunately getting less so every year, but very ripe grapes engender much loss, even here, if handled in baskets.

I would here warn against that voracious eating of grapes, while gathering them, which is characteristic of our lunds. Our grapes have very large kernels and very tough skins, and there is inside also a rather indigestible pulp. All these things are different in Europe. There the kernels are small, the skin very light, and the inside is almost without pulp. Persons in this country read of the Grape Cure in Europe, and from this conclude, that grapes are always healthy. So they no doubt are, if eaten in small quantities, and when perfectly ripe; but I know of five deaths, within my own experience, which from unmistakable signs arose from eating too freely of grapes. One of these five, was a most hearty and very intelligent young German, who laughed at all warning and would insist that grapes were surely healthy at all times of the day, and in any amount.—Charles Reemelin, in *Ohio Farmer*.

TO PREVENT THE JUICE IN FRUIT PIES BOILING OVER.—Place an inverted cup in the pie, and when the pie is removed from the oven the cup will be found nearly full of syrup. The reason why is this: When put into the dish the cup is full of cold air, which expands by the heat in baking, driving out all the syrup and a portion of the air it contains, in which state it will remain till removed from the oven, when the air in the cup will condense and occupy but a very small space, leaving the remainder to be filled with syrup.

The "Fruits" of Horticulture.

We give below a specimen of the *Fruits* that are produced by encouraging the science of "Pomology." We present our friends and readers with the sentiments inculcated by a gathering of the friends of Agriculture, Horticulture and Floriculture, at the Pomological Festival given by Hon. M. P. Wilder, at Boston, last winter, at the Revere House. Among guests from every State, men of the highest standing, we find the Governor of Massachusetts, the Mayor of Boston, and other distinguished men, and when called to respond, their words are as the fruits of such festivals nourished and grown upon the great tree of Agriculture. We append a few, to show them in contrast with political speeches, and hope the day is not far distant when such festivals shall be had upon the Pacific coast.

When the company had partaken of the elegant repast, Mr. Wilder made a brief address, and gave utterance to the pleasure which this visit of the members of the American Pomological Society afforded him. He said it was not his purpose to call upon his friends for formal speeches, nor to summon "spirits from the vasty deep,"—nor to invoke the presence of the "rapping spirits,"—nor should he, in these days of temperance and of the Maine law, before the Governor and Mayor, offer "ardent spirits,"—but it was his purpose to place before the guests a specimen of American fruit—the berry and the juice.

For some rich specimens of the juice of the grape, he expressed his indebtedness to generous friends in Ohio, who desired to have it tasted and tested by the members of the Pomological Society. And for the purpose of tasting and testing this Ohio vintage, Mr. Wilder proposed that the company resolve itself into a "Tasting Committee of the Whole," upon the Ohio vintage, and he would propose—"The Vintners of Ohio—By never allowing the juice of the grape to be distilled or adulterated, may they prove to the true promoters of temperance that it can produce joy without sorrow, and health without detriment to the public weal." (Great applause.)

This sentiment was followed by testing samples of "Longworth's Catawba," "Werks's Isabella," and other juice of the grape.

The host also gave as a sentiment—"Massachusetts—The good seed planted by the Pilgrim Fathers more than two centuries ago. It has borne fruit for her children in each succeeding generation."

His Excellency Governor Washburn responded: "Mr. President—I feel myself honored in being permitted to be present here this evening at this hospitable board. I am aware that I owe it to the circumstance that I have been honored with that post to which you have alluded, and I feel myself honored that I may welcome those who have honored you and the State by being here to-night. (Cheers.) I wish I could say something that might be suited to the sparkling of that beverage here before us. We have nothing of the kind here in Massachusetts. I was impressed this evening with the consideration of what a pleasant affair it would be if we only understood each other in the different parts of the United States—if we could meet at hospitable boards as friends, instead of being always engaged in angry discussions; and if we could feel that we have a common country—the rich fruits of which we are here to enjoy. Let me say that there is no spot on God's earth where the people, the whole people, the common people—the high and the low—enjoy so much of the fruits of the earth as we do in America. (Applause.) In Europe the rich only enjoy the luxury of a peach, a pear or an apple. The truth is, the people there are obliged to devote the entire soil to that which will support life."

The Governor pursued this point a little further, and concluded by giving as a sentiment—"Our host—Wherever he steps, flowers bloom around him; and whenever we meet him, his hands are full of richest fruits."

Mr. Wilder then gave—"His Honor the Mayor of Boston—By native talents and untiring industry, he has attained to the highest honors of the city."

Mayor Smith responded in a very neat and pleasing speech. He spoke of the pleasure it gave him to meet so many gentlemen of different States, and paid fitting and deserved compliment to Mr. Wilder, the host. He also spoke of the fine hotel (the Revere,) saying that there is no hotel in Europe like it. He alluded to his travels in Europe and Africa in corroboration of the remarks of His Excellency the Governor. He closed by giving—"The best fruits of New England—Those which every man and woman may cultivate, the fruits of industry."

The President then gave—"Our Guests—We give them a cordial welcome to the city, and extend to them the right hand of fellowship."

Hon. Mr. Benson, M. C., of Maine, was then introduced, and made a very excellent speech. He alluded to the host, speaking of his success as President of the United States Agricultural and other Societies, and of his ability to preside over this "fusion" society. He expressed the hope that if his other offices were not perpetual, that this would be.

Hon. Benj. Scaver, in response to a sentiment, made a good speech. He expressed his thanks as an American citizen, for the advancement of the objects of the society, which possessed so much interest to the whole country. He had not had much experience as a traveler, but he was satisfied that there is no country so blessed with fruits and flowers as our own. He believed that these

gatherings were productive of great good, and closed by proposing—"Prosperity to the American Pomological Society."

Mr. Prince of Long Island and Mr. Barry made some brief and appropriate remarks.

Hon. Samuel Walker of Roxbury being called upon, said if he had influence in sending out missionaries to foreign countries, he would encourage them to take good seeds with them, so that while they teach the heathen they may also instruct them how to till the soil and to cultivate the fruits of the earth. It is no mean occupation to be an agriculturist. He spoke of his visits to various parts of the Union, and to Western New York particularly, and closed by giving as a sentiment—"Our Friends—I rejoice to meet them here."

The oldest Horticultural Editor in the State, Mr. Hovey, having left, the youngest, Mr. King, was called upon, and responded in a brief but sensible speech. He spoke of the favorable influence of the occupation of agriculture upon men, in giving them ideas of equality. He closed by giving a sentiment complimentary to the host of the evening.

Hon. Seth Sprague of Duxbury, made an excellent speech, and was followed by Mr. Flint, Secretary of the Board of Agriculture, who gave in closing:—"The American Pomological Society—The Farmers look to you as the highest authority in this pleasant and useful branch of agriculture."

Hon. Mr. Keyes of Dedham, Secretary of the Norfolk County Agricultural Society, made an elegant speech, closing with the sentiment:—"The Pomologist—While our mouths are filled with his golden sweets, and while our lips are moistened with the nectar juice, our voices cannot help sounding and celebrating his praise."

Hon. Mr. Proctor, of Essex, being called upon, gave—"The memory of John Endicott."

To which the President added:—"And Peter Stuyvesant, who planted pear trees in Massachusetts and in New York, two hundred years ago, which are still living."

The President also gave as a closing sentiment:—"To all our friends from every section of the country, horticulturists, pomologists, and tillers of the soil, prosperity, health, and happiness."

Many other excellent things were said, expressive of the enjoyment of the company, and their appreciation of the character of their host.

The Levee passed off in the happiest manner, and was in the highest degree creditable to the taste and liberality of Mr. Wilder.

EVERY FAMILY SHOULD HAVE AN AGRICULTURAL PAPER.—It is worth more than it costs simply for educational purposes. Parents have hardly a right to deprive their families of its advantages in these times. Children will learn more, as they go to and from school, or drive the cows to pasture, or pick berries by the way, if their observation is quickened, by what they hear their parents read or talk over from the agricultural papers; and when they form habits of reading for themselves, such reading is both safe and useful. Reader, if your neighbor has no agricultural paper, persuade him to take one. Even if he is poor, he can better afford to take one than to do without it; for if he takes one, his children will be likely to be better off—to make a good home for themselves, and it may be for him in old age. Not all have farms; but all will need to know something of the garden and the orchard at least; and we advise no parent, who feels that he may sometime be dependent upon his children, to bring them up without the means of instruction in rural economy. It should be regarded as essential in the education of any child, male or female.

PRESERVING FLOUR AND MEAL.—The patented plan of Thomas Pearsall, of Hooper's Valley, N. Y., for preserving flour, meal, and grain from heating and souring, by having an open pipe running through the centre of a barrel of flour and meal, or a number of such tubes in bins of grain, we have tested and found to be an excellent invention. A barrel of Indian corn meal put up in May last, with one of his refrigerating tubes, is now as sweet as it was on the day it was packed. This improvement must lead to a great saving to our country, as it is calculated that no less than \$5,000,000 is lost annually by the souring of flour and the heating of grain in piles,—much, if not all, of which may be saved by the application of this invention, which is neither complex nor expensive, but simple and cheap. A barrel of corn meal, packed in one of Pearsall's patent tubular barrels, arrived in this city on the 11th of this month from Louisville. It was put up in July and shipped to New Orleans, was kept several weeks in the hold of a steamboat, and afterwards housed in a warehouse until about the 1st of December, and yet is now perfectly sweet. —*Scientific American*.

GOOD TIME.—A party of young men tried their speed of foot in racing round the Common, and "good time" was made in more senses than one. Among other feats, was that of drawing a buggy. One young man, a clerk in Milk street, took a two horse buggy at Streeter's stable in Bromfield street, drew it up Park street and round the Common through Boylston and Washington streets, back to the stable, accomplishing the trip in exactly twenty minutes. This was a distance of at least a mile and a half, and it must be admitted that he gave proof of extraordinary powers of endurance. Immediately after leaving the buggy, the same young man started on a race around the Common, outside the fence, and accomplished the distance in eight minutes and three quarters. Even after these exertions, the athlete did not appear to be greatly fatigued. —*Boston Journal*.

Ladies' Department.

(From the Boston Cultivator.)
I AM LONELY.

I am lonely, oh, how lonely,
And my weary soul doth pine,
For one loving heart, one only,
Joy and grief to share with mine!
I would pour each thought, each feeling,
Fearless out, on some fond breast,
Sure to find an echo stealing
Upward from its gentle rest!
When the festal throng are meeting,
Round one form my arm I'll twine,
Conscious that the heart-pulse beating,
Gave back throbs for throb, to mine!
Then I'll smile where crowds are smiling,
Proudly feeling even there,
Where sweet beauty's most beguiling,
I was one heart's dearest care!
Vain, till vain is this world's yearning
For the love I knew of yore,
Sadly, tearfully I'm learning
Earth will give me no more!
I have known how dear a blessing,
Is a love that knows no fear,
But its sweetness, past expressing,
Never more my heart will cheer!
So, I'm lonely, very lonely,
And my weary soul doth pine,
For that blessed home where only
Love and joy can now be mine!

DORA LEE.

Women Should Shun Men of Bad Character.

We hope that the following advice will not be lost on all mothers and daughters. They should shun base and sensual men, as they would a leper. But unfortunately the society of a brilliant bad man, is about as much courted, as a brilliant good one. Females cannot shield themselves under the plea of ignorance. Good men may have bad reputations, and bad men good reputations, but aside from this, they have a character which is or may be known by all decent women who would prefer the society of a gentleman, to that of a villain and rascal.—*Ohio Farmer*.

Here is the extract:
Did woman feel the responsibility of the station she holds in society—did she feel how much she is the arbitress of man's destinies on earth, nay, even beyond it, how different would she act! Instead of dispensing her smiles equally on the worthy and unworthy, she would show by her discountenance of vice, how hateful it was to her; no matter how talented a man was, how graceful in his manners, or pleasing in person, unless virtue was the guiding star of his conduct, she should banish him from her presence, as being unworthy of her society. "Should she shrink from his society as she would shrink from a noxious reptile. Is such the case? No. No matter what a man's vices, if he is handsome, brilliant in conversation, and versed in the arts of flattery, all the smiles and attentions are lavished on him that ought to be bestowed only on the virtuous; while the man who is endowed with every good quality that can render him estimable, if wanting in the showy acquirement of society, is treated with the utmost indifference; thus giving rise to the too generally received opinion that, the worse a man is, the more agreeable he is to woman. Can it then be wondered at, that, to meet her in society, win her affections by a thousand nameless attentions, and slight them when won, is the pastime of an hour to those honeyed flatterers, those destroyers of woman's happiness, who, like a gilded serpent, captivates but to annihilate. Were they regarded as the pests of society, instead of being treated as its ornaments, the race would disappear.—*Emerson*.

FROSTED PLANTS.—When plants, through accident or neglect, get frozen, they should be well syringed or sprinkled overhead, through a fine rose watering pot, with cold water. Great care must be observed in shading them from the sun till the frost is thoroughly drawn out, which should be done as gradually as possible. Standing them on the floor of the house is the best plan that can be adopted. Care must be taken that they do not again freeze after syringing. It seems not to be generally understood that frost merely suspends, but does not entirely destroy vegetation, and, unless plants are very tender, with careful treatment they may, generally, be saved.

LUTHER'S OPINION OF MUSIC.—"Music," says Luther, "is one of the fairest and most glorious gifts of God, to which Satan is a bitter enemy, for it removes from the heart the weight of sorrows, and the fascination of evil thoughts. Music is a kind and gentle sort of discipline; it refines the passions and improves the understanding. Even the dissonance of unskillful fiddlers serves to set off the charms of true melody, as white is made more conspicuous by the opposition of black. Those who love music are gentle and honest in their tempers. I always love music" adds Luther, "and would not for a great matter be without the little skill which I possess in the art."

The famous saying of Shakspeare, that "there is a divinity that shapes our ends" is illustrated in the employment of some 1,000 pretty girls at Milford, in making gaiter boots.

Ten years ago there was but one omnibus running in Cincinnati; at the present time there are ninety-three.

Miscellany.

PUSH ON!

BY HENRY J. SARGENT.

Awake! and listen, everywhere—
From upland, grove and lawn,
O'er breathe the universal prayer,
The orison of morn.

Arise! and don thy working garb;
All nature is astir;
Let honest motives be thy barb,
And usefulness thy spur.

Stop not to list the boisterous jeers,
(He would be what thou art,)—
They should not e'en offend thine ears,
Still less disturb thy heart.

What though you have no shining board,
(Inheritance or wealth?)—
To purchase at the broker's board,
The recompense of wealth—

Push on! You're rusting while you stand;
Inaction will not do;
Take life's small bundle in your hand,
And trudge it briskly through.

Push on!

Don't blush because you have a patch
In honest labor won;
There's many a man a cot roofed with thatch
Is happier than a throne.

Push on! The world is large enough
For you, and me, and all;
You must expect your share of rough,
And, now and then, a fall.

But up again! set out your part—
Bear smilingly your load;
There's nothing like a cheery heart
To mend a sorry road.

Push on!

Jump over all the ifs and buts;
There's always some kind hand
To lift life's wagon from the rut,
Or poke away the sand.

Remember, when your sky of blue
Is shadowed by a cloud,
The sun will shine as soon for you
As for the monarch proud.

It is but written on the moon
That toil alone endures;
The king would dance a rigapoo,
With that blithe soul of yours.

Push on! You're rusting while you stand,
Inaction will not do;
Take life's small bundle in your hand,
And trudge it briskly through.

Push on!

[For the California Farmer.]

Sketches connected with California History.

PROLOGUE.

IN that most ancient collection of gazettes containing the earliest chronicles of the human race, as indited by Moses and the prophets, and continued by the apostles and followers of Jesus Christ, until they touched on the distinctly ascertained boundaries of historical evidence, we are informed of countries similar to the one in which it has pleased God to cast our lot: of the primitive life of the ancient patriarchs and rancheros; of their explorations of unknown territories; of their battles with the heathen and conquest of Phillistine nations; of their discoveries of lands flowing with wine and milk and honey; of soils yielding an hundred fold; and of their trade and commerce with peoples and tribes who had riches of gold and silver, and pearls and precious stones.

And here followeth the narration of some of the most noted of their daily events, as related by editors of those times, when the earth lay a fresh field, open to the prying eyes and ready pens of men of primitive, but sublime conception. "And when Abram was ninety years old and nine, the Lord appeared unto him; and Abram fell on his face; and God talked to him, saying: thy name shall be called Abraham; for a father of many nations have I made thee: I will make nations of thee, and kings shall come out of thee: I will bless them that bless thee, and curse him that curseth thee; and in thee shall all families of the earth be blessed. As for thy wife, Sarah shall her name be: she shall be a mother of nations; kings of people shall be born of her."

And then again of another day—on the plains of the ancient Chaldea, physical counterpart of our California, concerning an entertainment of simple and open-handed hospitality to three strangers, he unaware of their being celestial visitors: for in those days "God walked and talked with men." "And Abraham lifted up his eyes: as he sat at the tent door in the heat of the day: and lo three men stood by him: and when he saw them he ran to meet them at the tent door: and said, pass not away, I pray thee from thy servant: let a little water be fetched and wash your feet, and rest yourselves under the tree: and I will fetch a morsel of bread, and comfort ye your hearts; after that you shall pass on: for therefore are ye come to your servant. And he took butter and milk, and the calf which he had dressed,

and set it before them; and he stood by them under the tree and they did eat." Simple banquet of patriarchal host to wayfaring, dusty, desert-tolling sojourners from the heavenly countries, in the shape of humanity—and for drink, they had water from the running brook. Can any modern reporter condense his notes of passing events within such comprehensive sentences as are to be found in the odd copies of the early manuscript newspaper, printed in the 12th to the 18th numbers of Genesis?

And then the descendants of this old patriarch went down into Egypt and multiplied greatly. And Moses, the chronicler of their traditions, the compiler and editor of their various daily doings, became finally their deliverer, legislator, poet, sage and prophet: and died before he entered the promised land: which is known to men since that time to this, as the Californian Palestine; abounding in fruits, and oil, and figs, and grapes, and all manner of things good and fit for man; and from whose ancient haunts of civilized arts, the tribes of men scattered over the face of the whole earth to multiply, increase and fill up the measure of their destiny.

And the coast of the Mediterranean became colonized by their ancient mariners and emigrant squatters, until the nations who sprang from their feeble loins, encompassed the boundaries of empires on both shores, and from the Atlantic ocean to the mountain passes of the Indies; and there remained, to their knowledge, no more fair lands to conquer and settle.

Then came the triumphs of civilized law, of the arts—of sciences—of the collections of the old records of history—of the foundations of colleges and libraries—of the making of books of which there was to be no end till time should die out. Then, in those times, were born Homer, Virgil, and Horace, the poets—the father of history, Herodotus—Tacitus, Livy—Strabo and Ptolemy the cosmographers—Aristotle the Stagyrice, teacher of the world's conqueror; and then were Dante of Syren note, Petrarch of the Amors, Ariosto, Michael Angelo, poet, sculptor, architect, painter—Raphael, the divine limner; Titian, glowing with mellow tinted nature—and hosts upon hosts of men, inspired by the divine spark from the living fire of God's altar:

"The madmen who have made men mad
By their contagion; conquerors and kings,
Founders of sects and systems, to whom add
Sophists, birds, statesmen, all unquiet things
Which stir too strongly the soul's secret springs."

Until we come to the time of the old Alchemists and the minds of all filled with the undefined idea of another continent beyond the shores of Europe, and over the wild wastes of western waters.

Now Christopher Columbus, the navigator of Genoa, arose from obscurity, and after numberless obstacles of poverty, neglect, calumny and iron-faceted ignorance, was given the command of three crazy barks to find out the eastern shores of Kathay, and the lands filled with gold, and silver, and pearls, and fine silks, and spices and precious wares; and to be ambassador to the great Khan in his fifty-sixth year; and to bring home to Spain treasure sufficient to equip an army to rescue the holy sepulchre from the hands of the infidels: at this present date of time embroiling three of the most powerful nations of the earth, in mortal combats of bloody strife. And this continent then became known to unfettered civilization from the date of its discovery, on the 12th of October, 1492, now foregone by 363 years.

Here followeth the lucid and diversified language of the elegant historian Irving, and his accents on this momentous epoch of the world's progress. The joy occasioned by the great discovery of Columbus was not confined to Spain: the tidings were soon spread far and wide by the communications of ambassadors, the correspondence of the learned, the negotiations of merchants, and the reports of travelers. "The civilized world was filled with wonder and delight. How gratifying would it have been had the Press at that time, (April, 1493), as at present, poured forth its daily tide of speculation on every passing occurrence. With what eagerness should we seek to know the first ideas and emotions of the public on an event so unlooked for and sublime. In Italy "it was recorded as one of the most triumphant events of the year." At the court of the seventh Henry in England "it was pronounced a thing more divine than human." By it "Sebastian Cabot, the future discoverer" of North America, "was inspired with a generous spirit of emulation." In a letter from Peter Martyr de Angliera, to his friend Pomponius Lotus, he writes: "that you leaped for joy, and that your delight was mingled with tears, when you read my epistle, certifying to you the hitherto hidden world of the antipodes; you have felt and acted as became a man eminent for learning, for I can conceive no aliment more delicious, than such tidings to a cultivated and ingenious mind. I feel a wonderful exultation of spirits when I converse with intelligent men who have returned from these regions. It is like an accession of wealth to a miser. Our minds, soiled and debased by the common concerns of life and the vices of society, become elevated and meliorated by contemplating such glorious events."

Notwithstanding this universal enthusiasm, however, no one was aware of the real importance of the discovery. That was the age, too, of the revival of letters—of the discovery of the modern art of printing—of the establishment of the periodical press—of imprinted works of the classical authors of antiquity, and of those of later times—of the upheaving of the moral sentiment of civilized man in the Protestant Reformation—of the great astronomical dis-

coveries which enabled the mariner to sail on unknown seas by observation of celestial phenomena. The human mind heaved up, as with the forces of volcanic energies, to compass its destiny, to survey the immense field of its future efforts in the opening vistas of brightening hope.

The biographer of Columbus hath but depicted in words of earlier date, the wondrous accessions to human fact and imagination, caused by the discovery of the golden fields of our Pacific territories.

The first decades of the sixteenth century was the age of the Spanish navigators, and of the iron-hearted conquistadores. In 1513 Vasco Nunez de Balboa discovered the Pacific ocean. In 1520 Fernando Magellan entered this great sea from the south, and tracking its placid and diversified bosom, for the first time, circumnavigated the great globe. In 1528 Hernando Cortez, misnamed with the conquest of Mexico, lifted out the first expedition to find the pearls and gold of California. Unsuccessful at first, with persevering courage he repeated expedition after expedition, till the final one of his lieutenant, Francisco de Ulloa, of July, 1539, which resulted in the discovery of the northern part of Lower California, on the Pacific.

At this time Pizarro had nearly completed his conquest of Peru—Alvar Nunez de Cabeza-Vaca had arrived from a nine years journey from Florida to Culiacan in Sinaloa, and brought rumors of Indian cities deep in the unknown central wilderness of prairies and mountains—the Friar Marcos de Niza had returned to Mexico, after some nine months travel into the countries within the boundaries of the rivers Grand del Norte, the Gila, and the Colorado of the West; a tract of territory to this day but little known to civilized man. "He," says the dubious historian Greenhow, without proper foundation of doubts, "pretended to have discovered northwest of Mexico, beyond the 35th degree of north latitude, extensive territories, richly cultivated and abounding in gold, silver and precious stones; the population of which was much greater and farther advanced in civilization than those of Mexico and Peru. In these countries were many towns and seven cities, of which the Friar only saw one called Cicola or Cibola, containing 20,000 large stone houses, some of four stories, and adorned with jewels; yet he was assured by the people that this was the smallest of the cities, and far inferior in extent and magnificence to one called Tototeco, situated more towards the northwest."

Now, to confirm the old Friar's story told 315 years ago, only on the 15th day of February, 1855, appeared in the columns of the San Francisco Daily Herald an account of a Mormon journey into these very regions in the October of 1844; and the discovery by one of the Padres of the Church of the Latter Day Saints of the Utah Jerusalem, and named W. D. Huntington; of a country full of ruined cities, about 500 miles southeast from Great Salt Lake, and some forty miles in length by twenty-five miles in breadth—the buildings (some of them), of dressed stones, four stories high, well cemented and put together, with various other singular proofs of the truth of Father Marcos's narrative. The veracity of the Mormon description is corroborated by that old mountaineer and adventurous explorer Captain Joseph Walker, of the county of Santa Clara, at Gilroy's, in this State, in the account of his journey to these very regions in 1850, which appeared in the same Herald, under date of September the 25th, 1853; and also by Dr. Lyman, in 1841; by Major Emory, in 1846, and by sundry other officers, hunters and traders to this day, whose accounts are full of curious lore of these ancient signs. So it appears that this is the very country traversed by Father Marcos de Niza, who had set out from Culiacan on the 7th of March, 1539, for the countries lying to the northwest of the then frontier Spanish settlements on the Pacific, in the present State of Chihuahua.

Then shortly after the time of de Niza, went out in search of these seven cities of gold and precious stones, with 350 Spaniards and 800 Indians, a Spanish Captain, Francisco Vasquez de Coronado, who returned late in 1540 and denounced the afore-said Friar as a deluded or intending impostor: "of whom, and whose travels," as the learned Albert Gallatin saith, in 1847, "that one Castenada, a Spanish book worm and volunteer in Coronado's expedition, wrote a full and authentic account" in 1562. Also Fernando de Alarcon discovered the great river Colorado, where it debouches into the Gulf of California, in August, 1540.

In the Spring of 1542, the bold navigator Juan Rodriguez Cabrillo discovered and afterwards coasted the shores of California, from San Diego to the Cape of Mendocino, and died at the island of San Miguel, off Santa Barbara, on the 3d of January, 1543. An account of the voyage, with further discoveries made towards the north, was conveyed to Mexico by his successor Bartolome Ferrel, of whom and his commander nothing more is now known.

Thus, in April, 1853, had the world got glimpses of exterior and interior California—every one of the expeditions being projected to find out the unknown cities of great kings, paved with gold, and pearls and precious stones, and to bring their souls under the discipline of the Fathers of the Christian Church of Rome. And on this display of historical concurrences we may quote the sagacious words of the Washington of Literature, in a work written at the age of eighty and sixty years spent in the study of nature and of man's history, "They err who believe that the conquistadores were incited by love of gold and religious fanaticism alone. Perils always exalt the poetry of life. Excited fancy urges men to undertake great enterprises, and the daring of these undertakings, whether successful or not, react on

the imagination and excite it still more powerfully. Many circumstances concurred at this remarkable period, to favor individuality of character and to enable some highly gifted minds to develop noble germs drawn from the depths of feeling."—Alexander Von Humboldt, in the Cosmos of 1844.

Now is not the foregoing true of California and the world since the memorable year of grace A. D. 1848? Has there not been a rare shaking and trembling of the earth's dry bones?

And then the Asiatic trade by Spanish galleons to the western coasts of Mexico, became established and shortened by the San Pedro Andreo Urdaneta, who was the first to steer north from the Chinese shores unto the 40th parallel; and so coasting with the mountainous shores of California in full view for 2,000 miles, sped on in to the harbor of Acapulco with the first cargoes of that mighty commerce, which is to lift Western North America, in the generations of our vigorous posterity into the magnitude of powerful maritime states and empires. And the old galleons brought the first Chinese emigrants to Spain's American Colonies, and thence and within our boundaries will never cease to be out of the land; though a hundred thousand crazy fictions should devour themselves with ignorant spite, at the flowings of God's mysterious providence.

And then in 1592, Juan de Fuca, or Foca, surnamed Apostolos Vulerianos, a Greek pilot of Cephalonia, in the service of Spanish kings, sailed on many northwest voyages from Mexico, until he discovered the straits of water which separate Oregon from the Island of Juan de la Bodega de la Quadra, now misnamed Vancouver. De Fuca returned to Mexico—despoiled of his gains by the English filibuster Cavendish, at Cape Saint Lucas—to get recompense for his services; but viceroys had had memories and cold hearts. And so he went to Spain and danced attendance at the court of the king, but kings are like viceroys and peoples; the first to receive great benefits from sacrifices of bold men, and the first to forget them. "And so his youth and prime was spent in toil and care"—and his soul became sick with faint of sweet hope; so he offered to Queen Bess his services, to go into the Straits of Annum and deprive her enemy and brother-in-law, of the high honor of searching out the great riches of California; but the Queen of England was the subject of other destinies. So Juan de Fuca went back into his native valley of Eleo, near by to Argostoli of Ionian Cephalonia; and the old Greek navigator, being old and stricken with years and grievous disappointments, died at Vuleriano, and was buried among his kindred near to the year 1602; his descendants to this day live humbly by his burial place, poor but proud mariners, kith of the great discoverer of Oregon, who was the robber of English freebooters and cheated of Spanish kings and courtiers. For we say these hitherto unknown facts of history from a veritable letter of a good friend living in the Islands of Greece, at the date of 12th October, 1854—that is, as in his actual death, burial and hallowed final progeny existing on the spot; and so the first for 262 years disputed, is now proof positive against all Spanish or other historical detractors; that such a man as Juan de Fuca lived and died, and did the things which dubious traditions had assigned to his name.

Now sailed Sebastian Cermenon in 1595 in the galleon San Augustin, with rich cargo from Manila towards Acapulco, and wrecked his bark near the bay of San Francisco, where under the eaves of some sandy cove doubtless they lie unburied at this day.

Then came Sebastian Vizcaino with his three barks in 1602, and re-surveyed the coasts of California; and one of his captains discovered a river called by the cosmographers the River of Martin de Aguilas, which puzzled the old chroniclers and gold seekers for more than 200 years; possibly that now called Klamath, or the Coluinda. And Vizcaino also died in 1608 of disappointment and grief, from slights of kings and viceroys, and was buried in Mexico with his broken heart and sunken hopes; but the world through Padres Forquenada and Asencion became better instructed as to what California was, though it was only that part of the world who lived in courts, cloisters and libraries—in those days newspapers and readers were scarce.

And then from 1602 to 1697 California was sought after by gold and pearl seekers on the shores of the Sea of Cortez, in numerous expeditions of Spanish money-mongers congregated there to steal the Indians for slaves to make divers and miners; which gave great grief to a chaplain who accompanied one of their raids—him known in missionary history, in Sonora chronicles and Lower California traditions, as Padre Kino—in German, Eusebius Kuhn, famous professor in the ancient University of Ingolstadt in Bavaria; the institution renowned also in the annals of Alemania, for "el sabio Dr. Faustus"—for fights of Gustavus Adolphus the Great—sundry sieges from old butcher generals even to Tilly and Moreau. But now it hath neither library, commerce nor great professors; but sundry tombstones of the past.

Now at this conjunction of California events appeared in modest garb of Queen's Play Actor, the noble Will who enchaineth men's hearths and imaginations; greater than all kings and generals and statesmen and poets past and present—that is, William Shakespeare saw the light of earthly day at Stratford-upon-Avon, in the county of Warwick, in Old England, on the 23d day of April, 1564; and he ended his immortal career and died a Christian man's death, on the 23d day of April, 1616, in his own house and among his own kith and kindred. And of him we say as we say of Byron, "Wild above rule or art"—and

John Milton, cosmopolitan christian and divine poet, hath writ:

"Thou thin, our fancy of herself becoming,
Dost make us marble with too much conceiving;
And, as if we were, in such pomp dost lie,
That kings for such a tomb would wish to die.
In a less volume, but no strongly bound,
Shakespeare shall breathe and speak; with laurel crown'd,
Which never fades; fed with ambrosian ment,
In a well lined pasture, rich, and neat.
So with this robe they clothe him, bid him wear it;
For time shall never stain, nor envy tear it."

The friendly admirer of his endowments J. M. S.
Thus hath gathered and conserved in Shakespearian memorials of 1853, J. P. Collier, the English bibliophile.

And then the Jesuits from Padre Kino became rulers of California—Christianized its heathen—surveyed its gulf shores—ascended the Colorado river; crossed from the mouth of the Gila over the deserts and mountains to the shores of the Pacific ocean about the year 1765, and under some German Jesuit ascertained that Lower was but a continuation of Upper California—that California was not an island but a great and fertile territory stretching infinitely north on the ocean and away into the eastern Tierra Incognita of deserts and wild wastes of plains and mountain-sierras.

Then, on the 2d of April 1767 were expelled from these regions the men, whose devout and learned associates wrote the History of California and a (then) vast and profound compilation of subjects connected therewith. So the Jesuit Padres ceased to live in the land and were landed down, in their old age, in the Italian countries; and what became of them, the annals of convents will disclose.

[TO BE CONTINUED.]

PRICES OF AGRICULTURAL IMPLEMENTS.

Hull's Shovel Three-bladed	\$900
Little do do one wheel	1,000
Emery's Shovel do	400
McCormick's Reapers and Mowers	400
Hessy's do do	10
Manny's do do	450
Kelham's Mowers	\$175 200
Grange's five-finger wire frame Cradles	80 100
Key's and Smith's do	25 50
Hay Rakes, round	6 10
Hay Rakes, straight	5 25
Hay Forks, two prongs	8 10
do do three prongs	12 20

We are informed says the Sonoma Bulletin of May 10th, that the frosts of last week have materially injured the fruit in Napa. The peaches throughout the valley were ruined, and grapes in many of the orchards were more or less injured. We have heard no complaints in Sonoma, however.

SPECIAL NOTICES.

The Balsam of Wild Cherry.—Proofs of the superiority of Dr. Wistar's BALSAM pour in from all parts of the country.

Oxford, New Haven Co., Conn., Jan. 4.

Dear Sir: Having witnessed the effects of WISTAR'S BALSAM OF WILD CHERRY, in the case of one of my neighbors, who has been for several years seriously afflicted with the pulmonary, general pulmonary weakness, bleeding of the lungs, etc., I have been induced to ask you to send me some of the medicine. My neighbor, referred to above, lately had a violent attack of bleeding at the lungs, and distress in breathing. He tried a bottle of the Wild Cherry, which has produced a most salutary and favorable effect. At his instance, and several others laboring under like complaints, I have been induced to make this request. By attending to the above immediately, you will oblige the afflicted, and also. Yours, etc.,

HENRY DUNHAM.

Sold by all druggists.

Agents for San Francisco, B. B. THAYER & CO.

Opinion of the Press.—From the Sentinel and Register, Worcester, Mass:

WISTAR'S BALSAM OF WILD CHERRY.—Two beneficial effects of this remedial composition are astonishing to the world, and make it one of the most popular medicines now known. For Coughs, Colds and Consumption cases, its curative powers are established by numerous testimonials of the highest character. In the first stages of the disease termed "Catarrhal Consumption," originating from neglected colds, it has been used with unvarying success, and hundreds acknowledge its power the restoration of their health to this invaluable medicine.

Many of the first physicians prescribe it in their practice.

Do sure it is signed I. HUPPS on the wrapper.

Agents for San Francisco, B. B. THAYER & CO.

Sold by all Druggists.

To Purchasers of Implements for Harvesting Grain.—We would keep ourselves always advised of the very best implements that are imported into this country, and those who wish to purchase, by writing or calling on us, can be assisted in their purchases rationally. We can find orders to any extent for machinery, and will be happy to do so for a commission, and we know we can do so with great advantage to the purchasers. [v3-13] WARREN & SON.

Religious Notice.—There will be Public Meetings held at the "Hall of the Sons of Temperance" on Washington street, between Sansone and Montgomery, every Sabbath Day, viz: A Prayer Meeting at 10 o'clock, A. M., and Public Lecture at 3 P. M.

The REV. MR. SEXTON will lecture next Sabbath, April 29, at 3 o'clock, P. M. NATHEL THURSTON.

Persons purchasing articles advertised in our columns will confer a favor by saying they observed them advertised in the "CALIFORNIA FARMER."

J. HOWELL & CO.,

46th J street, between Second and Third, Sacramento.

TAKE this opportunity of informing their friends and the public, that they have just received a new and choice selection of Watches and Jewellery. Among which will be found Watches of every description, from the best makers—English and French. Also—Diamond Rings, Chains, Bar-Rings, Pins, Bracelets, Quartz, Jewelry, &c., &c.

Particular attention paid to DIAMOND SETTING. Watches carefully repaired and WARRANTED. [v3-50]

MARKET REPORTS.

Where are they? What are they selling? Two we have bread enough and to spare. So our friends East will find when their clipper returns back to them with our produce and their own goods. They will soon learn about our markets and grow wiser.

The following are the rates for 10-day of Grain and Flour, and a few other products:

CALIFORNIA GROWTH.

Flour, 48 lbs, best brands	\$10 00	\$12 00
Wheat, 48 lbs	1 1/2 @	1 3/4
Barley, 48 lbs	1 1/2 @	1 3/4
Oats, 48 lbs	2 @	60
Butter, best dairy, 48 lbs	48 @	35
Cheese, 48 lbs	30 @	25
Lard, best, in tins	2 00 @	25
Honey, best, in boxes, 48 lbs	2 00 @	

CALIFORNIA PRODUCTS FOR EXPORT.

Hay, pressed, 48 lbs	\$15 00	\$16 00
Wheat, 48 lbs	2 50 @	2 75

Markets generally are dull, except for those articles that are now in some demand for export. Money is abundant, upon undoubted securities; but scarce and hard to be had in the usual course of collections. Economy and untiring industry, and constant effort will eventually bring things all right.

MARRIED.

On the 12th May, in this city, by Justice Pearson, Jacob Jeger and Mrs. Sarah Taylor, both of this city.
On the 10th May, in this city, by Rev. Mr. Le Brae, John S. Bakstien and Miss Catherine Cossely.
On the 13th May, in this city, by Rev. R. P. Cutler, Thomas A. White and Miss Emma A. Hunt, both of this city.
On the 9th May, in this city, by Rev. Mr. Thomas, Geo. W. Somerville and Miss Mary Yates.
On the 8th May, in Marysville, Jno. W. Noyle and Angelina H. Hughes, both of Marysville, N. J.
On the 2d May, at Mokelumne Hill, Joel Martin and Miss M. Burton.

DIED.

On the 7th May, in Monterey, Donna Maria A. Lugo de Vilajo, aged 78 years, wife of the late Ignacio Vilajo. She was born in San Luis Obispo—married her husband when 13 years old—and had 156 children, grand children, and great grand children. She retained her memory and faculties until within a few weeks of her death.
On the 12th May, in this city, Mary Cornie, infant daughter of Alex. G. and Emilio Alch, aged 4 months and 13 days.
On the 7th May, at the Mission Dolores, Charles, only son of Chas. Brown, Esq., aged 6 months and 19 days.

OBITUARY.

The tolling bell on the evening of the last Sabbath, drew our steps to the church of Rev. Mr. Benton, at Sacramento. Soon a long procession of children from the Schools were gathered within the church, and the organ notes sent forth the solemn requiem for the dead; then from the voices of many children rose the "Farewell Hymn," and this touching appeal prepared those who were in the crowded auditory to listen to the solemn address of the pastor who made an earnest exhortation to impress upon the minds of those present the melancholy event which had just occurred, in the loss of one of the teachers by drowning, while crossing the river from opposite Sacramento. It being near dusk, the boat was crushed by a steamer, and this lady with her friend and protector perished. This event is most touchingly and truthfully, yet beautifully and tenderly given in the obituary which we append, a just tribute to a most amiable and highly esteemed lady. The obituary notice is from the pen of a gifted lady, a teacher, also of Sacramento, a friend of the deceased.

Again has the Death Angel's wings swept across the etherial illos of our sunny skies. Again the public heart beats with one universal throb of awe and sympathy. In this dispensation of Providence has passed away from earth, in the early age of womanhood, one who, had she lived, would have been an ornament to society, having all those attributes that endeared her to her many friends and made her a mark of universal esteem. Ardent and affectionate in her disposition—earnest in the pursuit of intellectual culture, and vigilant in the discharge of her duty, she won the confidence of those associated with her as companions and teachers and the affection of her pupils. Amiable, as the moon all; intelligent, she charmed all; dead, she saddened all. Her character was adorned with those christian graces, which invested her with a sanctity and showed that she was ripening for that blessed life to which it has pleased God, so early to summon her.

One star has fallen from the blue sky—it is heaven aloft still. One tribulation has diffused down the stream of time to the shades of night—it is summer just the same.

Death does not fear the sunshine, for he comes in May. The rustle of ten thousand leaves does not startle him, or the breath of ten thousand flowers charm him away. Indeed, he loves flowers—the fairest of earth are of his choosing; he reaps "The bearded grain at a breath."

And the flowers that grow between."

Philosophy may analyze a tear, but it can neither curve a hope to it, nor bid it "exude." It may make the spectrum, but it cannot make a smile.

Beside the corpse of a much loved friend an empty chrysalis is lying, but we trust the spirit is in a realm where it is summer all the year long. There is a Receiving Angel, and a book lies open before him; and the page for Mar. 6th, 1855, bears a letter of light the name of ANNIE ALEXANDER. Oh God!

"We pray thee trouble her no more!
To keep us from her shadow;
Gently let go our hands and give us room
In the earth's breast to sleep."

SAN FRANCISCO MARINE LIST.

ARRIVALS.

MAY 9—Bark Ocean Bird, Wiggins, Columbia River, 5 days, with lumber.
U S Quartermaster's schooner Monterey, Belcher, Colorado river, 23 days, with ordnance.
Schr Horner, Deane, Tomales Bay, 13 hours; potatoes.

MISCELLANEOUS.

Copartnership Notice.

THE undersigned have formed a Copartnership for the purpose of continuing and carrying on the Furniture Trade as Wholesale and Retail Dealers and Importers, in this city and Sacramento, under the name and style of HOWES & CO.
Resident Partner, Boston, R. HOWES,
of the old firm of Howes & Co.,
180 and 182 Montgomery street.
Resident Partner, San Francisco, DAVID MOORE,
San Francisco, Sacramento,
139 Jackson st. 103 K st.
Resident Partner, Sacramento, B. C. NEWCOMB,
77 K street, Sacramento City.
San Francisco, May 8, 1855.

To Our Friends and the Public.

By uniting the above three firms our capital is largely increased and our
expenses reduced more than one-half,
which enables us to offer a greater variety of Goods at
15 to 25 per cent. less than our former rates.
One of the partners will be in Boston and New York to purchase goods, and will take advantage of the markets to obtain such goods as are desirable, at the
lowest Cash Rates.

Three years experience will enable him to select a stock that will

Defy Competition in Quality and Prices.

We are now before you with a large and
DESIRABLE STOCK OF NEW GOODS,
and shall endeavor to merit a share of your patronage. It will
be our pride to give
Perfect Satisfaction,
both in quality, prices, and good treatment.

HOWES & CO.

FURNITURE!! FURNITURE!!!

AT REDUCED PRICES.
NEW FIRM AND NEW GOODS.

Our stock of Furniture is now complete, comprising every thing suitable for the Parlor, Chamber, Dining Room or Office. We have lately added to our stock \$40,000 worth, purchased here at low rates, which, together with our former stock, and constant additions by every clipper ship, gives us one of the largest stocks ever offered in California. We have reduced our prices to conform to the times, at least 25 per cent. as all who will favor us with a call will be convinced.—By the addition of Messrs. Moore & Newcomb's stocks, here and in Sacramento, we can safely say that our stock is the most varied and complete ever offered to the public, and that we cannot be undersold by any firm in San Francisco, Sacramento, or elsewhere in this State. Call and examine our stock before purchasing.

[v3-6] Corner J and Second streets, Sacramento.

Circular.

OFFICE OF THE "LIVING AGE."
THE stereotype plates of this work now fill 1,000 boxes, and weigh 30 tons. The amount of capital locked up in them, even as mere metal, is greater than can be afforded; so that we are obliged to melt and sell them. Before doing so, we propose to print as many complete sets as may be ordered, and to sell any numbers or volumes necessary to complete volumes or sets in the hands of our subscribers. We press this upon their attention, for the value of a complete set is very great, and well worth the expense necessary to make it complete.
Here are 40 volumes, equal in quantity of matter to 120 ordinary volumes; in other words, equal to a whole set of the Edinburgh Review for sixty years. And it is made up of the best productions of the best writers of the last ten years; not dull, dry or abstract, but instructive with the Motion and Spirit of the Age in Live in. Its interest will not diminish as the volumes grow old, and fifty years hence it will be read with as much zest as at present.

On the grounds of public good, his own profit, and his future reputation, the editor is desirous that a set of this work should be placed in every public library and school district in the United States; being confident that its influence will be only good upon every reader, especially upon those who may be stirring up their spirits to self-destruction.
It is a material requisite in making up a library, that the works should not only contain good matter, but should be various and attractive. The editor of the Living Age is confident in saying that this work is eminently readable, and will constantly be taken from the shelves of any library, public or private, in which it may be placed. We have seen in the Franklin Library at Philadelphia, a set of the "Museum," which was edited before the Living Age was started, the volumes of which were thumbled to pieces, like old spelling books. Made up of the best, it cannot be otherwise.
Your advice and assistance, dear reader, is invited, toward the accomplishment of the object above set forth; and while by so doing you will do good to all who read the work it will perhaps be pleasant to you to know that you will also benefit the person who has long and laboriously "winnowed the wheat from the chaff," that you might enjoy the more easily.
[v3-19] LITTELL, SON & CO.

Benicia Iron Works.

STEAM ENGINE, BOILER AND MACHINE SHOP.—This establishment is now in successful operation, and offers to the public facilities equal to any in the United States, for manufacturing or repairing Steam Engines of the largest size, Boiler Wares, Brass Castings, Mill Gearing of the most approved patterns, Bloom Iron, Cast Iron Columns, Window Caps or entire fronts.
Contractors and others will do well by patronizing this establishment, as their work will be executed with greater dispatch and at lower prices than any other manufactory in the State.
The company have extended their Pier, and erected a large crane for the accommodation of their customers.

I DIDN'T SAY BRISTLES.—The Louisville Journal relates the following anecdote: We remember that some years ago, Rodger M. Sherman, and Perry Smith, were opposed to each other as advocates in an important case before a court of justice. Smith opened the case with a violent tirade against Sherman's political character. Sherman rose and very composedly remarked: "I shall not discuss politics with Mr. Smith before the Court, but I am perfectly willing to argue questions of law, to chop hairs or even to split hairs with him." "Split that then," said Smith, at the same time pulling a short rough looking hair from his own head, and handing it over toward Sherman. "May it please the honorable court," retorted Sherman, "I didn't say bristles."

INTERESTING TO HEN FANCIERS.—One of the most serious obstacles in the way of keeping hens about a house has been their hitherto unconquerable predilection for stretching up gardens. We learn from the Oswego Palladium that an ingenious Yankee has at length discovered a remedy for this difficulty, and is taking measures to introduce it into general use. It consists of a small instrument somewhat resembling a very long spur, attached to the hind part of a hen's leg. The instrument is so arranged that when the hen is about to scratch the earth, the spur catches in the ground before the foot has fairly descended, and obliges her to bring the foot down quietly and harmlessly a little in front of the place where she has aimed at. The hen thereupon tries the other foot, with a like result. She keeps on trying, and before she is aware of it the machine has walked her right out of the garden! An agency has been opened in Chicago for the sale of these "hen walkers."

"Does your son play eukre?" said a gentleman to old Mrs. Partington, on seeing Ikey enter the room with a pack of cards in his hands. "La sakes," answered the old lady, looking over the tops of her spectacles; "Ikey don't play the pikny, but I should'n't wonder if he could whistle it for you. Ikey, put up those wicked cards, and whistle eukre for the gentleman." "I can't," said the young hopeful. "It is strange how that boy has regenerated lately," said the old lady; and taking up her knitting work, she commenced to knit in a dejected manner. "Don't you feel well, mother?" asked Ikey. "No, my son, I do not feel well. I am digested with the immortality of the young folks now-a-days," upon which Ikey brought the camphor bottle to the good old lady. "Ah," said she, "Ikey you're one of Job's counterfeiters."

A SWIMMING PIG.—Though the times are fraught with strange, progressive, startling and extraordinary wonders and events, nobody, we feel sure, will be prepared to learn of any great achievement performed by a pig. One day lately, Mr. Garnett Sawrey, purchased a beautiful, sleek, short-eared China pig. That same evening it made its escape, and was found next morning at the noble entrance to Storrs Hall, having actually swam across Windermere from Cumbsey. The popular idea that pigs in swimming cut their throats is thus exploded.—*Westmoreland Gazette.*

THE WAY TO CONVINCE.—When we would show any one that he is mistaken, our best course is to observe on what side he considers the subject—for his view of it is generally right on this side—and admit to him that he is right so far. He will be satisfied with this acknowledgment, that he is not wrong in his judgment, but only inadvertent in not looking at the whole case.—*Pascal.*

You may as well feed a man without a mouth as to give good advice to a man who has no disposition to require it, and whose bent and inclination is only to wickedness.

Our principles are the springs of our actions—our actions the springs of our happiness and misery. Too much care, therefore, cannot be employed in forming our principles.

A COLD PUN.—A certain wit declared of late, that every acting magistrate was water in a freezing state—that is, just-ice.

If you put two persons in the same bedroom one of whom has the toothache and the other is in love, you will find that the person who has the toothache will go to sleep first.

Women in their course of action describe a smaller circle than men; but the perfection of a circle consists not in its dimensions but in its correctness.

The greater the difficulty the more glory in surmounting it. Skillful pilots gain their reputation from storms and tempests.

If you wish that your own merit should be recognized, recognize the merit of others.

Men of the noblest disposition always think themselves happiest when others share their happiness with them.

Absence, in love, destroys small passions and increases great ones, as the wind extinguishes tapers and kindles fires.

FRUGALITY may be termed the daughter of prudence, the sister of temperance, and the parent of liberality.

It betokens as great a soul to be capable of curing a fault, as to be incapable of committing it.

The greatest rogue generally contrives to get the most credit.

True nobility is exempt from fear.

MEDICAL.

IT IS A FIXED FACT, CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Tracts" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Linnæus and other pathologists." Dr. CARSWELL, who has investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis, (pulmonary consumption.)"

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or for calumniating falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

Dr. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Consumption had taken place, the Wild Cherry effected a cure."

Dr. A. H. MACANAR, of Tayboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

Dr. Wm. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of most of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity."

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe cold; during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry."

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful."

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obscure cases of disease, and its purity has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sh—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained relief from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for health, and experience on the lungs, than I anticipated, and, indeed, conceive myself cured of the most inveterate malady." C. D. MAYNARD, Argus Office, Portland, March 26, 1850."

Fifty thousand persons die annually in England of Consumption! In the New England States the proportion is one to four in five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate falling courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations—Sympies, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine.

Dr. Wistar's Balsam of Wild Cherry.

Surgery.

R. B. COLE, M. D.

Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.

Office—Athens Building, South-east corner of Montgomery and California streets, opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself principally to his office, where he proposes to treat all

Surgical Diseases,

feeling assured as he does that his former connection with Medical Schools and Hospitals, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the affections to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and morbid growths, occurring on any part of the body, Diseases of the Spine, Chronic Ulcers, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of Eye, Ear and Skin, Affections of the Bladder, Urethra, Scrotum and Testis (or in other words, all diseases of the Genito-Urinary Apparatus) and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly-treated Fractures, Contractions of the Limbs and loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.

Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.

A Lady's Prize of Spalding's Oil.

As the shadows of evening began to fall, A Lady was dressing her hair for the Ball; So were the accents that fell from her tongue, And this was the song that the lady sang— "Awake with Penitence and Repentance, No more in my room shall Bear's Grease be seen, The hair's soft texture they only spoil; Oh, give me the Castor and Rosemary Oil— It's made my tresses look soft and bright, And my hair keeps its curl tho' I dance all night. No more of grease or strong spirit for me, But Spalding's mixture of Rosemary!"

EXPRESSES, &c.

E. W. TRACY & CO'S EXPRESS TO SHASTA, WEAVER, YREKA, JACKSONVILLE, AND ALL INTERMEDIATE PLACES.

CONNECTING WITH THE

PACIFIC EXPRESS CO.

To the Atlantic States and Europe.

For the purpose of accommodating the business community, the undersigned commenced on Wednesday, Feb. 23, to travel from Shasta to San Francisco, carrying Mail, Letters, Packages and Valuables, and attending to all matters of Express Business.

The Express will be dispatched regularly as heretofore, in charge of careful messengers, and the whole business will be under the direct management of E. W. Tracy. We have no security to offer except business capacity, and for that refer to the annexed card, signed by the business men of Shasta.

Case.

We, the undersigned, Traders, Merchants and Dealers, in Shasta, do hereby recommend to all who have business to be transacted between this place and San Francisco, E. W. Tracy, as a person in whose honesty, integrity and business capacity, the utmost confidence can be placed.

Tomlinson & Wood, Benjamin Shortell, Goldsmith & Bro., P. M. Eder & Co., Hallab & Jones, M. Jackson & Co., T. Levy & Co., A. & S. Solomon, R. Lewis & Co., Van Wie & King, Simon Sells, M. Shores & Co., A. Roston, Freight and packages forwarded with dispatch and at greatly reduced rates. Collections attended to promptly, and return made in coin or dust. v3-15 E. W. TRACY & CO.

PACIFIC EXPRESS COMPANY.

After the employees of Adams & Co., in consequence of the disruption of that firm, have organized themselves into a joint stock company, under the above name and title, for the purpose of conducting a General Express and Forwarding business in all its branches, throughout California, Oregon and the Pacific Coast generally.

The business will be strictly and solely a forwarding one, having no connection with banks and bankers, and will be conducted on safe and economical principles.

The Expresses will leave the office at the north-west corner of Washington and Montgomery streets, daily, at regular hours, for Sacramento and the Northern Mines, Stockton and the Southern Mines, San Jose, San Juan and Santa Cruz, Monterey, San Pedro and the Southern Coast generally, as well as to the Northern Coast of California and Oregon.

We will also run a regular Express for Freight, Small Parcels and Letters to and from the Atlantic States by every steamer.

The parties who have organized this company are well known in the community as old and experienced express men, and hope it will be acknowledged generally, understanding their business thoroughly. They think they are not trying too much, when they attribute much of the success of the late firm of Adams & Co. in the express business to their exertions and personal energies.

In conclusion they would solicit a fair share of the favors of the public, pledging themselves to exert their best endeavors to transact such business as may be entrusted to them in prompt and business-like manner.

Collections of all kinds will be promptly attended to at any of the points mentioned above.

R. G. NOYES, President.

San Francisco, March 1st, 1855. v3-10.

WAINWRIGHT, RANDALL & CO.,

Real Estate and Stock Auctioneers, No. 103 Merchant street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of House Brokerage and General Directorate, and have made arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.

This department is an agency for leasing and selling Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are needed, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directorate.

This department will include a registry, (already prepared,) of all persons, (except Chinese,) within the limits of the city by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and addresses of forty-three thousand persons, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment. v3-18

Bookseller and Stationer's

WHOLESALE AND RETAIL WAREHOUSE. WE beg to call attention to the following catalogue, which comprises in part our stock of books and stationery.

By the recent arrival of clippers, an assortment of goods in this line has been made very complete, and we feel sure that the public will find it to their interest to call and examine our stock before making purchases elsewhere.

Blank Books.—Ledgers, Journals, Cash, Invoice, Day and Record Books, in Russian, Sheep and Muslin Binding. Copying Books, Indexed and Plain Memorandums, Bank and Pass Books, Diaries, &c., &c.

Paper.—Brief, Letter, Cap, Note, Envelope, Tissue, Blotting and Filtering Papers.

Stationery.—A complete assortment of Law, Counting House and Fancy Stationery.

Bound Books.—A large and splendid assortment of Law, Standard, School and Miscellaneous Books, including many in rich fancy binding, suitable for presents.

Blanks.—Law, Shipping and Custom House Blanks.

Miscellaneous.—Gold Pens, Razors and Razor Strops, Pocket Cutlery, Toilet Brushes, Cash, Deed, Data, Post Office and Envelope Boxes; Portable Desks, Gent's Dressing Cases, Ladies' Toilet and Work Cases and Receptacles, Port Monies, Perfumery, Opera Glasses, Fancy Articles, &c., &c.

On the arrival of each steamer we receive a full supply of all the leading Newspapers, Pictorials, Reviews and Magazines published in America and England, which we can furnish to all in quantities to suit.

GEO. W. MURRAY & CO., Montgomery Block.

N. B.—Particular attention paid to filling orders. v3-19

[For the California Farmer.]

Smut in Wheat.

Stockton, May 12.

MESSRS. EDITORS: As I suppose the columns
of the CALIFORNIA FARMER are open to every
species of industry and agricultural knowledge,
I have penned the following, more in the spirit of
inquiry than teaching.

Will you or some of your subscribers give a
clear and popular solution of this perplexing sub-
ject, rendered the more so because of the diversity
of opinion which prevails among all classes of
farmers.

Mr. A. and his neighbor B. bought of the same
lot of seed. A's turned out perfectly clear of
smut, while B's (grown on the adjacent ranch)
was by this scourge of the wheat field, rendered
unfit for the ordinary use. Mr. C. relates his
experience: he has grown two kinds of wheat,
mixed, for three years, sown and grown simul-
taneously; one kind has smutted invariably, in
the other he has never seen an unsound head;
hence C. infers that it is a disease in the seed,
transmitting it in the germ from year to year.

Mr. A. is puzzled, but concludes and argues
that it is in the soil, atmosphere, and season, (or
in short by chance.)

One thing is certain—the wheat known as the
"Hedge-row," or "Club-head," has never smutted
here, to my knowledge; but the wheat that is
generally attacked is the small white-headed
beardless Australian. The smut can be detected
by the smell, in time to cut for hay, to those who
have sensitive olfactories, which should be done
just at the time of heading; if deferred later,
the stalks become hard, and the smut is fully de-
veloped, which, to say the least, injures it. Those
heads destined to be smutty can be known at
sight by their tapering upward and by their
pale color.

I think, in conclusion, you would benefit the
much neglected farming interest if you would
give us what you know in relation to smut; or
you have many able subscribers who could elu-
cidate the subject. Wheat is the staple of the
agricultural interest, and light upon the growth
and adaptation to the soil and climate of Cali-
fornia is of the highest importance.

Stir up the farmers to activity in their own in-
terest!
Yours,
COLFON.

A GREAT STALK OF COTTON.—Mr. D. son, of
Corvington, Georgia, has exhibited a very
fine specimen of this great staple. It was grown
from the seed called Boyd's extra prolific, which
has produced 102 grown bolls on a stalk three
feet high. It is claimed for this seed that it pro-
duced a crop of squares and bolls in about half
the time of the ordinary cotton. The stock ex-
hibited is certainly a magnificent one, and the
subject is worth the attention of planters.

Clerkships vs. Farming.

The letter of the city Clerk, published in the
Country Gentleman of the 25th January, has
elicited several replies, the last one of which
seems to me to be peculiarly adapted to the case;
devising a plan, safe, judicious, pleasant and
profitable. If the early training of the clerk
was upon a farm, he may have obtained a knowl-
edge of the business with what he (if yet young)
can learn, to become a practical farmer and make
it profitable to himself. But I have seen many
instances here in the valley of the Connecticut
river, of attempts at farming by city gentlemen,
retired merchants and commanders in the mer-
chant marine, attracted hither by the healthful
climate, good air and water, and productive soil.

They are generally perfect novices in their new
vocation, and commencing an unlearned and un-
tried business late in life, it very often results in
loss, vexation, disappointment and failure. They
find themselves wanting in the practical routine
of profitable farming, a deficiency in which all
the book knowledge they can call to their aid
will not supply; and, unless they have an abun-
dance of spare capital, they soon become dis-
heartened, and sometimes disgusted with the
pursuit, and give it up as a mistaken and an un-
profitable business to them. I have regretted
these failures in so laudable an undertaking; they
are generally gentlemen, kind hearted, generous,
and a desirable acquisition to rural society, and
would be most happy if they could spend the
evening of their lives in a pleasant country re-
treat. They say, "You can live and grow rich
by farming—we cannot even live by it, but are
continually growing poor."

Now the reasons for these mishaps are obvious
enough. A new business is undertaken without
the knowledge to carry it successfully through.
What would be said of a farmer who should sell
out, take his means and go to the city, and under-
take to set up and control, unaided, a mercantile
house? Would he not to his sorrow soon learn
that the marts of trade in a crowded metropolis
were too much for him? Or, should he offer
himself to take command of a merchant vessel or
whale ship, would not he be considered a fit sub-
ject for an insane asylum? And yet the cases
are nearly parallel. He is about as fit for these
changes as the city merchant or sea captain is to
become a farmer. When these worthy men have
made money enough, and desire to leave their
ships or counting rooms for a rural retreat, my
advice to them would be, to purchase a country
seat with only a few acres, for gardens, pleasure
grounds and fruit trees, and to live on their cash
investments, otherwise invested than in numerous
acres for farming purposes; for the latter to them
will never pay.

But my purpose was to say a word about city
clerks who are desirous of escaping from their
thralldom to a farm in the country. I will give
my advice in this case; it is wholly gratuitous
and of course will be taken for no more than it
is worth. I would discourage our country youth
and young men who are so eager and anxious to
escape from the farm and go to the city, from this
deleterious course. I would say to them stay
upon the farm, pursue the business with a good
heart, and steady purpose, and when you are fifty
years old you will rejoice in vigorous health, in
an unimpaired constitution, independent means,
and a good standing in your community. If you
are true to nature and the laws of civilization,
a happy and cheerful family will surround you,
from none of whom has the half finished cry
for bread ever grated upon your ears, that cry
which of late has been so often heard in our
cities, so distracting to the parent's brain, so har-
rowing to his soul.

I would also advise the parents of our country
youth who are so anxious to place their sons
above the farm, and to obtain for them an eligible
situation in the city, to pause and reflect. Are
you certain it will prove so eligible in the end?
Have you thought of the vices, the temptations,
the thousand evils in our crowded marts of trade,
that continually surround the unthinking youth?
Are you sure that your sons have the stable
habits, the fixed principles that are proof against
these evils? Have you never known a young
man return to the country after a few years' resi-
dence in a city, broken in health, shipwrecked in
fortune, in morals, in character, and in everything
else that renders life desirable? Should the
youth who found the eligible situation, and who
rejoiced in prospective wealth and lofty situation,
be so fortunate as to escape the evils attendant
on city life, do you not know that not one in ten
of our city merchants succeed in business; that
overtrading brings on hard times; that Wall,
and State street brokers will shave paper at two
per cent. a month; that the profits of years van-
ish in as many months; and that when extrava-
gance has produced overtrading, bankruptcy and
ruin follow in the train? The city merchant

at last sighs most sincerely "for a lodge in some
vast wilderness," often emigrates to the West
where land is cheap, though totally unprepared
to rough his way in pioneer life; and drags out
the remnant of his existence in a feeble endeavor
to earn his bread in conformity with the first
commandment of God, which he finds too late it
would have been better not to have violated in
his youth.

It rejoiced my heart, when I read the commu-
nication from a city clerk, in these degenerate
times, to perceive one ray of light from the right
some, one spark of common sense based upon
experience. I wish this brief story, so truthful
upon its face, could be read by every disappointed
youth of our country; it speaks volumes for their
good. I have recently been witness to another
favorable instance of good sense in a youth of
Boston. He wrote me by the consent of his
father, who is a wealthy merchant, that he de-
sired a place on my farm to work and learn to
become a practical farmer, in preference to city
life and mercantile business. But I have no
doubt of there being one thousand farmers' sons
in this little State of Vermont who would gladly
step into his place in his father's counting room
if they could. It is really sad and sickening,
nothing short of disgusting to me to see the dis-
relish among our youth for farming, and the in-
sane and feverish desire to become clerks either
in city or country shops. But they are not alone
in this visionary project. The kind and loving
parent discovers something in these hopefuls that
entitles them to a higher sphere! They think
they must not keep them on the farm, and they
help to sow the seed that in nine cases out of ten
must invariably produce fruits that will cause
tears of repentance. If I were the father of ten
sons now growing up I would make them all
farmers if I could; not ignorant and stupid, but
educated, intelligent, scientific and practical far-
mers. If I had ten daughters I would marry
them all to such farmers if I could. I would do
this for the best good of my children, as con-
ducive to their future health, happiness, prosper-
ity and usefulness. A good name and fair fame
are priceless jewels; and they can be obtained,
preserved, and left to posterity in the pursuit of
Agriculture, as well as in any other employment
or vocation.—J. W. Colburn, in Country Gen.

To Ascertain the Weight of Live Stock.

First, see that the animal stands square, then,
with a string, take his circumference just behind
the shoulder-blade, and measure the feet and
inches—this is the girth. Then measure from
the hock of the hind leg which joins the line with
the hinder part of the buttock, and direct the
string along the back to the forepart of the
shoulder-blade, and this will be the length. Then
work the figures thus:—Suppose girth of bullock
6 feet 4 inches, length 5 feet 3 inches, which
multiplied together makes 33 square superficial
feet; and these, multiplied by 23—the number of
pounds allowed for each superficial foot of cattle
measuring less than seven and more than five feet
in girth—make 759 lbs. When the animal
measures less than nine and more than seven feet
in girth, 31 is the number of pounds to be esti-
mated for each superficial foot. And suppose a
small animal to measure two feet in girth and two
feet in length; these multiplied together make 4
feet, which, multiplied by eleven—the number of
pounds allowed for each square foot when cattle
measure less than three feet in girth—makes 44
pounds. Again, suppose a calf or sheep, &c., to
measure 4 feet 6 inches in girth, and 3 feet 9
inches in length, that multiplied together, makes
16 square feet, and these multiplied by 19, the
number of pounds allowed for cattle measuring
less than five and more than 3 feet in girth, make
306 pounds. The dimension in girth and length
of the back of cattle, sheep, calves and hogs, taken
this way, are as exact as is at all necessary for
common computation or valuation of stock, and
will answer to the four quarters of the animal,
sinking the offal. A deduction must be made for
animals half fat, of one pound in twenty from
those that are fat; and for a cow that has had
calves, one pound must be allowed, in addition to
the one for not being fat, upon every twenty.

ONIONS FOR POULTRY.—Scarcely too much
can be said in praise of onions for fowls. They
seem to be a preventive and remedy for various
diseases to which poultry are liable. Having
frequently tested their excellence we can speak
understandingly. For gapes and inflammation
of the throat, eyes and head, onions are almost a
specific. We would recommend giving fowls,
and especially young chicks, as many as they
will eat, as often as two or three times a week.
They should be finely chopped. A small addi-
tion of corn meal would be an improvement.
—Exchange.

Prevention of Drouth.

The subject of the best means of pre-
venting crops from suffering from drouth was
discussed at a late meeting of the Farmers'
Club of the American Institute. Professor
Mapes made a brief and excellent address.
He said that the deposition of moisture upon
the surface of bodies colder than the atmos-
phere was an acknowledged evidence of the exist-
ence of moisture in the atmosphere. The fact of
a want of moisture in the soil was a sure evi-
dence that there was a superabundance in the
atmosphere. Wherever the soils are disinte-
grated to a sufficient depth, they will be found to
be colder than the superatant atmosphere. When
the atmosphere circulates in a free soil, it will
deposit moisture in every particle of earth colder
than the air. This process too, was eminently
beneficial in another way. It was well known
that during the first part of a shower, rain was
more beneficial than in the last part, as the am-
monia accumulated in the atmosphere, and which
was necessary to vegetation, was carried into the
ground. During a drouth, the quantities of am-
monia and similar elements were much accumu-
lated, and with the atmosphere a greater amount
of these additional elements were deposited. The
true means, then, of averting the ill-effects of a
drouth, were subsoil plowing, deep plowing, and
under-drainage. On his farm, not a single plant
had suffered from the drouth, while nearly all the
neighboring farmers had suffered to a greater or
less extent. He attributed this result solely to
the system of subsoil plowing and under-drain-
ing he had pursued.

Fattening Fowls.

Fowls and chickens may be fattened in four
or five days, by feeding them three times daily
with rice boiled in milk, always fresh, as sourness
prevents them from fattening. Give them clear
water to drink. By this method the flesh is
made particularly white.

It is very desirable, both for the thrift of the
animal and the orderly progress of the labor of
the farm, that all the domestic animals, as far as
possible, be fed, watered, &c., at the same hour
and minute every day. It has been found by ex-
perience and intelligent herdsmen, that, when
thus attended to, they learn to expect their fodder
at the stated time, and remain quiet and uncon-
cerned until that period comes around. This is
true of all domestic animals, and should be heed-
ed by the farmer. Let him so arrange his labors
at the barn that every operation may be per-
formed at a stated time, and he will find matters
to go on much more pleasantly and comfortably
than when all is left at hazard, without system
or regularity. Few things are more unpleasant
to the good farmer than the complaints of hungry
stock.

"HERE IS SOMETHING FOR THE FARMER."
The following was handed us by a dear little
girl, saying, "Here is something for the FARMER."
She had been a reader of our paper, and meant
to express a wish to have this put in the Farmer,
which she had cut from some other paper. We
gladly hold it up to the view of the farmers of
California, and say to them, they have an oppor-
tunity such as was never yet given to the farmers
of any State, to make their mark;

MAKE YOUR MARK.

In the quarries should you toll,

Make your mark

Do you delve upon the soil?

Make your mark;

In whatever path you go,

In whatever place you stand—

Moving swift, or moving slow—

With a firm and honest hand,

Make your mark.

Life is fleeting as a shadow—

Make your mark;

Marks of some kind must be made—

Make your mark;

Make it while the arm is strong,

In the golden hours of youth;

Never, never make it wrong;

Make it with the stamp of truth—

Make your mark.

SPARE THE BIRDS.—The Fireside Journal
says: Teach your children, in mercy to spare the
nests of the harmless little birds, and if you have
a heart to be thankful, it will rise up in union
with the little songster's carol to think your lot
is cast in such a vale of flowers and singing birds.
There are some of the many things proved to
lighten the toil of labor, and it is only a vitiated
taste acquired from a false system of education,
that prevents us from deriving a great deal of
happiness from such small accompaniments of
the journey of life.

The California Farmer.

WARREN & SON, EDITORS AND PUBLISHERS.

SAN FRANCISCO, THURSDAY, MAY 24, 1855.

Removal.

By the correspondence which appears in this issue, and which was an acceptance of the proposals of the friends of Agriculture and of the State Society, the Exhibition Rooms which we have for a long time maintained at San Francisco, for the display of the various specimens of "Natural History" and the productions of the State, have been transferred to the "State Agricultural Society at Sacramento," where they will remain under the auspices of that Society; and where, in connection with the Exhibitions which are in preparation for the Annual Fair of the present year, plans can be matured for stated quarterly shows hereafter to be made.

By the liberality of individuals, rooms have been provided for the State Society free of cost, to which will now be added an Agricultural Reading Room, in connection with regular displays of the products of the State. Sacramento being the fixed capital of the State, the holding of the Legislature and the Courts makes it a very appropriate place for the State Society's Rooms, and more convenient for many cultivators who are called from time to time to the capital, in connection with the various public offices of the State.

It is highly important, also, that individual enterprise of this kind should be merged into a public one, and it is for this reason that we have thus disposed and given up to the State Society what to us was a source of pride and pleasure, in order that a greater public interest may be awakened and a greater public good result from it. By this arrangement we shall be relieved from one department of personal labor, that we may enter with more activity into another and a wider field, and we shall therefore in connection with the duties of our paper and the State Society be enabled to give more time to a survey of the conditions, capabilities, and resources of this State, to which we intend to direct our immediate attention, by visiting as speedily as may be, every portion of it, and reporting the same through the columns of the CALIFORNIA FARMER, to the Executive Committee of the State Society. This we believe will give a new and increased attention to Agriculture, and awaken a better interest in it.

We ask the kind aid and co-operation of the friends of Agriculture in the various parts of the State, in furnishing us such data relative to crops, &c., as may be within their reach—such facts will become matter of record, and subserve a general interest. We trust, too, a co-operation among the Agriculturists of each county, as we visit them, relative to forming County Societies, auxiliary to the State Society, whereby they can act in concert.

In returning to Sacramento city, our early home, to which we are bound by early and tender associations, still we must say we regret to leave the commercial emporium of this great State; but as our own pleasure, convenience, and interest have ever been secondary to the cause of Agriculture and its kindred interests, we go cheerfully. We regret to leave San Francisco on account of many pleasing associations, from whence we have received many personal favors and kind attentions and courtesies: to all who have thus extended to us such kindness in word or deed, our heart's best gratitude is earnestly tendered. San Francisco is a noble city, and contains many noble men; like a giant struggling with giants, she will conquer, and from her present depressions and misfortunes she will ere long emerge into prosperity and greatness, for it is her sure destiny, in spite of the frowns of fortune.

We hope all who visit Sacramento city will take an interest in the Society's rooms, on Fourth street, between J and K, where by the 1st June everything will be in apple-pie (that's horticultural) order.

SACRAMENTO CITY, May 9, 1855.

EDITOR CALIFORNIA FARMER: DEAR SIR—A few friends of Agriculture, desirous of seeing the State Society take a more prominent position and execute the design of its organization with greater efficiency, and believing that the present is a most favorable time to realize such a desire, have made the following propositions:

1st, That you shall furnish the Society with your Agricultural Museum, and the use of your exchanges for a reading room for the same, and remove your paper to this city, to be published here in future.

2d, That the said friends of Agriculture shall furnish to the Society free of rent, rooms for said museum and reading room, and to you rooms for the editorial and publication offices of your paper.

3rd, That the Society shall have its office or head quarters in connection with the above rooms, and shall at all times keep in order such rooms, hold them open to the public, and make weekly or semi-monthly exhibitions of such products of the soil or specimens of nature as may be from time to time presented for such exhibition.

Hoping that the above propositions may be found acceptable to yourself, and that you will forthwith give notice of the same, I herewith forward the gratifying intelligence that the Society will accept and perform as per propositions, and that it only remains for you to complete an arrangement which it is hoped will greatly conduce to the furtherance of every department of this fundamental interest of our State.

Very truly yours,
O. C. WHEELER, Rec. Sec.
Cal. State Ag. Society.

SAN FRANCISCO, May 10, 1855.

REV. O. C. WHEELER, Rec. Sec. Cal. St. Ag. Soc.:
Dear Sir—Your kind and interesting favor containing the proposition of the friends of Agriculture was received this morning, and we hasten to reply. As we were in some measure acquainted with the wishes of the friends of Agriculture previously, and having made up our minds to give up our personal wishes and feelings for public good, we resolved whenever the propositions were made us in form to accept the same, which we now do with promptness and pleasure, and we shall be at Sacramento on the 12th, to complete the necessary arrangements, which we trust will result in advancing the great work we all have so much at heart. Be assured sir, there is no personal sacrifice we are not always ready and willing to make to advance this work.

Yours most truly,
WARREN & SON.

Butter, Cheese, Lard, &c.

It may be interesting to some of our producers, our dairymen and others, and it may also be a matter of interest to our merchants in the country who are not posted in such matters, to know a little of the quantity of the articles of butter, cheese, lard, soap, and candles, that are imported into San Francisco.

We should bear in mind that the first three of these five articles are now the produce of California, and can be had in quantities ample for the wants of the State, if a proper regard be had to home industry; and the other two can be manufactured here as cheap as in the Eastern States.

From the books at the Merchants' Exchange, so ably conducted by Messrs. Sweeney & Baugh, we find the following recorded as the importation of the present month, only twenty-four days:

BUTTER—23 hhds, 634 tierces, 309 barrels, 424 half barrels, 251 firkins, 93 cases.
CHEESE—1,084 casks and cases.
LARD—1,023 cases.

These three articles can be had here in a purer state than they can be imported, and their value saved to the country.

CANDLES—10,173 boxes, 800 half boxes, 1,006 quarter boxes.
SOAP—2,850 boxes, 500 half boxes.

To these articles can be added salt, starch, &c.

Such importations demand attention. A country rich as is California—a country where dairy cows can find pasture the year round free—import butter and cheese? A country renowned for its trade in hides and tallow! import candles and soap? A country that can feed swine cheaper than any country on earth, import its lard or its pork? It is preposterous! No wonder the country is embarrassed—it cannot be expected to be otherwise. Millions paid for the freight of goods that can easily be produced upon its soil, is enough to embarrass it. And how long will our merchants thus continue to encourage a trade that must inevitably bring ruin on themselves, as well as on the country?

We have not given the full amount of importations here, for it is well known that a large amount is imported without specification, as barrels, boxes, casks, &c., and an additional quantity of all these articles, at least 25 per cent., could be added. Think of it, Californians, ye who are striving to build up the State and make it your permanent home! About seven THOUSAND hhds., barrels, casks, firkins and cases of butter, cheese and lard poured into this market in a month from foreign ports! here is the antagonism to your prosperity. THREE THOUSAND boxes soap!—this is laying it on thick. But they send LIGHT also—TEN THOUSAND boxes candles; ay, here we have them!

Californians! awake, and be ready; let not your light be hid! pay back in their own coin!

Load your ships with GRAIN and FLOUR—fat them up with the very goods they ship; send back soap and candles, and shovel together the surplus merchandise; this will give them LIGHT! and it will not be long before California will be better understood, her capabilities better appreciated, her resources better known. Shake off the incubus of dependence upon other States, develop the riches of our own, and we shall

bear no more of distress and suffering, or scarcity and hard times.

To Post Masters, Express Agents, the Press, &c., &c., &c.

The present issue contains the List of Premiums of the California State Agricultural Society, and your kind co-operation is invited to make this annual Fair as widely known as possible, in order to enlist all in its favor. Extras will be sent to you for gratuitous distribution, and it is earnestly hoped that a deep and abiding interest will be made to show what California can do at the coming Fair.

An additional list of premiums will be made, together with a plan of the Fair, time and place of holding the same, and the festivities that will be connected with it.

Will postmasters and deputies be so kind as to post up these circulars and call attention to them. Will the Express Co.'s and their several Messengers, also co-operate, and with their usual kindness, courtesy and energy, give the State Society and this enterprise their helping hand. Will the Press give a trumpet tone to the work, until it shall sound from valley to mountain, and be known over the whole extent of the country.

The State Society asks the aid and assistance of all in giving a wide notice to its plans, believing great good will result to the State by a successful exhibition the present year.

Practical Agriculture—Its History—The Mechanic Arts, &c.

We beg to acquaint our readers that we have made an arrangement with Mr. Wm. Thompson, of Mission Dolores, (the author of the "Prize Essay" of the California Academy of Natural Sciences, referred to in the FARMER of the 17th inst.) to furnish us with a series of articles on Practical and Scientific Agriculture, which we are confident will be found interesting to agriculturists. The manuscript copy of the first number is in hand and will appear in next issue. The publication of the State Society's Premiums prevents its appearance this week.

Mr. Thompson's articles will appear in familiar letters over the signature of "Agricola." From Agricola our readers may anticipate a series of interesting letters.

The second manuscript copy upon Mechanical Associations, Home Industry, &c., from "J. H." is in hand and will soon appear. It is a valuable communication on an interesting theme.

Manuscript copy in continuance of "California History," and other original articles, will appear at the earliest moment.

It is our desire and aim to go on increasing to the utmost in our power, the value of the CALIFORNIA FARMER, to every reader; and although we do not expect to please everybody, we have the assurance that there are those who appreciate our efforts, knowing the difficulties and trials that now beset the interests of Agriculture. It is very pleasant to us to announce prospective good to our readers, and it is gratifying also to receive good as we do, occasionally, in a list of new subscribers; and if our friends will aid us in these matters, among their friends, we will stir up our practical men to work for their good, by filling the columns of the FARMER with matter more and more interesting.

ROVING JACK.—Our friend will excuse us for thus holding him up to the public; but as we see he is up for public office and stumping it in his district, we can only say that one thing is certain: Amid all his political engagements he has not forgotten the true interests of his country, for he has most generously watched its agriculture and plead for it, and sent us a goodly list of names for the FARMER. Now if our friend Roving Jack makes as good an official as he is a friend of agriculture, it will be well. We do not know his politics and do not care what they may be—we have nothing to do with them. We only know that he that guards and encourages the agriculture and husbandry of the country is a good citizen.

CHILI STRAWBERRIES.—We received a glass jar containing four Chili strawberries, measuring 6 1-8, 6, 5 5-8 and 4 7-8 inches in circumference. They are as fine berries as the eye could desire; 'twas fortunate they were enclosed in glass, for the temptation was great. They were raised by Mr. E. L. Marsh, corner of Third and Bryant streets. They are truly beautiful. We intend a visit to the ground to examine their nature and character.

LEGISLATIVE GRANTS TO AGRICULTURE.—Massachusetts has again added to her wealth by granting new Bounties to her County Agricultural Societies. That State knows how to put money to good interest. Missouri too,—that State has at her last session granted \$100 to each County Society. Thus State after State are becoming awake to the necessity of encouraging the industry of the country as the sure means of permanent prosperity.

AGRICULTURAL AND HORTICULTURAL

FAIR;

Cattle Show and Industrial Exhibition,

OF THE

CALIFORNIA

State Agricultural Society,

TO BE HELDEN AT

Sacramento City, in September Next.

PREMIUMS OFFERED FOR 1855.

The following section from the Act of Incorporation, by the Legislature, is the basis for the premiums announced below:

"Sec. 8. There is hereby appropriated from any money in the Treasury not otherwise appropriated, the sum of Five Thousand Dollars annually, for the space of four years, to be paid in September each year, to the Treasurer of said Society, on a requisition of the Treasurer of this State, signed by the President and Recording Secretary of said Society, which sum shall be used only for the purpose of paying premiums, and for no other purpose whatsoever."

FARMS, VINEYARDS, ORCHARDS, ETC.

Competitors for premiums in this department are requested to give immediate notice of their intention, to the President or Corresponding Secretary, that the committee may visit and examine at the most favorable time. No such notice will be expected to claim the attention of the committee unless received before the first day of August.

It is of especial importance to Grain Growers that they bear the above in mind.

Best Improved Farm.....	\$200

GRAIN.

Competitors for premiums on Field Crops, must deliver samples of the same to the committee, on or before the 15th of September. The Fields shall be measured by the surveyor of the county or by two competent persons where they are located, or by one of the members of the society; and their certificate of the amount of land shall be presented to the committee, and the crop shall be measured or weighed by such persons, who shall make affidavit of the amount of the same, to be presented to the committee. In the estimate of Grain Crops, the committee will regard the number of acres, quantity and quality.

No premiums will be awarded for manufactured articles not produced in California, yet the Society will be happy to place such articles, with the names of the importers or exhibitors, on exhibition.

CATTLE SHOW.

The Cattle Show will be held near Sacramento, and will take place on the third and fourth days of the Agricultural Fair. Competitors for premiums on animals must deliver a list of those intended for exhibition to the committee, on or before the first day of the Fair.

Stock must be on the ground before 10 A. M. of the second day of the Fair, when proper places will be assigned them, and on the days of the Cattle Show must remain in their places from 10 A. M. to 4 P. M.

Discretionary premiums will be awarded by the Society on articles or animals which they shall deem highly meritorious, although they may not be named in the list of premiums.

Each Committee is authorized to recommend special premiums upon objects that properly belong to the class assigned to them.

The managers of the Society will be present during the Fair to give directions to all who may wish to enter animals or any articles for premium or exhibition, and forage will be furnished gratis for all animals entered for premiums.

The Society earnestly desire to be informed, at the earliest possible moment, how far the different Farmers in the State can co-operate in this undertaking, and what specimens they intend to exhibit—so that suitable provision may be made for their contributions.

All communications upon the subject, will be promptly responded to, and all information cheerfully rendered.

The announcement of the awards, together with appropriate exercises, will take place on the last day of the Fair.

Address the President or the Corresponding Secretary, at Sacramento.

MADAM PFEIFFER.—We would call the attention of our readers to the article in this week's issue, relative to this lady. It was taken from an eastern paper, and the lady merits all that is said and more. We have stated in a former article that we had the pleasure of a visit from her at our Agricultural Exhibition in 1883, at Musical Hall, and remember the activity of mind and the deep interest she manifested in all that related to science. Her company and conversation was most instructive, for it was a constant emanation of interesting facts, that, like electricity, vibrated through the nerves.

Our Country is Safe.

WHAT are these great gatherings at the Merchants' Exchange at New York, and at Boston, at Philadelphia and Baltimore? Why these telegraphic dispatches? The lightnings are at work there, and the merchants of these famous cities are gathered in groups in earnest conversation. Can it be true, says one—loaded with Grain and Flour from California did you say? What can it mean? There must be some mistake—one ship last, week another to-day, and a third telegraphed.

But, says another speaker, more anxious than the first, I have just received a dispatch from Boston of one ship in, and another below, laden with grain and flour; and my partner at Philadelphia says this is but the beginning. Californians are exporting shovels also, and various kinds of merchandise manufactured in the New England States, and making large profits. Strange country, that California!

Another group, more sedate than the first, are mutually condoling one another: Says one, my flour has gone to a poor market. Another says, I had better keep my shovels and candles and preserves at home. While a third exclaims, its all up with me—I'm a ruined man; o—the California. And other ejaculations escape from the many gloomy ones; and thus must it prove until wisdom takes the place of rashness and wild speculation.

California will, and must "make her mark upon the age," and it needs only a wise and prudent action on the part of the true and permanent citizens, to secure prosperity to our State—protect and encourage home products, in preference to all others. Let the word go forth that Californians will eat, drink, and wear the products of her own soil, independent of all others, and it will be but a brief time before the huz of the spindle shall be heard from manufactories in many of our valleys, and upon our hill-sides, and far away among our mountain streams. Plantations of cotton shall give us fabrics equal to the far-famed Lowell looms; and the fleeces from flocks upon our mountains shall compete even with the noted Lawrence Mills, of the old "Bay State." These are the signs of the times, and it is such signs that give us hope to believe that our country is safe.

THE MAMMOTH OX.—This wonderful animal is now on exhibition at rooms on Commercial street between Sansone and Montgomery. (see advertisement.) It is impossible to give such a description as will enable those who have not a conception of what a mammoth ox is, to appreciate his Bovine Majesty. No one should fail to go and see him and judge for themselves. It is a sight of more than ordinary interest. A wonderful animal, size and proportion in fair keeping; in truth an elegant animal. He looks so good you wish to feel of him to see if he is real. The rooms are neat and clean, and ladies can visit with the assurance that order and cleanliness and most respectful attentions will add to the pleasure of the visit to the wonder of the day. This ox approximates to the enormous weight of 4000 pounds, and he is still termed a calf, and by great care and feeding can be made to reach 5000 pounds. We are pleased to learn that the proprietor intends to put him in order for the State Fair at Sacramento, and win the prize.

SPECIAL FAVORITE.—From Mr. N. Simonds, Mission Dolores, we had a sight of a box of honey "good enough to eat," and not wishing to spell that which was so artistically wrought by the "busy bee," we advised its consignment to where it could be of more extended usefulness—to a circle of the "fairer part of creation," thus adding sweet to sweets.

From Mr. A. P. Smith, the last week (while we were absent) we received a basket of those monster strawberries that made so much noise (the seven inch kind). These with a nice lot of others a little smaller only (does the Wide West doubt it?) we tasted on our return. We think our friend of the Wide West shall have his turn next.

From Messrs. Wells, Fargo & Co., a constant continuance of favors, by daily exchanges, &c.; and also to the Pacific Express Co., the same.

SUPREMACY OF POTATOES, ONIONS, &c.—The thoughts of the cultivators of these vegetables in California should be turned to some plan whereby they can be prepared for shipment to other ports and countries. This can be done. Both these vegetables can be prepared by a process so as to be safely transported on a voyage of months, and a princely fortune can be made. (See advertisement to capitalists in our columns.)

Wm. D. M. Howard, Esq.

Few names are so honorably identified with the history of San Francisco as is the name of this gentleman, whose arrival with his family was chronicled among the passengers of the J. L. Stephens. In its earliest history stands the name of "Howard," its streets and blocks of buildings bear it, and the early pioneers remember well that every measure of public good, every public enterprise, every demand upon the benevolence and sympathy of this community—all received his prompt attention and cheerful aid. His name was a passport to success, his influence was potent. Whatever work was in hand, his name carried with it a host, and his influence came not only in a public sphere—hundreds and thousands in private felt the cheering and blessed charm of generous aid and sympathy. The stranger upon these shores was made welcome, the poor, the sick, the distressed, found in W. D. M. Howard, the noble, generous, disinterested friend and helper, and thousands will ever bear in remembrance the generous and cheering hospitality that made his friends welcome at his home.

San Francisco owes a large share of her present standing to the public spirit of this gentleman, who until the times that so often devastated it, sprang forward with indomitable spirit, and with giant energy and applied his great wealth to aid in saving the city again to life and prosperity. Mr. Howard has been absent for two years, and in that time great changes have taken place in the city and country. Great changes have taken place in all the phases of society and in all its relations, and no one can be absent so long without finding upon returning to these shores changes that mark the history of life with its "lights and shades." Mr. Howard during this absence has as is well known suffered much from continued severe illness; but he has now returned to his real home among those near and dear to him, and we hope and trust that the warm greeting, the true friendship, the generous welcome that has awaited him will show him that amid all other changes that time and fortune make in this city, there is none, can be none made in the large circle of friends, true friends that have ever and will ever greet him and his wherever he shall go. We trust the smiles of sympathizers and friends and the warm breath of our sunny Pacific will so set upon the health of our friend, that in a brief time he will be so restored, that our citizens will see him again in active life, among the merchants upon exchange, and in the councils of her citizens, with his wonted activity and spirit.

Auction House.—Messrs. Wainwright, Randall & Co.—This well known Real Estate, Auction and Commission house in connection with their extensive business in real estate, have added the house brokerage and general registry, thus combining in one house all the important information requisite for both buyer and seller. This house is thus fully prepared to give information relative to persons, localities, property, price and all the minutia, thus saving time and labor to buyer and seller. The registry department that has been prepared by them at great labor and cost, is and will be of great public utility. The residences of all the citizens, their various employments, their places of business, (always quickly noted if changed,) estates for sale, houses, stores and buildings to rent, with all needed particulars—these are important facts, and they are on record here, and to business men, to all interested as buyers, sellers or renters, merit and should receive encouragement and patronage. The plan is entirely new but of great importance, as by the register of this house persons can be found, when all other directories fail of the needed information. Strangers and all others will be greatly assisted in reference to business by conference with Messrs. Wainwright, Randall & Co.

Notice to Trespassers, and those who have cut timber and cord wood within the boundaries of the two grants of the Mexican Government to my, lately confirmed by the United States Land Commissioners, lying in the counties of Yuba, Butte, Placer and Sacramento.

That all persons who shall continue to cut timber on said lands, or who shall remove the timber or cord wood now cut, will be prosecuted; with those who remain quiet, and shall cease trespassing, will have a fair opportunity for a just adjustment, and the privilege of purchasing the land they are on, upon reasonable terms. JOHN A. BUTTER, For himself and others claiming timber and with him.

HECK PARK, May 16th, 1885.

P. S.—Communications of notices and other boats are not to be put on any way from lands not held by title from me or those who claim under me. JOHN A. BUTTER.

We insert the above with pleasure, and trust that the announcement of the settlement of this claim will be sufficient to induce every settler to come forward manfully and meet the generous proposition of the good old Pioneer. We do not believe any settler can resist so kind an offer, for it is so much easier to reconcile matters at once, and then improve the land permanently.

LITTELL'S LIVING AGE.—We have published the card of the Messrs. Littell & Son with pleasure, and gratefully, believing we do a public good by spreading such information, and we hope the press generally will do the same, for a work of this kind should be in the hands of every citizen that can possibly obtain it, and now is the time to secure it.

Miscellany.

A SONG OF SPRING.

BY MRS. MARY ANN WHITTAKER.

The Angel of the Beautiful
Hath raised the vernal veil
From Nature's face of loveliness,
And tinged her features pale,
By breathings pure as morning air,
When gently stirred with early prayer.

The Angel of the Beautiful
Hath wooed her for his bride,
With sweetest tale of mystery,
Till, spell-bound to his side,
Fair Nature kneels within her power,
And loving, joyful, owns his power.

The Angel of the Beautiful
Hath decked his bride with flowers,
And now he leads her lovingly
To greet the rosy hours,
With all things such as hermits bring,
To celebrate the birth of Spring.

The Angel of the Beautiful
Hath opened the secret robe,
Where precious gems are glistening,
As stars at midnight shine;
And claimed the brightest, purest, best,
To sparkle on dear Nature's breast.

The Angel of the Beautiful
Hath chosen one to love,
To sing glad songs of gratitude,
Which mortal ears have caught;
And thus to man on earth is given
A foretaste of the bliss of Heaven.

An Evening with a Woman who has Travelled round the World.

I HAD the good fortune to pass an evening in company with the celebrated female traveller, Madame Ida Pfeiffer. She interested me exceedingly, not only because she is the first woman who has had the courage to travel over the whole world, alone, unattended, and unprotected, but because her character of itself is a powerful and remarkable one. In person she is slightly and delicately formed, of scarcely the middle height. Her features are quite small and regular, her complexion darkened by exposure, apparently, and her expression worn and aged by fatigue. And here allow me to remark, how strange it is that different individuals see the same objects with such different appreciative vision. Madame Pfeiffer has been called plain. I do not understand how one who has ever seen her smile could say so. Her smile is wonderful and extremely fascinating. Her soul beams out of her face with amazing brilliancy and sweetness. I could compare it to nothing but the genial sunshine breaking out from among dark clouds on a dull day. My friend said, when a brilliant thought excited her, her eyes were like stars, and with a smile playing over her face it was like a meteor passing athwart an evening sky.

She is very unpretending in her manners, affable and easy in conversation, although speaking English imperfectly. Of course she talked of her travels, and her thoughts often passed in a moment from one part of the world to the other, in illustrating a story, or in comparing traits of character. She has been where a white man has never dared to penetrate, in the interior among cannibals, in both hemispheres; and I placed my three fingers within a wound—now cicatrised—on the upper part of her left arm, made by a huge negro and cannibal in Patagonia; I said, "How did you escape the perils of such an expedition?"—but I need not have asked—the regard of her eye was so calm, strong, and resolute, her smile so sweet and winning, that I saw how she overcame those wild, untutored savages.

"Yes!" said she, laughing; "when they threatened to kill and eat me, I patted them on the shoulder, and told them I was old and tough."

In the course of conversation she spoke of Russia, of its nobles and officers: "They are all," she said, "incapable of truth; they know not honor in its high and chivalrous sense! Ah," she continued, "the black slaves at the south, in the United States, are not so unfortunate, nor so cruelly abused, as the serfs in Russia—the white slaves!"

She paid a warm tribute to the followers of Mahomet, their noble hospitality and truth. Travelling among them; that is, the Turks, Arabs, &c., she said:

"I was apparently poor, but the women treated me like a mother; the men with honor and honesty; but in the same circumstances and condition among Christians, quite different—quite different!" with a good deal of emphasis.

"Of all the countries I have ever visited," said Madame Pfeiffer, "of all the vile, immoral places I have ever seen or heard of in savage or civilized lands, the gambling saloons in California are the worst. I went there in company with friends; the doors were open—every thing invited entrance. Splendor in every form, temptation most subtle and powerful, combined to lure the soul and body to destruction: splendid curtains, carpets, exquisitely painted pictures, whose subjects were so impure that I involuntarily placed my hands over my eyes; wines, liquors of all kinds, free, and to be had for the asking, all combined to lure the poor mortal to sin and death. Yet all was so voluptuously respectable, so perfect in good taste, so refined in appearance, so beautiful to the eye, that his influence stole into the soul like the deadly poison of the upas-tree. What wonder if, with awakened passions, and brain made insane by liquor, allured by lovely young women, who preside at the table and overlook the game, with gold around and on every side of him, the

poor victim rushed to the gaming table for a new excitement and a new phase of stimulation?"

I asked Madame Pfeiffer of all the countries she had seen which she should prefer as a residence, quite aside from her love of her native land—which is, I think, Prussia.

She said: "Ceylon—the Island of Ceylon! The climate is so fine, the country so beautiful, the people so kind, hospitable, and courteous!"

Madame Pfeiffer is a genius, and of course a wonderful woman; she is a rare combination of delicacy and strength, not only mentally but physically.

"My nerves and muscles are like cords!" she said; and they must be. But these could not have carried her through the fatigue and perils of her travels, had not her resolution been invincible—her determination indomitable. She is not unsexed by her intercourse with the world; she is still sweet-voiced, subdued, and quiet. She needs no protector: the strength within her own soul is a panoply and shield.

May she ever find hearty friends, and a home warm with hospitable cares for her comfort, wherever her wandering feet may lead her, and in whatever land she may find a temporary or permanent abode.

Terrible Revenge.

A LATE Parisian newspaper tells the following story of a wealthy Englishman, who may constantly be seen at the Grand Opera, and the Italian Opera, and who enjoys a great reputation, not only as being a connoisseur of music, but further, as being a great amateur of painting. How the reputation was acquired, you will presently see.

He was one of those Bedouin Englishmen, who live alternately in the European capitals, except when they are on an occasional jaunt to Egypt, or to China, or to India, or to the Holy Land. He never traveled alone; his wife was with him—his *bone fide* wife—for, notwithstanding his errant life, so apt to weaken one's morals, he had all the English respect for the sex, and a true Englishman's love for his wife. She was a beautiful woman, one of those "keep-sake" beauties, that once seen, make a man dream forever. Her social success was very great in all the cities they visited.

In Rome, after being married some years, they became acquainted with a German artist, of a good reputation, who, to his art, joined the learning of a Benedictine, and knew the city of Rome as well as Winklemann or Visconti. The German volunteered to be their cicerone in the Eternal City—they gladly accepted the offer. Many were the hours they passed in the museum of the capitol, in the Vatican, in St. Peter's, and in the delightful excursion they made in the environs of Rome.

The artist became in love with the English lady; she reciprocated his affection. The husband was a long time in seeing the stain upon his honor. Several months passed away before he perceived it, for he was very much pleased with the artist, and they had long been on the most intimate terms. Although stung to the quick by such base faithlessness and gross violation of the laws of hospitality and friendship, he said nothing; he disliked scenes. He was nevertheless determined upon a complete revenge, and he appealed to cooler reflection to furnish a suitable punishment, as the passions are bad counsellors.

He left Italy, and retired with his wife to England, saying nothing but *au revoir* to the artist. When he reached England, he told his wife of the painful discovery he had made, and gave her back to her father's hands.

He then returned to the continent alone, and visited Germany, Russia and France, where he purchased a great many paintings. He then went to Italy, meanwhile continued to purchase paintings, and at last—two years had now passed away since their last meeting—he called on the German painter, who still lived in Rome, and demanded satisfaction of him.

His challenge was accepted, and the Englishman, according to the European custom, being the offended party, selected the weapons—he chose pistols. During the past two years he had practiced daily for several hours, and his known address with the pistol had become an unerring certainty of shot. He sent the shot wherever he wished it to go.

The parties were on the ground; they were placed at thirty paces apart, with the privilege of advancing ten paces before firing. The signal was given—"One! Two! Fire!"

The last word was hardly out of the second's month, when the Englishman fired without moving. His antagonist's pistol fell from his hand, and was discharged by the fall, the ball burying itself in the ground. The Englishman's ball had shattered the artist's wrist; an amputation was necessary; his career of artist was ended—and forever!

A few days after the amputation, the Englishman called on him, and without noticing the angry reception he met, said to the suffering artist:

"If you think that my vengeance is satisfied with your shattered hand, and the wreck of your artist's career, you strangely underestimate the agony of a deceived, dishonored husband. I have condemned you to a life of vain regrets—to a never-ending series of impotent sighs, to a total oblivion by all amateurs and historians of art."

"O no, sir," interrupted the artist, his face beaming with a ray of hope: "The last you cannot do. My Madonna, at St. Petersburg; my Luther at Berlin; my Flight into Egypt, at Paris; my—"

The Englishman interrupted him in turn.

"Spare me," said he, "the names of your works; but look over this catalogue, and see if I have not the exact list of them all?"

"Yes, they are all here; even the painting I finished the day before the duel!"

"So I was persuaded. All the paintings in this catalogue are my property. Being my property, I do with them what I please, and I please to burn them—ay, to burn every one of them, that your name shall be effaced from the glorious roll of artists. In two hours from this time, your conceptions, your skill, will be as completely effaced from this world as the lines which the weaver traces in the sand are effaced by the rising tide. Fire is as destructive as water."

In vain the poor artist begged for mercy. The wronged husband was insensible to his supplications; and in two hours the servant brought to the artist's room a large earthen vessel, commonly used to contain oil, filled with ashes. It was all that remained of the artist's paintings.

[From "Three Hours School a Day,"

Hints on Education.

HOME EDUCATION.—No children now study at home, save those who, at school, study too much. Give them three hours per day at school, and the business there would be delightful and attractive. The mind of the child would involuntarily revert to the business of the next day, and moments would be snatched—as rest or recreation, as a change from other occupations—to look into the subjects on hand for the next succeeding school hours. Parents could point them to men or women of whom they could get a fact or a truth. Insensibly, the interest of parents would be excited, either by inquiries on their part or on the part of the child, to ascertain that which either did or did not know; and here would be a home-school, blending in deep and delightful harmony the deep and warm interest and experience, developed mind, and may be scientific knowledge of the parent, with the active and searching curiosity, confidence, simplicity, sprightliness, and affection of the child.

THE POOR INFANTS.—We pit little innocents of four, five, six, or seven years of age to a bench or chair; they breathe impure air into their delicate lungs, vitiating and rendering heavy the currents of the blood at a period of intense vitality, in order that they may, three or four times a day, say over "A, B, C," and spell "baker, briar," etc.; and at the same time we prate of science, progress, and civilization!—not forgetting frequently to notify the world that we are the "smartest nation in all creation!"

WE DEMAND IMPOSSIBILITIES.—Six hours a day of activity in the duties of the school-room CANNOT BE HAD. The quantity is not there, and therefore you can't get it. There are scholars who are exceptions, but to them it is death. They early furnish food for worms, for plaintive verses, and far more plaintive wails. If they survive, and reach what by way of complaisant burlesque is called *maturity*, the ordeal through which they have passed has proved forever fatal to the integrity of their constitutions.

PRESERVE THIS!—This truth, that there can be no integrity of body without integrity of mind, and no integrity of mind without integrity of body, ought to be burned in the palms of the hands of both young and old.

THE SECRET OF SUCCESSFUL STUDY.—Adopt the plan here proposed—three hours a day, with two fifteen-minute recesses taken out of it—one at the end of the first hour, and one at the end of the next three-quarters of an hour, to ventilate the room and the lungs of the scholars and teachers, and to give the circulation impetus for the next hour of motionless work—I say, adopt this policy, and the children will rush with delight to the school—ay, with the same inexpressible joy with which they now rush from it! And what an advantage we thus secure! The very vitality of education! For that intellectual labor alone which is voluntary and cheerful, adds strength to the mind—alone adds to the stores of memory. It is only when the mind acts voluntarily, that it possesses energy. Everybody knows this. His own experience, not books, is every one's teacher for this. Unless the mind so act, how can it strike out new or bold path of thought and investigation, and perseveringly follow them? And in gaining a knowledge of facts, as in spelling, reading, geography, history, etc., the same law prevails. Their acquisition depends on memory. Attention is the secret of memory. Interest is the secret of attention. Interest is impulse; and impulses are voluntary, or individual.

A CURIOSITY.—The Marysville Herald tells of a fine assortment of leeches, which were found in rather extraordinary quarters: "Professor Kennedy, that *ne plus ultra* of the art terpsichorian, on Wednesday afternoon, while indulging in piscatorial sports, hooked up a monster pike, weighing nine and a half pounds, under the gills of which was a nest of full-grown and lively leeches. The poor pike must have been well drained of his 'life current,' by these blood suckers of the genus *hirudo*, and we have some curiosity to learn from Professor Kennedy whether a well-bleed pike is better or worse than one fried in the fullness of blood. We have these leeches on hand; and, as we are not exactly in the 'cupping and leeching' line, will, with pleasure, dispose of them to any one who can make a good use of them."

In the cities of Paris, Brussels, Grenoble and Annouay, no less than 6,400,000 kid and lamb skins are worked yearly into kid gloves, and 12,800,000 eggs are used in the preparation.

THE editor of the New Hampshire Patriot says that he expects to grow fat as long as he lives. Ah, yes; but when he dies, will not the fat be in the fire?—*Louisville Journal*.

[For the California Farmer.]

Sketches Connected with California History.

PROLOGUE.

[CONTINUED.]

So we come on to the time (1769-70) of Padre Junipero Serra, as he saith in old manuscript, who "at the expenses of the Catholic Monarch of the *Espanas* Senor Don Carlos III, (who may God guard,) subministered by the orders of the enlightened Senor Don Carlos, Marquis de Croix, actual Viceroy and Captain General of this New Spain, by the hands, commission and direction ample and entiro, of the illustrious Senor Don Josef de Galvez, of the king's council and honsehold, and of the royal and supreme council of the Indies; Intendente in the army, etc., etc;" established the Missions of San Diego, San Carlos de Monterey, San Gabriel, and San Antonio; and by successive viceroys and priests gathered the Indians of the coast valleys into communities from San Diego in 1769 to San Rafael in 1817—besides sending out to the northwest the maritime expeditions from 1774 to 1791 of Juan Perez, Juan Bodega de la Quadra, Bruno Heeceta, Ignacio Arteaga, Estevan Martinez, Gonzalo Haro, Francisco Elisa, Salvador Fidalgo, Alexandro Malaspina, Manuel Quimper; and finally the last in 1791, under Don Dionisio Galiano and Don Cayetano Valdez in the Goletas Sutil and Mexicana—(these last two California captains, as the Prince of the Peace states, fought bravely with Nelson at Trafalgar)—who surveyed and mapped the coasts and headlands of the north west, discovered the river Columbia, and whose fame was unmercifully mutilated and cribbaged by Cook, Vancouver, Meares, Fitzherbert, Canning, Castlereagh, Pitt, etc., etc, mariners, historians and courtiers of Britain.

And also the land expeditions of the Fathers Francisco Garzes, Francisco A. Dominguez, Silvestre V. do Ercalante, and Pedro Fonte, who left accounts of their journeys in 1775 and 1776 into the mysterious countries of the old eastern territories of California, which have been roamed over by explorers, trappers and traders for the last forty years, and yet it is filled with unknown wonders, dead and living. And then also came in 1786 to Monterey, La Perouse the Frenchman, and left with Friar de la Suen, the old priest of San Carlos Mission, some bags of the potatoes of Chili, which from that year to this have so increased in size and quality as even to astonish the natives—of Ireland; and establish in California a fame for the Frenchman as permanent as the hunger of men's stomachs. And then after taking notes of things on this coast, La Perouse sailed for northwest America and so finally to the island Malicola of the New Hebrides, where his ships and crews were all lost or died, every soul of them: which was not known until the Irish Captain Dillon, a brave sailor, through the liberality of the twenty-four kings of the English East India Company, went in 1826 and searched out the remnants of the unfortunate navigator: for which he was made an ornament of the French Legion of Honor.

And the cause of the why and wherefore of La Perouse's sailing to these coasts, was for account of rich furs told of by John Ledyard, traveler, and Robert Morris, financier, both Americans: one died in a debtor's prison and the other died on foreign strand; for all their friends at court were dead! And hath the nation ever remembered their families?

In 1778 the famous Captain James Cook visited the coasts of Oregon. In 1785 Captain James Hanna, Captains Lowrie, Guise, Meares, Tipping, Portlock, Dixon, Duncan, Barelay, Colnet, and Douglas, Englishmen trading for furs, voyaged in the same seas—also Kendrick, Gray, and Ingraham, Americans on like errands of commerce bent. These all left accounts of the northwest countries, embraced between 1785 to 1792. Also in 1792 to 1794 Captain George Vancouver visited California and Oregon and surveyed these coasts afresh, and more exact than had been known before; and sprinkled curious long-winded names on their nautical charts; in a very ungenerous manner depriving foregoing navigators of their hard earned fame. And "Vancouver," as the Spaniards call him, is known of ancient Californians now living, at his visit to Monterey in November and December 1794.

Now then came the first original Yankee Pioneer to these shores in the year 1791, with the celebrated navigator Alexander Malaspina, of the family of the Malaspinas of Italy; doubtless descendant of the Malaspinas, noble Florentines, and friends of the immortal Dante, persecuted poet of the "Comedia Divina," whose name is immortal in the annals of the human race.

Here is the original account of this Yankee's death, and of his burial by a California Padre, at this Monterey on the Pacific, and never before made public:

"On this 13th day of September, 1791, in the Cemetery of the Church of the Royal Presidio of Monterey, (the Senor Don Francisco de Paulo Anino, Chaplain of one of the Corvettes of His Majesty, anchored in this port, named the *Atravida*), I gave ecclesiastical sepulture to the body of 'Juan Graem' (John Ingraham,) Gunner on board the said corvette, a native of the city of Boston, in the States of the United provinces of America; legitimate son of Juan and Catalina Mullen of the same city. The deceased was of the sect of the Presbyterians, but he had abjured these errors and had made repentance and obtained absolution for the previous errors and sins he had in consequence incurred before he left Cadiz; and having been fortified in the dogmas of our Sacred Faith, he died receiving the Most Holy Sacraments of Absolution, the Eucharist, and Extreme Unction.

And for the truth of these things I sign my name,
"FRIAR JOSE SENAN."

How strange the mutations of time in the affairs of men and nations. A few months ago a great flourish of trumpets came off in this modern Athens in which the forty-niners shone in splendor resplendent. But sixty-nine years ago there came to these then silent shores, a countryman of ours, sick and dying with devouring scurvy, who gave up his spirit unto the Judge of all flesh, and his soul was shrived by a foreign priest and his eyes closed by stranger's hands. This was the original Yankee Settler. He was then only one in the land. But in September 1854, the California which held his dust, had in six short years become the talk of the world and stirred the souls of the earth's inhabitants as hath never been stirred before; may not even by Christ's name. For it even started the five hundred millions of Asia from the sleep of centuries of dead ideas.

How apt comes the reflection (cynical, so called, but truthful nevertheless,) of Byron—

"And when his bones are dust, his grave a blank,
His station, generation, even his nation
Become a thing, or nothing, save to rank
In chronological commemoration,
Some dull MS. oblivion long has sunk,
Or given stone found in a barrow's station
In digging the foundation of a closet,
May turn his name up as a rare deposit."

And the next conjunction of continental events bearing Europe-ward and America-wise, was the empire of the English colonists of the Atlantic, founded by George Washington and our forefathers of pure and honest fancies, for integrity and noble simplicity—until it became, under the administration of Thomas Jefferson the philosopher, statesman, sage and philanthropist, a democratic republic. And for inasmuch that a "family compact" between the Bourbon Monarchs of Spain and France was concluded in 1762, with great solemnity, after "the old French war" of our ancestors, and Spain became possessed with diplomatic formality in 1769—the year of the foundation of California—of all the boundaries of the new provinces of Louisiana and Florida which stretched from the Atlantic shores of Florida and so winding and turning everywhere southwards along Gulf of Mexico coasts; then up the Mississippi northward and westward beyond into Goli knows where, and stretching towards the setting sun until it stopped at the beaches, where breaks with thundering roar the vast Pacific ocean.

Then this said Thomas Jefferson, book worm, author, student, and declaimer, after former devoted services, came into the general government of the sixteen United States and their territories, first as secretary for his country to all outsiders—Vice-President second, and then on the fourth day of March 1801 he became as he says only our "chief magistrate," and he sat on the bench of magistracy eight years—and he took notes of what was going on in Louisiana; that she was re-sold by Spain to France in 1800—that Spain and France formed strange laws and policies to keep Hoosiers and Kentuckians from flat-boat navigation, etc., etc., on Mississippi waters. And then did the chief magistrate put this and that together which he had read in old books of travels, history and geography; for he was one to pick the cream of matter from authors; and catching France, Spain and England in an ugly "pinch" of conjunctions of finance and marplots, he bought from Napoleon of France, on the 30th of April 1803, for fifteen millions of dollars, all that certain piece or parcel of land from the mouth of the Perdido across the Mississippi and up and west of the Mississippi to the north fork of the Arkansas, until it touched the forty-second degree of parallel north, and then away off along that line of latitude until it stopped at the ocean waves of the great sea; included 90,000 French and Spanish inhabitants with their slaves; and covered one million of square miles superficial of territory. All this came from study of men and events; of thoughts and facts, in books and papers stored; but are your bookworms worth anything? And furthermore, matters were laid in train by the aforesaid "Son of Old Virginia," which we Americans by the sagacious arrangements planned by him since 1800, continued to, and finally executed, with all ministerial formality, in the midst of Spain's throes of distress and anarchy, on the 22d day of February 1819, through and by his political godson James Monroe; did purchase all that other and adjoining lot with the sundry water frontage and privileges pertaining thereto of the present State of Florida; thus giving to us the supreme control of the northern shores of the Gulf of Mexico from Atlantic waves to Sabine flows; the trifling matter of five millions of dollars for some 60,000 square miles of new belds for emigrant conquest, and a complete predominance in the waters of the American Mediterranean.

Hear the words of Napoleon Le Grand in 1813 when the throes of his thrones, and the might of his fame began to tremble: "The force of physical power is indeed great, but that of moral opinion is overwhelming!" This man had a soul indeed, and to him France was everything, and he reigned high on throne, and embattled set in the hearts of his countrymen. But the cloud came; he fell and died on a lone ocean rock, like the old California discoverer, Rodriguez Cabrillo—the last is forgotten in men's memories, though he gave a great country to the world; but, Napoleon no! his monument, encasing the mortal body is seen every day of men, and his system bath made a new resurrection in our time; but who ever searched out the last resting place of California's first hero and greatest? None—not even a place that goes by his name in the land he made known to men; a lone isle his grave, his tomb nature's womb; his epitaph an old book; his requiem the

wild surging surf-broken billow. Let him there lie.

Then came the times of the rapid spread of the descendants of the children of revolutionary sires over the mighty rivers, lakes, forests and prairies of the great valley of the Father of Waters. And from 1800 to 1824 they filled the land from Maine to Louisiana and from the Atlantic to the Rocky Mountains, with an unknown energy and the mighty spirit of the peaceful occupations of a race of the most restless and unquiet mortals on the face of the earth. And there was sent out to survey old Louisiana and everywhere to the great ocean, to spy out the good things of the land and its marvellous and strange sights, the Captains Lewis and Clarke, great travelers and observing men, officers of Uncle Sam's little army who done credit to their country. And they arrived from over the Rocky Mountains, down unto the mouth of the great Columbia river at the ocean shores, on the 15th day of November A. D. 1805—the first of civilized men of books who had accomplished this now every day undertaking. All honor be unto the fame of these ancient soldiers and pioneers of the far west.

And also came to light in these times, the fame and name of Andrew Jackson, born in the hill country of South Carolina; an honest backwoodsman, a plain farmer's son, a man of indomitable will, of noble, just and generous heart and principles; of unconquerable courage and valor who subdued the savages of the Southwest and took captives at New Orleans on the 8th of January 1815, the proud hosts of the conquerors of the conqueror of Europe, and the soldiers of the merchant's subjugators of the hundreds of millions of oriental India. And then he was Chief Magistrate for eight years.

And he, now surnamed "Old Hickory" died in his home of Tennessee, hard by to the flows of the Father of Waters, on the 8th day of June 1845; and he lies forever embalmed in the rugged affections of his countrymen as a pure and spotless patriot; a noble defender of the rights of man, and a philanthropist of the true cosmopolitan stamp.

And also before Old Hickory, was Daniel Boone, high patriarch of forest animals and prince of the followers of Robin Hood; of whom great Byron hath said in Don Juan of immortal wit:

"Crime came not near him—his is not the child
Of solitude; health struck not from him—for
Her home is in the rarely trodden wild
Where if men seek her not, and death be more
Their choice than life, forgive them, as beguiled
By habit to what their own hearts abhor—
In cities caged. The present case in point I
Cite is, that Boone lived hunting up to ninety;
And what's still stranger, left behind a name—
For which men vainly declaim the throng—
Not only famous, but of that good fame
Without which glory's but a tavern song—
Simple, serene, the antipodes of shame,
Which have not envy e'er could touch with wrong;
An active hermit, even in age the child
Of nature, or the Man of Ross run wild.
'Tis true he drank from men, even of his nation,
When they built up to his darling trees—
He moved some hundred miles off, for a station
Where there were fewer houses and more ease—
The inconvenience of civilization
Is, that you neither can be pleased nor please;
But when he met the individual man
He showed himself as kind as mortal can."

And much more of Boone, as beautiful and true, which may be found by reading canton eight, verse forty-eight to one and forty-two.

And in these times sprang into notice John O. Calhoun, a man of rare and unrivalled genius, student of books and master of political logic; not like his enemy Jackson, but a man given to vagaries of abstractions and nullifications; a just and revered man, but lacking the homely character of him who swore "by the eternal," that come what might this Union of Sovereign States "must and shall be preserved." And they were, *malgre* all the Jacobites, factionists and wild-harem-seam national spouters, and the sub-keepers of Uncle Sam's extra stores of political wind.

Then also arose the first settlements of Texas, and also the hunters of Kentucky, who went trapping into the Rocky Mountains and they crossed over thence after the beaver and to look after the skins of sea otter into California; and of which they made great slaughter. After that, the old hunters meeting the Yankee sailors of Down-East in this fair land, saw that it was a goodly land; and they married the fat and buxom Muelachas, and begot children, and had lands and the cattle on a thousand hills: of whom and their generation, many to this day remain in the Palestine of the Pacific, where the land flows with milk and honey, and every tenth woman is blessed with a double baker's dozen of samples of Uncle Sam's chunks of human nature.

Then arose in 1830 the Texas times that tried her first settler's souls: the flood of human tide was rolling south and west—of whom and of which, the sagacious student De Tocqueville says in the same 1830: (we cannot find better words, to depict the truths of actual history, in prophet's mouths.)

"Obstacles to their progress unexpectedly encountered are sometimes met with. The advancing column then halts for awhile; its two extremities fall back upon themselves, and as soon as they are re-united they proceed onward. This gradual and continuous progress of the European race toward the Rocky Mountains has the solemnity of a providential event. It is like a deluge of men rising unabatedly, and driven onward by the hand of God: for an Anglo-American State has been known to grow as rapidly as a man; passing from birth and infancy to maturity in the course of thirty years.

There was once a time when the three greatest

rivers of North America flowed within the dominions of France. Now, to the southwest, Spanish Mexico presents a barrier to the Anglo-Americans. The limits of separation have been settled by a treaty, but I do not doubt they will shortly infringe this arrangement: for vast provinces extending beyond the frontiers of the Union toward Mexico are still destitute of inhabitants. The natives of the United States will forestall the rightful occupants of these solitary regions and establish social institutions; so that when the legal owner arrives he will find the wilderness under cultivation and strangers quietly settled in the midst of his inheritance. The province of Texas is still part of the Mexican dominions, but it will soon contain no Mexicans; there the Anglo-Americans are gradually founding the empire of their own language and their own manners."

An then on the 4th day of July 1845 was annexed unto these United States this same Texas, by the voluntary act of its citizens, and we became with them companions in that vast and fertile territory of unknown wealth, bounded southward by the Rio Grande or Rio Norte, and stretching away westward north to the outlying spurs of the Rocky Mountains and containing over 325,000 of square miles of land, and rounding off the sharp corners of our southern boundary: done into acres, it is two hundred and eight and a-half millions, and all requiring new fencing material.

Then arose out of the Annexation of Texas—which effected no more than England had done with Seinde, Assam and the Punjab, and latterly in 1854 all Burmah; and France with Algeria; but it was done more peaceably and cheaply—the war of 1846 with Mexico, which resulted in the standard of the American Eagle being lifted up loftily, and flouted gaily to the wind from the domes of the Halls of the Montezumas—in the ancient capital of the Aztecs, conquered of Hernan Cortez in 1521. And also this gave unto the race of the Anglo-Saxon the mid-northern shores of Pacific America, the fairest, most fertile, most salubrious country on the face of the wide earth, and forever perhaps confirmed to this Republican Empire, the domination of the western continent. With 3,000 men: hunters, emigrants, volunteers and sailors, it gave to us, and for fifteen millions of dollars we acquired domain over four hundred and forty-eight thousand square miles of new territory; containing two hundred and eighty seven millions and more square acres, and enough to sweat under any number of one hundred and sixty acre bounty land warrants. Also, came at the same time that adjoining tract of land, better known as New Mexico, full of sheep and buffaloes and queer Moquis, roaming Apaches, savage Camanches, and warlike Navajoes; and containing some seventy-eight millions of square miles.

Plenty of land; plenty of land; but enough not mentioned, as we had under the administration of Young Hickory, a godson of Old Hickory, acquired after forty years long bulguring with Old Bull, that fertile territory watered by the great river of the west, which was discovered by the Greek pilot Juan de Fuca in 1592, and commonly called Oregon; as so named by the Spaniards of Padre Junipero's time: the said additional parcel and piece of land containing a little more or less three hundred and forty-one thousand square miles, or two hundred and eighty-seven millions of square acres, and covered with heavy forests on mountain sides of volcanic ranges, topping the regions of the eternal snows; and surrounding valleys of beautiful prairies of exceeding salubrity; where future giants of American mountaineers shall grow and flourish in pristine vigor in the ages of coming prosperity and danger to our dearly beloved country. And the ratifications of the same were exchanged in solemn treaty at Washington on the 15th day of June A. D. 1846.

[TO BE CONTINUED.]

A True Man.

If I shall describe a living man, a man that hath that life that distinguishes him from a fowl or a bird, that which gives him a capacity next to angels; we shall find that even a good man lies not long, because it is long before he is born to this life, and longer yet before he hath a man's growth. "He that can look upon death, and see its face with the same countenance with which he hears its story; that can endure all the labors of his life with his soul supporting his body; that can equally despise riches when he hath them, and when he hath them not; that is not sadder if they lie in his neighbor's trunk, nor more brag if they shine round about his own walls; he that is never moved with good fortune coming to him, nor going from him; that can look upon another man's lands, evenly, and pleasantly as if they were his own, and yet look upon his own and use them, too, just as if they were another man's; that neither spends his goods prodigally, and like a fool, nor yet keeps them avariciously and like a wretch; that weighs not benefits by weight and number, but by the mind and circumstances of him that gives them; that never thinks his charity expensive if a worthy person be the receiver; he that does nothing for opinion's sake, but everything for conscience, being as curious of his thoughts as of his actions in markets and theatres, and is as much in awe of himself as of a whole assembly; he that knows God looks on, and contrives his secret affairs as in the presence of God and his holy angels; that eats and drinks because he needs it, not that he may serve a lust or load his stomach; he that is beautiful and cheerful to his friends, and charitable and apt to forgive his enemies; that loves his country and obeys his prince, and desires and endeavors nothing more than that they may do honor to God!" this person may reckon his life to be the life of a man, and compute his months,

not by the course of the sun, but the zodiac and circle of his virtues: because these are such things which fools and children, and birds, and beasts, cannot have. These are therefore the actions of life, because they are the seeds of immortality. That day in which we have done some excellent thing, we may as truly reckon to be added to our life, as were the fifteen years to the days of Hezekiah.—Bishop Taylor.

Ladies' Department.

A Word for Wives.

BY ALMA GREY.

WHAT is it? A little pencil note, crumpled and worn, as if carried for a long time in one's pocket. I found it in a box of precious things that Fanny's mother had hoarded so choicely, because Fanny had been choice of them. I must read it, for every thing of Fanny's is dear to us now. Ah! 'tis a note from a gentleman who was at school with us at F—, whom Fanny esteemed so much, whom we both esteemed for his sterling integrity, and his gentleness. It is precious, too, as a reminder of him. I love the remembrance of old schoolfellows,—of frolicsome, foolish, frivolous, loving schooldays. But let me read. 'Tis mostly rubbed out, but here is a place.

"You know full well that long since, 'that dear cousin,' permitted me to call her by the endearing name of sister; and may I not, when far away, thinking of bye-gones, add your name to hers in the sisterly list? You asked me when I had heard from the dear one; she was down here a short hour last week, but what was that among so many who wished to see her?"

Al! that means me! If I had only known it then! And just now I was wondering if he really loved me, and perhaps felt almost in my secret heart to grieve a bit—to mourn at him. I fear I spoke as he little dreamed then the "dear one" would ever do. What shall I do? I remember him now, in all his young loveliness, in all the exultation of a first love, and my heart kindles too warmly to write what I wished.

What if I had told me then that my home would be in his heart—that my beautiful Alma would be his child! My Alma, my beautiful babe! how sweetly she nestles her little face in his neck. She has stolen her mother's place; little thief! I wonder she does not steal his whole heart to the clear shutting out of her mother!

Little wives—If ever a half-suppressed sigh finds place with you, or a half-unloving word escapes you to the husband whom you love, let your heart go back to some tender word in those first love days; remember how you loved him then, how tenderly he wooed you, how timidly you responded, and if you can feel that you have not grown unworthy, trust him for the same fond love now. If you do feel that through many cares and trials of life, you have become less lovable and attractive than then, turn—by all that you have on earth, or hope for in Heaven, turn back, and be the pattern of loveliness that won him; be the "dear one" your attractions made you then. Be the gentle, loving, winning maiden still, and doubt not, the lover you admired will live forever in your husband. Nestle by his side, cling to his love, and let his confidence in you never fail, and, my word for it, the husband will be dearer than the lover ever was. Above all things, do not forget the love he gave you first. Do not seek to "emancipate" yourself—do not strive to unsex yourself and become a Lucy Stone, or a Rev. Miss Brown, but love the higher honor ordained by our Saviour, of old—that of a loving wife. A happy wife, a blessed mother, can have no higher station, needs no greater honor.

Little wives, remember your first love. As for me, I see again the little crumpled note about the "dear one" and I must go to find love and forgiveness in his arms.—Arthur's Home Mag.

A Word.—A mother sat at the fireside of home, and her darling boy sat with her. Love and peace seemed hovering over them. A word from that mother's lips, was treasured up in the heart of the boy. Years rolled on. The boy had gone from the paternal roof, and his voice was heard in the halls of his country. But through him spoke the holy influence of a mother, and a nation felt the power of that fire-side word. Again, it is night. A fair-haired boy looks imploringly in the face of a worldly-minded mother, and inquires of holy things. That mother utters a word that crushes forever the germ of eternal truth. A word lightly spoken is like dew to a drooping flower. One badly spoken is like the worm that ever dies, and a word unuttered may afflict the world for weal or woe.

BEAUTIFUL EXTRACT.—"When the summer of youth is slowly wasting away into the nightfall of age, and the shadow of past years grows deeper and deeper, as life wears on to its close, it is pleasant to look back through the vista of time upon the sorrows and felicities of our earlier years. If we have a home to shelter and hearts to rejoice in, and friends have been gathered together around our firesides, then the rough places of our way faring will have been worn and smoothed away, in the twilight of life, while the sunny spots we have passed through, will grow brighter and more beautiful. Happy indeed are they whose intercourse with the world has not changed the tone of their holier feeling, or broken those musical cords of the heart, whose vibrations are so melodious, so tender and touching in the evening of age!"

DESTRUCTIVE HAIL STORM IN YOLO COUNTY. A terrific hail storm, accompanied by thunder and lightning, on Monday last, visited that section of Yolo county known as Putah Ridge, and extended over a strip of territory some ten or more miles in length and four in width. The storm arose about 2 o'clock in the afternoon, in the south-west, and swept over the tract above mentioned with resistless fury, completely beating down grass, wheat, barley, oats, &c. Our informant, Mr. Nathan McClure, represents the hurricane as of unparalleled severity. The hail stones were as big as ordinary sized marbles, and with such terrible velocity were they hurled, that splinters were seen to fly from shingles against which they struck. The tornado bore up the valley, and passed off in the direction of Marysville. The effects of this storm are truly deplorable. At the lowest calculation it is estimated that ten thousand bushels of wheat and barley have been totally ruined. In addition to this destruction of grain, an incalculable amount of growing grass was beaten down and greatly damaged. Hundreds of chickens, exposed to the peltings of the pitiless hail, were killed. Besides these losses, our informant states that Mr. Edmund Joseph had 150 acres of wheat in the ground, nearly all of which was effectually destroyed. Messrs. Patrick Kerrigan and John Taylor also met with serious losses. Messrs. Swain and Schwartz, who had ninety acres of wheat and barley on their ranch, have likewise suffered severely.—*Sac. Union.*

DISCOVERY OF A COAL MINE.—The soil of California was only required to yield coal in the abundance of its mineral wealth, to make it indeed the richest mining country in the world; and this it appears it has done at last, and almost at our very doors. The State Tribune gives the particulars of the discovery of a coal mine, on the Jackson road, about four miles from Lone City. It was first found about three weeks ago, by a man who had settled on the land, intending to farm, and while sinking a well, discovered the coal at a depth of only thirty feet from the surface. He first struck a hard substance, supposed to be sulphate of iron, under which lay the precious mineral. Several small shafts have since been sunk, and in every instance coal has been found at the depth of from 30 to 35 feet. Thus far the owners have only descended five or six feet into the bed, but the further they go the better article they find. A company composed of nine members has been formed, who intend to work the land immediately.

BOSTON TEA PARTY.—We received a very neat package from a friend the other day, and took it home to examine the same. There were some facts connected with it which led us back to the memorable days of the famous "Boston Tea Party" in which our Patriot Fathers resolved they would have no more Tea without their own consent. However right they were in their plans—and it has never yet been called in question—we do think if they had found a box of such "ORANGE PECCO" as was sent us from Bradshaw's, there might have been some hesitation in throwing such tea overboard. The very aroma that exhales from it is — — — Co and try it.

THE CONTRAST.—An article upon the markets of New York and California giving the prices in contrast, and which we prepared for our journal, we find copied into the San Francisco Herald and the Golden Era, the first without giving us the credit, the Era promptly naming the source from whence they copied. We have always looked to the Herald as an exemplar in such acts of courtesy, and would presume it an oversight in this case. We cite the instances of the Herald and Era and we shall ever strive to do the *amende honorable*, when we copy and not give credit promptly.

DUNCAN & Co.—Industry brings a sure reward. The sales of real estate, diamonds, jewelry, furniture, books, fancy goods, plants, &c., keep the hammer of friend Duncan busy. By the daily sales, and large ones too, and the oft repeated sound of going! gone! that is heard even at late hours of the night, it is pretty evident that his "ivory mallet" will work with recuperative power upon Dame Fortune. Well, the laborer is worthy of his hire, and surely Duncan deserves the smiles of fortune.

An Artesian Well, just sunk by Mr. Saml. L. Broughton, on his farm three miles north of San Jose, is just now one of the greatest curiosities of that valley. It has been sunk to the depth of 250 feet, and discharges an immense volume of water, more by far than that of any other well in the neighborhood.

MARKET REPORTS.

The condition of the markets, generally, is such that if we believe common report and newspaper items, we would pronounce, dull, very dull. The price of most merchandise is made by auction prices. Some staples are in good demand, but the large amount of arrivals check any advance in prices, except Grain and Flour. Both these articles are firm and advancing. Wheat, best, firm, 24; Barley, best, 14; Oats, best, 12; Flour, Cal., \$6.50; Gallego and Hazell, \$12.15; \$13. The advance of these articles of produce and the demand for shipment, together with large shipments already made, speaks well for our State, and should speak hope to the husbandman.

SPECIAL NOTICES.

The Balsam of Wild Cherry.—Proofs of the superiority of Dr. Wistar's Balsam pour in from all parts of the country.

Oxford, New Haven Co., Conn., Jan. 4.
Dear Sir: Having witnessed the effects of WISTAR'S BALSAM OF WILD CHERRY, in the case of one of my neighbors, who has been for several years seriously afflicted with the phthisis, general pulmonary weakness, bleeding of the lungs, etc., I have been induced to ask you to send me some of the medicine. My neighbor, referred to above, lately had a violent attack of bleeding at the lungs, and distress in breathing. He tried a bottle of the Wild Cherry, which has produced a most salutary and favorable effect. At his instance, and several others laboring under like complaints, I have been induced to make this request. By attending to the above immediately, you will oblige the afflicted, and also. Yours, etc.,
HENRY DUNHAM.

Sohl by all druggists.
Agents for San Francisco, B. B. THAYER & CO.

Opinion of the Press.—From the Sentinel and Recorder, Worcester, Mass:

WISTAR'S BALSAM OF WILD CHERRY.—The beneficial effects of this remedial composition are astonishing to the world, and make it one of the most popular medicines now known. For Coughs, Colds and Consumptive cases, its curative powers are established by numerous testimonials of the highest character. In the first stages of the disease termed "Catarrhal Consumption," originating from neglected colds, it has been used with unvarying success, and hundreds acknowledge they owe the restoration of their health to this invaluable medicine.

Many of the first physicians prescribe it in their practice.
Be sure it is signed L. BUTTS on the wrapper.

Agents for San Francisco, B. B. THAYER & CO.
Sold by all Druggists. v3-20

To Purchasers of Implements for Harvesting Grain.—We shall keep ourselves always advised of the very best implements that are imported into this country, and those who wish to purchase, by writing or calling on us, can be assisted in their purchases materially. We can find orders to any extent for machinery, and will be happy to do so for a commission, and we know we can do so with great advantage to the purchasers. (v3-13) WARREN & SON.

Religious Notice.—There will be Public Meetings held at the "Hall of the Sons of Temperance," on Washington street, between Sansone and Montgomery, every Sabbath Day, viz: A Prayer Meeting at 10 o'clock, A. M., and Public Lecture at 3 1/2 P. M.
NATHL THURSTON.

ifornia, retailing at wholesale prices, and samples gratis.

v3-20 BRADSHAW & CO.

MISCELLANEOUS.

Copartnership Notice.

THE undersigned have formed a Copartnership for the purpose of continuing and carrying on the Furniture Trade as Wholesale and Retail Dealers and Importers, in this city and Sacramento, under the name and style of HOWES & CO.

Resident Partner, Boston, R. HOWES, of the old firm of Howes & Co., 180 and 182 Montgomery street.

Resident Partner, San Francisco, DAVID MOORE, San Francisco, Sacramento, 139 Jackson st. 103 K st.

Resident Partner, Sacramento, B. C. NEWCOMB, 77 K street, Sacramento City, San Francisco, May 8, 1855.

To Our Friends and the Public.

By uniting the above three firms our capital is largely increased and our

expenses reduced more than one-half,

which enables us to offer you a greater variety of Goods at

15 to 25 per cent. less than our former rates.

One of the partners will be in Boston and New York to purchase goods, and will take advantage of the markets to obtain such goods as are desirable, at the

lowest Cash Rates.

Three years experience will enable him to select a stock that will

Defy Competition in Quality and Prices.

We are now before you with a large and

DESIRABLE STOCK OF NEW GOODS,

and shall endeavor to merit a share of your patronage. It will

be our pride to give

Perfect Satisfaction,

both in quality, prices, and good treatment.

77 and 103 K street, } HOWES & CO.

Sacramento, } 180 and 182 Montgomery street,

opposite Metropolitan Theatre.

FURNITURE!! FURNITURE!!!

AT REDUCED PRICES.

NEW FIRM AND NEW GOODS.

Our stock of Furniture is now complete, comprising

every thing suitable for the Parlor, Chamber, Dining

Room or Office. We have lately added to our

stock \$40,000 worth, purchased here at low

rates, which, together with our former

stock, and constant additions by

every clipper ship, gives us one

of the largest stocks ever of

furnishings in California. We

have reduced our

prices to con-

form to the

times,

at least 25

per cent. as all

who will favor us

with a call will be con-

vinced.—By the addition of

Messrs. Moore & Newcombs

stocks, here and in Sacramento, we

can safely say that our stock is the most

varied and complete ever offered to the public,

and that we cannot be undersold by any firm in

San Francisco, Sacramento, or elsewhere in this State.

Call and examine our stock before purchasing.

Varieties

THOUGHT IS FREE.

Thought is free!
Childless as the unfathomed sea,
Buoyant as the breath of Heaven,
Rapid as the gleaming levin:
It was born before the light,
And will last beyond the night.

Thought is free!
"Free as air men's thoughts should be,"
So English Alfred said;
So did preach the martyred dead
In the land in time of old,
Where truth bravely yet is told.

Thought is free!
In the woods of Germany
Herman the old Runic withstood;
Dauntless Luther lit his brand;
And still in that realm of cloud
Breathe their souls as through a shroud.

Thought is free!
In the vaults of Italy,
Nenth the grey sepulchral stones,
Late it stirred the old dry bones,
And its flash electric ran
Down the gloomy Vatican.

Thought is free!
France, to purchase liberty,
Though the price of blood she paid,
Of the boon seems half afraid;
But no fetters yet may bind
In that land the fervent mind.

Thought is free!
Ponderful be its victory!
But at times its latent force,
Bursting, takes a whirlwind's course,
Shakes the palaces of kings,
And to earth the temple brings.

A DRUNKARD'S TRICK.—Swartz was a drunkard. He was once engaged to ornament the ceiling of a public building, and was to be paid so much per day for his work; but he was so fond of tripping that his employers were obliged to hire another man to watch the tipsy painter. Finding that he could not go to the tavern as often as he wished, he resolved upon practicing a piece of deception. He stuffed a pair of stockings and shoes similar to those he was in the habit of wearing, and hung them down from his staging whenever he left his work. The watchman called in two or three times every day, but seeing a pair of legs hanging down, suspected nothing, and reported to his employers that Swartz had reformed! The roguish painter thus contrived to absent himself for whole days.

SEEN AND NOT SEEN.—A worthy miller wishing for a portrait of himself, applied to a painter to have it accomplished. "But," said he, "as I am a very industrious man, I wish to be painted as looking out of the window of my mill; but when any one looks at me, I wish to pop my head in, so as not to be thought lazy, or as spending too much time at the window." "Very well," said the painter, "it shall be done so." He painted the mill, and the mill window. The miller looked at it, and inquired, "Where is myself looking out?" "O," said the painter, "whenever one looks at the mill, you know you pop in your head to preserve your credit for industry." "That's right," said the miller; "I'm content, that's right, that will do!"

At the breaking of the ground for the commencement of the Lynchburg and Tennessee Railroad at Lynchburg, a clergyman present commenced slowly and solemnly to read a manuscript prayer. At the conclusion, an old negro man, who had been resting with one foot on his spade, and his arms on the handle, looking intently in the chaplain's face, straightening himself up, remarked very audibly, "Well, I reckon dat's de first time de Lord has ever been written to on de subject of railroads!"

A little fellow, weeping most piteously, was suddenly interrupted by some amusing occurrence. He hushed his cries for a moment; there was a struggle between smiles and tears; the train of thought was broken. "Ma," said he, resuming his sobs and wishing to have his cry out, "Ma—ugh! ugh! ugh! what was I crying about just now?"

THE DOCTOR'S WELCOME.—Down East there resides a certain M. D. One very cold night he was aroused from his slumbers by a loud knocking at his door. After some hesitation, he went to the window and asked, "Who's there?" "Friend." "What do you want?" "Want to stay here all night!" "Stay there, then," was the benevolent reply.

The world always judges a man, (and rightly enough, too,) by his little faults which he shows a hundred times a day, rather than by his great virtues which he discloses, perhaps, but once in a lifetime and to a single person; nay, in the proportion as they are rarer, and as he is nobler, is shyer of letting their existence be known at all.

It is not high crimes, such as robberies and murder, which destroy the peace of society, as the village gossip, family quarrels, jealousies and bickerings between neighbors—middlemenses and tattling, which are the worms that eat into all social happiness.

It is almost as criminal to hear a worthy man traduced without attempting his justification, as to be the author of the calumny against him; it is, in fact, a sort of misprison of treason against society.

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Laminé and other pathologists." Dr. CASPARY, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis." (Pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or even blazoning falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,
has cured hundreds of cases of
Consumption of the Lungs, Liver Complaints, Coughs,
Colds, Asthma, Bronchitis, Whooping Cough,
Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that **Consumption can be cured.**

Dr. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Consumption had taken place, the Wild Cherry effected a cure."

Dr. A. H. MACANAR, of Tarboro, North Carolina, writes up, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

Dr. Wm. A. STRAW, of Washington, D. C., says: "I wish heartily success to your medicine. I consider every case of cure of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity."

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry."

HON. SAMUEL S. PENNINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful."

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many elaborate cases of disease, and its name has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most distressing malady."
Argus Office, Portland, March 26, 1850.

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations.—Sympom, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine.

Dr. Wistar's Balsam of Wild Cherry.

Signed I. BUTTS in the wrapper.

Surgery.

R. B. COLE, M. D.,

Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South of East.

Office—Atheneum Building,
South-east corner of Montgomery and California streets,
opposite Wells, Fargo & Co.

Dr. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, from which this community may suffer, he will in future confine himself principally to his office, where he proposes to treat all

Surgical Diseases,

feeling assured as he does that his former connection with Medical Schools and Hospitals, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the numerous to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and morbid growths, occurring on any part of the body; Diseases of the Spine, Chronic Ulcers, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of the Eye, Ear and Skin, Affections of the Bladder, Urethra, Scrotum and Testis (or in other words, all diseases of the Genito-Urinary Apparatus); and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly-treated Fractures, Contractions of the Limbs and loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.

Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.

OFFICE HOURS: Morning, From 10 till 12.
Afternoon, " 2 " 5.
Evening, " 7 " 9.

A Lady's Praise of Spalding's Oil.

As the shadows of evening began to fall,
A Lady was dressing her hair for the Ball;
Soft were the accents that fell from her tongue,
And this was the song that the lady sung—
"Away with Pomatum and Boudoiring,
No more in my room shall Beards be seen,
The hair's soft texture they only spoil;
Oh, give me the Castor and Rosemary Oil—
It's made my tresses look soft and bright,
And my hair keeps its curl tho' I dance all night.
No more of grease or strowd spirit for me,
But Spalding's mixture of Rosemary!"

Sold by
B. B. THAYER & CO.,
Montgomery street, San Francisco.

PACIFIC EXPRESS COMPANY.

The late employees of Adams & Co., in consequence of the disruption of that firm, have organized themselves into a joint stock company, under the above name and title, for the purpose of conducting a General Express and Forwarding business in all its branches, throughout California, Oregon and the Pacific Coast generally.

The business will be strictly and solely a forwarding one, having no connection with banks and bankers, and will be conducted on safe and economical principles.

The Expresses will leave the office at the north-west corner of Washington and Montgomery streets, daily, at regular hours, for Sacramento and the Northern Mines, Stockton and the Southern Mines, San Jose, San Juan and Santa Cruz, Monterey, San Pedro and the Southern Coast generally, as well as to the Northern Coast of California and Oregon.

We will also run a regular Express for Freight, Small Parcels and Letters to and from the Atlantic States by every steamer.

The parties who have organized this company are well known in the community as old and experienced express men, and hope it will be unobscuredly generally understood their business thoroughly. They think they are not saying too much, when they attribute much of the success of the late firm of Adams & Co. in the express business to their exertions and personal energy.

In conclusion they would solicit a fair share of the favors of the public, pledging themselves to exert their best endeavors to transact such business as may be entrusted to them in a prompt and business-like manner.

Collections of all kinds will be promptly attended to at any of the points mentioned above.

R. G. NOYES, President.
San Francisco, March 1st, 1855.

WAINWRIGHT, RANDALL & CO.,

Real Estate and Stock Auctioneers,
No. 100 Merchant street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of Real Estate and General Brokerage, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

Home Brokerage.

This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a directory, (already prepared,) of all persons, (except Chinese,) within the limits of the city, by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and also where.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and address of forty-three thousand persons, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.

WAINWRIGHT, RANDALL & CO.

Bookseller's and Stationer's

WHOLESALE AND RETAIL WAREHOUSE.

WE beg to call attention to the following catalogue, which comprises in part our stock of books and stationery.

By the recent arrival of clippers, our assortment of goods in this line has been made very complete, and we feel sure that the public will find it to their interest to call and examine our stock before making purchases elsewhere.

Blank Books.—Ledgers, Journals, Cash, Invoice, Day and Record Books, in Russia, Sheep and Marble Binding. Copying Books, Index and Plain Memorandums, Bank and Pass Books, Diaries, &c., &c.

Paper.—Brief, Letter, Cap, Note, Envelope, Tissue, Blotting and Filtering Papers.

Stationery.—A complete assortment of Law, Counting House and Fancy Stationery.

Bound Books.—A large and splendid assortment of Law, Standard, School and Miscellaneous Books, including many in rich fancy binding, suitable for presents.

Blanks.—Law, Shipping and Custom House Blanks, Miscellaneous—Gold Pens, Razors and Razor Strops, Pocket Cutlery, Toilet Brushes, Cans, Dials, Date, Post Office and Envelope Boxes; Portable Desk; Gent's Dressing Cases, Ladies' Toilet and Work Cases and Reticules, Port Monies, Penknives, Opera Glasses, Fancy Articles, &c., &c.

On the arrival of each steamer we receive a full supply of all the leading Newspapers, Pictorials, Reviews and all Magazines published in America and England, which we can furnish to all in quantities to suit.

GEO. W. MURRAY & CO., Montgomery Block.

N. B.—Particular attention paid to filling orders.

To Printers.

FOR SALE—One Second-hand Hoe's DOUBLE CYLINDER PRESS. Size of bed, 44 by 28. Apply to
F. BLAKE, 68 Merchant street.

MISCELLANEOUS.

DR. DEVINE'S COMPOUND PITCH LOZENGE
FOR THE CURE OF
COUGHS AND COLDS
AND
BRONCHIAL AFFECTIONS
LITTLE & CO
AGENTS
137 MONTGOMERY ST.
SAN FRANCISCO.

TO PREVENT COUNTERFEITS, EACH BOX OF DEVINE'S PITCH LOZENGES will in future bear the Written Signature of "Little & Co."

Agricola's Letters.—No. 1.

INTRODUCTORY.

THERE is no other life so agreeable to an unso-
phisticated mind as that of the Country, where,
more particularly, we hold converse with Nature,
and riot in the enjoyment of her charms in her
favorite haunts. But

"The plowboys whistle and the milkmaid's song,"
"The woodcock and the living stream at eve,"
"The cottage home from towns and strife remote,"

and all the combined enticements of rural inno-
cence, and rural scenery together, would cease,
and go to waste and ruin, did not the skillful far-
mer, "with eye of observation," continually direct
the natural gifts of Heaven into their proper
channels, and apply his useful labor to render
nature doubly beautiful and attractive.

Agriculture, properly speaking, is both a Science
and an Art—the Scientific department consisting
in ascertaining the nature and qualities of soils
by chemical and other means, the analysis of
plants and of manures, and the philosophical
reasons for every requisite operation for growing
the different cultivated crops to perfection—the
Art, in conducting and performing these various
operations with economy and comfort, and in a
tasteful and proper manner. The former is re-
quired by reading and study, the latter by prac-
tice and experience; and both are essentially
necessary to enable the farmer to maintain the
dignity of his profession, and take his proper
position among the intelligent community of this
country.

Agriculture as a Science is but of modern date.
As an Art, if art it could then be called, it is
coeval with the human race; progressing with
the other Arts in some measure, but generally
behind them, from the fact that it has, till lately,
been followed almost exclusively by the humbler
and less intellectual portion of the community.
But thanks to agricultural works, and more par-
ticularly agricultural periodicals, such is not now
the case, although, it might be admitted, many
have still much to learn, from the fact that they
have not, from the continuous nature of their oc-
cupations, much time for the study of abstract
and scientific works, which besides, are frequen-
tly of no great service to the practical man, in
consequence of the writers having never been, to
any extent, practical farmers themselves.

At present there are no two countries in Eu-
rope whose Agriculture is in more general repu-
tation than Scotland and Belgium. And, as I
have lived for a considerable time in both, I shall
in a particular manner, refer to the systems of
Agriculture therein practiced, and endeavor to
show how far they may, and may not, be intro-
duced into California, with prudence and reason-
able hopes of profit. I do not mean, however, to

confine myself to them alone. In regard to agri-
cultural implements, our own land stands forward
in a conspicuous manner, and if Agriculture has
not, in every instance, been conducted with the
same precision and neatness with us that it has
in Europe, it is because it was not necessary for
the people to be so minutely careful. Still, it is
always well to know the most that can be made
of anything, whether our necessities require us to
avail ourselves of that knowledge, or not. I
should therefore consider myself recant to the
task I have undertaken, if I did not avail myself
of all my experience, wherever and however ob-
tained, to make my contributions to your jour-
nal as useful as possible. As far as Science is
concerned, I shall study to avoid trying to appear
learned, which generally amounts to a man in-
flating himself with a species of spurious gas,
which is incapable of elevating, either himself or
his readers, a single inch above their former po-
sition. Still, it must be admitted that it is im-
possible to carry on Agriculture in an enlight-
ened manner, without understanding all the whys
and wherefores of everything we do, and this can
only be done by being, in some measure, ac-
quainted with what the plants we wish to raise
are made of, and whether, and how far, the soil
on which we propose to raise them can supply
the materials. Without this knowledge, the
practice of Agriculture is merely groping in the
dark, and although a man may farm land, with
which he is well acquainted, without Science, in
a similar way that another can walk along a road
with which he is familiar at night, still it is more
comfortable, in both instances, to have light
enough to prevent us from going astray.

But let me not be misunderstood. My experi-
ence derived from practice in other places, and
what knowledge of Agricultural Chemistry I may
possess, would be of little avail if the particular
circumstances of the soil and climate of Califor-
nia were not taken into account; and it is, in
this respect, I believe, that I shall have the great-
est difficulty in meeting the expectations of your
readers, or satisfying myself. I mean, therefore,
to use some caution, in recommending any other
mode of culture in this State than what has al-
ready been proved to be advantageous, and pre-
sume, that no farmer will be so foolish as to take
any advice from me as gospel from an authorita-
tive teacher, but only, as what it is really meant
to be, the counsel of a practical man like himself.

With these remarks I shall conclude my letter,
and shall proceed in my next to speak *ex cathedra*,
as if nobody knew anything about the sub-
ject but myself, and the writers and farmers
whom I may have occasion to refer to.

AGRICOLA.

Protection of Home Industry—Mechanic Arts.

To the Editor of the California Farmer:

Sir—The social and political affairs of Califor-
nia seem to be undergoing a very minute analysis,
inviting as they are all the philanthropy
and philosophy that the sentinels of its future
independence and prosperity can put in requisition.
Yet there are not many flying to the rescue
of our young State from the internal disorder
which is fast discolored her fair and lovely
figure, though adorning as she did another bright
star to the enviable, but I hope enduring, constel-
lation. The bridal plumage which she has worn
since her annexation, is now so much tainted by
treachery and corruption as to nearly cause a
mortification of her entire frame. The men who
have been fed and fattened, and made aristocrats,
by sucking the open pores of her golden heart,
have for the most part become the Arnolds of
her tottering disease, and who would in all proba-
bility smile at her agonizing groans if their own
clandestine perfidy had escaped the notice of a
bewildered and betrayed people. They have de-
voured the bowels of her infant greatness, as
Saturn devoured his own male children to grasp
the Titan's power. They have driven to despair
and desperation many a quiet mind, and have

wrecked the industry, the hopes, the ears, almost
the life, of many, too many, who have toiled
their marrow to oil, divesting this racy land of
its bounteous freight. They may fancy their in-
tricate dishonesty might, perhaps, after a while,
sink into oblivion. No; like the swathing of an
Egyptian mummy, it will entwine round their
character and preserve their infamy intact. And
what is more insolent and by far more erroneous,
the financial condition of this country, brought
about by a banditti of bankers and speculators,
is attributed to the imprudence and extravagance
of Californians, by the journalists of New York,
Boston, and other Atlantic cities—they and their
army of stock jobbers, mercantile, and commer-
cial men, who have been saved from experiencing
before this the calamitous revolution that is
raging throughout the length and breadth of their
monetary affairs at present, by the unparalleled
enterprise, the inflexible perseverance, of the
men who have built up this country's colossal
statue, and who they so unblushingly slander.

But, sir, we yet, it is to be hoped, have guards
enough on the watch towers; yes, I trust we
have still, amid the bleak and angry storm, the
chartered pilots of our future course in the tid-
e-circled journalists of this city, who have, notwith-
standing the various interests at stake which so
frequently come in collision with each other, en-
deavored to guide the public mind in the ad-
vancement of the entire State, and soothe the
bursting aspirations that deluded nature can
freely exude. Your task, and theirs, is visibly
an up-hill struggle; however, if in the discharge
of your arduous and laborious duties you fail to
realize the grand idea of placing this State in an
independent and thriving position, you can hear in
your hearts the consciousness of having done
your duty, and in the hour of death you will not
be haunted by the reflection of having basely
trafficked on the destruction of your fellow man;
if ye do not procure a temporal remuneration for
the fearless inculcation of economy, progress and
truth, you will at least have the thanks and bles-
sings of an honest community, and the tears of
the widow, or the curses of the children, will not
follow ye to the grave.

Sir, in your publication of the 10th March,
you have done me the honor of inserting my
former communication, advocating, as I did, pro-
tection for the Agricultural and Manufacturing
interests of this State, which in propounding such
a doctrine I do not sail under any false or pirati-
cal colors. Being a humble artisan whose future
happiness depends on the augmentation of trade
in general, I yearn for its speedy supremacy in
this fertile country; having no political ambition
to gratify, I only desire to see men of unimpeach-
able integrity guiding its councils—men of capa-
bility as well as character directing her onward
march to the proud position she is qualified (by
her geographical position, her numerous resources
and her luxuriant soil) to occupy; and what a
happy reflection would it not be to behold the
men of all political parties absorb their distract-
ing prejudices and direct the great genius of
American intellect to the promotion of Art and
Science, to the cultivation of her waste lands,
and the development of her hidden treasures.

An organization of Mechanics has lately sprung
into life among us: Under whatever influence
they have been induced to co-operate, it would
appear to be a most opportune time they have
chosen, for the diffusion of useful knowledge, the
discharging of many duties as relates to their
own well being, and the protection of their rights
as workmen. With the crashing announce-
ments of insolvency come quickly in its train the
merciless burning brand of petty oppression; the
very characters whom chance more than qualifi-
cations has put in the position of employers, are
the first to make the workman their prey, and
with the tenacity of a hungry tiger, devour the
sweat of his brow to satiate their greedy appe-
tites. In the insolence of some of these irre-
sponsible adventurers, the meanness and intri-

cacy of others, they more than emulate the
heartless tyrants of the Old Country, and this,
lest in the revulsion of things their own thread-
bare abilities would be thrown on a dull market,
where surely they would realize an unenviable
altitude; and I venture to think they are spring-
ing a mine that may very soon burst like thun-
der about their ears. Now, sir, to shield the
bone and sinew of this country, the working
class, from the ravages and Nevoism of such men,
they have done well to organize, and with it I
apprehend there is no more imperative duty on
such an influential class, as to direct their power
and political privileges towards protecting the
Agricultural products of California—stimulate
the consumption in every possible way, resolving
to give the home produce a preference, even at
a higher cost; if they do not, let any of them show
what will keep the capital in the country to ad-
vance Trade and Manufactures.

It appears very liberal in politicians to bubble
about free trade, but let us suppose all the stores
in San Francisco to be choked with Eastern
broadstuffs, selling below their value—what mat-
ters the plenty or the price to persons out of em-
ployment? I say they ought, and I may be right
in saying they would, prefer paying a higher
rate for the fresh and fragrant produce of our
own soil, not only on account of its superiority,
but for the *bona fide* fact of retaining in the
country the money paid for it, revolving as it un-
questionably would into some other channel of
trade. I have no second opinion about the matter;
I have no hesitation in saying that if the Mecha-
nics of this city, now that they are organized, do
not direct their attention to the protection of
Home Manufactures and the Agricultural Pro-
duce of the country, I see no difference between
them and any other literary association. These
ideas, whether right or wrong, require at all
events to be more generally disseminated, and
those who labor under them, if ignorant of more
serviceable ones, to be informed.

I am under the impression that those who in-
tend to spend the remainder of their life in Cali-
fornia, may as well try to infuse blood into the
body while the arteries are cut, as to secure last-
ing prosperity to this State without patronizing
and protecting the fruits of his own labor. This
is the time to kick the ball while it is rolling—to
teach the importing speculators a lesson they very
much need, and to make the Eastern journalists
and their patrons fully sensible to the fact that
California can live and prosper on her own re-
sources.

Respectfully yours,

THOMAS WARR.

San Francisco, May 21, 1855.

SHEEP.—Lawrence Smith, of Middlefield, has
been testing the respective merits of the Merino
and Oxfordshire sheep, and finds that the latter
are at the same time the most productive and the
least expensive; they are also very prolific,
usually giving birth to twins, and Mr. Smith has
discovered that while the receipts in ten Merinos
amounted to \$32, the profits on nine Oxfordshires
was \$60 90. He also states that the lambs of
the latter species often attain the weight of 100
pounds on nothing but the milk afforded by the
dam, and says that he has had a seven-month
lamb in his flock weighing 104 pounds.—*Spring-
field Republican*.

ARTISTICAL.—The Florence correspondent of
the Newark Advertiser speaks in high terms of a
valuable instrument, designed to diminish the
difficulties and perfect the processes of the art of
sculpture, which has been recently invented by
Mr. Hart, of Kentucky, a meritorious artist, who
is now sojourning in Florence. The instrument
is said to be of such a character that under its
guidance any ordinary sculptor may copy the
form of any person or inanimate object, with
mathematical precision and fidelity, both as to
feature and expression.

A NUTRITIOUS VEGETABLE.—It is perhaps un-
known to many, that the onion is one of the most
nutritious of roots, containing when dried, from
twenty-five to thirty per cent of gluten. It is a
great staple of life in Spain and Portugal. Onions
are not a relish merely to the Spaniard, but they
sustain his strength, and add beyond what their
bulk would suggest, to the amount of nour-
ishment which his simple meal supplies.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SAN FRANCISCO, THURSDAY, MAY 31, 1855.

"Prologue."—The original sketch under this heading, from the pen of ALEX. S. TAYLOR, Esq., of Monterey, which appears in several numbers of the FARMER, we have issued in pamphlet form. Those who wish copies in this style, can obtain them on application at this office, Market Hall Building, or by Mail or Express. Price Twenty-five cents per copy, or six copies for One Dollar.

SUBSCRIBERS AND ADVERTISERS AT SACRAMENTO.—We would esteem it a very great favor if our subscribers would give us prompt information of any irregularity in receiving their papers. From circumstances arising from a change in carriers, we are subjected to loss and to much disappointment, and we ask that indulgence which we trust will be readily accorded, when we assure our friends that the difficulty was entirely beyond our control. The publication office being now also at the Rooms of the State Society, on Fourth street, between J and K, we hope to see all our friends there, and will endeavor to have them promptly supplied hereafter.

To our friends in Sacramento we would offer the CALIFORNIA FARMER as a medium of making their business known widely. Our journal is circulated in every portion of the State—no city or town of any note where the CALIFORNIA FARMER does not find its way; and during the present summer large numbers of extra, having the State Society's list of Premiums, will be widely scattered, and with these issues a very large circulation can be given to those branches of business that require to be widely known.

Hindrances to California Prosperity.

With good intent our public journals are weekly suggesting plans of various kinds to relieve the State from its present embarrassments—among them are: plans to induce emigration to our shores—plans to induce our steamers to offer special encouragement to emigrants—plans to form Immigrant Associations, and many other plans that may appear feasible. All these have appeared from time to time in the columns of the CALIFORNIA FARMER, for a year or more; but this is not the most important thing to be done.

There is one thing PARAMOUNT to all others, that must be done, before we can expect a large immigration of permanent settlers, of the right kind. We must furnish the citizens of the old States with the right kind of information about California. We must give them reliable information as to our climate, soil and productions; we must show them we have a country fit to live in; a country that has moral, social, and intellectual privileges and blessings; a country where law and order does and will prevail. These are the considerations that will move the people. These are the considerations, and these only, that will induce that kind of people that will prove a blessing to California.

We want families as permanent settlers; we want those who will come to be identified with our institutions and aid in sustaining, building up and advancing the work already begun. We do not want adventurers, office seekers, speculators, loafers; we have enough of them already, enough and to spare. We want no more drones—we want working men and working women. There are fields of labor for all. We want working men for our agriculture, for our manufactures, for our workshops—real working men, practically so; and we want working women also, in every department—in the domestic circle, in our industrial pursuits, in our schools, and in all the higher social relations of life. We not only want those qualified for physical labor, but mental labor—California wants mind as well as muscle.

California is but poorly understood abroad; she has been poorly represented in her industrial relations. California is like a ship richly freighted—she has been the prize for which the piratical crews of every nation have battled, and they have fattened upon her treasures until there is nothing left but the hull and rigging; but she is strong built and well rigged, and will yet make a glorious voyage. California has a treasure chest left yet, and when the piratical crew is turned aloft, and she is once purified and fumigated, the drones driven from her shores and measures taken to develop her real resources, there will be found riches to surpass those of any portion of the world. That this may be done, correct information should be transmitted abroad into every State of our own glorious Union, and to all the most enlightened nations of Europe, where real industry prevails.

We have said that California suffers for want of a just opinion of her resources abroad; this is so, and we are prepared to show it. The tone of the Press in many of the States shows their ignorance of our resources, and their doubts of our civilization, almost; the conduct of the mercantile and commercial men, and the character of their shipments, contrary to all advice and remonstrance of their own agents here, and of our own Press; the various reports emanating from high authority, official documents often, many of

them written without data, without a shadow of truth, or any just conception of the subject upon which the writer is speaking—these are the causes of our present difficulties, depressions and embarrassments, and until these are removed and our citizens take measures to show the citizens of all the States our true condition, we never can have any material addition to our population.

Our political journals—the journals of the present day—we mean those relating to business, those that contain the ordinary transactions of the times—these are absolutely doing the State an injury abroad. The disastrous condition of trade, the auction sales, sheriff sales, forced sales, show at home (in the States) such a picture, that people will not emigrate hither. Such journals only show the DARK SIDE. What is wanted now, and wanted immediately, is a BRIGHT PICTURE. We want to show them a true picture of our broad and fertile valleys, the fields of waving grain, our vineyards, our orchards, our gardens, our flouring mills, our workshops, our markets—in truth we must convince them we are a civilized people, and not liable to be starved to death by being cut off from other parts of the world, as some would suppose.

We herewith present for our readers' curiosity, an extract which we copy from an official document issued from the Quartermaster General's office in November, 1853, and as an accompanying document to the President's Message. Our readers will please bear in mind that this refers to California in 1853. The extract is from a portion of the document where the subjects of roads and means of communication are demanded from one territory to another, and the danger that arises for the want of such roads shown; it is Quartermaster's Jessup's report, to Hon. Jefferson Davis, Secretary of War, at Washington, Nov. 22, 1853:

"To make our military power effective even for defense, the improvement of the harbors and rivers of Texas, California, Washington, and Oregon, and the construction of railroads to connect those States and Territories, as well as New Mexico, with each other and with the States east of the Mississippi, are indispensably necessary. Let these works be completed, and our military power, whether for offense or defense, will be quadrupled.

"Our extensive territories, bounded west by the Pacific, are separated from the strength and power of the nation by vast deserts and lofty mountains, over which it requires months to communicate. With those territories our only channels of rapid communication are through foreign States. Suppose our country at war with one of the great maritime powers of Europe; our Pacific coast would be immediately blockaded, and the communications through the States above referred to cut off; our people on that side of the continent would be deprived of their commerce, and from the undeveloped state of their agriculture, would be left without the means of self-support; and being beyond the reach of effective and timely support from the mass of the nation, through our own territories, would be starved out and compelled to capitulate in less than six months."

STARVED OUT! Starved out in California! This report too in an official document at Washington, our "nation's heart," and annexed to the President's Message, to be scattered over the whole country and read by thousands and tens of thousands, as no other document would be.

STARVED OUT IN CALIFORNIA in 1853—blockaded—capitulate—no retreat—UNDEVELOPED AGRICULTURE!—and this report, too, at a time when the tables at the Patent Office were loaded with such specimen products from California as the world never saw before, specimens borne from the city of San Francisco by our own senators and representatives, shown at the capital, and reported in the Washington Intelligencer of that month.

STARVED OUT! Aye, starved out in California in '53—in a country where two FARMERS alone the small crop of thirty-three million pounds raised of potatoes that very autumn—a season of great crops—a season when the barley at Salinas Plains yielded one hundred and forty-nine bushels per acre, and many crops of wheat yielded 60, 70, and even 80 bushels to the acre. Californians capitulate to a foreign foe, because of her undeveloped Agriculture in '53! Where is Farmer Horner with his twenty million pounds of potatoes, and Farmer Beard with his twelve or thirteen millions, and Farmer Hill of Salinas, with his barley crop? where Gen. Huchinson of the Utah, with his wheat crop? Where are the Union and City Flour Mills, the Santa Clara Mills, the Benicia Mills, the Eureka Mills, and many others that were pouring out their tons of pure flour? Starve, will we? Californians may starve by reason of her undeveloped Agriculture, and die by over feeding—but never die of starvation! never! and a few months will show our friends East and West these facts, when their

ships shall return laden with our flour and grain, and other products. These are evidences of our prosperity, and these are the evidences we must present to them; these will awaken them to our real condition, and show them that our Golden State abounds with all that can make life desirable. Let us all unite and send them a true report, and we shall soon see turning to our shores a population by thousands and hundreds of thousands, that shall build up the State and make it a mighty empire.

To Grain Growers.

THE present condition of the grain interest of California demands more than a passing notice from a journal like ours, professing as it does, to guard this great and growing interest of our country. The prospect of large crops of wheat and barley is before us, and it is readily admitted that the conditions of the growers are such, in many districts, that unless a generous sympathy is felt, and a disposition shown to aid those who have met with reverses, and unless the present price is fully maintained, there will be many a field that will go unharvested for want of means to gather the crop.

The great cost of the harvesting implements utterly precludes the possibility of their purchase by all who need them. For in the present depressed state of trade they can only be bought for ready cash, and this farmers have not got. We mean all that need these implements. It is for reasons like these that we urge that in every county there should be meetings called of those interested, and a full and frank explanation take place of the real condition of this interest. It is important that at such meetings pains be taken to ascertain the quantity grown in each county, of every kind of grain and produce. Such knowledge in the hands of grain growers, in each county, and with a central board, the true value of grain, the quantity on hand, and all that appertains to it would be known, and under the control of the very men whose interests were identified with it. This matter should be attended to at once.

Harvesting has already commenced—(we learn that barley has been harvested at Stockton)—and if a wise and generous plan be devised to aid those who need help in harvesting, great good will result, for the prosperity of the mass is made up of the prosperity of individuals. Combinations can be made of individuals to purchase harvesting implements for a county, and let them at a moderate rate, or free, according as the necessity of the case may require. Acts like these, on the part of land owners and wealthy farmers, will not only redound to their credit, but be like good seed that will by-and-by bring back a noble harvest.

Grain growers and all others are kindly invited to confer with the Executive Committee of the State Agricultural Society, or with this journal, and every aid will be given to advance the general interest. Cultivators of the soil are also invited to visit the State Society's rooms, now opened on Fourth street, between J and K, where agricultural papers, from the States and Europe, will be found on file for reference, and where specimens of grains and product will always be found.

Members to State Agricultural Society.

THE California State Agricultural Society has been duly organized and in operation more than one year; and having held its first State Exhibition is now entering upon the preparatory labors and duties of its Second Grand Exhibition. By reference to the FARMER of last week and of every alternate week, the list of premiums will be found, embracing agriculture and its kindred interests, and a large and generous list of prizes worthy a spirit of friendly strife and emulation. It is highly important that the plans of the society should be extensively known and widely disseminated. It is important too that all who are owners and cultivators of the soil should take an active interest in the State Society; that they should come forward voluntarily and enroll their names as members, attend its meetings, aid in all those plans that will tend to develop the resources of our growing State.

Members tickets are now ready at the Society's rooms. Ten dollars constitute a member, and this gives the privilege to a member and his family to all the Society's Exhibitions, their reading rooms, &c., absolutely of more value than thirty cents. Persons at a distance, by remitting, can have certificates of membership sent to them.

It is to be hoped that there will be a spirit of magnanimity manifested to sustain the State Society in plans that every good citizen must feel assured is doing much to save the State from its present embarrassed condition and raise it to a condition of renewed prosperity.

California State Agricultural Society.

WE published last week the list of premiums to be awarded by the State Society, at the coming Annual Fair, to be held at Sacramento city in September next. It is to be hoped that all who are interested in Agriculture, or in any branch of Home Industry, will give immediate attention to the invitation of the State Society, and unite with them in preparing for such an exhibition as will do honor to the State. The Manufacturers of the State are interested, the Mechanics are interested, also, Artisans in every department—all are most kindly invited to co-operate, to become members of the State Society, and to take part in this great enterprise. It is most earnestly desired that every friend of California's best interests, will so take part as to speak a kindly word of encouragement to his neighbor, convey information to a distant friend, correspond with the officers of the Society, make suggestions, &c., and thus stimulate all to the goodly work.

Our wealthy citizens can materially aid by becoming members. A member's ticket entitles him to free admission to all the Exhibitions of the Society, and at the same time aids the Society in carrying on the work. Among the many ways in which great good can be accomplished for the State, donations can be made of sums of money to be invested by the Society, the annual interest of which shall be awarded in a medal bearing the name of the donor. Thus, as in the premiums of the Massachusetts Horticultural Society, of Boston, we find the names of some of its merchant princes enrolled upon medals, they having contributed thousands to promote this noble science; several have contributed one thousand dollars each; Theodore Lyman bequeathed \$10,000. The medals are annually awarded, as follows:

The Appleton Gold Medal,	-	-	-	\$60
The Lyman, do do	-	-	-	60
The Bradley, do do	-	-	-	60
The Lowell, do do	-	-	-	60

The several donations are made to advance such particular branches as may strike the minds of the donors—for instance, a prize for the best seedling apples, a pear, a peach, potato, wheat or corn, melon, or any other article.

Now who will be ready to advance the cause thus nobly, and by a generous contribution bring out new productions, such as cotton, rice, tea, coffee and sugar. We make these suggestions and trust California will not long be without the evidence of that liberality which must be found within her borders.

High Prices East.

THE present high prices of all kinds of provisions and produce abroad should serve as an encouragement to stock raisers, dairymen, grain growers, farmers and produce dealers of all kinds in our State. The war in Europe has created a larger demand, and its continuance has withdrawn the laborer from the field to other avocations, thus decreasing the crops, while an increased supply is needed.

From a combination of circumstances not wholly explained, with increased crops, there is almost a certainty of high prices ruling for grains, flour, produce and provisions of all kinds, for some time to come, even till or after the new harvest. By reference to our extracts from New York prices, it will be seen that eastern markets rule higher than our own for flour, grain and produce.

California can spare a large amount of each and have enough left; and while we would urge a large shipment we would again urge shippers to look well to the condition of articles shipped, especially grain and flour. California must not make bad shipments. Her aim should be to be successful from this side. Goods shipped from this side that may be found in bad order, though the quantity be small, would deter others, and it is easier to be careful now and thus secure a permanent prosperity. A check in shipments would result in great injury.

Whilst referring to this matter we would urge particular attention to the valuable invention recently presented to this State, for kiln drying grain, potatoes, lumber, &c., to which reference is made in an advertisement in our columns.

MESSRS. JAMES FRENCH & Co., of Boston, have in press and will soon publish a new work entitled, "Anna Clayton,"—for which they anticipate an extensive sale. This is a new and original tale, founded on actual occurrences, and of the most remarkable character. The scene is laid in one of our New England villages, and written in a style of uncommon beauty and force, and promises to exceed any work of the kind, with which we are acquainted. We have seen the proof sheets, and shall notice it more fully as soon as published. It will make a 12 mo. vol., of about 400 pages, and will be issued on the 1st of May.

Land Titles.

ONE of the greatest obstacles to the improvement of our immense territory may now be considered as removed, and all those original claims like that of Fremont and Richie, may now be claimed from authority as already confirmed, for the same rules and principles that have been applied to those cases will be applied to all others, and in a brief time the difficulties will disappear, and peace, order and prosperity will take the place of riot, bloodshed and ruin.

The generous proposition of General Sutter to those who have for years held his property, without rent, should awaken sufficient gratitude to bring them to a prompt and amicable adjustment.

We learn that T. O. Larkin, Esq., a large land owner in Colusa, Butte and Sonoma counties, has manifested great liberality in the adjustment of claims. It is a pleasure also to record the fact that O. M. Weber, Esq., of Stockton, has shown very great liberality to those who are upon the grounds lately confirmed to him. Acts like these will result in great good; they will promote the speedy settlement of lands, and great improvements upon them. This will still be the cry of hard times! We are glad to know this, for when a spirit of forbearance and confidence begins it should be encouraged and cherished, for its fruits will be pleasant to the sight and taste.

Now that this great question of titles is rapidly assuming a satisfactory form, we would suggest to real estate owners and cultivators, the public assemblage of both parties, and all that are interested, to consult for the general good, form county agricultural societies, lay plans for mutual benefit, for the improvement of the lands, for the introduction of important products, and foster and cherish everything that shall tend to the prosperity of the mass. In doing this it secures the prosperity of each individual. Unless something of this kind is done, the propitious moment will pass, and apathy and estrangement will take the place of a friendly intercourse and exchange of neighborly courtesy, and finally, loss, disaster and ruin will be the result.

We would urge this point as one of moment to land owners. The success of their tenants is their own success, and the misfortune of their tenants will and must eventually fall upon themselves. We urge a spirit of liberality and generosity, even among our larger land owners. We ask their sympathy and aid in this time of depression, to all with whom they are connected; for if there is one class that deserves aid and sympathy more than another, it is the cultivator of the soil. He is in the work that shall prove of the highest moment to our State, and really deserves a consideration commensurate with its importance.

Notices for the California Farmer,—April 20.

We have received from Messrs. Harper & Bros., of New York, the following works, just published by that House:

"The Countess of Blessington,"—being the literary life and correspondence of the above celebrated lady, whose house was the favorite resort of the London literati, for some fifteen years. The above work is in two volumes, well got up and must be extensively sought for.

"Frank," or "The Philosophy of Tricks and Mischiefs,"—being No. five of the series of story books for children, by Jacob Abbott. This is a very engaging look for the young reader, is neatly printed, and adorned by thirteen beautiful engravings.

"Introduction to Practical Astronomy, with Astronomical Tables,"—by Elias Loomis, L. L. D., Professor of Mathematics and Natural Philosophy, in the University of the city of New York. Those investigating astronomy, whether for their own pleasure or otherwise, and particularly those engaged in government surveys, will find this a most useful volume. These are all to be found at their large establishment New York, or at Redding & Co's., Boston, and all the principal book-stores in San Francisco.

Messrs. Phillips, Sampson & Co., Boston, have just published the "May Flower," a new work from the pen of Mrs. Stowe, being many of her early productions. They are stories of New England life, and contain the mingled humor and pathos for which the author is so universally admired.

From Messrs. Long & Brother, New York, "The Life and Beauties of Fanny Fern," a work which has created so much excitement, and is known the wide world over.

The "Pride of Life," a new work by Reynolds, has just been published. The well known and popular works by Reynolds, are all published at this establishment, and their publications can al-

ways be found at Messrs. LeCount & Strong's, San Francisco.

We have received from Wm. V. Spencer, 128 Washington street, Boston, the series of publications called "Spencer's Boston Theatre,"—published by him and Samuel French, of New York, being a series of scarce acting tragedies, comedies, dramas, farces and burlettas, with casts of characters as performed at the principal theatres in the United States and Europe. They are handsomely got up, and printed on fine white paper, and can be had of the publishers here, or their agents in San Francisco. In connection, we would say, that at the store of Wm. V. Spencer, can be procured all the best publications of the day, comprising all those published by them and Samuel French of New York. They are also fully supplied with all the foreign papers on the arrival of each steamer from Europe. We advise all our Boston readers to give him a call, where they will find a stock worthy their inspection.

PURE WATER.—The Artesian Well now being bored opposite the Merchants' Exchange is rapidly progressing, and we have taken notice of it each day. After the first day, occupied in preparing the curb, &c., and penetrating the soil that had been filled in to the depth of twenty feet, the work of boring commenced, and the second day entered a blue clay, which continued about forty feet more; at sixty feet a fine sand was struck, which continued twenty feet; then blue clay again to ninety-seven and a half feet, which we saw on Saturday evening. Here the first boulders were struck, the workmen bringing up a small one about twenty inches in diameter. This well is in the hands of Smith & Vanlyne, workmen of experience, skill and perseverance, and we have faith to believe if the thing can be done they will bring it to a successful issue. We shall note it again, and watch the result with deep interest, for pure water in San Francisco will be of more importance to the city than a mine of gold.

Messrs. Chosman, Carter & Jewett.—This house, on the corner of California and Montgomery streets, seems to be doing a good and prosperous business trade for themselves, however it may be for those whose goods are daily sold. "Necessity knows no law," and when goods must be sold, the quickest sale is the best, especially in a falling market. In passing, a day or two since, the sound of Mr. Jewett's voice, selling beautiful blooming plants, gold watches, jewelry, and rich furniture, recalled to mind the contrast to his sales in '49. We then remember purchasing of him, not beautiful plants, but bread and pork—the staff of life. '49 and '53 are in strange contrast, as is both felt and seen.

THE NEW FREIGHT COMPANY.—The new propeller Martin White, left her berth at Market street wharf, Tuesday afternoon at 4 o'clock, towing her barge astern, full freighted and crowded with passengers. When abreast of Vallejo street wharf she fired a salute, and steamed up the Bay in gallant style. This pioneer enterprise gives promise of benefit to both the merchant and traveller, and we should be glad, for their sake, to see it well patronized. Sun.

The intelligence from all parts of the country indicates that, with a favorable season, the grain crop of the present year will be unusually large.

Mr. Moses Einstein, of Kingston, N. C., blew up his store on the evening of the 11th inst., by "unthoughtfully" placing a lighted cigar on a keg of powder!

The New Orleans Picayune professes to have reliable information from Havana that the decree issued at Madrid directs the Captain General of Cuba, in the event of a filibuster expedition, to arrest all Americans on the island, not excepting even the U. S. Consul.

The high prices of provisions in all the Atlantic States, is the topic of serious discussion among all classes. Every article of consumption is held at a famine rate, and the worst feature of the state of things is, there appears no promise for the future. Prices of breadstuffs have not been so high as at present since the war of 1812.

CONSOLIDATION OF PITTSBURG.—The Board of Trade of Pittsburgh have just adopted a report in favor of the municipal consolidation of Pittsburgh, Alleghany, South Pittsburgh, Birmingham, &c., into one corporate city.

The treaty, which was sometime since made by our government with the Argentine Confederation, for opening the navigation of the rivers Paraguay and Uruguay, to the merchant flags of all nations, was confirmed by the United States Senate before the adjournment.

A proposition will come up in the next Congress to amend the Constitution of the United States, by inserting a clause to the effect that no State law shall be passed which may interfere with or prohibit the sale or consumption of any imported article upon which the General Government derives a benefit by imposing a tariff.

Horticultural Exhibition.—Fruits, Flowers, &c., &c.

The First Exhibition at the State Society's Rooms will take place on Saturday, June 2d.

The Exhibition will consist of fruits, flowers, vegetables, and other products of the seasons; and it is proposed by the Society to make semi-monthly Exhibitions, if a sufficient interest is manifest.

The Florists, Gardeners, and Farmers are invited to contribute such specimens as they may have, and thus make known the products of the county and the State. The State Society's Rooms are located on Fourth street, between J and K streets, Sacramento city, where all who are interested are invited to visit.

It is anticipated at these shows, a renewed and lively interest will be made manifest, as they will be offered free to all. The Rooms have been arranged and decorated, and appropriately prepared for these exhibitions, and it is hoped that the ladies of Sacramento and of the State, and strangers visiting Sacramento will find the Society's Rooms a pleasant and instructive place of resort.

Contributions of every species, in all the range of scientific discovery, are invited, and of which due record and acknowledgement will be made.

The Exhibition will open at 11 A. M., Saturday, June 2. Rooms on Fourth street, between J and K streets, Sacramento city.

FROM THE EAST.—The Steamship Golden Gate arrived at this port Wednesday afternoon, with a week's later dates. A large fire had occurred in Boston, commencing on Battery wharf and burning over an area of three acres, loss nearly a million dollars; three engines were also destroyed. Col. Kinney has been arrested and his expedition stopped. The Vienna conference had closed, Russia having absolutely rejected the demands of France and England. Napoleon III. and the Empress had been on a visit to Queen Victoria—remained the guests of the British sovereign five days—met with a distinguished reception from the Court, and extraordinary enthusiastic greeting from the crowd—were almost overwhelmed by congratulatory addresses from corporations and institutions, and returned to France amid a tempest of hurrahs! Napoleon is said to be going to the Crimea. A vigorous bombardment of Sebastopol has been carried on by the Allies, who intend soon to make an assault.

THE WEATHER, &c., IN TUOLUMNE COUNTY. The weather has been delightful for the past week, says the Gazette of the 26th, and Columbia and vicinity presents a more lifelike appearance, than we have previously witnessed for months. The eye can turn to no point of the compass without beholding the busy and toiling miner closely engaged in extracting the shining ore from our hills and valleys, and it is highly gratifying to state that we have at the present time fewer "gentlemen loafers" in our midst than for months past. Many of the drunks, who heretofore made a scanty support in and around the gambling houses, have shouldered the pick and shovel and are now delving in the mines, earning a surer and by far more creditable livelihood, by the "sweat of the brow."

On Saturday and Sunday last, heavier showers of rain fell in this vicinity, than has fallen since January last. At the same time, we learn, that immense quantities of snow fell, high up in the mountains, covering the ground to a great depth; and we feel confident in predicting, an abundant supply of water for mining purposes, in this and the surrounding camps, for several months. The grand desideratum with the miners in Tuolumne county, is a constant and abundant supply of water, and there is no calculating the immense amount of gold that will be extracted from the earth, as rich and inexhaustible leads of the precious metal are being discovered almost daily, in our hills and valleys. Let abundant supplies of water flow over our hills and valleys, and the next eight months will show to the world, that Tuolumne county, in point of mineral wealth will be numbered with the first counties in California.

THE WEATHER IN THE INTERIOR.—The California Express is congratulating its local readers upon the delicious weather in that section of the country—Marysville. For several days past an alternation of sunshine and rain has been experienced, varied and rendered romantic by occasional thunder and lightning. Like a coquet, one moment all smiles, the next all tears, and should the boxed cars be added which makes some saucy wipers see stars, the simile is complete. The country is dressed in its richest garments of green and gold, presenting a scene of surpassing loveliness. This, above all others, is the reason for a tramp or journey through the sublime mountain districts of California. The roads are excellent, scenery beautiful, and unlike the troublesome times of '49, when the weary traveller had to foot it through the mountains, comfortable stages are constantly running between the principal towns. California dresses herself in her gayest apparel in May.

FAVORS.—We are under obligations to Wells, Fargo & Co. and their attentive messengers, for the prompt delivery of letters, packages, &c., the past week. George is sure to put things through straight.

LIGHTS AND SHADES OF MINING.—The Columbia Gazette of Saturday, gives the following in relation to mining in Tuolumne:

Never before, since we became a citizen of Columbia, have we been enabled to record "ligger strikes," or more favorable mining news. Hills, flats and gulches, that have, heretofore, been prospected, passed over, and pronounced worthless by the prospector, have been more thoroughly tested by the running of drifts and the sinking of deeper shafts, and deposits of gold have been struck upon which have astonished even the most sanguine miner. From every section of the county, we are in daily receipt of the most favorable mining news; "big strikes" are being made in almost every section of the county, and we predict that more gold will be extracted from the mines of Tuolumne County, during the next six months, than has ever been taken out before in the same length of time. Although hundreds own rich claims, and are making their "piles," there are—as in every other mining county in the State—hundreds and thousands of others, many of whom toil from sunrise to sunset, and use equal diligence and industry, that are barely making a decent support. "Fortune," it is said, is a "fickle jade," and many an honest, industrious and hard-working miner, has toiled in the mines for months and years, contending against the frowns of the "fickle dame," without ever meeting with a single smile at her hands, and still without a "red" in their pockets, whilst numbers of others appear to be her favorite "pets," and meet with her blindest smiles wherever they stick a pick.

GREAT STRIKE.—On Friday last, a rich vein was discovered in the claim formerly owned by Judge Abbott, near the Half-way House, by two negroes. It appears that the claim had been given up as worthless some time since, and on Friday morning these colored individuals had bought the mining tools left on the claim, for \$75. In the afternoon they went to work, and in three hours they took out \$265. On Saturday, they washed out \$500; on Monday, four pounds; on Tuesday, about four pounds; and they have been taking it out by the "bat-fall" ever since. There is great excitement in the vicinity, and hundreds of claims have been staked out in the adjoining flat.

GOLD DUST.—The Calaveras Chronicle gives the following estimate of the quantity of dust sold weekly at the various towns in that county: Mokelumne Hill, \$40,000; San Andres, \$35,000; Campo Seco, \$10,500; Geys City, \$10,000; Vallecito, \$7,500; Angels, \$5,000; Murphy's, \$5,000; Douglas' Flat, \$3,000; North Branch, \$2,500; Fernum's, \$2,500; Albany Flat, \$2,000. At other of the smaller towns there are a few thousands bought, which will make up an aggregate of full \$125,000 weekly. There is besides a large amount taken at trailing posts, and considerable is held in first hands.

A correspondent of the Southern Californian writes from San Bernardino as follows: We have had a great deal of rain up here this season, and the most of the crops, especially wheat, is very rusty, and a great portion dead already, and it is feared that the entire crop will be lost. I never have seen in my life such an amount of rusty crops as there is here this year.

We hear bad accounts relative to the grain crops from all parts of the country. The heavy rains have been productive of an unprecedented injury to our agricultural prospects. Appearances indicate that we shall not realize half a crop. In many instances whole fields are completely destroyed.

GRAIN INJURED IN SONOMA.—In last week's issue we stated, says the Bulletin, that grain in our valley had entirely escaped damage from the rains; but, since then, we have had more rain, and are sorry to say that a portion of the wheat and barley crops have been ruined—to what exact extent, we are not aware. We hope, however, the loss will not materially affect our farmers.

The Calaveras Chronicle of the 26th, says: Last Sunday and Monday it rained hard the whole of both days, without scarce a moment's cessation. With the rain on Sunday we were treated to a violent hail storm also, which continued for half an hour. The weather since has been quite cool.

EARLY HARVEST.—The farmers along the Cosumnes river contemplate cutting their barley the present week. Wheat will be ready for the sickle during the course of the ensuing week, and by the 16th prox. harvesting grain in this section of the State will have fully commenced.

NOVA SCOTIA POTATOS.—An Eastern paper says: It is said that the last crop was a good one in that Province, and that large quantities are in transit hither. With all due respect to our Blue-Nosed friends, who, Sam Slick says, are a little tardy in their movements, we must beg them to quicken their pace and hurry up the potatoes.

The Norristown (Pa.) Herald says there is a secret order of conspirators in and about Philadelphia to raise potatoes—not by planting—but by storing and holding until they raise the price. If that is the case, we hope the Nova Scotians will raise the siege, and give the Pennsylvanians potatoes at less than \$2 a bushel. As for ourselves, we have got so used to this price, that we are like the skinned eels—we don't mind it.

THE BIG OX, ELMITE.—This large and beautiful specimen of the animal kingdom, which is an exhibition at 124 Commercial street, is the universal admiration of all that visit him.

Horticultural Department.

The Fruit Trade.

SOME thirty vessels are engaged in the fruit trade between New York and the West Indies. A much larger trade in fruits is carried on with ports in the Mediterranean, which supply annually something like seventy or eighty cargoes—principally oranges. The West Indian importations of last year are estimated as follows: 75,000 bunches of bananas from Baracoa, sold here at from \$1.25 to \$1.50 per bunch—\$93,750 to \$112,500; 2,000,000 Baracoa coconuts, sold at from \$25 to \$30 per 100—\$500,000 to \$600,000; twenty cargoes of pine-apples, from Matanzas and Havana, averaging 80,000 dozen per cargo, and sold at from \$8 to \$12 per 100—\$128,000 to \$192,000; 20,000 dozen St. Barts pines, sold at from \$7.50 to \$8 per 100—\$15,000 to \$16,000; 200,000 dozen from the Bahama Islands—\$15,000 to \$16,000; ten cargoes of Havana oranges, averaging 350,000 at 3 cents each—\$10,500; have been received, thus far, the present season, the crop being more abundant than at any time during the last fifteen years. West Indian oranges arrive in October, and are most abundant in January and February. Bananas and pine-apples begin to arrive about the first of April, and are most plentiful during the succeeding three months. Cocoa-nuts arrive all the year round. Mediterranean oranges, which come in boxes, and are most extensively shipped to different parts of the United States, begin to be received in January, but not extensively until April or May.

The above list comprises but few of the foreign fruits imported—and these only from the West Indies. A few minutes' calculation will show the sum paid for the articles enumerated in the list amount to not less than \$850,000. The total amount paid for foreign fruit last year was not less than twenty millions of dollars.

Our exports are comparatively trifling. With the very best soil and climate in the world for growing fruit, embracing twenty-three degrees of latitude, we pay out annually, to foreign countries, cash enough to stock a Territory with the choicest varieties of fruit trees.

Besides, fruit grown in our own soil and climate is better adapted to our people, and far more healthful than that which is imported from other climates.

Let us grow our own fruits, and thus save the millions paid to foreign countries, now almost lost to our nation.

BEES AND FRUIT TREES.—It is believed that the bees greatly improve the fructification of the fruit trees. Orchards in which several hives are kept always produce more fruit than those in which there are none. In the provinces on the Rhine the fruits are more abundant and finer than in any other part of Germany, and there it is the custom to keep large quantities of bees. Plants, too, which bees visit, thrive better in the neighborhood of hives.

Twelfth Legislative Agricultural Meeting.

The twelfth and concluding meeting of the series was held on Tuesday evening. The meeting was called to order by Mr. Flint, Secretary of the Board of Agriculture, who made some interesting remarks appropriate to the closing meeting. He felt that the discussions during the meetings just closing had been of an unusually practical and useful character, and that they had personally benefited all who had listened to them; while the reports which had been published had been read and copied throughout the length and breadth of the land. The subject for this evening's discussion, *The Economy of Agriculture*, was one which embraced all the practical details of farming, and not only those, but the broader question of the duty of the State to promote the interests of agriculture. He concluded by announcing His Excellency Governor Gardner, as the Chairman for the evening.

The Governor, on taking the chair, expressed his interest in the cause of agriculture, and his especial approval of the objects for which these meetings have been held. He did not doubt but that they had been of great advantage to those who had attended them. Unquestionably, experimental knowledge is the most valuable, but these meetings, like the libraries of books which we prize so much, compress into a small compass the knowledge and experience of a great many intelligent minds, for the benefit and instruction of all. The Governor remarked that it was his good fortune to be born upon a farm, and he had always cherished a love for agricultural pursuits. Indeed, that very morning, and early too, he had left his home in the city to visit his farm, and he hoped to have the pleasure in a few months of cutting some green peas raised from seed which he had that very morning planted with his own hand. He had eaten fruit of his own production every month in the year. Referring to the economy of agriculture, he remarked that a few days ago he had the pleasure of visiting the State Farm at Westboro', and of forming there the acquaintance of many members of the Board of Agriculture. He had previously read a good deal in regard to the farm, but had formed the opinion that the experiment of a State farm was visionary, and would prove only a waste of money. What he saw, and the explanations given him in regard to the experiments carried on by the Board, however, modified his former belief, and he was now of the opinion that the farm would be of great benefit to the farmers of the Commonwealth, much greater than the appropriations which have or are likely to be made to it by the State. In his opinion, the State should take a deep interest in the obtaining and diffusion of

agricultural knowledge among the people; and he could conceive of no reason why Massachusetts should not be able to sustain her entire population, even though it should hereafter reach five millions, with the productions of her own soil alone.

Mr. Proctor, of Danvers, followed, at the call of the Governor, and urged the justice of the farmer's claims to aid from the State. He believed that the bounty extended by the State to the county agricultural societies, had been a great help to the agriculture of the State, and that the State farm at Westboro' would be of very essential service to the people of the Commonwealth. It is only by means of such institutions that we can learn the economy of agriculture. State farms should be established in all the counties in the State, to be placed under the control of the county societies, making annual reports to the Secretary of the Agricultural Bureau. It might be stipulated that each county should raise a sum equal to that donated by the State. He doubted whether the present system of dispensing the bounty of the State by means of premiums, was a judicious one. The same sums expended on experimental farms, whence valuable reports in regard to modes of cultivation, course of crops, application of manures, the breeding and management of cattle, &c., would be derived, would prove far more beneficial than the ephemeral cattle shows now in vogue, which makes no lasting impression.

Mr. Waters, of Beverly, spoke briefly of the importance of experiments in agriculture, and took occasion to allude to the great attention paid to raising onions in Essex county.

Mr. Fiske, of Framingham, referred to the remark often made to him by farmers, "Only give me a plenty of manure, and I don't care any thing about your Boston Cultivator, your New England Farmer, or your Ploughman. If I could only get manure, I could get crops fast enough." Many farmers who talk thus, could double or treble their manures if they would only make the most of their resources—bogs, sinks, urine, ashes, &c. He had raised forty to fifty bushels of corn to the acre, with a manure made up of meadow mud, sifted fine, ashes and urine from horse and cow, putting a handful on each hill after planting the corn, which was put into the ground without manuring. The economy of the manure is the great point in farming. The wash of one sink will raise half an acre of corn.

Mr. Proctor, of Danvers, remarked that a farmer in his county cleared \$400 from an acre of onions the last season, and that was only a sample of what is done in Essex county. The great secret of their success lies in the preparation and adaptation of manures, and in keeping the soil free from weeds. By attention to securing the best plants for seed, the size and quality has been greatly improved, and \$2 and \$3 a pound is paid for seed coming from Essex county.

Mr. French, of Braintree, illustrated the great want of information upon the various matters connected with farming—as location of buildings, the preservation and application of manures, the feeding of cattle, and the selection of stock—and argued that, from the complicated nature of these questions, private individuals were not competent to elucidate them. The matter should be undertaken by the State, through the agency of experimental farms. While speaking of stock, the speaker remarked that an English gentleman had long advocated "box-feeding" in fattening stock, and his views, it is believed, will triumph in England. He did not exactly understand what was meant by "box-feeding," but believed that it consisted in enclosing the animal in a stall or pen, and keeping it there on a dry floor until fattened. The English butchers offer an advance for such beef, without knowing how it is raised. The speaker questioned the utility of littering the floor for cattle, having discarded the practice the past year, without noticing any detriment to the cattle in consequence. He also related the case of a Maryland farmer, who, in planting his hot, sandy soil with corn, put his manure on the top of the hill, believing that it was the true way, in which he was sustained by a farmer in the Connecticut valley. It was a new idea, and he intended to try it on a small scale, and would recommend others to do so.

Mr. Sheldon, of Wilmington, followed, and gave it as his opinion that where litter could be had cheap, bedding cattle should be kept up. He thought it made a material difference with oxen. It is economy to supply cows with water about milk warm in winter; they will give ten per cent. more milk.

Mr. Dodge, of Sutton, forcibly argued the duty of the State to furnish pattern farms, for the benefit of the farmers of the Commonwealth.

Mr. Hall, of Bradford, illustrated the benefits derived from study, and a perusal of the agricultural newspapers, by those who were wise enough to make use of them.

Mr. Buckminster, of the Ploughman, remarked that there were but two ways of doing a thing—the right and the wrong—and if we could induce the farmers to give up their stand-still notions, and try the various methods of cultivation, we should soon arrive at the economy of agriculture, and, by making it more profitable, our young men would be retained upon the farm.

On motion of Mr. Hall, the thanks of the meeting were presented to Joseph Bird, Esq., of Wintertown, for his interesting lecture, last week, on an improved fire system.

The meeting then adjourned sine die.—N. E. Farmer.

THE love of pleasure is natural to the human heart; and the best pleasure is a proper indulgence of such as are innocent.

Home-made Bread.

MESSRS. EDITORS: Your correspondent E. D. P., must have experienced much gratification to find his important inquiry, how to bring butter in the winter, without spending three days in fetching it, so gratuitously and satisfactorily responded to by so many members of the Cultivator family; and as good butter deserves good bread, I will go out of my way a little, for the purpose of bringing my wife to east into your treasury. Now, is there one in one hundred of those who live in the country that does not advocate the use of home-baked bread in preference to that obtained of the baker? But is there one of all these who has not at times been disappointed in the expectation of obtaining it as it should be, in consequence of ill flavored, dark colored, bitter yeast? I trow not. Here it may be well to observe, I never use any "lightening" for bread but brewer's yeast, if that can be obtained by almost any means; knowing by painful experience the difference, when in the stomach, between bread raised by fermentation, and that produced by mechanical means, as it may be termed, and which artificial rising is, I consider, the cause of much of the dyspepsia we hear of; but I too have been sadly exercised by the pain of disappointment in my undertakings by the short eowing, sometimes worse, of the yeast that I have been able to obtain—a filthy, discolored, bitter, nauseous looking liquid, that it has gone against me to use for the purpose. So it has heretofore sometimes been, while at all times it has been a sort of lottery work, not knowing how it may turn out. But this is no longer so, and I will tell you why.

Calling on a sister farming-friend, I found her washing brewer's yeast in a pan, and pouring off the discolored water, the thicker part—the real yeast—remaining at the bottom of the pan, rendered almost white by the several ablutions it had received, and was wonderfully interested by the assurance, that not a particle of the yeast had passed away in the filthy water, but all the bitterness and ill flavor, of which I had so often complained was carried off by it, and that most completely; and on trial, I find it so done; I have therefore no longer, black, bitter, ill-tasted bread, and consider this a secret worth knowing, and therefore worth communicating to our friends through the ever-welcome and instructive columns of the Cultivator, as a small token of the great obligations I am under to "you and yours."—A Farmer's Wife, in Boston Cultivator.

Butter-making.

MESSRS. EDITORS: I would notice one very essential point in butter-making which has been entirely overlooked by your correspondents who have written upon the subject of late, and that is, good butter-cows. There is as much difference in cows as there is in butter makers; these last may be improved, but cows which make white, soft butter, that is a long time coming, cannot; so they had better be sought out and put to some other use. It is most generally the case, that poor butter costs the most, on account of its being hard to churn, sell, or eat. I have practised butter making fifteen years, and am fully convinced of the truth of the above. Every new cow which comes on the place, and they come often, I give a fair trial by herself, and if she proves satisfactory; well; if not, she is put to some other use besides making butter. I do not scald my milk, neither put stones or carrot juice in my churn; only let me select my cows, and I can have good, yellow, solid butter all the year, and no task to churn either. One very essential thing is to set the milk in summer where there is a circulation of pure air; in winter it may as well freeze after it has stood ten or twelve hours; by this means there will more cream rise, and it will be equally good.—Naomi, in Boston Cultivator.

AN ARGUMENT FOR BABY-SHOWS.—The following facts, which could be multiplied by similar ones to any extent, afford the data for an argument in favor of Baby-fairs as well as Cattle-shows: We know a man who last summer hired four colts pastured on a farm some five miles distant. At least once in two weeks he got into a wagon, and drove over to see how his juvenile horses fared. He made minute inquiries of the keeper as to their health, their daily watering, &c. He himself examined the condition of the pasture; and when a dry season came on, he made special arrangements to have a daily allowance of meal, and he was careful to know that this was regularly supplied. This man had four children attending a district school kept in a small building erected at the cross roads. Around this building on three sides is a space of land six feet wide; the fourth side is on a line with the street. There is not an out-house or shade tree in sight of the building. Of the interior of the school-house we need not speak. The single room is like too many others, with all its apparatus arranged upon the most approved plan for producing curved spines, compressed lungs, ill-health, &c. We wish to state one fact only. The owner of those colts, the father of those children, has never been into that school-house to inquire after the comfort, health, or mental food daily dealt out to his offspring. The latter part of the summer we chanced to ask, "who teaches your school?" and the reply was, "he did not know; he believed her name was Parker, but he had no time to look after school matters."—Am. Agriculturist.

The above is a fair specimen of the inversion that generally exists in social and domestic matters, and in reference to the higher interests of religion. Men are often found devoting more attention to their colts than to their children, and to their money than to their God. It will not always be so.—Circular.

Miscellany.

WHERE DWELLETH MUSIC?

She seeks a wild home in the ocean's roar,
In the floating breeze she loves to soar,
In the morning wind, in the waterfall—
Oh, the spirit of music dwells in them all.

This fairy being hath many a tone,
And 'tis by her freaks that her pathway is known,
For the blackbird's song in the rustling tree
As the spirit passes grows firm and free.

Her presence is felt with the deepest awe
When the gorgeous daylight is passing away,
And the living sunbeams their brightness cast,
Each one in radiance outvying the last.

They rest on the church, and its towering spire
Glow to the earth with a brightening fire;
Then to the brook, as it dances so free,
In the tiny streamlet a rainbow see.

Though we cannot see her, I know she is nigh
When twinkling stars are gemming the sky,
And the glorious moon in the silver cloud
Is sailing enwrapped in her veiled shroud.

Oh, there's solemn music at daylight's close
In the hush of fair Nature's calm repose;
Ye need not search for that spirit fair,
For the home of music is everywhere.

—Mark Lane Express.

BEAUTY.

Never yet was there the beauty
That with time would not decay;
Never yet was there the flower,
Bowed by dew or washed by shower,
On the earth or in the bower,
But would droop and pine away;
Never breeze, though sweetly sighing
Through the grove mid o'er the plain,
But had kissed the fruit and dying
That can never bloom again.

Time and beauty chime together
Till we pass our childhood's hour;
But when most we need the charneling
Of our graces, Time's alarming
Speed is all our grace diamining,
And we chide beneath his power.

Reason bows at beauty's shrine;
Passion thinks her all divine;
Men adore, admire, and love,
O'er the earth for beauty rove;
Find her but a tender flower
Blooming in the sheltered bower;
Rise her from her parent stem—
Gaze awhile upon her bloom—
Gaze upon her hundred graces—
Press her o'er mid o'er again;
But she dies in their embraces,
Fleeting time her bloom erases,
Tune and sorrow leave their traces—
Each is lord of beauty's reign.

—Life Illustrated.

A NEW FLYING MACHINE.—The Paris Patrie says that the French Academy of Science is much interested in the alleged invention of a flying machine by a Spaniard named Diego de Salamanca. The machine is very simple, the whole motive power being comprised in a case two feet long and one foot wide; buckled upon the back, two iron rods fastened to the case, support a small piece of wood, upon which the feet repose. The operation of turning a handle sets in motion two large wings, ten feet long, made of very thin couteau covered with feathers. The wings may be worked so as to produce vertical, horizontal or perpendicular flying, and the handle has to be turned every quarter of a league to regulate the distance—the operation of turning lasting about a minute. The machine has been successfully tried at Madrid (so says the Patrie,) and the inventor estimates that its price when perfected will not exceed two hundred dollars. Several members of the Academy have been seriously troubled by the idea that there is a possibility of such machines being brought into general use, and have made speeches pointing out their inconveniences, and showing that if they are ever introduced, malefactors and thieves will be able to fly on to the roofs of houses, get into windows, and commit all sorts of depredations. The Patrie thinks it will be very curious to see policemen pursuing thieves through the air, and pouncing upon them like eagles from above.

Good Wives.—That young lady will make a good wife who does not apologise when you find her at work in the kitchen, but continues at her task until the work is finished. When I hear a lady say, "I shall attend church and wear my old bonnet and every-day gown, for I fear we shall have a rain storm," depend upon it she will be sure to make a good wife. When a daughter remarks, "I would not hire helps, for I can assist you in the kitchen," set it down she will make somebody a good wife. When you overhear a young woman saying to her father, "Don't purchase a very expensive or showy dress for me, but one that will wear best," you may always be certain she will make a good wife. When you see a female rise early, get breakfast, and do up her mother's work in season, and then sit down and knit, depend upon it she will make a good wife. When you see a female anxious to learn a trade, so as to earn something to support herself, and perhaps aged parents, you may be sure she will make one of the best of wives. The best qualities to look after in a wife are industry, humanity, neatness, gentleness, benevolence and piety. When you find these there is no danger: you will obtain a treasure, and not regret your choice to the last period.

WE are what we are in private.

[For the California Farmer.]

Sketches Connected with California History.

PROLOGUE.

(CONCLUDED.)

And but yesterday, as we must put all in, was concluded by James Gadsden, engineer, soldier and minister plenipotentiary at the city of Mexico, a formal treaty on the 30th day of December 1853, which surrendered unto the party of the first part, for and in consideration of the sum of ten millions of "pesos duros," paid unto the party of the second part, all that additional piece or tract of land adjoining and bounding on California and New Mexico aforesaid, and commonly known in Spanish and Jesuit chronicles as "Pimeria Alta," and "Apacheria Brouco," and containing, a little more or less, 50,000 square miles of land, and abounding in gold, silver, copper, iron and lead, and fruitful in salubrious valleys of cotton, tobacco, tropical fruits, figs, grapes, olives, dates, almonds, pomegranates, tinias, also wheat and grain, cattle, horses and sheep, ten pueblos and the most level, and the shortest route for a rail road, from ocean to ocean.

Thus we have condensed and rounded off all the sharp corners of our history, and we see that in May 1848, our flag floated on the Pacific and Atlantic shores, 2,020 miles by the Pacific, and by the Atlantic and Gulf of Mexico 3,100 miles, running by windings and turning on old ocean shores, and stretching from sea to sea and from the rising of the sun even unto the going down of the same.

And here is indeed a fair domain; enough land for a great nation's homestead. And if a humble man, born on the same soil as Jackson and Calhoun, the son of an old American tar who died honest, owing no man a grudge; if he with awe before that Great Spirit with whom "the life of man is but as a span; a thousand years as a day, and a day as a thousand years;" if he, I say, could be heard in the presence of that Spiritually Divine Existence, a portion of which dwelleth in the soul of every living creature, who

"Warms in the sun, refreshes in the breeze,
Glow in the stars, and blossoms in the trees;
Lives through all life, extends through all extent;
Spreads undivided, operates unspent;
Breathes in our soul, informs our mortal part,
As full, as perfect, in a hair as heart,
As full, as perfect, in vile man that mourns,
As the rapt seraph that adores and burns;
To him, no high, no low, no great, no small;
He fills, he bounds, connects and equals all;"

it would be, To preserve to the children of the self sacrificing, honest old revolutionary patriots and companions of the Reverend and faithful Father of his Country, the territory of this great and powerful nation intact and entire, without split or division, from Ocean to Ocean, and from the northern seas to the Gulf shores, until the crack of doom, if that ever is to come; and that the present generation may hand down with primitive simplicity and integrity, the plain and intelligent principles of common sense and wholesome democratic American faith, the time-enduring and intelligible counsels of George Washington, whose system is a rock, a sure refuge, in every strait of every political difficulty. For his doctrine was the Constitution, and he says our safeguard from revolution, anarchy, poverty and disgrace, is "the Union, one and indivisible." *Esto Perpetua.*

And loay the children of that bastard scoundrel, predicted by some homely old hoosier prophet, to arise in the lapse of time in the Mississippi lands, to swallow up his gang of bigger thieves, horse stealing, gambling, rowdy, ruffianly, vile, drunken, half-Arab lawless crew, the liberties of his country, and the honest rights of his countrymen: I pray God that speedy work may be made of them, and example so sharp and sudden made that none other such blotted villains, begotten of unholy ambition, may be suffered to exist on this continent; consecrated to reason, to law, and to humanity; the refuge of those, who know not where to set their tired feet from the persecutions of bigots and human butchers.

And now we come to the Epoch of Gold, which has made California a household word in every home of the world's thousand millions. For in the June of the year of grace 1848 the gold became a "fixed fact," and wondrous treasures were hauled from the bowels of mother earth. It scared some, it elated others, it crazed many, it broke the hearts of many, it divided families, it excited nations, it made a new exodus of the human race, it stirred up the depths of men's souls, it segregated like water to quick-lime every human interest, it sent fleets of swift ships flying over the round globe, it gave a new and wonderful impulse to the world's commerce, it discovered the Placers of Australia, it added a thousand millions of dollars to the circulation of money, it first energizes with untold power the faculties of man, it as quickly depresses; glory, factions, loves, hates, strifes, vigorous industry, adventurous enterprise, hasty laws, corrupt legislation, public education, the rights of the laboring man, the happiness of the human race, are all attendant on this gold. All the vile villians of the vile part of mankind flock to share, so do many of the cream of the earth. California will come right in the end, as the great philosopher Dufrenoy said in November 1848, on receiving at Paris from France's consul in California, some of the specimens of the "precious stuff"—As follows he prophesies:

"The discovery of gold may for awhile cause great anarchy and confusion in Pacific North America, but in the end it must, in my opinion, initiate a higher standard of civilization and or-

der; the societies of that portion of the world, will in a much shorter space of time settle down into habits of cultivation and good fellowship, than have been experienced among the obler populations of men. Instead of producing permanent disorder, it will I conceive, under the institutions of the Anglo-Americans form the basis of the wealth of the powerful States in that remote quarter of the earth, and immeasurably impel in the path of progress, the best interests of mankind." Or words to that effect.

And then came the Constitutional Convention of 1849, and the admission of California into this Confederacy of Republican States; and then followed such scenes of public plunder and drunken legislation, of outrageous violations of public law, of lynchings, hangings, fires, murders and heart burnings from abundance of what is called law, but which is too often but little justice. And then came floods, and all sorts of accidents, wild speculations, and ten per cent. per month's interests, and finally ending in 1855 in a grand thunder storm, smashing banks, blowing up rotten credits, and teaching wild, rash men, useful lessons of moderation, common sense and proper patience.

So now, on the first day of May 1855 we find ourselves quietly emerging from the wreck and the storm—only passing; and we find we can sum up of assets and valuables—as follows:

1. One State of California with 121,000,000 of square acres.
2. Said acres have on them 250,000 sturdy young laborers.
3. These have a regular State government of 500 officers.
4. These last live on the fat of the land, earning \$2,000,000.
5. The State has a revenue of \$2,158,099.
6. A debt also of \$2,520,204.
7. On taxable property of \$111,000,000.
8. Exports of gold and silver \$36,000,000.
9. Of literary periodicals, in number 82.
10. Of public and private schools 214.
11. With scholars numbering 20,076.
12. Of cultivatable lands, in acres, 70,000,000.
13. Of saw mills some 100.
14. Of flouring mills some 60.
15. Of hardy, camp-inured, brave, ready-equipped,—ready mounted citizen soldiers in the coasts and sierras, 30,000. Besides ships, steamboats, sea steamers, 200 miles of electric telegraphs, 3,000 lawyers, 130 post offices, 5,000 miles of established mail routes, a rocky line of sea steamers connecting with the Atlantic, a railroad communication from ocean to ocean in six hours, another isthmus route through belching volcanoes, by daylight, twenty express companies, 100 bookstores, 100 churches, 150 cities, towns and villages (all done in six years); an agricultural society incorporated granting premiums of \$5000 annually, five volumes of State laws, thirty miner's canals of wonderful construction and great benefit, 500 miles of gold placers; silver, quicksilver, sulphur, salt, soda, iron, copper, lead and platinum mines; ocean coast of 700 miles, and three navigable rivers penetrating the State; a public penitentiary, an asylum for the unfortunates deprived of reason, conducted with great credit to the State and honorable to our prudent Californians; a commodious marine hospital built with Uncle Sam's money, and an invaluable dry dock and navy yard for our maritime forces, some excellent lighthouses; a mercantile library association of 5,000 volumes, a city of 40,000 inhabitants, plenty of banks and bankers, a fertile, fruitful soil, producing the the grain, plants and fruits tropical and temperate, and a climate of unrivalled salubrity. Also the sea abounding with fishes of divers kinds, great and small, even unto the great leviathan—all good, and fit and useful to make a great State if the hand of the diligent shall bear rule, and we seek truth, in the words of Washington, "only through the channels of a temperate and well informed investigation," and live up to that "honesty, which is the best policy for nations, as it is for individuals." And "nought shall make us rue, if California to itself do rest but true."

And Oregon and Washington territories do progress, in milder ratio of good success. And what we greatly want on the Pacific is the acknowledgment without stint or grudge "of the supremacy of the Laws," calm appeals to reason and right, instead of to passion, avarice and lynch law—put down the rowdies and law breakers—democratic republics cannot exist long without the enforcement of law, law—the violent man cannot violate the rights of court long without the triumph of anarchy, which brings necessity, "the last plea of tyrants."

Then we want Oregon and Washington divided into four States by natural boundaries and admitted into the Union; and we want California divided into four more States by the bay of San Francisco and the Sacramento and the San Joaquin rivers, which all will give the Pacific States thirty or more representatives in the National Councils, and exert an influence that must be heard and felt. This scheme which we have advocated since 1851 has now some friends, as people see the plain necessity of it.

And above all must not the black curly head of slavery ever be allowed to distract the councils of the people of this part of America; as white men can do all the work which is to be done, and we shall save ourselves much heart-burning and vile strife.

And if the said eight States are admitted into the Union, let us make eight more States out of Texas and Arkansas, which give them an equality of power with the free States, and also allow the slave States, as in fair play they ought to have thirty more members of the popular house. All of which will make a proper balance, and tend to perpetuate sweet harmony and concord.

And the continental railroad being finished, the Chinese allowed to emigrate to these shores with their families, proper laws made for them, and set to work to cultivate sugar, cotton, tobacco, rice; we shall see the mighty oriental trade set agoing which is to make these shores hum with the noise of an overflowing commerce, such as the world hath never known before.

We shall then see the family of man gathered on these remote shores, putting forth the vigorous strength of a new life only dreamt of aforesaid by sages and prophets; where "ere long the better genius of our race, having encompassed earth, and tamed its tribes, shall sit him down beneath the farthest rest, by the shore of this calm ocean, and look back on realms made happy." For he has been traveling and sojourning six thousand years, before his weary feet halted, and the destiny of his race begins to dawn into visibility; afar of as yet, but we hope for the "Good Time a Coming," when

"What sandy valleys, once perplexed with thorns,
The spiny fir and shapely box adorn;
To leafless shrubs the flowery pinks succeed,
And odorous myrtle to the molasses weed,
Then gales shall rise; the joyful son
Shall finish what his short-lived sire began;
Their vines a shadow to their race shall yield,
And the same hand that sowed shall reap the field."

ALEX. S. TAYLOR,
of Monterey.

On the First of May 1855.

Dennie and his Father;
OR, THE DOUBLE PLEDGE.

On the shores of the beautiful Horicon, now known as Lake George, in the eastern part of New York, there lived, a few years ago, a clergyman. His happy family of five daughters, and a darling son, a boy of more than ordinary promise, were growing up under the influence and instruction of such parents as few children could boast. Happy among themselves, with their home amidst the most beautiful scenery in nature, life seemed to them a bright and glad reality. But occasionally a shadow of anxiety might have been detected on the usually calm brows of both father and mother.

The time at which my story commences was before the days of temperance. It was when every family kept a supply of ardent spirits constantly on hand; and children were accustomed to the dangerous beverage daily. So it was in this family. The little "Dennie," accustomed every morning to his glass of bitters, and to treat every time a friend called upon the family during the day, soon began to show a decided fondness for the intoxicating drink, and sought for more frequent occasions to gratify his taste. His parents saw his growing appetite with alarm, and often admonished him, but with little effect; his appetite increased, and more than once they had the mortification of seeing their promising boy in a state of evident intoxication. Various were the remedies they tried, but with little good; and they could only hope that time and his own good sense, would at length enable him to control the habit that threatened to ruin him. But an event occurred which blasted every hope, and they saw nothing before their child but a drunkard's life and a drunkard's grave.

One morning the little Dennie came running in with the eager inquiry—"Mother, Mr. Smith is going to have a raising this afternoon, and James has invited me. May I go?"

"My son, if your father thinks it best, you may go," his mother replied.

His father's consent was readily obtained; and after dinner he started off full of happy anticipations. Arrived at the place, his attention was occupied for a time in the erection of the building; too soon, however, he discovered a keg on the premises, which his ready genius quickly told him contained his favorite beverage. Without a moment's hesitation he asked for a drink—it was given; he asked for another, then another, and before the afternoon was half gone, "Dennie" was dead drunk; and the workmen had laid him on a board under a tree.

About four o'clock his father called to accompany him home; not seeing him about, he eagerly inquired for his child—they pointed him to the place where he lay. With a heart full of sorrow he carried him home to his horrified mother and sisters. Together his parents watched by his bed during the tedious night that followed, not knowing but the dreadful stupor would result in his death; but fully resolved, if he lived, not to leave untired an effort that might promise to save him.

It was not until the evening of the second day that he was restored to perfect consciousness. His parents thought it best not to speak to him of the cause of his illness for some days, hoping his own reflections would do much more good; but in this they were disappointed—he did not exhibit the first symptom of remorse or consciousness that he had done wrong.

About a week after the event just related, his father invited him one pleasant morning to take a walk. Their road lay along the shore of the lake, and was lined with stately trees on either side. For a time they walked on in silence.

"Dennie," said he, "do you know what it was made you sick the other day?"

"Why, I suppose I drank too much rum," he heartlessly replied.

"Well, my son, do you know that I think you are in danger of becoming a drunkard?"

"What, father, I know you tell me so, but I ain't afraid of it. You drink rum every day, and you are not a drunkard; and when I get old enough to know how much it will do for me to drink, then I can keep from becoming drunk too."

They both seated themselves on a rock near the

shore, and most faithfully did his father speak of the evils of intemperance; then taking a small gold watch from his pocket, which Dennie had long desired to call his own, he said, "Dennie, if you will never drink any more rum, I will give you this gold watch. Will you do it?"

Rising from his seat, and looking his father full in the face, he replied: "If it is wrong for me to drink rum, I scorn to be hired not to drink it! But I will tell you, sir, what I will do. If it is wrong for me to drink, it is wrong for you, and if you stop drinking I will."

Had a flash of lightning burst from the cloudless sky above them, his father would not have been more startled. How could he get up in a cold winter night, and go and pry by the bedside of some dying parishioner, without a glass of something to prevent his taking cold? How could he attend to the various ecclesiastical meetings of the church, without something to help him bear the fatigues of the journey? The sacrifice was indeed great, but the welfare of his son demanded it. And summoning all his resolution, with a faltering voice, he replied—"I will do it my son." And thus they pledged themselves to total abstinence.

The lake, the trees, and the pure blue sky, were the only witnesses, save only that holy Being who is everywhere. As they retraced their steps, his father, taking the little watch from his pocket, gave it to Dennie, and said:

"My son, you have long wished that I should give you this watch. It is yours as long as you keep your promise. Should that ever be broken, I shall expect you to return it to me; till then, let it be a token to you of this promise we have now made."

Years have passed; and the same little "Dennie" is now a distinguished clergyman in one of our most populous Western cities. Four bright little boys call him father. The same little gold watch decorates his parlor wall, and often does he point to it and tell of his danger, and his escape from the whirlpool of intemperance.

TAYLOR DIFFER.—In a lecture on what he has seen abroad, Wendell Phillips observes:

"In Italy you will see a man breaking up his land with two cows, and the root of a tree for a plow, while he is dressed in skins with the hair on. In Rome, Vienna and Dresden, if you hire a man to saw wood, he does not bring a horse along. He never had one, or his father before him. He puts one end on the ground, and the other on his breast, and taking the wood in his hand, rubs it against the saw. It is a sad emblem of that in Florence, a city filled with the triumph of art, there is not a single angur, and if a carpenter would bore a hole he does it with a nail hot poker. This results not from the want of industry, but of sagacity of thought. The people live by no means idle. They toil early and late, men, women and children, with an industry that shames labor-saving Yankees. Thus he makes labor, and the poor must live. In Rome charcoal is principally used for fuel, and you will see a string of twenty mules bringing little sacks of it upon their backs, when one mule could bring all of it in a cart. But the charcoal vender never had a cart, and so he keeps his mules and feeds them. This is from no want of industry, but there is no competition.

A Yankee always looks haggard and nervous as if he were chasing a dollar. With us money is everything; and when we go abroad we are surprised to find that the dollar has ceased to be almighty. If a Yankee refuse to do a job for fifty cents, he will probably do it for a dollar, and will certainly do it for five. But one of the lazaroni of Naples, when he has earned two cents and eaten them, will work no more that day if you offer him ever so large a sum. He has earned enough for the day, and wants no more. So there is no eagerness for rinking money, no motive for it, and everybody moves slowly."

LATVIE THORNS.—The sweetest, the most clinging affection is often shaken by the slightest breath of unkindness, as the delicate tendrils of the vine are agitated by the faintest air that blows in summer. An unkind word from one beloved, often draws the blood from many a heart which would defy the battle-axe of hatred, or the keenest edge of vindictive satire. Nay, the shade, the gloom of the face, familiar and dear, awakens grief and pain. These are the little thorns which, though men of rougher form wank their way through them without feeling much, extremely incommode persons of more refined tarr, in their journey through life, and make their traveling irksome and unpleasant.

THE NEW POSTAGE LAW.—Under the new law there were, up to April 20th, 98 unpaid letters remaining in the Albany Post Office—3 directed to places abroad, and 94 to places in the United States. A public spirited and benevolent neighbor happening in the post office, inquired the amount of postage due on the whole lot, and finding it to be \$2 94, paid it, and sent them on their destined way—a piece of kindness that will benefit many people without their knowing who they are indebted to.—*Albany Journal.*

NOVEL PLACE OF CONCEALMENT.—A stage-driver, missed a \$5 bill, while in a drinking saloon, in Albany, N. Y., and having procured the assistance of an officer, searched a suspected person named Teelin, but without success, until the officer, catching the fellow by the back of the neck, hooked an enormous chew of tobacco out of his mouth, in the centre of which the \$5 note was found snugly ensconced. Teelin was committed to answer.

MUNICIPAL ELECTION.—Below we give a list of the officers elected in this city on Monday last. Their term commences on the first of July. Under the new city charter, the Mayor, Marshal, President of the Board of Aldermen, and President of the Board of Assistant Aldermen, form a Board of Commissioners to appoint and govern the Police Department. It is probable, says the Chronicle, that one Board of the Council will elect a democratic President, and the other a Know Nothing; and if so, and if North be elected Marshal, the Police Commission will be equally divided. Five out of the nine officers on the general ticket were elected by Democrats, and four by the Know Nothings. The Council is equally divided in each ward. There is much complaint of fraud in this election, and several arrests were made for illegal voting. The Know Nothings say they had 300 majority in the Sixth Ward, while the return is made to give them but 16.

City Officials Elected.—Mayor, James Van Ness, dem., 65 m.; Controller, A. J. Mondor, dem.; City Surveyor, J. J. Hoff, dem.; City Attorney, B. L. Peyton, k. n.; City Treasurer, Wm. McKibben, dem.; Marshal, Hampton North, k. n.; Harbor Master, John B. Schneider, dem.; Clerk Superior Court, James B. McMillan, k. n.; Tax Collector, Edward T. Batturs, k. n.

Aldermen.—Ward 1, Charles H. Corser; Ward 2, Joseph Hopkins; Ward 3, C. W. Hathaway; Ward 4, J. W. Brittan; Ward 5, J. M. Tewksbury; Ward 6, R. W. Slocumb; Ward 7, R. Rankin; Ward 8, Wm. Greene.

Assistant Aldermen.—Ward 1, Charles Wilson; Ward 2, R. J. Tobin; Ward 3, B. C. Peckham; Ward 4, H. J. Wells; Ward 5, C. J. Bartlett; Ward 6, J. Van De Water; Ward 7, W. H. Dow; Ward 8, J. B. Beideman.

Ward Assessors.—Ward 1, Michael Gaffney; Ward 2, Charles Umber; Ward 3, W. T. Denis; Ward 4, M. S. Brown; Ward 5, R. M. Cox; Ward 6, A. M. White; Ward 7, S. P. Burnham; Ward 8, J. B. Johnson.

The San Diego Herald says that Dr. R. C. Mathewson is immediately about to survey the United States lands in San Diego county, embraced between the second and third standard parallels south, and extending east from the San Bernardino meridian to the Colorado river, comprising between 1,000 and 1,500 miles of township lines.

Parties just arrived from the Teuson bring us the information that orders have recently arrived suspending further operations on the boundary survey between the United States and Mexico, in consequence it is rumored, of the purchase of another slice of Santa Anna's dominions.—*South-Central Californian.*

WIRE SUSPENSION BRIDGE.—The Battle Record, says that the contract for the erection of a wire suspension bridge across Feather River at Bidwell, has been taken by Messrs. Jones & Murray, old Feather River contractors, for the sum of \$26,500. The bridge is to be completed by the 1st of December.

GOOD SIGN.—A quantity of wool to the amount of fifty bales or 10,000 pounds, was shipped from Oakland wharf, this week. We understand it is to be taken aboard one of the clippers now loading for New York.—*Contra Costa.*

At the Big Tree, Calaveras, we learn that snow fell on Tuesday, 22d, to the depth of four inches.

The above are a few of the leading marketable products, thus showing that our California markets can supply as good, or better, at a much lower figure; and are first safe in saying we can live as cheaply or cheaper (rent excepted) as in New York.

"So come along, come along!
There's no need of alarm,
For Uncle Sam is rich enough
To give us all a farm!"

P. B. CORNWALL,

Real Estate Broker, General Agent, &c.
Office—East side of Second street, between J and K.
The advertiser has been a resident of Sacramento, and engaged in Real Estate transactions since 1848, and having been personally acquainted with nearly all the Real Estate dealers who have operated here at different times, and with their transactions in property, has peculiar facilities in his business.

SPECIAL NOTICES.

Consumption.—There is no disease with which our country is afflicted, which sweeps off annually so many victims as Consumption. No walk in life is spared from its blighting influence. No age is exempt from its death-dealing grasp. The old, the middle-aged, and the young, all alike are food for this common enemy of mankind.

Is there no help for the afflicted? No preventive of the disease which beset us in our changeable and fickle climate? We think there is.

WISTAR'S BALSAM OF WILD CHERRY, is offered to a suffering world, as such. Its true value and intrinsic excellence are sufficient to entitle it to the confidence of the public, and it has won that confidence.

Sold by all druggists.

Agents for San Francisco, B. B. THAYER & CO.

Opinion of the Press.—The Editor of the International Journal says: "Of all the specifics offered for the cure of Lung complaints, we have the greatest faith in WISTAR'S BALSAM OF WILD CHERRY. Free from those noxious ingredients which enter so largely into the composition of some other patent medicines, it acts without injury to the nervous system. We speak of this value medicine from personal knowledge of its effects. Scarcely two years have elapsed since a member of our family was raised from the very brink of the grave through its use; and in several subsequent cases where it has been administered in our household, it has never once failed of the desired effect. We cheerfully commend it to our friends in the British Provinces, and among 'the rest of mankind,' as a certain remedy for incipient diseases of the lungs."

* Be sure it is signed I. BUTTS on the wrapper.

At a Meeting of the Stockholders of the California Steam Navigation Company, held at their office February 25, 1855,

Samuel J. Hensley, Richard Chieny, J. Whitney, Jr., A. Reddington, W. B. Munroe,	R. M. Jessup, David Van Pelt, John Bensley, F. P. Low,
--	---

Were elected Trustees for one year from the 23d May, 1855.

At the annual meeting of the Trustees for the election of officers, San Francisco May 24, 1855,

SAMUEL J. HENSLEY was unanimously elected President,
J. WHITNEY, Vice-President, and
Wm. ROBERTS, Secretary of the California Steam Navigation Company.

To Purchasers of Implements for Harvesting Grain.

—We shall keep ourselves always advised of the very best implements that are imported into this country, and those who wish to purchase, by writing or calling on us, can be assisted in their purchases materially. We can find orders to any extent for machinery, and will be happy to do so for a commission, and we know we can do so with great advantage to the purchasers.

Religious Notice.—There will be Public Meetings held at the "Hall of the Sons of Temperance," on Washington street, between Sutter and Montgomery, every Sabbath Day, viz: A Prayer Meeting at 10 o'clock, A. M., and Public Lecture at 3 1/2, P. M.

NATHAN THURSTON.

Persons purchasing articles advertised in our columns will confer a favor by saying they observed them advertised in the "CALIFORNIA FARMER."

Spalding's Rosemary Hair Oil.
Take the sweetest of natures and the fairest dowers, Combine them, and lo, what a treasure is ours!
For blooming in winter, when earth is all dreary,
We hail with delight the green fragrant Rosemary.
Its dark shaded leaves with an essence is filled,
Which, when from its secret recesses distilled,
And combined with an Oil of a quality rare,
(As by Spalding) is just the right thing for the hair.
And Spalding esteems it no more than a duty,
This offering to lay on the tablet of Beauty.
For boldness and Time's bad effects all may feel,
By the use of his Ointment and Rosemary Oil.
Sold by
LITTLE & CO.,
Montgomery street, San Francisco.

MISCELLANEOUS.

Storage and Commission.

THE subscriber having purchased the entire interest of Messrs. Tilden & Little, in the Storage and Commission Business, heretofore conducted in the Empire Warehouse, is now prepared to continue the business in all its various branches, at this old established and thoroughly Fire-Proof Warehouse, on as reasonable terms as any other Warehouse in this city; will make cash advances on all goods, when desired; and hopes to retain a continuance of the old business.

HIRAM W. BEEBE,
Reference—Messrs. Case, Baker & Co.; J. W. Britton;
James Doyle; Barber & Boyd.

Notice.

WHEREAS certain impressions are gaining circulation connected with the insolvency of Messrs. Tilden & Little, late lessees of the Empire Warehouse, which if uncontradicted may cause unnecessary alarm, I feel it a duty to myself to state that the goods stored there, that all difficulties which exist, are confined entirely in their connection with, and the suspension of the Empire Floor Mills, and that all other goods now stored in this warehouse, will be duly receipted for by me, upon presentation of the old Receipts.

FURNITURE!! FURNITURE!!!

AT REDUCED PRICES.
NEW FIRM AND NEW GOODS.

Our stock of Furniture is now complete, comprising every thing suitable for the Parlor, Chamber, Dining Room or Office. We have lately added to our stock \$34,000 worth, purchased here at low rates, which, together with our former stock, and constant additions by every clipper ship, gives us one of the largest stocks ever offered in California. We have reduced our prices to conform to the times, at least 25 per cent, as all who will favor us with a call will be convinced. By the addition of Messrs. Moore & Newcomb's stocks, here and in Sacramento, we can safely say that our stock is the most varied and complete ever offered to the public, and that we cannot be undersold by any firm in San Francisco, Sacramento, or elsewhere in this State.

Call and examine our stock before purchasing.

San Francisco ahead of the World!
Ever on, on apace with the Age and Times!

Entrance for Vienna's new Engineering Gallery:
Largest Light in the World, (over 500 feet Glass.)

New Building, cor. Sacramento and Montgomery streets,

WHY should every man go to VAN CLEVE who wishes
PERFECT LIKENESSES? Because he has now the
best arranged Gallery in the Pacific Coast, and not to be sur-
passed by any in the world. Instruments combining beauty
more perfect, and with greater power than any ever before
used in this country.

24. Broadway has the largest light in the world, from which we can turn three distinct lights—blue, white, and half blue light—that may enable him to overcome the great difficulty which every artist in this city has to contend with—namely to be able to obtain perfect blue, green, different colored greens require differently arranged lights.

3d. During the largest flight, he is enabled to make pictures in his mind of any other establishment in the city; therefore they must be made perfect, but he is well known, therefore the time the more natured the experience.

fish, then another kind of fish, after much experimenting brought his chemical preparations to perfection, using compounds entirely different from anything ever before used in fishing, which enabled him to readily secure abundance of various kinds of fish.

All those visiting perfect themselves will do well to call before
 sitting elsewhere, and judge for themselves.
 [F] Prices reasonable, and work superior to any in the
 city.

Don't forget the place.

HINTS AND HITS.—Short Business Visits—
Idlers in Stores.—A correspondent complains that some of his customers, who are very valuable to him, are nevertheless in the habit of lingering in his establishment for hours at a time, much to his annoyance. He can not treat them with discourtesy, and has no inclination so to do. But he thinks that a hint or two as to the policy of short visits on business, especially when others require a fair degree of attention, would not only prove serviceable in his case, but in a general sense. The error alluded to is a serious one, and it prevails to a very great extent. There are some people who fancy that others have little or nothing to do. They stop them in the street during business hours and attempt to get up a long conversation on trifling matters—they visit their stores and lounge on their desks and counters—they repeat silly stories that have been told a dozen times before—and still worse, they pry into matters with which they have no concern, and thus not only annoy and vex, but inflict absolute injury. A friend who keeps a leading store at one of our prominent corners, informs us that he has lost quite a number of customers, in consequence of the almost perpetual presence of idlers and loafers, who stare with rude impudence, and who will not take any of the many gentlemanly hints that he has ventured to give them. He does not like to turn them out absolutely, but he assures us that he not only suffers in his feelings but his business. Some of them may mean no harm, but the effect is not the less pernicious. A man of common sense, and a gentleman, could readily imagine the inefficiency of standing beside the counter of a bookstore, with a lady making application for publications, either for herself or a member of her family. Nay, we know of a case, in which a young man, who kept a store for the sale of works, was absolutely ruined in the manner described. He lacked the moral courage to send away the idlers who infested his establishment, and the consequence was, that all his customers left him. But as a general rule, a visit of business should be brief, especially when other parties are to be consulted with, or waited upon. When, too, any matter, private or confidential, is in progress, everything like curiosity should be regarded as ill-timed or impertinent. It is quite a common occurrence for an idler to step into a room, and exclaim, "are you engaged?" seeing, at the same time, two or three persons busily occupied, and hence such a question being altogether unnecessary. But even when an affirmative answer is given, he will take a seat coolly, pick up a newspaper, and attempt to listen to all that is passing. Nay, he will venture ever and anon, to throw in a remark, as if he were the party concerned, and as if his affairs were the topics under consideration. But enough for the present. The subject is a fruitful one, and we may return to its consideration again.

OUR LOCOMOTIVES.—An Englishman was bragging of the speed on English railroads, to a Yankee traveler seated at his side, in one of the cars of a "fast train," in England. The engine bell was ringing as the train neared a station. It suggested to the Yankee an opportunity of "taking down his companion a peg or two." "What's that noise?" innocently inquired the wide-awake Yankee. "We are approaching a town," said the Englishman. "They have to commence ringing about ten miles before they get to a station, or else the train would run by it before the bell could be heard! Wonderful, isn't it? I suppose they haven't invented bells in America yet?" "Why, yes," replied the Yankee; "we've got bells, but can't use them on our railroads. We run so far from the fact that the train always keeps ahead of the sound. No use whatever; the sound never reaches the village till after the train gets by." "Indeed!" exclaimed the Englishman. "Fact," said the Yankee; "had to give up bells. Then we tried steam whistles—but they wouldn't answer, either. I was on a locomotive when the whistle was tried. We were going at a tremendous rate—hurricanes were now and then, and I had to hold my hair on. We saw a two-horse wagon crossing the track, about five miles ahead, and the engineer let the whistle on, screeching like a trooper. It screamed awfully, but it wasn't no use. The next thing I knew I was picking myself out of a pond by the roadside, amid the fragments of the locomotive, dead horses, broken wagon, and dead engineer, lying beside me. Just then, the whistle came along, mixed up with some frightful noise that I had heard the engineer use when he first saw the horses. Poor fellow, he was dead before his voice got to him. After that we tried lights, supposing these would travel faster than sound. We got some so powerful that the chickens woke up all along the road when we came by, supposing it to be morning. But the locomotive kept ahead of it still, and was in the darkness, with the lights close on behind it. The people perished against it; they couldn't sleep with so much light in the night time. Finally, we had to station electric telegraphs along the road, with signal-men to telegraph when the train was in sight; and I have heard that some of the fast trains beat the lightning fifteen minutes every forty miles. But I can't say as that is true—the rest I know to be so."

"You are from the country, are you not?" said a know-nothing clerk in a certain bookstore, to a plain dressed individual who had given him some trouble. "Yes." "Well, here's an essay on the roaring of calves." "That," said the man, as he slowly turned to leave the store, "you had better present to your mother."

EXPRESSES, &c.

E. W. TRACY & CO.'S EXPRESS
 TO SHASTA, WEAVER, YREKA, JACKSONVILLE,
 AND ALL INTERMEDIATE PLACES.
 CONNECTING WITH THE
PACIFIC EXPRESS CO.

To the Atlantic States and Europe.
 For the purpose of accommodating the business community, the undersigned commenced on Wednesday, Feb. 28, to travel from Shasta to San Francisco, carrying Money, Letters, Packages and Valuables, and attending in all matters of Express Business.

The Express will be dispatched regularly as heretofore, in charge of careful messengers, and the whole business will be under the direct management of E. W. Tracy. We have no security to offer except business capacity, and for that refer to the annexed card, signed by the business men of Shasta.

Card.
 We, the undersigned, Traders, Merchants and Dealers, in Shasta, do hereby recommend to all who have business to be transacted between this place and San Francisco, E. W. Tracy, as a person in whose honesty, integrity and business capacity, the utmost confidence can be placed.

Freight and packages forwarded with dispatch and at greatly reduced rates.
 Collections attended to promptly, and return made in coin or draft.
 E. W. TRACY & CO.

PACIFIC EXPRESS COMPANY.

THE late employees of Adams & Co., in consequence of the disruption of that firm, have organized themselves into a joint stock company, under the above name and title, for the purpose of conducting a General Express and Forwarding business in all its branches, throughout California, Oregon and the Pacific Coast generally.

The business will be strictly and solely a forwarding one, having no connection with banks and bankers, and will be conducted on safe and economical principles.

The Expresses will leave the office at the north-west corner of Washington and Montgomery streets, daily, at regular hours, for Sacramento and the Northern Mines, Stockton and the Southern Mines, San Jose, San Juan and Santa Cruz, Monterey, San Pedro and the Southern Coast generally, as well as to the Northern Coast of California and Oregon.

We will also run a regular Express for Freight, Small Parcels and Letters to and from the Atlantic States by every steamer.

The parties who have organized this company are well known in the community as old and experienced express men, and hope it will be acknowledged generally, understand their business thoroughly. They think they are not entering too much, when they attribute much of the success of the late firm of Adams & Co., in the express business to their exertions and personal energies.

In conclusion they would solicit a fair share of the favors of the public, pledging themselves to exert their best endeavors to transact such business as may be entrusted to them in a prompt and business-like manner.

Collections of all kinds will be promptly attended to at any of the points mentioned above.
 R. G. NOYES, President.
 San Francisco, March 1st, 1855.

WAINWRIGHT, RANDALL & CO.,
 Real Estate and Stock Auctioneers,
 No. 100 Market street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of HOUSE BROKERAGE AND GENERAL DIRECTORY, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

These new branches possess some useful features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokerage.
 This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business will be respectfully solicited.

General Directory.
 This department will include a register, (already prepared,) of all persons, (except Chinese) within the limits of the city, by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and addresses of forty-three thousand persons, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.
 WAINWRIGHT, RANDALL & CO.

Booksellers and Stationers
WHOLESALE AND RETAIL WAREHOUSE.
 WE beg to call attention to the following catalogue, which comprises in part our stock of books and stationery.

By the recent arrival of clipper, our assortment of goods in this line has been made very complete, and we feel sure that the public will find it to their interest to call and examine our stock before making purchases elsewhere.

Blank Books.—Ledgers, Journals, Cash, Invoice, Day and Record Books, in Russian, Sheep and Muslin Binding. Copying Books, Indexes and Plain Memoranda, Blank and Faint Books, Dairies, &c., &c.

Paper.—Brief, Letter, Cap, Note, Envelope, Tissue, Blotting and Filtering Papers.

Stationery.—A complete assortment of Law, Counting House and Family Stationery.

Bound Books.—A large and splendid assortment of Law, Standard, School and Miscellaneous Books, including many in rich fancy binding, suitable for presents.

Blanks.—Law, Shipping and Custom House Blanks.

Miscellaneous.—Gold Pens, Razors and Razor Straps, Pocket Cutlery, Toilet Brushes, Cash, Deed, Date, Post Office and Envelope Boxes; Portable Desks, Gent's Dressing Cases, Ladies' Toilet and Work Cases and Reticules, Port Monies, Perfumery, Opera Glasses, Fancy Articles, &c., &c.

On the arrival of each steamer we receive a full supply of all the leading Newspapers, Pictorials, Reviews and Magazines published in America and England, which we can furnish to all in quantities to suit.

Geo. W. MURRAY & CO., Montgomery Block,
 N. B.—Particular attention paid to filling orders.

MEDICAL.

IT IS A FIXED FACT,
 CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise on Consumption," says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Linnæus and other pathologists." Dr. CANSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the still telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or circulating falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

Dr. ROYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Consumption had taken place, the Wild Cherry of fact cured."

Dr. A. H. MACANAB, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

Dr. Wm. A. SNOW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity."

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry."

HUN. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful."

(From the Boston Journal.)

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most distressing malady."
 C. D. MAYNARD.
 Argus Office, Portland, March 25, 1850.

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations.—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine.

Dr. Wistar's Balsam of Wild Cherry.

Signed I. BUTTS on the wrapper.

SETH W. FOWLE,

Proprietor, Boston, Mass.

Surgery.

R. B. COLE, M. D.,

Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.

Office—Atheneum Building,
 South-east corner of Montgomery and California streets,
 opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself principally to his office, where he proposes to treat all

Surgical Diseases.

feeling assured as he does that his former connection with Medical Schools and Hospitals, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the indications to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and morbid growths, occurring on any part of the body, Diseases of the Spine, Chronic Ulcers, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of Eye, Ear and Skin, Affections of the Bladder, Uterus, Scrotum and Testis (or in other words, all diseases of the Genito-Urinary Apparatus) and Disorders, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly-treated Fractures, Contractions of the Limbs and loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.

Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.

A Lady's Praise of Spalding's Oil.

As the shadows of evening began to fall,
 A Lady was dressing her hair for the Ball;
 Soft were the accents that fell from her tongue,
 And this was the song that the lady sung—
 "Away with Pomatum and Balmoline,
 No more in my room shall Bear's Grease be seen,
 The hair's soft texture they only spoil;
 Oh, give me the Castor and Rosemary Oil—
 It's made my tresses look soft and bright,
 And my hair keeps its curl tho' I dance all night.
 No more of grease or strong spirit for me,
 But Spalding's mixture of Rosemary!"

AGRICOLA'S LETTERS.—NO. 2. On the Climate and Seasons of California.

EDITORS FARMER: There is no subject, on which Farmers are more interested, in general, or nothing upon which the success of many of their operations so much depend, as the weather. The contemplation, and prediction, of rain and sunshine, are, to them, objects of similar importance, inquiry, and speculation, as the rise and fall of prices to the merchant; and are, in some respects, dependent on the same law, namely: the excess or deficiency of the articles wanted, within such a distance as can make them available for the desired purpose.

The seasons in California seem to be a fixed fact; and doubtless the laws which regulate them, like those of the Medes and Persians in olden time, are unalterable in their character; but as to whether, and how far, the seasons themselves may be modified and altered, by means of the improvement and cultivation of the country, is a subject of such vast importance to the Agriculturist, and to settlers in California generally, that, I presume, I need offer no apology in devoting this letter exclusively to that purpose.

The great difficulty however which meets us on the threshold, and one which has hitherto prevented meteorological speculations from being so brought within the reach of science, as to make them an object of correct calculation, is the varied character of the earth's surface. If the earth were perfectly level, and all land, or all water, the weather would be as certain as the seasons, and as regular as day and night. But as it is not, the only thing that can be done in the matter, is, to set out on such an hypothesis, and afterwards endeavor, as far as our present limited knowledge will admit, to show how far the variations in the weather are to be attributed to such a cause, and how far they are dependent on others, more within our own control.

Taking these grounds—we all know that the sun in the Equatorial Regions shines with great force, and so warms and rarefies the air, as to make it rise up, in the form of a mountain, under his direct beams, and that, in consequence of the air getting so rarefied, heavier and colder currents of air rush in from the north and south, to supply the vacuum; not exactly, however, from the north and south, on account of the earth's turning on its axis, diurnally, towards the east, which would have the effect of making the wind blow directly from that quarter, if it were not for the other reason, I have just stated, and which, taken conjointly, have the effect of making the winds blow, within the limits of the Trade Winds (as they have been called) from the northeast and southeast, according to which side of the Equator we are on. As, however, the sun travels over a space of 45° from north to south, it is evident

that this mountain of heated air, and all the varieties of weather depending on his place in the heavens, must follow him in his course. Hence the change of the seasons in all countries. And hence, in particular, the rainy and dry seasons in California.

The effect of the Trade Winds blowing from north and south, towards that portion of the earth more immediately under the direct rays of the sun, is, that the colder air introduced is rarefied by his heat, and the aqueous vapors, which it contained, being charged with a different proportion of electricity, from those formerly in these Equatorial Regions, thunder takes place, and rain falls in great quantities. But the air, thus freed from its vapor, rises up, as I said before, in the shape of a mountain, and naturally flows back—in the same way that oil would if poured on water—over the lower and heavier air in the regions to the north and south, in a direction opposite to that of the Trade Winds, and thus helps to supply the deficiency occasioned by the incessant demands of the Equator. This is the summer atmosphere of California, and in so far our seasons are fixed in their character. We never can change them.

Let it not be objected that the coast winds in California do not blow from the southwest but from the West, and in the afternoons, especially, with so much force as to leave no mistake about the quarter they come from. The air they contain comes from the south for all that, and contains, as we all know, very little aqueous vapor in it. The immediate direction of these winds depends on a modification of the same law, namely: that land being, to a so much greater degree, a conductor of heat than water, and during the day, getting so much more heated, the air above it consequently gets rarefied, and that from the sea rushes in to supply its place—but water, as I said, being less a conductor of heat retains it longer than the land, which quickly throwing it out, the air above it comes back, at night, to the same temperature as that over the water; consequently we have, during the summer months, winds in the afternoons, and in them only. But these winds, though coming immediately to us from the west, because the ocean is west of us, had their birthplace in the south, where they have been kiln dried by the sun, and are necessarily possessed of all the scorching qualities which they have thus acquired; or, more strictly speaking, they have thus been deprived of all the grateful accompaniments they would otherwise have brought along with them.

Now, it must here occur to every one, that, if we could manage to render our soils and lands more on an equality with the sea, in reference to their being conductors of heat, that we would not only succeed in modifying these furious winds, but that we might thus seize hold, if I may be allowed the expression, of the robe of departing spring, and detain her, with all her genial showers, for some time longer, to gladden the heart of the California farmer, and enable him, with certainty, to bring all his crops to perfection. And I am happy to say that the eye of science not only sees this in prophetic vision, but can also point out the way in which it is, in some measure, to be accomplished, namely: by promoting the cause of Agriculture.

When land lies in an unbroken state, the rains which fall in such abundance during the winter months necessarily run off, almost as soon as they fall; whereas, when it is well and deeply cultivated, the soil, like a sponge, has first to be saturated before any such waste can take place, and thus, not only becomes a magazine where the superabundance of these rains is stored for after use, but the fact of the earth being thus in a moist condition, makes it retain, from natural affinity, the lingering aqueous vapors of the atmosphere, which, otherwise, would leave us, and be deposited elsewhere. But this is not all; by cultivating the soil and having our crops in an advanced stage of growth, before the rainy season

is entirely over, we clothe our fields with a covering, having scarcely any properties of reflecting, or conducting heat, and consequently in doing so more extensively the atmosphere, in the commencement of summer, would be not only moist, but cooler than formerly. The temperature above the land would thus be more on an equilibrium, in regard to heat, to that above the ocean, and consequently the coast winds, in the early part of summer, would be proportionally weakened and retarded. Besides, if we have got to furnish a certain quantity of cold air, at a certain season, to supply the deficiencies of the southern region, and to take their dry and heated atmosphere in exchange, does it not follow that, the greater the proportion of moist and heavy air we have got we shall feel this tax the less, and, that having a better supply of good wholesome agricultural atmosphere, we shall be less intruded on, and longer in doing so, by our unwelcome visitor from the south, on whom we will not have so much to depend as now for the air we breathe, as we can thus, so far manufacture an atmosphere for ourselves, very much superior to the one we have been importing?

Thus, year after year, as we go on cultivating more and more extensively, the rains of spring will continue the longer; and though we never can overcome, from the large proportion of land in this State which is not susceptible of cultivation, all the disagreeable peculiarities of our summer climate, yet, it must be gratifying to reflect that it is so much in our power to modify them.

These are not idle speculations, but natural conclusions from well established facts. When Capt. Basil Hall, who made the subject of winds a particular study, ascended the Peak of Teneriffe, he found the wind blowing, as he had supposed, in a direction directly opposite to what it was at the base of the mountain. And anyone who has sufficient love of nature, or poetical enthusiasm,

"To climb the steep summit of such towers of snow,
To gaze on the torrents that thunder beneath,
Or the mist of the tempest that gathers below,"

will find that there is nothing more common, than for the clouds, between the summit and the valley, to be pouring down rain, while he himself looks down on the storm perfectly secure from its effects—thus showing, that the wind in the upper strata of the atmosphere may blow a different direction from the wind below it—and that it is frequently if not always drier.

AGRICOLA.

Agricultural Papers for Premiums.

We are glad to see that Brother Brown of the Ohio Farmer, and his correspondents, are after the County Agricultural Societies, in this matter of premiums. Why should they not put a large number of such publications in their premium lists? Why should not Ohio Agricultural Societies offer to competitors Ohio Agricultural publications? Here are two questions we should like to see soberly considered. But for the interest awakened by these papers, where would have been your seventy county societies in Ohio? Where would have been your State Board of Agriculture? Where would have been your grand annual gatherings of farmers, to look upon the excellency of labor and skill? Answer, you timid mortals, who for fear of not pampering the greed of some miserly churl, that thinks more of a silver dollar than he does of his soul, will pass by with neglect an agency that has poured untold thousands into the lap of the State, and now asks a generous recognition among the institutions it has helped to raise up and foster.

Besides, this is a patronage that costs you nothing. That is, you can give this direction to your awards just as cheaply as to pay in money or cups or spoons, and with this advantage, that the paper will serve to keep up the interest of the receiver the year round. Now as you are making up your premium lists, please bear this in mind, and don't go skulking behind a stingy policy, and say, "Oh! they'll take the Cultivator any way;" but do your own duty, and stand up frankly for the Press, that has always stood up faithfully for you.—Ohio Cultivator.

When prosperity was well mounted, she let go the bridle, and soon came tumbling out of the saddle.

Should the Farmer be Educated?

This question has long been agitated by the agricultural journals and book-farmers assuming the affirmative and the plow-joggers the negative, in a manner that speaks vehemently of the enthusiasm and confidence entertained by both parties. The affirmative have argued that the farmer should be a man of reading, observation and study; that his vocation involves as great a degree of scientific inquiry as any other; that he is the recipient of education and mental discipline equal to those engaged in the professions, and that he can claim as high a rank in literature with the same facility. The negative contends that the requisite qualifications for a farmer consist in following out the instructions handed down by tradition from antique ages; to be able to legibly write his name; to compute interest; to read indifferently; to show an agricultural paper as if it was a hump to their prosperity; to be doubly poison to their mortality, and to extract from the soil by injudicious management, that indispensable element for the growth of plants, and to leave mother earth so sterile that future generations will have to shirk for themselves as best they can. It is my attempt to substantiate the affirmative, and I affirm that for any man to be a good practical farmer he must be educated.

Agriculture is and was intended to be the chief and most honorable pursuit of men. One of the purposes for which reason was conferred on man, besides distinguishing him from and exalting him above animals, was for properly cultivating the ground, which was the first gift of God to man. The utility and honor of any vocation should correspond to the intellectual and moral dignity of its devotees. Those whose ignorant should not be engaged in occupations that much tax the mental organs; that require power of mind; and as there is dignity and scientific intricacies involved in agriculture, the agriculturist should be men of energy and emulation, so that the original gift may not be depreciated, but improved. The farmer is so situated that, every day, he comes in contact with much to expand his mind, if he has only indolent the taste for learning, and by giving him that taste, we confer a better benefit than money. He will be enabled to converse, to invent, to perfect, and to improve his ends in higher and higher degrees. While occupied in the healthy proceedings of his calling, inhaling the pure and invigorating air, and familiar with the principles of nature and the intricacies of science, he is more amply prepared for intense thought, than the most laborious student, whose enervated limbs and weakened organs unfit him for the mental ability to which he ardently aspires.

Farmers have not yet appreciated the utility of cultivating their thinking faculty, so as to make it subservient to some valuable purpose. This error has long bound their pursuit to degradation, and made it the contempt of enlightened men. Who has more convenience for reading and meditation than the farmer? The long evenings of winter and the stormy days of every season, proffer ample opportunities for improvement, and if they are not beguiled, in an instructive and entertaining manner at home, some public place of amusement is resorted to, where, coming in contact with men of corrupt principles, they are liable to become the victims of dissipation and debauchery. Knowledge united with virtue constitutes the basis on which rests the system of this republic, which will be permanent in proportion to the ability of the rural people. When we reflect on the rapidity with which our population is increasing, and the extent of territory annually settled, thoughts arise whether we shall maintain our patriotism and philanthropy, or whether discord and conflicting interests may not arise to inflame partisan zeal, and our country eventually be crushed by the ponderous weight of faction, we become impressed with the necessity of educating the laity of mankind; to have our farmers become men of strong minds and honest hearts, in order that the mainspring (agriculture) of all prosperity may be supervised by men of intellect and ability. Farmers, collectively, are the power of the nation, and every year their importance is more and more appreciated. The results of their experiments are now transmitted to the agricultural journals, through which other farmers at their dwellings learn of the new principle of agriculture, and the progress of every science. The plow, to sow, and to reap, by the old and new of the moon, is now generally only a reminiscence of whimsical superstition of former days, and farmers are now more dictated by realities, than by any of the pretended indications of any of the planets or celestial orbs.—Corres. American Agriculturist.

The whole number of applications for Bounty Land under the new law is 20,600.

If a man could have half his wishes, he would double his troubles.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, THURSDAY, JUNE 7, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

"Prologue."—The original sketch under this heading, from the able pen of ALEX. S. TAYLOR, Esq., of Monterey, which appears in several numbers of the FARMER, we have issued in pamphlet form. Those who wish copies in this style, can obtain them on application at this office, Mineral Hall Building, or by Mail or Express. Price Twenty-five cents per copy, or six copies for One Dollar.

A Card.

The public throughout the State and Agriculturists in particular, are hereby notified that the Corresponding Secretary of the Society, J. L. L. F. Warren, Esq., is about to make the tour of the State, for the purpose of presenting the general interests of Agriculture to those who are interested in its advancement, and gather statistics for the Society, with the view of adding to the interest of the approaching Annual Fair.

It is not only desirable but indispensable, that the membership list of the society must be largely increased beyond its present number, in order to make the Fair what it ought to be, considering the important position that California occupies among the Agricultural States of the Union.

Col. Warren is furnished with certificates of membership, and is authorized to furnish them to those who may desire to become members of the Society, and are earnest in their endeavors to develop the Agricultural resources of the State.

C. I. HUCHINSON, President.

O. C. WHEELER, Rec. Sec'y.

EDITOR FARMER: Please say to your readers that the Executive Committee of the State Society will not be able to examine any Farms, Orchards or Vineyards, unless notice of the wish to enter the same for premiums, be forwarded by the proprietors thereof, before the 1st of July. Address the President or Corresponding Secretary at Sacramento.

O. C. WHEELER, Rec. Sec'y.

Semi-Monthly Exhibitions.

THE Executive Committee of the State Agricultural Society have the pleasure to announce the opening of their Rooms, on Fourth street, between J and K, and hereby tender to the public in general, and to the cultivators of the soil in particular, a most cordial invitation to visit the rooms at all times, free of cost.

The Rooms are fitted up with a fine museum of natural science, and the full appliances of an Agricultural and Horticultural Reading Room. There will also be held, at such times as circumstances shall warrant, Horticultural Exhibitions at the Rooms, the first of which will take place on Saturday next, at 11 o'clock, A. M.

Farmers, Gardeners, Florists, Botanists, Geologists, and all others interested in developing the resources of the State, are earnestly solicited to contribute whatever they may be able, for the interest of such exhibitions and the general prosperity of Agriculture.

O. C. WHEELER, Rec. Sec'y.

Sacramento, May 30, 1855.

The above notice was received too late for our last issue. The next Exhibition will take place on Saturday, June 16.—Ed.

California Farmer Office.

THE publication office of our journal is now at the city of Sacramento. Our paper it will be seen is dated from that city, and we ask our friends and patrons and our subscribers generally, to address their letters to the city of Sacramento. The California State Agricultural Society having established their head quarters at the Capital, and the "Annual State Fair," having been appointed at that city the present year, it became necessary that as much of our time as we could spare should be given to advance the work of preparation.

Sacramento being also the Agricultural centre of the State, a convenient point, and to which there is a more ready access for a large quantity of produce and stock, and many other facilities having been tendered the Society, we felt it our duty to join and make it the head quarters of our journal and our labors. We shall, as we have said, visit as speedily as possible every portion of our State, and we ask a generous co-operation in the labors before us, which is to collect the most important data upon Agriculture and such information as will advance the work of the coming "Annual Fair." (Please see Society's notice.)

We wish it distinctly understood, however, that while we may make Sacramento our head quarters,—our "home"—we have no partiality so strong as to make us forget the duty we owe and the interest we feel in Agriculture and its kindred interest wherever found in our State; to that interest we are wedded, mind, heart and strength, and if its friends will but give it a just portion of their time and interest, they shall never find us wanting in ours. We repeat then to all, the Office of the CALIFORNIA FARMER, is at Sacramento city, where all letters should be addressed, and where we would most respectfully request our *Exchanges to be mailed to us.*

To our Readers.

We would most respectfully call the attention of our readers and all interested in the cause which this journal pleads, to the card of the Executive of the State Agricultural Society, which appears in this day's issue.

THERE IS A WORK BEFORE US which we have long desired to perform—the EXAMINATION of the PRACTICAL AGRICULTURE OF CALIFORNIA. Most earnestly do we wish to meet the Cultivators of the soil upon their own ground—to see them AT WORK—to see the TRUE CONDITION of the crops, the acres under cultivation, and the condition and character of each crop—to look at, examine closely, and report truly, the prospect of the coming harvest of the great staples of California. But this is no small or easy task; it is a Herculean labor, but one that can be made easy and pleasant by the generous co-operation of those who are now engaged in the practical duties of Agriculture. We wish not only to examine the *grain fields and potato fields*, but *orchards, nurseries, greenhouses and gardens*, the public grounds and the private grounds, the large farms and the "pet" gardens. We wish to do this not for the sake of the IMMENSE AMOUNT of cultivated lands and industrial labor it will reveal—not for the mere spreading out such facts before Californians—not for the desire to call attention to the State Agricultural Society, or the CALIFORNIA FARMER—no; no; but for a higher and nobler purpose; we wish to do it for the VERY WORK SAKE. We do wish to see and know and report the INDUSTRY of OUR STATE, the source from whence her real wealth and prosperity proceeds and upon which her permanence is based. We wish to do this that we may make known, not in California only, but over the whole Union and the world, that in the AGRICULTURE OF CALIFORNIA and in the interests that grow out of it, our State possesses resources beyond that of any other State or country upon the earth. But these resources are as yet but partially developed, and it is for this reason that the Executive Committee desire the co-operation of all in the work proposed.

Having been desired and appointed to the work named, we ask of the friends of Agriculture throughout the State a kind co-operation and a helping hand, to make that work easy. Every cultivator large or small, can furnish us with a schedule of his lands, cultivated and uncultivated, his crops in all their variety, his stock of all kinds, the number of laborers he employs, his orchards, fruits, crops, and any and all the facts and particulars he may please to communicate. We earnestly hope they will do this, for the sake of the great good that will accrue to them and to all. We would be pleased, in the tour we shall make, to meet at any time the citizens of any place and confer with them—talk, preach, or write for them. Our theme is *Agriculture*, by day or night, summer or winter, rain or shine, now and forever—for it is a subject worthy the highest energy of the human mind.

We ask particular attention to the wishes of the Executive Committee of the State Society, for whom we would earnestly labor and in whose service we toil. That Society needs the interest, influence, aid and countenance, as well as support, of every good citizen of the State, for its success will benefit every citizen.

While we shall proceed from place to place, if those who feel a desire for special meetings, or desire the formation of County Societies, will write us, we will render all the aid in our power, and shall be glad to meet the citizens at any time or place they may desire, if they will notify us. Letters addressed to us at Sacramento will be duly forwarded us wherever we may be.

Again would we urge ACTION! UNITED ACTION!! so that the coming Annual Fair may be such as shall show the value of the AGRICULTURE and INDUSTRY of our noble State.

ACKNOWLEDGEMENTS.—We return thanks to the gentlemanly and attentive messengers of Messrs. Wells, Fargo & Co.; also to the Pacific Express Company, for prompt delivery of letters, packages, and papers the past week.

Agricultural Exhibition.

JUNE, the month of roses, is ever hailed by those who love horticulture and floriculture, as the fairest and brightest month of the year. The first Saturday in June is the bright opening of Flora's gala days in the New England States; for May has an embargo of east winds and chilly days that holds the goddess in check till the bright "Mouth of Roses," June.

Thus the California State Agricultural Society, wishing to commemorate this fragrant month, have commenced a series of exhibitions, which give promise of much interest and pleasure, not only to the citizens of Sacramento, where these exhibitions are held, but to many others from all parts of State, who contribute of their products and who may chance to be at the capital during the exhibition days. The Society having announced these displays to be held semi-monthly, the first came off on Saturday last, and although the notice had been but short it was well attended.

Preferring to take the report of one of our contemporaries who was present, to our own, we copy from the State Tribune the following report of the show:

THE new apartments occupied by the State Agricultural Society in this city, are situated on Fourth street, between J and K, at which place we passed a very pleasant hour yesterday, examining the beautiful collection of flowers there displayed. The rooms are under the immediate direction of Col. Warren, and the secretary of the society, Rev. O. C. Wheeler.

It is proposed to hold semi-monthly exhibitions to which Farmers, Agriculturists and Horticulturists are invited to send in specimens of their products, which will be labeled and kept for public exhibition. The feature is excellent and cannot but prove highly popular and successful. Below is a brief description of the articles displayed yesterday. The next display will be on the 16th June.

W. C. Walker, of the Golden Gate Nursery, San Francisco, exhibited a collection of twenty-five fine Green-house Plants, Roses, Fuchsias, Geraniums, Verbenas, Heliotropes and Carnations, all very fine plants, and in full bloom. Mr. Walker also sent twelve very rich hand bouquets, made in superb taste.

E. B. Marsh, of San Francisco, sent a sample of his Chili Strawberries, of wonderful size and beauty; measuring five and six inches in circumference; also a box of plants, of most extraordinary growth.

Messrs. Kuhler & Co., Florists, Sacramento, near the Fort, sent a handsome collection of twenty-one plants from their "Floral Gardens." Among the plants was an extra fine Hydrangea Japonica, and among his Roses were the superb Yellow Rose (Solitaire), Triumph of Luxembourg, Madam Laffay, and others; also very fine specimens of the Fuchsia. Messrs. K. & Co., sent a very fine specimen of the Cactus, of the Mamillaria tribe. These gentlemen also furnished a very handsome collection of Carnations, in cut vases.

Messrs. Kuhler & Co. sent a basket of very fine White Potatoes, raised from the seed, and one that promises to be an acquisition.

Mr. A. P. Smith, of the famed Pomological Gardens, exhibited two finely formed Pyramidal Trees, ornamented with flowers, made by Wm. O'Brien—these were quite an ornament to the rooms. From the same gardens came a basket of superb Strawberries, also two dishes of Raspberries—the Franconia and Ohio, ever-bearing. Mr. Smith also exhibited three baskets very large and fine long green Cucumbers. Upon the tables were found two moss baskets of rich flowers, bearing a card from Mr. Smith's gardens—designed and prepared by Mr. A. B. Sanl, formerly of Center's, Mission Dolores, now at Smith's gardens.

From Rev. O. C. Wheeler, Sacramento, two large and very handsome white English Turnips, twenty-six inches in circumference, one weighing seven pounds.

Dr. B. B. Brown contributed a collection of Grass of six varieties, all very interesting and fair.

During the day and evening, a large number of ladies and gentlemen visited the rooms, and all expressed great pleasure at the neat and attractive apartments, and the display of flowers. Hereafter all specimens of fruit and flowers will be sold after the exhibition, and on Wednesday, a large collection of pot plants will be sold. It is hoped that our lady friends will not only contribute the products of their gardens and needle, but honor the rooms with their presence on the 1st and 16th of each month.

It was indeed most gratifying to the executive committee, who were present, to note the interest evinced by the whole press of the city, and some of other place. The following journals were ably represented by one or more of their editorial corps: the Sacramento Union, State Journal, State Tribune, Empire Argus (Auburn), California Express (Marysville), the authorities of the city, and many strangers, were also present. Such a gratifying interest will serve as a stimulus to the Directors to do their best to make the exhibitions and the rooms of more and more interest and worth, continually.

AGRICOLA'S LETTERS.—Our readers will find a subject of much interest in the letter No. 2, of Agricola, and we hope now we have thus secured so many valuable aids to our journal, and its having so many interests to promote, our friends will express their interest by giving us a wider circulation.

The Press of Sacramento and Agriculture.

ONE of the evidences of the influence of Agriculture is seen in the interest that is now evinced in its behalf by the press of Sacramento. So many evidences are being daily presented to the minds of all, of the beneficial results of the cultivation of the soil, that the press can no longer withhold in giving it a true position.

The whole press of Sacramento speaks its value to that city. The numerous gardens, the luscious fruits, the fragrant flowers—these demand a tribute of praise, and we rejoice to have them duly recognized. A double good is accomplished when a portion of the columns of a political journal is occupied in speaking of these beautifiers of our homes; these strong advocates of industry, of health, peace and prosperity. The press of Sacramento have very promptly and generously urged the subject upon the attention of their readers, in repeated notices, since the announcement of the proposed opening of the State Society's Rooms at that city.

We have read with much pleasure the most excellent articles upon Agriculture and its influences, in the daily Union of last week. Also the State Journal and Tribune speak most favorably on its behalf. We are personally and particularly thankful for the kind and cheering notice of our friends of the Tribune. It is so pleasant and so frank that we could not do less than copy it verbatim:

CALIFORNIA FARMER.—We have neglected to mention the fact that the CALIFORNIA FARMER, the only agricultural newspaper in the State, is now published in this city, instead of San Francisco. We were honored with a call yesterday, from the gallant and accomplished editor, who is as brilliant and spicy as ever. We welcome the FARMER to Sacramento, and assure its editor we will do all we can to advance its interests, and the cause it so vigorously advocates.

For the smiles and greetings that so kindly met us on our return to Sacramento, and the many friends that call to welcome us, we are indeed grateful—such kindness we shall never forget. We can only say we will try to make the pathway of such friends fruitful with pleasure and pleasant with fragrant flowers.

Examples Worthy of Imitation.

THE Exhibitions of the Massachusetts Horticultural Society have ever been a source of pride to every member, a source of gratification to the citizens, and an honor to the State. The Annual Shows have always been the great gatherings of the lovers of nature and her handiworks, and these Exhibitions have always been attended by the most intellectual and wealthiest citizens—and not only attended, but encouraged and sustained by them. The wise and good have liberally contributed, and it has been by such encouragement that this Society has reached its present proud and exalted position, and can now wield a mighty influence for good in developing the resources of mind and matter. By referring to the Annual Report of the Treasurer of that Society, we find the following estimate of its property:

Original purchase and Hall	\$36,000
Additional purchase	12,000
Furniture and Library	4,000
Appleton Fund	1,000
Lyman Fund	1,000
Bradlee Fund	1,000
Lowell Fund	1,000
Lyman Bequest (in stock)	10,000
Twenty shares railroad	2,000

Liabilities of Society, mortgages, - - - \$68,000

14,500

\$53,500

To show show the real prosperity of this noble Society—their income from the Mount Auburn Cemetery is about \$5000 annually, thus enabling them to increase their premiums yearly, add to their library, pay all expenses, and leave an increasing fund to accumulate. The amount of last year's income from Mount Auburn Society, received after the above report, gave them the means to pay off \$4500 of their mortgages, which leaves them with a real capital of \$58,000.

It will be perceived that four merchants have donated \$1000 each as a special fund, the interest to be appropriated annually as a medal to some worthy object; and the Society ordained that such medal shall bear the name of the donor. It will be seen, also, that Hon. T. Lyman made the noble bequest of \$10,000 to the Society. It is to such instances of noble liberality which we would call the attention of those who have means by which they can do good while they live and see that good continually increasing.

Are there not citizens of California to whom a hint only will be necessary? What citizen of California and what State shall be recorded as the first donor to the noble science of Agriculture

in California? A bequest, or a donation, that shall call into action mental and physical power, by which a new species of produce shall be made known to the world, or a valuable invention offered, must redound to more honor to the donor than monuments of granite—for the good will go on increasing and live long after granite will have crumbled away. A good deed never dies, and the invention, and he who is the cause it, will no more cease to be remembered than a Newton, or a Franklin, a Fulton or a Bowditch, a McKay or a Maury.

We sincerely trust that it will not be in vain that these facts are now recorded.

It may be that some of those noble spirits whose desire to do good is not limited by State lines or ocean boundaries, and seeing what can be accomplished here on the Pacific coast, may feel a heart-throb ushering in a desire to do good; and to such we can only say—their donations will be received with gratitude, and faithfully appropriated as they direct.

Disease in Roses.

SAN FRANCISCO, MAY 23, 1855.

Messrs. Editors: I wish to ask your advice concerning a singular fatality which has attended my efforts to raise a few roses to relieve the barren waste of brick and plank in this place. I had four thrifty plants five weeks ago. Now I have two left, and the other two (before the healthiest of all) are on their last legs, apparently. Let me detail the process of destruction: They are in pots and are placed in a window facing south; they were the recipients of close attention, were well watered and entirely free from any visible insects. About April 17, the leaves began to curl up as if frost-bitten—soon the largest leaves and leaf stems dropped off, then the others; the disease stripping first the old wood and leaving for a while the fresh shoots from the root. These suffered next; the disease here beginning at the root and ascending to the top. At last, in the short space of about two weeks, the plants had not a leaf on them. They then sent out a second crop of leaves, which perished before reaching maturity; and now a third has appeared and is following in the same road. Meantime all the this year's growth has died and most of the old wood.

The leaves usually are first covered with purple spots and stripes and edged with a dull purple, and soon drop off, sometimes curling up, frequently dropping as if frost-bitten, and sometimes without any apparent change dropping off in a seemingly healthy condition. I could detect no insects; and indeed it seemed more like a want of vitality in the plant itself than anything else. They seemed to be sick.

They were not frost-bitten, for a second and third crop of leaves underwent the same changes, moreover, less hardy plants in the same situation were untouched. I thought it might be too much water, but the other roses, which are still thriving, had received the same treatment; nor did I water them excessively. I thought they might be intending to take a nap; but they immediately thrust out their second crop without any delay after the loss of the first.

What then can it be? The air, soil, location and treatment are all good. Other roses by their side were unharmed, as well as geraniums, &c. Are plants here subject to such sickness, and what is the cause, if so? I write to you from curiosity, for this is a wholly new thing to me, though I have dealt considerably in horticulture when in the States. With much respect,
Yours truly,

NOTE.—In answer to our correspondent, we should say that from the curl of the leaf as described we should infer the plants to have been watered in the morning too freely, and the water standing upon the leaves they were scorched by the action of the sun. Their change of color to a purple or a brown would indicate the "Red Spider," the worst enemy of the Rose. This insect can be seen with a glass, and is a minute but destructive plague to plants in houses—hot rooms, close and impure air, are sure to breed them. The falling of the leaf, the repeated efforts of the rose to recover itself, show either too much or too often repeated watering, or clay soil, or worms in the earth. There is one thing, however, that should always be observed, to secure healthy plants, i. e. good drainage in the pots; this permits the excess of moisture to pass off. Another evil prevents healthy plants in private collections—saucers are placed beneath the pots to catch the water, and if there remains; sometimes water is poured into the saucer, and thus the earth at the roots of the plant is always saturated—this should never be except to water plants during excessive bloomings.

Plants thrive better while in a growing State to dry off occasionally, so that even the leaves droop—then a free watering will do good. The leaves will curl, change color, drop, and the plant perish, by reason of want of water. (half watering, as it is called.) Some, water frequently upon the top, but not sufficient to reach the roots, and thus the plants suffer and die. It is the root that needs watering, not the top of the earth.

We would suggest to our correspondent to report the roses, if not wholly dead; see the condition of the earth, the roots, drainage, &c. He will find out the cause of the disease better than we can unless we should see the plants. We are always very glad to offer any advice or suggestions that may aid in the culture of flowers, and are pleased to receive such inquiries; and the more explicit the inquiry, the easier we can answer to every difficulty.—Ed.

The Firemen's Parade.

Monday, June 4th, was a gala day for the brave Firemen of Sacramento city, and heaven looked smilingly down upon them, seemingly to approve and make more joyous the occasion, by one of the loveliest days of the season. The bells rang out their merry peals at early morn, and soon the "reds and blues" were moving along the streets to their several quarters. Anon came the bugle note and tone of martial music, and the city was astir. It was indeed a "gala day," for the streets were thronged with citizens, ladies and gentlemen in their best attire, moving on to witness the brilliant pageant.

It was pleasant to notice how deep was the general interest in this strong arm of the city's safety. There was a universal wish and desire to have the celebration a pleasant and happy one. At 10 o'clock the signal bells gave notice of the formation of the several companies into line upon Second street. At 11 1/2 o'clock the line commenced moving. It was a fine parade and reflects great credit upon the City of the Plains, as a finer body of men for form, manliness of appearance, strength and muscle, could not be found or gathered were you to take your "picked men" of any State in the Union. The following was the order of the procession, which we copy from the Daily Union:

Chief Engineer Henry Polley, Grand Marshal.

FIRST DIVISION.

Assistant Engineer Paxson McDowell, Aid.

Groom's Brass Band, ten pieces.

Ex-Chief Engineers—Folger and Houseman.

Engine Co. No. 1, numbering 67 men, preceded by four axmen. Uniform—red fire caps, red shirts and black pants. Pioneer engine, trimmed with wreaths.

Carriage containing the Governor, Controller of State, Orator and Chaplain of the day.

Physicians and Surgeons of the Department in vehicles.

Hook and Ladder Co. No. 1, 35 men, preceded by three axmen. Uniform—black fire caps, light blue shirts and black pants. Truck unadorned.

Engine Co. No. 2, 30 men. Uniform—black fire caps, red shirts and black pants. Engine trimmed with evergreens and flowers.

SECOND DIVISION.

J. W. Haines, Assistant Engineer, Aid.

Sacramento Brass Band, 10 pieces.

Engine Co. No. 3, 64 men, preceded by four axmen. Uniform—dark green fire caps, dark blue shirts and black pants. Engine tastefully wreathed with flowers and evergreens.

Alert Hook and Ladder Co. No. 2, 30 men, four axmen in advance. Uniform—black fire caps, red shirts and black pants. Truck festooned with evergreens and surmounted by a bower of evergreens tenanted by a small boy. (Edw. Van Every,) in fireman's costume—a silver plated fire cap.

Engine Co. No. 4, 38 men. Uniform—black fire caps, red shirts and black pants. Engine trimmed with flowers and evergreens, and adorned with a large wreath of artificial flowers encircling the number of the company in the same material, presented by Miss J. Jacobs.

Engine Co. No. 5, 49 men, preceded by two axmen. Uniform—black fire caps, red shirts and black pants. Engine tastefully trimmed with flowers and evergreens.

As the whole line upon J and K street was presented to the eye it was one of the most unique processions we have ever seen. The companies in fine uniform of red or blue; each company alternating in color, and at their ropes, forming circular lines which embraced the whole street. The glorious day, splendid music, gaily decked apparatus gleaming in the sun, happy countenances—it was a glorious sight, worthy the attention bestowed upon it, upon the defenders of our city, our homes. After passing through the principal streets, and receiving the loud huzzas of the citizens, the body moved to the Theatre to listen to the oration by Dr. J. F. Morse. It will be sufficient notice of the oration to say it was what might be expected from one so able and eloquent.

The whole event closed by a crowning benefit to the Firemen at the Theatre in the evening, and it was a benefit, the Theatre being filled to overflowing, the play the "Lady of Lyons," and the whole nobly done. For the courtesy extended to us by the managers we are most thankful.

ALMOST A CRASH.—On Saturday, about 11 o'clock, the floor of the building in which our office was situated commenced giving way. For a few minutes we thought our presses, material, and the laws and journals which had been worked, were a total loss. But before any serious damage was done, the sinking of the floor ceased and we lost nothing but the cost of moving and the piling of the inside of our paper, and of some standing pages of the laws and journals—probably a total of \$500. Mr. French, of the Tribune, was almost instantly on the ground and offered any assistance his office could render to get out our Monday morning's paper. The Union proprietors were almost as prompt in their kind tenders of aid, which we accepted so far as to use their steam press to work off Monday's paper, as we found it impossible to get our own power press in order in time. Accidents like the one we have been subject to can severely be considered a loss, as they bring forth the finer feelings of human nature, and show that the acerbities concerning during a long period of bitter political antagonism are only the scum rising to the top—nothing more. We return our sincere thanks to our contemporaries.

Before noon Monday our new office, No. 40 K street, will be in complete working order, and our business will continue as though the accident had not happened.—State Journal.

We tender our sympathy always for trials, and we doubly regretted this accident, as it detained our friends of the Journal from visiting the exhibition on Saturday. We called upon them on Monday and found them all "right side up, with energy" and we surely rejoice the damage is so light, when so much was at stake. It was a fortunate escape from a heavy loss; but these ills of life are ever made light when the generous aid of neighbors and friends comes as quickly as noted above.

SEVERE ACCIDENT.—We regret to announce that Mr. Thomas Gardiner, of the firm of Gardiner & Kirk, and carrier of this paper, met with a severe accident yesterday afternoon by being thrown from his buggy, on the Stockton road, about three miles from the city. While returning to the city with a friend, they stopped for a moment to see a grizzly. To prevent the horse being frightened by the animal the head of the former was turned from the latter by Mr. Gardiner, while his friend got out. The horse, soon afterwards, being annoyed by flies, turned his head, saw the grizzly, and started off. After running about 100 yards the vehicle came in collision with a post, against which Mr. Gardiner was dashed, head foremost, by the immediate springing of the horse. He was picked up in an insensible condition in a moment afterwards, conveyed to a neighboring house, and died. A gentleman kindly started forth with this city for a physician and returned with Dr. Charles Burrill, without delay. Upon examination it was found that Mr. Gardiner had suffered a severe laceration and contusion just above and back of the left ear, and that one knee was also somewhat bruised. At the last account the injury was not deemed serious. The dash board of the buggy was broken and the horse ran about two miles before he was overhauled, although a gentleman started immediately in pursuit on horse.—Sac. Union.

This accident is to be deeply lamented, for such even as Mr. Gardiner, cannot well be spared even for a time. His energy and prompt business habits made him one of the main pillars of literary distributions.

WISTAR'S BALSAM OF WILD CHERRY.—This world-wide known specific, or sovereign remedy for consumption, can now be had in San Francisco of the agents for California, B. B. Thayer & Co., and of the principal druggists throughout the State. Messrs. Thayer, we notice, are the principal agents for this State for S. W. Fowler, of Boston, the proprietor. The name of S. W. Fowler prefixed to this and to many celebrated specifics, carries with it a guarantee that it is all that it purports to be, and wherever his remedies go, renovated health and happy homes take the place of disease and sorrow.

TOBACCO, COTTON, RICE, SUGAR CANE, &c. Mr. Cogswell above Murphy's, in Calaveras, has planted the present season one-fourth of an acre of tobacco, as an experiment for that section. We have heard of many persons in various counties who have done the same. Cotton has been planted also quite freely. Rice also, and sugar cane; and we may expect to see samples of all these important products the present year at the "Annual State Fair," at Sacramento city.

EXPRIE WAREHOUSE.—This substantial warehouse under the proprietorship of the Messrs. Bebee & Co., is one of the most extensive of the city, and the proprietors are preparing to receive storage and make the most liberal advances upon the goods entrusted to them.

IMPORTANT LAND CASE DECISION.—On Saturday in the District Court at Marysville, says the Express, a very important decision was rendered by Judge Barbour, which is a parallel case to one that it is rumored will be argued in the Sacramento District Court. It appears that in 1850, Covilland, Sampson, Renurez and Buchanan, sold to the plaintiff Brown, a large and now very valuable tract of land, which is embraced in the Cordana grant, and which has been recently confirmed to them by the U. S. Land Commission. The plaintiff paid a portion of the purchase money at the time of making the purchase, and the defendants executed to him their bond for a title on his paying the balance of the purchase money when the note was matured, which was at a time specified in the bond and note. On the maturity of the note, the plaintiff refused to pay the remaining portion of the purchase money, on the ground that the vendors were then unable to make him a good title. As soon as the title was confirmed, the plaintiff tendered the balance due the ranch company and demanded their deed, this the company refused, and the plaintiff filed his bill to force them to convey, to which the defendants demurred. The judgment of the court was for the plaintiff, Brown.

AGRICULTURAL AND HORTICULTURAL.—The rooms of the State Agricultural Society, on Fourth street, between J and K, were thrown open on Saturday to the public, and were visited by a large number of ladies and gentlemen, who were much pleased with the evidences there displayed of the whittation of our soil to the purposes of successful culture. Selections of great merit were exhibited from the principal gardens in this city, vicinity, and at San Francisco. It is designed hereafter to give public exhibitions on the 1st and 16th of each month, to which cultivators of the soil are invited to contribute. It is to be hoped, as desired, that the enterprise will have a salutary effect in directing the efforts of all who are or may be hereafter engaged in the culture of the soil.—Sac. Union.

STOCKTON SETTLERS.—According to the Republican the land owners of Stockton, under the Waker claim, have made distinct statements and propositions to two classes of settlers. First, to those settled outside of the original survey and within that made by the U. S. Deputy Surveyor. The land between the surveys is offered at \$1 25 per acre, cash; which will be better to the settlers than if Uncle Sam owned it, the expense, trouble and delay of proving up a pre-emption being saved. The other class of settlers are those occupying the land within the original claim and survey. To these, the land is offered at prices ranging from three to ten dollars per acre, according to the quality of the land and the advantages of location.

CALIFORNIA LAND CLAIMS.—The law requires that transcripts of all the cases decided by the Commissioners shall be filed simultaneously in the proper District Court in California, and in the office of the Attorney General; and if appeal is to be prosecuted by the United States therefor, shall be filed within six months by the Attorney General, in the proper District Court. The first transcript came to the office of the Attorney General on the 31st of March, 1853, and the total number of transcripts filed from that to the present time, is 427.

TO MANUFACTURERS AND OTHERS.—Manufacturers in the Eastern States will find it for their interest to place their business in our advertising columns, by this means they will make it known extensively in California, Oregon and Washington Territory. All new patents that need a wide extended notice will do well to look to our Journal. Address J. Q. A. Warren, Boston,—or address us here, and refer to responsible parties, and advertisements will appear at the regular rates. A large issue of the FARMER will be had during this summer and time of the Annual Fair.

THE NAZARENE'S VOW.—We have been kindly favored with this address of Dr. O. F. Winslow, before the Sons of Temperance in San Francisco, on Sunday, March 3. We have not had opportunity to examine it, but are confident it is worthy the perusal of every lover of morality and human happiness. Dr. Winslow is deservedly ranked among our most accomplished writers, and his addresses and writings are as much read as those of any public man in California.

ELLEN NORRURY.—We have received from the publisher, T. B. Peterson, of Philadelphia, a copy of the new and celebrated work, "Ellen Norrury." It comes to us heralded by glowing accounts of its excellence, its moral purity and its deep and truthful delineations of character and events. It is a tale from real life in the Quaker City, and only having a glance ere we go to press, we were touched with its beauty, and shall give it a careful reading and speak of it more at length.

NEW PAPER.—The first number of the Monterey Sentinel has been received. It is ably edited and neatly printed.

The Monterey Sentinel says that the potato and grain crops in Carmel and Salinas valleys are looking very well.

AGRICULTURAL AND HORTICULTURAL FAIR;

Cattle Show and Industrial Exhibition,
OF THE
CALIFORNIA
State Agricultural Society,
TO BE HELDEN AT
Sacramento City, in September Next.

PREMIUMS OFFERED FOR 1855.

The following section from the Act of Incorporation, by the Legislature, is the basis for the premiums announced below:

"Sec. 8. There is hereby appropriated from any money in the Treasury not otherwise appropriated, the sum of Five Thousand Dollars annually, for the space of four years, to be paid in September each year, to the Treasurer of said Society, on a requisition of the Treasurer of this State, signed by the President and Recording Secretary of said Society, which sum shall be used only for the purpose of paying premiums, and for no other purpose whatsoever."

FARMS, VINEYARDS, ORCHARDS, ETC.

Competitors for premiums in this department are requested to give immediate notice of their intention, to the President or Corresponding Secretary, that the committee may visit and examine at the most favorable time. No such notice will be expected to claim the attention of the committee unless received before the first day of August.

It is of especial importance to Grain Growers that they bear the above in mind.

Best Improved Farm.....	\$200
2d do do do do do do.....	100

GRAIN.

Competitors for premiums on Field Crops, must deliver samples of the same to the committee, on or before the 15th of September. The Fields shall be measured by the surveyor of the county or by two competent persons where they are located, or by one of the members of the society: and their certificate of the amount of land shall be presented to the committee, and the crop shall be measured or weighed by such persons, who shall make affidavit of the amount of the same, to be presented to the committee. In the estimate of Grain Crops, the committee will regard the number of acres, quantity and quality.

No premiums will be awarded for manufactured articles not produced in California, yet the Society will be happy to place such articles, with the names of the importers or exhibitors, on exhibition.	

CATTLE SHOW.

The Cattle Show will be held near Sacramento, and will take place on the third and fourth days of the Agricultural Fair. Competitors for premiums on animals must deliver a list of those intended for exhibition to the committee, on or before the first day of the Fair.

Stock must be on the ground before 10 A. M. of the second day of the Fair, when proper places will be assigned them, and on the days of the Cattle Show must remain in their places from 10 A. M. to 4 P. M.

Discretionary premiums will be awarded by the Society on articles or animals which they shall deem highly meritorious, although they may not be stated in the list of premiums.

Each Committee is authorized to recommend special premiums upon objects that properly belong to the class assigned to them.

The managers of the Society will be present during the Fair to give directions to all who may wish to enter animals or any articles for premium or exhibition, and forage will be furnished gratis for all animals entered for premiums.

The Society earnestly desire to be informed, at the earliest possible moment, how far the different Farmers in the State can co-operate in this undertaking, and what specimens they intend to exhibit—so that suitable provision may be made for their contributions.

All communications upon the subject, will be promptly responded to, and all information cheerfully rendered.

The announcement of the awards, together with appropriate exercises, will take place on the last day of the Fair.

Address the President or the Corresponding Secretary, at Sacramento.

Indian Settlements—Agricultural Developments—Civilization—Government Appropriations, &c., &c.

The vast amount of moneys appropriated for California, on her public works and in her varied departments, is often the subject of newspaper criticism. The large amount expended at our Indian reservations, and of which so much has been said and written the last year, and the wrong done to a gentleman of great worth—(Lieut. Beal) who had charge of these departments, and under whose administration great improvements were made—has induced us to make inquiries and know if in reality there has been any good accomplished.

It is a source of very great pleasure in the commencement of such a work to learn that Lieut. Beal had accomplished so much and laid so good a foundation, and it will be gratifying to his

friends everywhere to know that after the wrong that has been done to a most faithful officer, one who had labored long and arduously and had done so much to awaken attention to the value of agricultural wealth, had won the confidence and good will of a large body of Indians, had induced them to turn their attention to the cultivation of the earth, won them to peace, given them habits of industry—that this officer and his merits will be duly appreciated. Lieut. Beal, who was charged as being a defaulter to large amounts in that department, or rather behind in his accounts, has been reported most honorably correct in those accounts and reports; and it will be but a sorry matter for our government if prompt reparation is not made for wrongs done such public men. We do hope that our government may set an example so noble that all other governments may imitate them.

In making inquiries now relating to the Indian departments at Tejon, Noomlacke and Fresno, we have been greatly and most kindly assisted by the present superintendent, Col. F. J. Henley, whose earnest wish to advance the work is best proved by what we shall take pleasure in offering from time to time from that department. Col. Henley has most kindly offered us access to all the statistics which are important to show that the Indian tribes, once useless wanderers, can be induced to cultivate the earth and become useful to themselves and the country, instead of disturbing its peace; that they can be made to aid in developing its agriculture, instead of hindering its progress; and we are pleased to present these facts to our own readers, for we all rejoice to know that of the large amount of moneys our government has expended, a goodly portion of it, at least, is doing good, instead of advancing political schemes, as partisan papers would have it.

We are among those who believe the wrong done to Lieut. Beal, a most noble officer, and a friend of the Indian, and a benefactor to California, to have wholly originated in a partisan press and political hate. We, as Yankees, only guess so—but justice will be done to Lieut. Beal for the benefits he has conferred.

We have only room for a report which was sent to Washington in April last, showing the condition of affairs at that time, by a personal inspection of Col. Henley. The amount of land cultivated is as follows:

Tejon.—1,000 acres wheat; 300 acres barley; 200 acres oats; 100 acres in Indian gardens. About 800 Indians are here employed.

Fresno.—300 acres wheat; 300 acres barley; 50 acres Indian gardens. 400 Indians employed.

Noomlacke.—700 acres wheat; 300 acres barley; 100 acres oats; 100 acres corn; 50 acres Indian gardens. 1500 Indians employed.

There are also new settlements being begun at King's river (4 creeks,) and at Klamath; at these places potatoes are the principal products. Here are about 400 Indians. At every station or department Superintendents and well qualified Agents have charge of squads of Indians, who make weekly reports of all labor to Col. Henley. These reports have been kindly offered us to show the practical workings at these stations and they will be found very interesting to all who feel an interest in the permanency of California and of its "rise and progress."

The reports have been kindly transcribed for us by the courtesy of H. C. Brayton, Esq., Secretary in the office of Superintendent, to whom we return many thanks. Other data will appear from time to time and be of much interest.

The following is the report alluded to:

OFFICE SUPERINTENDENT INDIAN AFFAIRS, }
San Francisco, April 14th, 1855. }

HON. G. W. MANNING, Commissioner Indian Affairs, Washington, D. C.:

Sir: Having just returned from the South, I am able to give a very favorable account of affairs at the Tejon. The Indians are quiet and contented, and engage in their work, even more quietly than usual.

The quantity of wheat and barley sown, is about fifteen hundred acres. This is less by five hundred acres, than I intended to have sown—the dry weather, during the winter, prevented the plowing of a greater quantity. Rain, however, has fallen, bountifully, during the last month, and the crops look exceedingly well. I made arrangements while there, to provide for each Indian tribe on the Reserve, a garden, corn-field, and melon and pumpkin patch, as their individual property. The houses, which they were directed to build, last fall, are now completed, and many of them are now living in adobe houses, of their own construction.

They have become content with the policy of giving beef, only to those who labor, and are satisfied, now, with their ration of flour, which is the only food we give those who do not labor; to those who work we give about three pounds of beef, each, per day, which is boiled with the flour, (chopped wheat,) making a very good and substantial food, with which they are very well satisfied.

The women make their own clothing, very neatly; and I now purchase a cheap article of cotton drilling, which is made into clothing for the men; and as there is no expense, except the wholesale cost of the cloth, the cost of clothing is very little. I do not, however, give to the men, who perform no labor, any other clothing than shirts—deeming it important, at every point, to keep up the distinction between those who labor and those who do not.

We manufacture our own flour and grain, or, rather, chop the wheat for the Indians, with a small mill driven by mules; the water mill, which is in the course of erection, not being yet completed. When I left there the plows were engaged in breaking the garden and corn land for the Indians. When this should be completed I directed them to commence breaking new land for the next year's crop, as I consider this, which is similar to the summer fallow in the East, to be the proper method of farming in this country. Land thus prepared can be sown any time during the fall, and is ready to take its start with the first rains in winter. The wheat, of which there is a large quantity, on hand, is stored in the chaff, in the large adobe building; and I shall be able this year to test fairly the experiment as to whether wheat can be kept in this climate or not.

Returning from the Tejon, I came the land route, via Kern River, Fort Miller and the Fresno Farm. The Indians upon the entire route are peaceable and quiet, and I left word with them that this year's crop would enable us to furnish them with plenty of wheat at the Tejon, and gave them a general invitation to go there, which I have no doubt they will do as fast as the progressive settlement of the country demands their removal. There are about fifteen hundred Indians on King's River who have heretofore been averse to removal, and the white people, also, were last year disposed to favor their remaining. They, however, are now anxious that early steps should be taken for their removal; and the Indians, seeing the inevitable fact that the lands must soon be taken from them, are becoming restless, and ask for protection.

Preparatory, therefore, to bringing them under subjection, I have sent up from the Tejon, a team of mules, a wagon, loaded with flour, plows, &c., and have directed an agent to plant at one of the Rancheros a field of corn—say fifty or an hundred acres. This will be done at small expense, and is, in my opinion, the cheapest method of exhibiting to the Indians the objects and intentions of the government.

At the Fresno Farm I found everything in a prosperous condition. The quantity of wheat and barley sown is about four hundred acres, and looks more flourishing even than at the Tejon. There are about four hundred Indians at this place. They are in good condition and are very well contented. The distinction which I have kept up, in regard to food and clothing, between those who labor and those who do not, induced the chief of this tribe to solicit labor for all his people, that they might be clothed and fed alike.

There are within a circle of one hundred miles around the Fresno, several thousand Indians, and the object of this farm is to collect them here, preparatory to their removal to a more suitable location. Leaving the Fresno, I returned to this city, via Stockton, arriving on the 30th March, having been absent thirty days.

Very respectfully,

Your obt. servant,

THOS. J. HENLEY,

Superintendent Indian Affairs.

[From the Ohio Cultivator.]

THE FLOWERS.

Strong Wisdom framed this world of ours,
Rich goodness formed the herb and tree;
But love and Beauty made the flowers,—
Or so it seems to me.

From heaven they brought their tissues bright,
Earth bathed no drupe such tints to dye;
And formed the petals, in the light
Of Beauty's laughing eye.

And love and Beauty, as they wrought,
Joyed o'er their work, so won't you fair;
And each its breath of fragrance caught,
From sweet words uttered there.

The little cherubs, hovering by,
Crept each to some sweet blossom's breast,
And closed their bright wings, lovingly,
Like song birds in the nest.

And still they braided buds and flowers,
And Eden grew so sweet and fair;
Till lo! the serpent loved the bower,
And God himself walked there.

When sin invaded Eden's bowers,
All high and holy angels fled,
But, nestled in their favorite flowers,
The loving cherubs stayed.

And now by mountain, shore, and grove,
Beside the palace and the tomb,
Still beathing out their souls of love,
The buds of beauty bloom.

Though treachery, deceit and art,
Have desecrated all earth's bowers,
The earnest and the pure of heart
See angels in the flowers.

LYDIA JANE PIERSON.

BAD LUCK.—I never knew an early rising, hard working, prudent man, careful of his earnings and strictly honest, who complained of bad luck. A good character, good habits, and good industry are impregnable to the assaults of all the ill luck that fools ever dreamed of.—*Henry W. Beecher.*

My Confession.

I HAD always been a passionate boy. They said I was almost a fiend at times. At others I was mild and loving. My father could not manage me at home; so I was sent to school. I was more fogged, both at home and at school, than any one I ever knew or heard of. It was incessant fogging. It was the best way they knew of to educate and correct me. I remember to this day how my father and my master used to say, "they would fog the devil out of me." This phrase was burnt at last into my very being. I bore it always consciously about with me. I heard it so often that a dim kind of notion came into my mind that I really was possessed by a devil, and that they were right to try and scourge it out of me. This was a very vague feeling at first. After events made it more definite.

Time went on in the old way. I was forever doing wrong, and for ever under punishment—terrible punishment that left my body wounded, and hardened my heart into stone. I have bitten my tongue till it was black and swollen, that I might not say I repented of what I had done. Repentance then, was synonymous with cowardice and shame. At last it grew into a savage pride of endurance. I gloried in my sufferings, for I knew that I came the conqueror out of them. The masters might fog me till I bled; but they could not subdue me. My constancy was greater than their tortures, and my firmness superior to their will. Yes, they were forced to acknowledge it—I conquered them; the devil would not be scourged out of me at their bidding; but remained with me at mine.

When I look back to this time of my boyhood, I seem to look over a wide expanse of desert land swept through with fiery storms. Passions of every kind convulsed my mind—unrest and mental turmoil, strife and tumult, and suffering never ceasing;—this is the picture of my youth whenever I turn it from the dark wall of the past. But it is foolish to recall this now. Even at my age, chastened and sobered as I am, it makes my heart bound with the old passionate throb again, when I remember the torture and the fever of my boyhood.

I had few school friends. The boys were afraid of me, very naturally; and shrank from any intimacy with one under such a potent law as I. I resented this, and fought my way savagely against them. One only, Herbert Ferrars, was kind to me; he alone loved me, and he alone was loved in return. Loved—as you may well believe a boy of warm affections, such as I was, in spite of all my intemperance of passion, isolated from all and shunned by all—would love any one such as Herbert! He was the Royal Boy of the school; the noblest; the loved of all—masters and playmates alike; the chief of all; clever; like a young Apollo among the herdsmen; supreme in the grace and vigor of his dawning manhood. I never knew one so unselfish—so gifted and so striving, so loving and so just, so gentle and so strong.

We were friends—fast, firm friends. The other boys and the ushers, and the masters, too, warned Herbert against me. They told him continually that I should do him no good, and might harm him in many ways. But he was faithful, and suffered no one to come between us. I had never been angry with Herbert. A word, or look, joining on the humor of the moment, would rouse me into a perfect fiend against any one else; but Herbert's voice and manner soothed me under every kind of excitement. In any paroxysm of rage—the very worst—I was gentle to him; and I had never known yet the fit of fury which had not yielded to his remonstrance. I had grown almost to look on him as my good angel against that devil whom the rod could not scourge out of me.

We were walking on the cliffs one day, Herbert and I, for we lived by the sea-side. And indeed I think that wild sea makes me fiercer than I should else have been. The cliffs where we were that day were high and rugged; in some places going down sheer and smooth into the sea, in others jagged and rough; but always dangerous. Even the samphire gatherers dreaded them. They were of a crumbling sand stone, that broke away under the hands and feet; for we had often climbed the practicable parts, and knew that great masses would crumble and break under our grasp, like mere gravel heaps. Herbert and I stood for a short time close to the edge of the highest cliff; Haglin's Crag it was called; looking down at the sea, which was at high tide, and foaming wildly about the rocks. The wind was very strong, though the sky was almost cloudless; it roared round the cliffs, and lashed the waves into a surging foam, that beat furiously against the base, and brought down showers of earth and sand with each blow as it struck. The sight of all this life and fury of nature fevered my blood and excited my imagination to the highest. A strange desire seized me. I wanted to clamber down the face of the cliffs—to the very base—and dip myself in the white waves foaming round them. It was a wild fancy, but I could not conquer it, though I tried to do so; and I felt equal to its accomplishment.

"Herbert, I am going down the cliff," I said, throwing my cap on the ground.

"Nonsense, Paul," said Herbert, laughing. He did not believe me; and thought I was only in jest.

When, however, he saw that I was serious, and that I did positively intend to attempt this danger, he opposed me in his old manner of gentleness and love; the manner which had hitherto subdued me like a magic spell. He told me that it was my certain death I was rushing into, and he asked me affectionately to desist.

I was annoyed at his opposition. For the first

time his voice had no power over me; for the first time his entreaties fell dead on my ears. Scarcely hearing Herbert, scarcely seeing him, I leant over the cliffs; the waves singing to me as with a human voice; when I was suddenly pulled back, Herbert saying to me, angrily—

"Paul, are you mad? Do you think I will stand by and see you kill yourself?"

He tore me from the cliff. It was a strain like physical anguish when I could no longer see the waters. I turned against him savagely, and tried to shake off his hand. But he threw his arms round me, and held me firmly, and the feeling of constraint, of imprisonment, overcame my love. I could not bear personal restraint even from him. His young slight arms seemed like leaden chains about me; he changed to the likeness of a jailer; his opposing love, to the insolence of a tyrant. I called hoarsely to him to let me free; but he still clung round me. Again I called; again he withstood me; and then I struggled with him. My teeth were set fast—my hands clenched, the strength of a strong man was in me. I seized him by the waist as I would lift a young child, and hurled him from me. God help me!—I did not see in what direction.

It was as if a shadow had fallen between me and the sun, so that I could see nothing in its natural light. There was no light and there was no color. The sun was as bright overhead as before; the grass lay at my feet as gleaming as before; the waves thronged up their sparkling showers; the wind tossed the branches full of leaves, like bonfires of glittering gems, as it had tossed them ten minutes ago; but I saw them all indistinctly now, through the veil, the mist of this darkness. The shadow was upon me that has never left me since. Day and night it has followed me; day and night its chill lay on my heart. A voice sounded successively within me, "Murder and a lost soul, for ever and ever!"

I turned from the cliff resolutely, and went towards home. Not a limb failed me, not a moment's weakness was on me. I went home with the intention of denouncing myself as the murderer of my friend; and I was calm because I felt that his death would then be avenged. I hoped for the most patent degradation possible to humanity. My only desire was to avenge the murder of my friend on myself, his murderer; and I walked along quickly that I might overtake the slow hours, and gain the moment of expiation.

I went straight to the master's room. He spoke to me harshly, and ordered me out of his sight; as he did whenever I came before him. I told him authoritatively to listen to me; I had something to say to him; and my manner, I suppose, struck him; for he turned round to me again, and told me to speak. What had I to say?

I began by stating briefly that Herbert had fallen down Haglin's crag; and then I was about to add that it was I who had thrust him down though unintentionally—when—whether it was mere faintness, to this day I do not know—I fell senseless to the earth. And for weeks I remained senseless with brain fever, from it was believed the terrible shock my system had undergone at seeing my dearest friend perish so miserably before my eyes. This belief helped much to soften men's hearts, and to give me a place in their sympathy, never given me before.

When I recovered, that dark shadow still hung silently to me; and whenever I attempted to speak the truth—and the secret always hung clogging on my tongue—the same scene was gone through as before; I was struck down by an invisible hand; and reduced perforce to silence. I knew then that I was shut out from expiation—as I had shut myself out from reparation in my terrible deed. Day and night, day and night I always haunted with a fierce thought of sin, and striving helplessly to express it.

I had come now to that time in my life when I must choose a profession. I resolved to become a physician from the feeling of making such reparation to humanity as I was able, for the life I had destroyed. I thought if I could save life, if I could alleviate suffering, and bring blessing instead of affliction, that I might somewhat atone for my guilt. If not to the individual, yet to humanity at large. No one ever clung to a profession with more ardor than I undertook the study of medicine; for it seemed to me my only way of salvation, if indeed that were yet possible—a salvation to be worked out not only by chastisement and control of my passions, but by active good among my fellow-men.

I shall never forget the first patient I attended. It was a painful case, where there was much suffering; and to the relations—to that poor mother above all—bitter anguish. The child had been given over by the doctors; and I was called in as the last untried, from despair, not from hope; I ordered a new remedy; one that few would have the courage to prescribe. The effect was almost instantaneous, and, as the little one breathed freer, and that sweet soft sleep of healing crept over her, the thick darkness hanging round me lightened perceptibly. Had I solved the mystery of my future? By work and charity should I come out into the light again? and could deeds of reparation dispel that darkness which a mere objectless punishment—a mere mental repentance—could not touch?

This experience gave me renewed courage; I devoted myself more ardently to my profession, chiefly among the poor, and without remuneration. Had I ever accepted money, I believe that all my power would have gone. And as I saved more and more lives, and lightened more and more the heavy burden of human suffering, the dreadful shadow grew fainter.

I was called suddenly to a dying lady. No name was given me, neither was her station in life nor her condition told me. I hurried off

without caring to ask questions; careful only to heal. When I reached the house, I was taken into a room where she lay in a fainting fit on the bed. Even before I ascertained her malady—with that almost second sight of a practiced physician—her wonderful beauty struck me. Not merely because it was beauty, but because it was a face strangely familiar to me, though now; strangely speaking of a former love; although, in all my practice, I had never loved man or woman individually.

I roused the lady from her faintness; but not without much trouble. It was more like death than swooning, and yielded to my treatment stubbornly. I remained with her for many hours; but when I left her she was better. I was obliged to leave her, to attend a poor workhouse child.

I had not been gone long—carrying with me that fair face lying in its death-like trance, with all its golden hair scattered wide over the pillow, and the blue lids weighing down the eyes, as one carries the remembrance of a sweet song lately sung—carrying it, too, as a talisman against that dread shadow which somehow hang closer on me to-night; the darkness, too, deepening into its original blackness, and the chill lying heavily on my heart again—when a messenger hurried after me, telling me the lady was dying, and I was to go back immediately. I wanted no second bidding. In a moment, as it seemed to me, I was in her room again. It was dark.

The lady was dying now, paralysed from her feet upwards. I saw the death-ring mount higher and higher; that faint bluish ring with which death marries some of his brides. I bent every energy, every thought to the combat, and ordered remedies so strange to the ordinary rules of medicine, that it was with difficulty the chemist would prepare them. She opened her eyes fell upon me, and the whole room was filled with the cry of "Murderer!" They thought the lady had spoken feverishly in her death-trance. I alone knew from whence that cry had come.

But I would not yield, and I never quailed, nor feared for the result. I knew the power I had to battle with, and knew, too, the powers I wielded. They saved her. The blood circulated again through her veins, the faintness gradually dispersed, the smitten side thung off its paralysis, and the blue ring faded wholly from her limbs.

The lady recovered under my care. And care, such as mothers lavish on their children I poured like life-blood on her. I knew that her pulses beat at my bidding, and knew that I had given her back her life, which also had been forfeit, and that I was her preserver. I almost worshipped her. It was the worship of my whole being—the tide into which the pent-up sentiment of my long years of unloving philanthropy, poured like a boundless flood. He continues:

It was his life that he gave her—his destiny that he saw in her—his deliver from the curse of sin, as he had been hers from the power of death. He asked no more than to be near her, to see her, to hear her voice, to breathe the same air with her, to guard and protect her. He never asked himself whether he loved as other men or no; he never dreamed of his loving her again. He did not even know her name nor her condition; she was simply the lady to him—the one and only woman of his world. He never cared to analyse more than this. His love was part of his innermost being, and he could as soon have imagined the earth without its sun as his life without the lady. Was this love such as other men feel? He knew not. He only knew there were no hopes such as other men have. He did not question his own heart of the future; he only knew of love—he did not ask for happiness.

One day he went to see her as usual. She was well now; but he still kept up his old habit of visiting her for her health. He sat by her side for a long time this day, wondering, as he so often wondered, who it was that she resembled, and where he had met her before, and how; for he was certain that he had seen her some time in the past. She was lying back in an easy chair—how well he remembered it all—enveloped in a cloud of white drapery. A sofa-table was drawn along the side of her chair, with one drawer partly open. Without any intention of looking, he saw that it was filled with letters, in two different handwriting, and that two miniature cases were lying among them. An open letter, in which lay a tress of sun-bright hair, was on her knee. It was written in a hand that made him start and quiver. He knew the writing, though at the moment he could not recognise the writer.

Strongly agitated, he took the letter in his hand. The hair fell across his fingers. The darkness gathered close and heavy, and there loomed from him the self-accusing cry of "Murderer!"

"No, not murdered," said the lady, sorrowfully. "He was killed by accident. This letter is from him—my dear twin-brother Herbert—written the very day of his death. But what can outweigh the blessedness of death while we are innocent of sin!"

As she spoke, for some strange fancy she drew the gauzy drapery round her head; it fell about her soft and white as snow. He knew now where he had seen her before, lying as now with her sweet face turned upward to the sky; looking, as now, so full of purity and love; calling him then to innocence as now to reconciliation. Her angel in her likeness had once spoken to him through the waves, as Herbert's spirit then spoke to him in her.

"This is his portrait," she continued, opening one of the cases.

The darkness gathered closer and closer. But he fought it off bravely, and kneeling humbly, for the first time he was able to make his confession. He told her all. His love for Herbert; but his

HOME.

BY AARON SWITTL.

There is a simple little word—
Oh! ne'er its charm destroy—
Throughout the universe 'tis heard,
And nowhere but with joy;
There's music in its magic flow
Wherever we may roam,
The dearest, sweetest sound below;
That little word is Home.

The soldier in the battle's hum
May all things else forget;
'Mid hy'nets' flash, and beat of drum,
His home's remembrance yet.
The exile, doom'd on foreign lands
Through hopeless years to toil,
May do the despot's stern commands,
Yet sigh for home the while.

I came not where my life is hid,
Or roof'd with straw or tile,
So that the hearth-fire burns more bright
'Neath woman's radiant smile;
Affection on her fondest wing
Will to its portals fly,
And hope will far more sweetly sing
When that last place is nigh.

It may be fancy, it may be
Something far nobler—far;
But Love is my divinity,
And Home my polar star.
Oh! never not home's sacred ties;
They are not things of air;
The great, the learned, and the wise,
All had their training there.

Mark Lane Express, London.

EXPRESSES, &c.

E. W. TRACY & CO.'S EXPRESS
TO SHASTA, WEAVER, YREKA, JACKSONVILLE,
AND ALL INTERMEDIATE PLACES.

CONNECTING WITH THE
PACIFIC EXPRESS CO.

To the Atlantic States and Europe.

For the purpose of accommodating the business community, the undersigned commenced on Wednesday, Feb. 28, to travel from Shasta to San Francisco, carrying Money, Letters, Packages and Valuables, and attending to all matters of Express Business.

The Express will be dispatched regularly as heretofore, in charge of careful messengers, and the whole business will be under the direct management of E. W. Tracy. We have no security to offer except business capacity, and for that refer to the annexed card, signed by the business men of Shasta.

Card.

We, the undersigned, Traders, Merchants and Dealers, in Shasta, do hereby recommend to all who have business to be transacted between this place and San Francisco, E. W. Tracy, as a person in whose honesty, integrity and business capacity, the utmost confidence can be placed.

For the undersigned, Traders, Merchants and Dealers, in Shasta, do hereby recommend to all who have business to be transacted between this place and San Francisco, E. W. Tracy, as a person in whose honesty, integrity and business capacity, the utmost confidence can be placed.

For the undersigned, Traders, Merchants and Dealers, in Shasta, do hereby recommend to all who have business to be transacted between this place and San Francisco, E. W. Tracy, as a person in whose honesty, integrity and business capacity, the utmost confidence can be placed.

For the undersigned, Traders, Merchants and Dealers, in Shasta, do hereby recommend to all who have business to be transacted between this place and San Francisco, E. W. Tracy, as a person in whose honesty, integrity and business capacity, the utmost confidence can be placed.

For the undersigned, Traders, Merchants and Dealers, in Shasta, do hereby recommend to all who have business to be transacted between this place and San Francisco, E. W. Tracy, as a person in whose honesty, integrity and business capacity, the utmost confidence can be placed.

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise on Consumption," says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Lennec and other pathologists." Dr. CANSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or embellishing falsehoods.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Consumption can be cured.

Dr. WISTAR, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles of my knowledge have been used by my patients, with beneficial results. In two cases, where it was thought confirmed Consumption had taken place, the Wild Cherry effected a cure."

Dr. A. H. MACANALD, of Toronto, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever met, and knows of none so deserving the public patronage.

Dr. Wm. A. STAW, of Washington, D. C., says: "I with hearty success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity."

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry."

HON. SAMUEL S. PECKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful."

(From the Boston Journal.)

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its name has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most distressing malady."

C. D. MAYNARD.

Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations.—Synops, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine

Dr. Wistar's Balsam of Wild Cherry.

Surgery.

R. B. COLE, M. D.,

Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences; and Corresponding Member of several Medical Societies in the South and East.

Office—Athens Building,

South-east corner of Montgomery and California streets,

opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself principally to his office, where he proposes to treat all

feeling assured as he does that his former connection with Medical Schools and Hospitals, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the affections to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and morbid growths, occurring on any part of the body, Diseases of the Spine, Chronic Ulcers, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of Eye, Ear and Skin, Affections of the Bladder, Urethra, Scrotum and Testis (or in other words, all diseases of the Genito-Urinary Apparatus); and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly-treated Fractures, Contractions of the Limbs and loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.

Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.

AGRICOLA'S LETTERS.—NO. 3. On the Advantages and Necessity of a Rotation of Crops.

EDITORS FARMER: As plants derive a certain
portion of their constituents from the soil, and
different plants are composed of different materials,
or of the same materials in different proportions,
it must be of the utmost consequence to the far-
mer, if the land which he is cultivating is run-
ning short of any particular constituent to have
it planted with a different crop, in which it will
be wanted in less quantities; especially if it
should happen that the same soil contains a su-
perabundance of those very materials which were
less wanted by the first, but which, the crop in-
tended to follow is more particularly composed
of. Besides this, there are other reasons, which
go to support the claims of a rotation of crops,
equally convincing, and sufficient to show that
where farming is meant to be continued on the
same portion of land, for a length of time, such
a system is not only advantageous, but indispen-
sable.

To prevent any needless repetition, I shall en-
deavor to illustrate this by showing the advantage
of the "Five Course Shift," as practiced in Scot-
land, on land of ordinary quality, when it is not
in the immediate vicinity of towns, and when, in
consequence, the farmer has to depend, principal-
ly, for manure, upon what he can raise on his
own farm. Not that I mean to say that under
other circumstances, where soil and climate are
different, and where the wants and wishes of the
community render a different species of crops
more advantageous, other rotations may not only
be more profitable, but also more consonant to
sound philosophy. Still, as it is one with which
I am better acquainted, and may, with little modi-
fication, be introduced into California, I refer to
it not to the disparagement of other rotations,
but by way of example. It consists—1st year,
green crop of turnips or potatoes, richly ma-
nured. 2d year, grain crop, sown down with
clover and rye grass. 3d year, hay or pasture.
4th year, pasture. 5th year, grain.

Now, let a man take up any modern treatise
on Agricultural Chemistry, and refer to the dif-
ferent plants included in the above course, and
he will at once perceive that, not only are they
composed of the same inorganic constituents, but
that the proportions are not very dissimilar. The
only striking disparity is, that silicious matter
is much more wanted in grain crops and grasses
than for potatoes and turnips; and that, for
clover, the necessity of the alkalies and lime is
so very conspicuous. Hence a conjecture arises,
that there are other reasons, besides this dispar-
ity, which materially contribute to render such
a rotation so advantageous as experience has
proved it to be.

Let us examine this. The first course as speci-
fied is turnips or potatoes, on a well-cleaned fal-
low. Now the turning all the available working
horses and cattle, on the farm, to work on a field
of only one-fifth the amount of the whole, for
seven or eight weeks, in plowing and cross-plow-
ing, harrowing and cross-harrowing, so pulver-
izes the soil, and clears it of noxious weeds, which
it may have acquired during the whole rotation,
since five years before, when it underwent a sim-
ilar stirring, that not only is new soil exposed to
atmospheric influence, but the little fragments of
rocks, from which it was originally formed, and
which are to be found in every soil in the shape
of stones, more or less minute, get thus farther
reduced and comminuted, and are, in conse-
quence, made capable of furnishing those alkaline
and silicious materials, which all plants more or
less contain, and of which, to some as we have
seen, a considerable quantity is indispensable. It
is true the disintegration, thus mechanically com-
menced, takes some time to be chemically com-
pleted, but let it be remembered, that we do not
particularly want the alkaline materials we thus
procure for a year or two to come.

As it is necessary for growing turnips and po-
tatoes to perfection to have a rich soil, farmers
generally apply to these crops all the manure
which they have succeeded in making on the
farm for the whole year. In addition to this, it
is usual to apply guano and bone manure to the
turnip crop—but of this I intend to treat on a
future occasion.

If the thorough stirring and pulverizing of fal-
low land answers a valuable purpose, the laying
down the land, after it has grown a turnip and
grain crop, with clover and rye grass, is no less
advantageous, nor less in accordance with the fiat
of science. How far plants derive carbon, of
which they are chiefly composed, from the at-
mosphere through their leaves alone, or if they
also assimilate it through their roots from the
soil, is a question which may admit of some
doubt and discussion. At present it is not ma-
terial for us to examine. We know that a con-
siderable quantity is, in most cases, indispensable
to the formation of a good soil, so it matters little
whether it depends for this quality on the chemi-
cal or mechanical properties which carbon con-
fers upon it. But the stirring and turning which
the soil receives, during the operation of fallow-
ing, tends to diminish its quantity of carbon, as
the oxygen of the atmosphere, by the exposure
necessarily produced, is enabled to disintegrate
those portions thereof which had before remained
intact from its influence, and consequently to
consume and expel, in the form of carbonic acid
gas, a large proportion of the carbon which the
soil previously contained, and which, but for the
freshness of the new soil now brought into opera-
tion, and the manure added to it, would be con-
siderably impoverished of this valuable and ne-
cessary constituent.

To obviate this objection, it is laid down in
grass. Now if this had not been done, the land,
which had been cleared of weeds, as the leaves
began to fade, before the perfect ripening of the
grain crop took place, and after it was cut, would
have had nothing to present to the potent
sun of summer but a bare and exposed surface,
rendered doubly porous from the manner in
which it had been worked, and which, the oxygen
of the atmosphere, so penetrating in its character,
would have joined with the heat of the sun in
depriving still further of its remaining carbon.
But if when exposed to a warm summer sun, the
free carbon of the soil having combined with
oxygen, like water similarly exposed with air, is
expelled in the form of carbonic acid gas, as
water is in that of vapor, yet, where the heat is
not so powerful, the same gas, which is much
heavier than common air, necessarily falls to the
ground, as may be seen on the tops of mountains,
where a layer of almost pure carbon frequently
covers the surface to a depth of several feet.
Also the same effect, modified by the excess of
heat and oxygen at a lower level, takes place

under similar circumstances, in all soils, not too
porous, where air and water have free admission,
and consequently we always find the soil proper
more or less of a black color. Hence the value
and importance of clothing the otherwise naked
soil with an artificial covering of grass, which
not only presents a surface with diminished pow-
ers of acquiring heat, but one by which carbon
is absorbed as well as attracted.

We have now reached the 5th and last crop of
the Rotation (supposing the two years of grass
to be passed over) when, if not naturally a very
poor soil, the land would be in full perfection.
Thus such a system, instead of exhausting the
soil which must inevitably occur where a rotation
of crops is not followed, gradually improves it—
the only thing that is necessary for the scientific
farmer being, to take care that those necessary
constituents of his soil which are sold off his
farm in the shape of grain, cattle, &c., are restored
in those forms in which they may be most acces-
sible, and useful; and also, that any materials of
plants, of which it may be naturally deficient,
are added, so as to make it fully productive.

AGRICOLA.

Culture of Cranberries.

The little knowledge I possess in regard to the
cultivation of cranberries, is the result of my ob-
servation and experience during the last five
years. Hoping that it may benefit some of your
subscribers, I send you a few facts for publication
if you consider them of sufficient importance.

A marsh, which may be termed dry, is in my
possession; it is not dry, and sometimes is as
dry as meadow land; it is composed of muck, or
a black vegetable fibre of several inches in depth,
underlaid with hard gravel—being covered with
grass and a species of moss. Around the edge
of the marsh is a heavy growth of alder and
willow, forming a tangled thicket. It is wet
most of the year. The cranberry vines grow
naturally upon this marsh. Five years ago the
different patches of vines altogether did not ex-
ceed two acres. There are now more than seven
acres of bearing vines.

The marsh has been improved by clearing
away the brush, drainage, &c., and the quantity
of vines increased by transplanting in sods, put-
ting them in rows two feet apart one way and
one foot the other. Were the earth between the
vines covered with coarse sand it would be bene-
ficial in destroying the grass, and expedite the
harvesting of the fruit.

Cranberries can be cultivated from seeds, but
it is not a sure mode, neither is it expeditious or
as profitable as to transplant the vines.

Some portion of the marsh has been ditched,
but it is thought some of filling up the ditches,
especially if the seasons prove as dry as they
have been for two years past.

Last July the vines blossomed very full, but
were scorched by the heat and the crop was a
total failure.

Water is essential to the cultivation of these
cranberries, and if it could be done, it would be
desirable to overflow the marshes in a dry season.

I have another marsh which has no gravel
bottom, but is dry. The cranberry seems to
thrive equally well on it.

There are two kinds of cranberries growing
upon these marshes, each having their relative
value.

One variety grows on low straight vines, sel-
dom exceeding six inches in height; produces
fruit abundantly, of a small size and delicious
flavor. The vines are often so covered with ber-
ries that the ground looks red with them. The
process of gathering them is slow on account of
their small size. They bear nearly every year.

The other variety has long trailing vines, bear-
ing only in alternate years. The berries are
large, some are round, some are oblong, others are
oval or pear-shaped; they are of a beautiful color,
but not of as deep red as the other variety.

Some vines were procured from Minnesota in the
spring of 1852. The marsh was then very wet.
I put in the sods with a spade, intending to re-
move these in the fall, should the ground become
more dry, but as they thrive, they have remained
ever since. They have spread very much; the
vines nearly cover the ground and are fast rooting
out the grass. They are planted where I have
usually mowed for hay. The berries are very
large and fine. In the fall of the last year, 1854,
one square rod of these vines produced one and a
half bushels of berries, which sold for three
dollars a bushel.

The best time for transplanting vines is in No-
vember, but they will do well transplanted in the
spring.

I gathered in the fall of 1853, from five acres,
700 bushels of cranberries, that sold for \$2.50
per bushel. One man gathers about seven bush-
els in a day. Labor cost at that time seventy-
five cents per day and board, making the total
cost of harvesting about \$100.

The cost of marketing them is not great, buy-
ers purchasing them at any place on the line of
the railroad. I delivered them in barrels at Cold-
water, that cost perhaps \$100 more—leaving a
clear profit of over \$1500.

If our farmers who have marshes should turn
their attention to this branch of agriculture, they
would realize more profit on the investment than
in the cultivation of any other crop, while at the
same time they need not neglect the cultivation
of their upland.

I reside in Quincy about four miles east and
two miles south of Coldwater, Branch Co. Michi-
gan.—L. D. Halsted, in Michigan Farmer.

Will not the facts recorded above induce the
cultivation of cranberries upon some of our Tulea
and other appropriate places. Cranberries are
selling in New York the present month at \$15
per barrel. This would give double the income
named, in that State—what would it give in
California?

RANCHING.—We find the following sensible
article in the Columbia Gazette, Tuolumne county:

Since the first discovery of gold in California,
we venture to say that no occupation has been
more profitable to those engaged in it, than
ranching. Fortunes have been realized, in the
mountains, as well as in the valleys, in a few
years; and although it may not, at the present
time, be as profitable as it was three or four years
ago, yet there is no surer or more certain way of
making money, even at this day. We have a few
small and well cultivated farms in this portion of
Tuolumne County, from which the proprietors
are netting as much clear profit as they would
from any other occupation; and from close ob-
servation, we feel well assured that there are still
hundreds of acres of uncultivated land in this vic-
inity, which, by a proper mode of cultivation,
could be made to yield large amounts of grain
and vegetables. The soil on our hill sides is
 admirably adapted to the growth of wheat and
barley, and we have never yet known a season in
California, that sullent ruin did not fall during
the Spring, to mature all crops of grain sowed
early enough in the fall. Hundreds of families
are now settling among us, society is becoming
more permanent—those scenes of debauchery,
riot and rowdiness, which were heretofore of such
frequent occurrence—are passing away, and it
now behooves our citizens to use all efforts to
continue the general improvement that is now
taking place; and we know of no surer means to
use in this improvement, than to urge the occu-
pation and cultivation of our soil. Let the miners,
instead of crowding our towns and villages, settle
on small farms in the vicinity of their mining
claims, and when circumstances prevent their
working their claims, let them cultivate the soil.
Such a course will measurably make us more in-
dependent, happier and far more contented.

RASSETTE HOUSE.—This house, none so well
and so favorably known in California as a first
class hotel, is also being known, reported and re-
ferred to in New York, Boston and Philadelphia.
It must be gratifying to the proprietor, Mr. Ras-
sette, to know that his energy and perseverance to
overcome, the trying times through which he has
passed, have not gone wholly unappreciated, but
that his exertions will bring to him a deserved
reward. The Rassetto has the large number of
two hundred and fifty boarders, besides a constant
stream of transient customers. The Rassetto is
one of the finest hotels of the city, and truly
deserves the highest reward.

CLOTHING WAREHOUSES AT SACRAMENTO.—
Probably no city in California is better supplied
with the very best quality of ready made clothing
than is the city of Sacramento. Upon J street
can be found many large and well selected stocks;
but the well known house of Keyes & Co., the
connecting branch of Keyes & Co., of San Francis-
co, has a complete and perfect stock of every ar-
ticle of a gentleman's wardrobe, from the highest
cost and value of the full dress coat, pants and
vest, to the delicate neck-tie and white kids. For
every day, or for any occasion, a sure fit can be
found at Keyes & Co., J street, corner of Second,
Sacramento city.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, THURSDAY, JUNE 14, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

State Society's Second Show.

SATURDAY next, June 16th, the Society's rooms will again be in readiness to receive Specimens, Plants, Flowers, Vegetables, and such other rare and beautiful things as the friends may please bring forward.

It is to be hoped that "steamer day" being over here, our business men can find a breathing spell to call at the rooms with their families and friends. Rooms opens at 11 A. M.

WARREN, Corresponding Secretary, Sacramento City, June 13, 1855.

California Resources.

In answer to our correspondent "An Old Miner," in another column, we at the present time can only answer briefly, as our columns are full. We have full credence in all that can be said relative to the vast resources of California, in her mountains and valleys, and we are most anxious to see those resources developed and turned to good account.

The immenso sugar pine forests we know are all, and more than all, that they are represented to be, and for this reason we have endeavored to show not only the utility but the feasibility of converting them into gold, by preventing the importation of lumber. This can only be done by the establishing of mills in the mountains and preparing by a kiln-drying process the lumber at head quarters, which saves a vast expenso in transportation. When this is done, the price falls, more is consumed, and importation ceases; and the gold that would otherwise go abroad, remains here to encourage home industry.

As to the products of our soil—potatoes, onions, and roots of all kinds—about which so much has been said, and the repeated inquiries, "What shall be done with our surplus?" we answer promptly, *export! export!* We can raise produce enough to supply Europe, and as low as any other State, if the business is rightly managed. And we can ship it safely, too. The inquiries of "An Old Miner" are to this point, and he is wise and looking ahead, looking to results. He is right. It is only by a fit preparation of flour, grain, root crops, &c., that we can export in a safe and profitable manner. The new invention, the *Kiln Dryer*, will do this, and we have the proof for all who really have interest in the matter.

To answer "An Old Miner" directly, we can only give about the cost, having only made partial calculations and inquiries from those who know. The cost of a "kiln," of brick, and necessary machinery for drying grain and vegetables, will be from \$1000 to \$1500. The expense of drying grain or flour 20 to 25 cents per barrel. The expense of drying potatoes, 15 to 20 cents per bag. Green lumber can be perfectly dried in twelve to thirty hours, according to its thickness, and costing only \$10 per thousand feet.

"An Old Miner" may rest assured he will be safe in any investment he may make in the work contemplated, of preserving grain and produce for shipping—provided he is lucky enough to come in. The invention is one of the greatest of the age, and is in good hands. Experiments are now making and it is expected to have specimens ready for exhibition on Saturday, June 16, at the State Society's Rooms, at the city of Sacramento.

Those interested are fully aware of the importance of the work in hand, for the facts cannot be long kept out of sight, that our harbors are to be the resort of the whaling fleets of the Pacific coast, and the demand for produce of all kinds will be immense. When the facts are established as they will be, that all these articles can be so safely prepared as to keep for months, not only whalers, but our navy, merchant ships, and transportation companies, will all require to be supplied, and if our friend the "Miner"—good looking as he may be—would come in, he must be on the alert. The work is in progress, companies are forming, and soon he and others will see the results; they will be seen on Saturday next.

CONFIRMATIONS TO LARGE CLAIMS.—Of J. L. Folson, Esq., to eight square leagues (32,000 acres) in Sacramento Co., was confirmed on Tuesday last. The claim of Wm. Cary Jones for thirteen leagues at San Luis Rey, has also been confirmed.

Education.

This subject is one of such vital importance that we occupy a large space of our paper to-day with the subject, and trust our readers all will feel that it is room well occupied, even in an Agricultural journal.

We cannot better explain our wishes or desires than by republishing a few lines which appeared in our journal some months ago as approving the sentiments of Superintendent Hubbs, relative to the character and qualifications of Teachers, and we also publish his recent notice relative to the character of the Superintendent.

Mr. Hubbs urges strongly the vital importance of securing to this important trust intelligent gentlemen and such as shall be eminently qualified for so important a position. We give the document, and let these sentiments be fully carried out, and the cause of education will progress.

IMPORTANT AND TRUE.—We especially commend the following sentiments, uttered in a letter from Paul K. Hubbs, Esq., the Superintendent of Public Instruction, to the Convention of Teachers that assembled in San Francisco, recently. They are as noble as they are truthful, and of the highest moment to the citizens of that city especially. We give the extract:

"Teachers may be very learned, but if they lack the capacity to impart to others what they have stored up themselves, they are less competent than the unpretending who succeed in better development of the youthful mind. An ignorant teacher, however, must never be employed. It is a fraud upon the people to do so. The cities and large towns of our State are generally well organized. The rural communities have more especially my greatest anxiety. True, they are separated from the view of the cities, and in point of morals have great advantages for their children; but conventions like yours are scarcely thought about, and the occupations of the parent forget too often the future of the child. I feel my friends that I cannot sufficiently commend your patriotic and holy effort, and only rely upon it, such movements will live in the reminiscences of the past, the loveliest scenes of life. With sentiments of great respect, I subscribe myself your friend sincerely,

PAUL K. HUBBS,
Supt. of Public Instruction."

We here append the late Circular.

PUBLIC SCHOOL NOTICE.

DEPARTMENT OF PUBLIC INSTRUCTION,
SACRAMENTO, June 9th, 1855.

To the Superintendent of Common Schools in each of the Counties of the State:

SIR: The act of May 3d, 1855, in relation to Common Schools, provides for an election of three Trustees in each school district, on the first Monday of June of the present, and on the first Monday of October in each succeeding year. Copies of the act were forwarded you early after the passage; but it is probable that few of the districts have elected their trustees. I desire to call your attention to the necessity of appointing, on your part, in accordance with law, the trustees, in districts where they have failed to elect.

The opportunity is offered for the appointment of active and intelligent gentlemen to this very important position; and the careful selection of such becomes immediately necessary—as under the act no election by the people takes place till the first Monday of October, 1856. The visitation by the County Superintendent "personally at least once a year" of each school in the county, as provided by the new law, would, at this moment, aid materially in your selections of gentlemen best calculated to advance the interest of the important trust confided to your care and supervision.

Permit me again to urge upon your consideration, the necessity for the exercise of very great care in the appointments, upon which so much for good or for evil may result to the people of your county.

Your obedient servant,
PAUL K. HUBBS,
Superintendent of Public Instruction.

AMEN! to every word of it,—and we will go farther. In addition to activity and intelligence, we would have other traits of character in the teacher and in the superintendent. We would have gentlemen of manners and hearts full of kindly sympathy for the pupil that shall attract rather than repel. A teacher or a superintendent whose heart is enlisted in the work, is sure to win the love and respect of the pupil, and this accomplished, the pupil is certain to make good progress in knowledge.

We would have for teachers, committees, and superintendents, those only who are free from all sectarian or political bias—in fact, a sectarian or a politician is as unfit for these important stations as an inebriate drunkard or smoker would be to guard a powder magazine. One great cause of the slow progress in our schools arises from the incapacity of those into whose charge they fall. We shall take cognizance of this subject often, but for the present forbear further remarks.

NEW CITY DIRECTORY.—S. Colville, Esq., is engaged in preparatory steps for a new Directory of Sacramento. As he is so familiar with the preliminaries and details, having published several previously, we may expect from his experience of the past, that he will offer a Directory the present year superior to all others yet issued.

Grain—Bread Stuffs.

In the old world—in ancient days—from the days of Pharaoh to a more recent date, monarchs and rulers, princes and merchants, have been grain dealers upon a large scale. In the years of plenty they stored away their grain, thus preparing for years of scarcity; and history shows they were rarely mistaken. Monarchs and rulers thus saved their people from suffering and starvation. Merchants by the same plans made fortunes. For years of plenty are surely followed by years of scarcity; and were it not for the high value of money in California, we would earnestly call the attention of grain growers to the importance of some thought to this subject now. We do not fear an immediate famine, yet we feel confident that a demand will arise for grain and breadstuffs, within one year, that is but little conceived of at the present time.

The price of grain East and West shows conclusively that they have not large stocks on hand. The increased cultivation of lands has not kept pace with the ratio of population, and the demand for export will be very largely increased the coming year for European markets. The prospect of war is darkening daily, leaving little doubt of a long and bloody strife, and from present appearances crops in the great granaries of Russia and along the Baltic sea will be demanded for Russia and her new allies, and none will find its way to England or France. A change of trade will surely come and with it a change in the price of grain. The strife of battle is but just begun. The war trumpet is now being heard along the cultivated plains of Russia and other despotic nations, soon to be linked with Russia; and the plow and barvester will be left in the field, and the muskét take the place of the sickle. No grains will be allowed to leave these territories to supply their enemies, for all will be needed at home. The kingdoms of Great Britain, France and other nations will want our breadstuffs. The signs are in the heavens, and our country, if it will but see it, will become the granary of the world. And California may load her ships and bear the palm among her sister States.

Were merchants less timid, those who have capital to invest for one, two or three years, at a low rate, could find no safer investment than grain. What is required is such warehouses as would protect grain from loss by animals, insects, fire and damp; and the past is a guarantee that the article will always command a profit, if bought when at its lowest. There are always eases and times when purchases can be made with sure profit by holding. It only demands a permanent and legitimate business; not a mere temporary action of the speculator, but a trade of years and such as can be had for years in California.

Granaries, permanently established, should be built at such places as Sacramento, Marysville, Napa, San Jose, &c. At all these points it would pay, and we hope the subject will be regarded. It would aid the cultivator and benefit the country to have the capitalist and merchant always ready as purchasers, and to sustain the grower by a sure market.

Commissioner to the Paris Exhibition.

THE journals of the day announce John McCracken as the Commissioner to the world's Fair at Paris, the present year, and that he is the bearer of several gold specimens. This information to Californians must be interesting. California will be represented after all. We have frequently been inquired of among our correspondents—"What has our State done for the World's Fair? Will her Agriculture be represented?" But all we can learn has been contributed is a few gold specimens! We well remember the appointment of committees to collect, and a memorial to the Legislature for means to work with: even to pay the freight of articles, and commissioners to attend them. Both requests were refused by the Legislature; and we presume the present commissioner attends at his own cost!

We have been asked, too, who is Mr. John McCracken? Was he the former treasurer of Sacramento City? In all earnestness we would ask of our chief magistrate if it would not have been well for the best interests of California to have had such an interest evinced, and such means made use of as would have shown to Europe that California could produce something more than gold.

We have manufacturers, and mechanics, and workers in gold, and silver, and precious stones. It is true, those who are bona fide workers might not think it "would pay" to manufacture and ship to the World's Fair at their own cost. But again would we ask, where is our Government? Shall the industry remain so utterly disregarded,

when by a just and proper interest manifested by those in power, California could have been so represented in these industrial interests, as to have spoken volumes for her progress.

California is a manufacturing State, and many specimens could have been sent that would have reflected credit upon her industry and progressive developments. California is an Agricultural State, and in that relative should have been fairly represented. Means should have been provided liberally by the State for such a collection and a fit preparation, as would have shown the world what California really was. But when political influences and measures absorb all other interests, then industry in every department must flag. It is too late now to remedy the neglect, the Parisian Exhibition has opened, and California will be shown as a gold country only; and all we can do to show that she is something more, will be to endeavor to awaken manufacturers, mechanics and artisans in every branch of industry to prepare for our own State Fair, and from thence let a voice go out that shall speak her real condition and show that these great interests are an honor to the State.

Exhibitions during the Week.

STATE AGRICULTURAL SOCIETY'S ROOMS.

A growing interest has been shown at the Society's rooms during the time they have been opened, and citizens generally feel an interest by calling often. Children also esteem it a pleasure and privilege to be permitted to pass round the rooms and examine the various contributions made.

Mr. Wm. Vaughan, gardens Ninth and M streets, presented a very handsome Pyramidal Bouquet, composed of flowers very neatly arranged. The Bouquet was nearly three feet high.

Mr. Vaughan also sent a specimen of *Lallium Tigradium*, or spotted Tiger Lilly.

Mrs. Williams, gardens N street, between Fourth and Fifth, sent superb specimens of Franconia Raspberries; also a fine crimson Dahlia, a twin flower upon one stem.

A very handsome Vegetable Bouquet, made of turnips, beets, and radishes, was presented by Mr. Charles Tegel.

A noble specimen of the *White Globe Turnip* was received from the garden of J. Neely Johnson, Esq., one of the finest grown we have seen, very fine grained, measuring 27 3-4 inches in circumference, and weighing 6 3-4 pounds.

A handsome collection of quartz specimens, many very beautiful, brought from the Nevada tunnel, contributed by Joshua Butts, Esq.

Handsome samples of Native Grasses were received from Mr. Brooks, of the gardens of Wheeler & Brooks.

Another dish of those famous *Chili Strawberries*, grown at San Francisco, were received, and we are assured of a fine display on Saturday next also, when a show of the vines will be made and they will be offered for sale.

W. W. Swadley, Esq., very kindly sent us a specimen of Iron Pyrites, embedded in a root of the Manzanitto. It was found at Volcano Tunnel, 300 feet below the surface, and 650 feet from the opening. This specimen was the result of intense volcanic fires, for a portion presents the molten forms of several minerals, in a very interesting figure.

Green, Yet Ripel

We often hear it said that such a man is green, and it would be implied, and is intended generally as a hint that he is a know nothing; but it does not always follow that if a man is green he is behind his neighbors in knowledge; and we have a case to prove it. We append a letter from a farmer, who is Green, and will say that we should rejoice to find many more like our friend farmer Green. Here is the right tone and spirit, plainly and honestly spoken, and we deeply regret that our farmers are so forgetful of their truest interests, as not to be ready to join in the excellent plans proposed by Mr. Green. It is the very plan we have so often urged, and it would work a revolution in the pockets of our grain growers, for it would fill the pockets of the M. T. ones.

We commend this letter and hope all will read it and act upon it. We cannot omit this opportunity to say that one feature of the letter pleased us much, as it gave evidence that our friend wished the prosperity of the cause he advocated, for upon referring to our subscription list we find he has paid up a good way ahead, and in this letter was enclosed the quarter for the single copy, thus showing him mindful of what was our rights. Many persons think if a paper is lost or mis-carried, or if they want one or two extras, oh! it is of little consequence to the publisher; it is a trifle. He is a subscriber, and, of course, bound to receive all missing numbers free, or any respectable number, on given times, for mailing to friends, gratis. The paper is already printed and don't cost much. Now our friend was not so green as to forget that these scattering quarters would be

acceptable as well as just, and if all would act up to this, editors and publishers would see a little easier work of it.

The following is the letter referred to:

COLUSA, June 5, 1855.

MESSESS. EDITORS: No. 20 of the FARMER was taken out of the office for me and lost. If you have another number you will please forward it to me. That is the only number I have not received. Some people here that take other papers, frequently complain of not getting them regular; but there has never been a mail (we have a weekly mail) that the FARMER did not come, since I have been a subscriber. I don't know the reason of others failing. It cannot be the irregular mails, for that would act on all alike. I wrote you some time ago that the farmers here had called a meeting for the purpose of building a house to store their grain. But there is not enough of energy here for anything. I proposed to appoint (and recommend the same to other counties) a corresponding committee, whose duty should be to ascertain the amount of grain in each county and report the same to the central committee, who should ascertain as near as possible the consumption of the State, and report all such information to each of the county committees. Then our light would not be "under the bushel," but we could see what we were doing. But it seems that all hands would rather "dig" for themselves than to spend one day to make them a light.

But I am trespassing on your patience.

I remain yours, &c.,

WILL S. GREEN.

Queries from "An Old Miner."

To the Editor of the California Farmer:

DEAR SIR: I have recently returned from a short trip in the country. While there I was surprised to see so large a portion of our extensive valleys under cultivation. If we continue to progress at this rate, we shall soon be able to supply the nations of the world, that may be destitute, with all the bread they may need. Our State is unsurpassed in its adaptation to the production of all the small grains, and the staple vegetables and fruits necessary to the wealth and comfort of man. Not only are our broad acres covered with the waving grain, but our forests abound in the best lumber the world can produce. In many sections the sugar pine is found in great abundance. This is conceded to be as valuable for all the purposes of building as any of the Eastern pine; why then should this particular kind of lumber be brought from the Atlantic States, when we have at our doors more than we can use for a century, and with mills, energy and capital enough to meet the most extensive demands?

Now, will you inform me, and the public through your paper, how the dry kiln, you have often alluded to in your editorials of late, may be rendered available in drying lumber, fruits, grain and vegetables?

How long will it require to dry green lumber for the market? Can grain be dried so as pass through the Tropics without injury? how long will it take to go through the process?

Can potatoes be dried for the whaling fleet and the navy? Can the common vegetables, that cannot be kept in this or any climate through the year, be so prepared by this plan, as to be available at any time, and in any climate?

Again, what will be the expense of a kiln to dry lumber, grain and vegetables? What the expense of drying after its construction?

Has the company you spoke of, been formed yet? if so, could I get some stock in it if I wished? Is it a good investment for capital? I am pretty sure the thing will go ahead—for we greatly need something of this kind to prepare our lumber immediately for the market, and to insure the safety of our surplus grain in its transportation to any part of the world, more particularly to meet the great demand from Europe for all that we can spare.

By answering the above questions, you will greatly oblige me,—for I am satisfied by what I have witnessed in my travels, that something of this kind will become a necessity, and that it will be a source of immense profits to its owners.

Yours truly,

AN OLD MINER.

JUNE 15, 1855.

SMUT IN WHEAT.—Reports begin to come in from various sections of our State that smut begins to manifest itself, and, in some places, seriously. It is deeply to be regretted that farmers and grain growers will not take measures to save themselves from the loss that arises from this disease. We published many very valuable antidotes for the rust, and gave the practical results of last year. We also urged our grain growers to copy these results and lay them away for trial. They were published in the summer and early autumn. Those who have tried them would confer a favor by letting us know the results. This will be a public benefit, and we wish to lay it before our readers early, to save others from loss the coming planting season.

Benicia Female Seminary.

"THIS EDUCATION forms the common mind: Just as the twig is bent the tree's inclined."

It is a glorious satisfaction to know that amid all the trials which now beset our country and her institutions, arising from all those influences that are at war with their great principles, that we have a hope to which we can cling, that the days of trial will soon pass; and this hope springs from the knowledge derived from the fact that the education of the youth of our country will be such as to secure the prevalence of religion, morality and virtue. These are the pillars upon which the constitution of our country is based.

When speaking of education, it is usually in general terms—now it is in a particular sense in which we desire to call attention to it. The seminary of which we speak is for the especial education of females; and the attention and interest that is being bestowed upon female education is worthy of all commendation. It is only of late years that it has received a just consideration in the public mind; but the heaven is at work and it is now understood that educated mothers are the salvation of the household. California will not neglect the subject of education. The citizens universally feel its importance, and throughout the State, in all our cities and towns, parents and citizens are ready to aid in the good work. But we digress; we would speak of female education, and more immediately of the seminary to which we allude in this article.

We have noticed with pleasurable interest and with true satisfaction the steady, onward progress which is made by the pupils at this seminary. There is that constant care and regard for the whole education, moral, physical and intellectual, that the progress is seen in the whole character of the pupil. The seminary at Benicia is under the charge of Miss Mary Atkins, a lady every way qualified for this responsible trust. Able assistants are connected with the seminary in music, drawing and French. The apartments are excellent, the location pleasant, the scenery fine; and having placed our own children at this institution and seen them make rapid progress, and found them very happy amid a group of other happy ones, we can most conscientiously and earnestly recommend this seminary as one of the best in the State.

It was our privilege to enjoy an intellectual repast of more than ordinary interest at the recent public exhibition of this highly interesting and valuable institution. Having received a courteous invitation to be present, this gave us a double motive for our attendance—the pleasure of an examination of a High School, and the interest we had in loved children among the pupils.

This seminary has been in operation about six months under its present Principal, yet it is now one of the most popular seminaries in the State. The exercises lasted two days and evening. The first day, Wednesday, was principally devoted to the primary classes of scholars, in the usual primary lessons, yet in them a pleasing interest was manifested throughout the day. Thursday was particularly interesting, being an examination of the studies pursued in the higher branches, the recitations and examinations in Reading, Arithmetic, Algebra, Composition, Botany, French, &c. These examinations were very close and thorough, and conducted by the Principal, assisted by Rev. Mr. Woodbridge and other gentlemen who took an interest and were present. We noticed with pleasure the following persons present: Rev. Mr. Hunt, of San Francisco; Paul K. Hubbs, Esq.; Mr. Gray, Mr. Wetmore, besides many parents and ladies and gentlemen connected with education. We could not but notice with satisfaction the determination on the part of the Principal, that the pupils should be closely examined and no error pass uncorrected. The two days' examination were finished much to the credit of all.

Thursday evening was set apart for a Festival Examination, or Exhibition rather—a series of declamation, music and rehearsal—and of so interesting a character, that we feel assured our readers will not regret the space we occupy in giving publicity to what affects the community so well as education. The evening exercises were held at the "State House," and were well attended. We noticed in addition to those who attended during the day, Gen. Wool and suite, Judge Heydenfelt, Judge Hastings, Lieut. Derby, with many of the families of those among the military departments, and the principal families of the place, the hall being crowded to a late hour.

The following was the order of the exercises:

- 1st, Prayer.
2. Music—two pieces—by Misses Virginia Hubbs and Mary E. Hook.
3. Rehearsal—Be kind to the loved ones at home—by about fifteen of the primary class; after the rehearsal it was sung in a pleasing style by the class.

4. Music (Duett)—by Misses L. Boggs and R. Reynolds.
5. The Four Wishes—by Misses Mary Warren, Matilda Wright, E. C. Wright, and Arabella Park.
6. Remember Me (Original Essay)—by Miss Mary Humphrey.
7. Home (Rehearsal)—Miss Mary Hastings.
8. Music (Duett)—Misses M. Kroh, and M. L. Bequette.
9. Hope (Original Essay)—Miss Mary Riddell.
10. Geneva (Rehearsal)—Miss M. L. Bequette.
11. Music (Duett)—Misses F. E. Livingston and Lepgeer.
12. Hamlet's Soliloquy on Life and Death (Rehearsal)—Miss M. Kroh.
13. Ambition (Original Essay)—Miss M. A. Hook.
14. Beauty of Piety (A Dialogue).

This was that beautiful dialogue of S. C. Edgerton. It was well studied, comprehended and delivered, by ten young ladies, all appropriately dressed, and with emblems representing the characters of the three first—*Flora, Terrestria, and Oceanica*. The characters were as follows:

- | | |
|-------------|-------------------------|
| Priestess, | Miss F. E. Livingston. |
| Flora, | Miss M. L. Livingston. |
| Terrestria, | Miss C. J. Dutton. |
| Oceanica, | Miss G. E. Woodbridge. |
| Chrysoline, | Miss Josephine Latimer. |
| Eria, | Miss Virginia Hubbs. |
| Meteorina, | Miss Marion Latimer. |
| Celestia, | Miss A. Hook. |
| Psyche, | Miss Rosa Reynolds. |
| Christina, | Miss Lewann Boggs. |

15. Swiss Shepherd's Song—by Miss Emily Walsh.
16. The Benicia Wreath, a weekly paper, edited and conducted by the pupils, was presented and read. Editors for No. 10, Misses E. Walsh and M. E. Woodbridge.
17. Song (Duett)—Miss E. Walsh, Miss Lepgeer.
18. Hail Columbia—by the whole school.

We have given below the editorial and some essays from the Benicia Wreath, to show the style of composition, and we shall publish a part of the original essays. We wish we could publish all at this issue, but must defer till another time. We have been kindly furnished with several copies of this "Wreath," and shall be pleased to exchange with the fair editors, and shall always be proud to cull some of the beautiful "rose and lily" buds from this bright garland. Many of the articles, both prose and poetry, give evidence of talent more than ordinary. We publish in our present issue three original essays by the pupils—"Remember Me," by Miss Mary Humphreys; "Home," by Miss Mary Hastings, and "Hope," by Miss Mary Riddell. The compositions possess many beautiful thoughts, and if the ideas conceived in the sentiment thus uttered be carried out in life, the world will be so much bettered.

The scene presented at the hall was one of BEAUTY AND TRUTH—teachers and their young pupils all giving utterance to noble and virtuous sentiments, written, spoken, and uttered in song—and the scene presented was doubly beautiful, for the brave, the good, and the true were present as parents, brothers, sisters and friends, to sustain, to appreciate, to applaud, and to enjoy. It was indeed a sight that the good angels could smile upon and bless. To the Lady Principal, who stood within the circle of her lovely pupils, loving and loved, there needs no word of praise—her very works praise her. And it was a pleasing and proud moment for each teacher—all were happy—everything was in harmony, and the citizens of Benicia, lonely a place as some would have it without the capital, yet they have a capital mightier than all political structures, one that shall endure when granite and marble shall perish—the capital of educated mind. Benicia may well be proud of her schools and seminaries of learning. We shall often revert to them, and to the Benicia Female Seminary, of which no better exists in the State.

(From the Benicia Wreath, Miss E. A. Walsh, Editors.)

DEAR SCHOOLMATES: As you are all aware, agreeably to the wishes of our Teacher, we a few months since, formed a Wreath, with which we hoped to crown our little band, where beauty and brightness had nestled in its opening buds. So far it has been kept among us by the breezes of love and ambition; each is vying with the other to cull and twine the sweetest flower in the "Benicia Wreath." 'Tis an honor, and well may it be, for we wander not on the lofty mountain peak, or in the lonely dell, nor yet upon the hill-side, but on yonder plain, watered by the ever-flowing fountain of knowledge. It is there we have culled never fading flowers, wherewith to twine our garland. Spring has passed away with all her loveliness, and summer is succeeding, but not bringing floral offerings to us, therefore shall we weary from study, rest for awhile; and let us lay our Wreath beneath the cool, refreshing waters of this fountain, till our return, then shall we gather for it, with renewed love and ambition. And now dear companions, the tie which has bound us together for the last six months is to be burst asunder, perhaps never to be united again, but memory will play her part in the great drama of life, and in after years per-

chance it will bring before you visions, in which all your schoolmates will picture, just as they appeared when you were of their happy band. Time is wasting us swiftly onward, and the hour of parting draws near, with its tear and heartfelt farewell; but the time of rejoicing will soon follow, for kind friends and dear parents are waiting to welcome you home. And should some of us never meet again, on earth, perchance we may meet, in that happy home, where bliss reigns forever, and sorrows are unknown.

"REMEMBER ME," BY MISS MARY A. HUMPHREY.

THERE are not two words in the language that call back a more fruitful train of past remembrance of friendship than those words. Look through your library, and when you cast your eye upon a volume that contains the name of an old companion, it will say Remember Me. Have you an ancient album, the repository of the mementoes of early affections? Turn over its leaves stained by the fingers of time, sit down and ponder on the names enrolled upon them; each says Remember Me. Walk in the hour of twilight, amid the scenes of your early rambles; the well known paths, the winding streams, will recall the dreams of youthful pleasure, and the recollections of juvenile companions; they too bear the injunction, Remember Me. But whom do we always remember with affection? The virtuous, the kind, and the warm hearted, those who have endeared themselves to us, by the amableness of their dispositions, the habits and feelings of our friends which attach us to them most strongly, which leaves the only lasting bond of affection; which alone can secure our affectionate remembrances.

HOME.

OUR first, best country, is at home. There is no trait more amiable in the human character, than the attachment which each individual feels for his native place. With what resistless, tender, and soul-subduing influence, does the remembrance of past scenes and pleasures, frequently rush upon the mind! Our native hills, the groves, the meadows, and the fields, which witnessed the innocence and sportings of our youthful years, arise before the imagination arrayed in all their beauty. From the lonely retreat of our own hearts, we look back with tender affection to the sacred spot where repose the slumbering ashes of our departed kindred and friends, and in the chaste and pious meditation, we feel a pleasurable melancholy steal over our souls which we would not exchange for all the sparkling of unsubstantial amusements. But awakening from the pleasant reverie, we find we are in a far distant land, surrounded by strangers. In vain we look around for the companions of our youth—all is sad, lonely, and desolate.

M. D.

"HOPE," BY MISS MARY RIDDLELL.

How cheering she seems to the heart of the wearied man, as she trips lightly before him, and with smiles beckons for him to follow. How softly her words fall on the bruised spirit of the lonely orphan, as she goes in to the world, to pursue "Life's" weary pilgrimage alone. How welcome are her words of comfort and prediction of a happy future. Do you not think the heart of that orphan blossoms here, as it does in her labor and softens her grief? "Hope" rays gleams swiftly through the grating of a prison window, and cheer the weary prisoner. A spirit, quickly wending its way homeward, to the land of happiness, beyond the grave, hears a sweet voice, speaking of that beautiful land. She lists, the voice is "Hope."

The wanderer, in a foreign land hears her with joy, as she bids him hope for the future, and the evening breeze and the roaring sea, sound no longer to him like the predictions of a clouded future, but on the crested waves her smiling face is seen, and amid the breeze, as it sweeps gently past his window, is heard her voice, soft and low, as it tells of a reunion of the wanderer and his friends, beneath the azure skies of his far off home. The aged mother whose only son is on the bounding billow, feels the cheering light that is shed within the depths of her heart, by her gentle visitant, as she thinks of the return of the long absent one.

The world would be a wilderness if all Hope were taken away. None could be happy without her beams; and however delusive she may sometimes be, she lightens the pathway of life. How-ever hopeless the future may look to us, let "Hope on, hope on," be our motto, and our paths will be brightened by Hope's cheering beams.

Would you cast gentle Hope from your path and heart, and let her presence be supplied by the dull heavy form of Despair? No! rather welcome her with smiles, and shouts of joy, and let her words of cheerfulness, help to clear away the gloom from our life's pathway, and wreath a crown of everlasting glory for the future. Hope dwells not with gloom; but she is like to a beaming star in the heavens that cheers you onward, in its path. How dark and gloomy would be the veil of night, if there were no lights in the heavens to guide the traveller on his way. Thus would our hearts be if we allow the star of Hope, to grow dim, for no longer should we have a beacon light to guide us o'er life's thorny pathway, but should be involved in darkness, ignorant of the path we trod. What but Hope could have secured America's independence? Nought! for the patriot's heart was cheered by her beams; and the hope that he could help to secure his country's freedom, made him dash onward, and amid the cannon's roar, raise aloft the banner of his country. Then, when we think of the time, when the patriot Washington fought for America, and the hope that cheered him on, let on each heart be indelibly written—HOPE!

Horticultural Department.

Pomology in Various States.

FROM the "Proceedings of the Third Session of the American Pomological Society," at the session held at Boston, in September, 1854, we select the following reports:

REPORT FROM MAINE.

The committee do not think it advisable, at this time, to make a lengthy report, but rather briefly to notice the seasons in Maine, since their last was made, with a very few remarks on varieties.

Last year the fruit crop was generally good. Of apples, moderate; pears and plums beyond an average.

The winter succeeding surpassed in severity any previous one for twenty years or more, and serious losses were sustained.

A degree of cold equal to 31 deg. below zero, coming upon an autumn, warm and unusually late, and consequently acting upon much imperfectly ripened wood, and in too many cases upon trees weakened by overbearing, might well be feared.

To show that the disasters of the past winter were not wholly owing to the severity of the cold, it may be well to mention the fact, that of about eighty pear trees planted by one of your committee, about the fifteenth of October last, and to which the leaves adhered firmly, and were removed by hand to check the further flow of sap, not one tree was lost; while in the nursery rows, from which the trees were taken, a considerable proportion were killed.

In consequence of the severe drought of the past summer, which was more severe than since 1841, no rain having fallen for seventy-five days previous to the first week in September, the fruit crop of the present year has consequently been very light, and less opportunity has been afforded than was desired, for testing many new varieties, and the more so, as on many trees not apparently otherwise injured, the blossom buds were so much injured as to fall without opening.

Yet they are not the less confident, in regard to the ultimate profit and general success of fruit culture in Maine, if judiciously managed in the matter of the selecting of suitable varieties, and of subsequent cultivation. As to the adaptation of varieties to soil and climate we know something; but much remains to be learned. Of the necessity of thorough cultivation, we already know more than we practice.

Allow us to press this point, and urge all who propose to plant trees, to invest in the operation some money, care, and labor, say one dollar's worth in all for each young tree, to purchase, plant and care for it the first year, and fifty cents for each year afterwards. This would suffice, and would not be extravagant. Should this be faithfully done, it would be reasonable to anticipate a good profit on the investment. In a few years each tree would probably yield as much as the interest of one or two hundred dollars, and will continue to do it for many years.

The committee are confident that there is no way by which the lands of Maine can be used that will pay a greater per cent. per acre, than by the cultivation of the finer varieties of fruits which are suited to the climate of the State. They therefore recommend the extensive cultivation of the choicest and long keeping varieties. That the winter apples of Maine possess a sharper and a higher flavor, and a more crispy and finer texture than those of the same varieties grown in other States, in a warmer climate, and a longer season. They also decidedly possess better keeping qualities. This gives our cultivators an advantage when large quantities are grown for exportation. The fact that our long-keeping fruits may be successfully carried to nearly all parts of the world, is calculated to allay the fears of any who may apprehend that the extensive planting of fruit trees would result in overstocking the market, for that is out of the question.

Maine is largely interested in shipping; our ice crop never fails, and immense quantities are annually shipped to foreign countries; and our fruit and ice can go well together. Baldwin and other long-keeping apples have been carried with ice to Galatia, and there sold at high prices, weeks and even months after our stock of apples at home has been exhausted.

REPORT FROM CONNECTICUT.

Hardly any season is exactly right, according to our notions. In the middle region of our State, the two past have been remarkably dissimilar. The one now closing has been very dry, while that of 1853 was very wet; the two extremes nearly alike unfavorable to the cultivation of good fruits, with perhaps the exception of grapes (both foreign and native) cultivated in the open air. These stand severe droughts, ripen earlier, are superior in flavor, and at the same time are less liable to mildew and the rot.

The early part of the season of 1853 was made remarkable, also, by the appearance of the Palmer worm, so called, in great numbers, which destroyed the foliage of apple trees, as well as that of some others, and, of course, injured the fruit more or less. This insect eats the leaves as voraciously as the canker worm, and at about the same season, viz., June. They did not appear again this year.

Very much fruit, it is believed, was destroyed this year by a severe frost that occurred on the first Saturday night in May, the effects of which were more noticed than the cause; which fact can only be accounted for, by the habit people have in these parts, of lying late Sunday mornings. The morning was bright and clear, and the ground where it had been broken up, frozen,

hard enough to bear up a man of common size. Plum trees, cherry, and perhaps some others, were in profuse bloom at the time, but failed almost entirely of producing fruit. Apple and pear buds generally were also much injured. One fact, in this connection, is worthy of notice: many pear trees, on quince roots, were at this time entirely killed, as appeared afterwards, while those on their own roots, were not injured beyond the destruction of the fruit. About one dozen vigorous looking trees were killed in my own garden, many of them having borne fruit several seasons; showing very conclusively that pear trees, on quince roots, are liable to a calamity which those, on their own roots, are not. The trees, in this instance, were forward, the buds nearly ready to open, and the sap, of course, in free circulation, making it most probable that the sap vessels were destroyed by freezing of the sap. If this be true, there is one objection to trees thus worked, which we have not seen noticed.

REPORT FROM NEW YORK.

I find myself unable to make my report as full or interesting as I had hoped to do, in consequence of having, as yet, received no replies from several of the cultivators of this vicinity, to whom I have addressed letters on the subject. I am constrained, therefore, to rely more upon my own observations than I had expected.

Fruit culture in the vicinity has rapidly advanced within the past ten years. Up to that period it had attracted comparatively little attention, and (except in the nurseries) the varieties cultivated were few, and many of them such as would now be considered worthless. The apple was almost the only fruit I cultivated for market, except a few of the most common pears and cherries. There were several pretty large apple orchards, composed chiefly of Rhode Island Greenings, Spitzenburg, the various Russets, and a few others, which at that time comprised the bulk of the varieties under cultivation.

Many thousands of trees have since been planted, and nearly all the finest apples, pears, cherries, plums, etc., have fruited. The smaller fruits have also largely increased, both in number of varieties and quantity. The strawberry, in particular, has of late received much attention, and a considerable extent of land is devoted to its cultivation.

Several experienced cultivators have planted large orchards on Grand Island, in the Niagara river, a few miles below the city, which being somewhat removed from the violence of the lake winds, is a more favorable situation for the culture of the less hardy fruits than the more exposed lands near the lake.

The majority of fruits are, however, cultivated with great success in our vicinity, and many of them grow and produce with great luxuriance.

Our winters are variable and frequently mild, being, by the alternations of severe and open weather, unfavorable to the safety of both the buds and the trees themselves. The springs are generally cold, backward, and windy; and sometimes a late frost causes great damage to the fruit crop. When the season is, however, fairly opened, vegetation advances with great rapidity, and the long continuance of fine weather in the autumn, permits the wood to become well ripened, and prepared to sustain the return of cold.

The soil varies much. On the same lot can be frequently found sand, gravel, and clay, in greater or less proportions; a strong clayey loam and a light sandy soil being the two most commonly found.

Great confusion has existed in nomenclature, which is not even now fully cleared up. Many fruits have been received and cultivated under names to which they had not the slightest claim; and much disappointment necessarily resulted.

REPORT FROM PENNSYLVANIA.

The State Fruit Committee of Pennsylvania present a report upon the fruits and fruit culture of the State, from such sources of information as to them became available.

The chairman selected his associates from residents of different portions of the Commonwealth, so that the whole might be canvassed, and a full expose of fruit culture might be made; appointing one in each of the counties of Chester, Cumberland, Centre and Alleghany.

Dr. J. K. Eshleman of Chester county, in a communication, dated August 12th, remarks, that "the almost total failure of fruit in our part of the State, will give us but little experience in new varieties."

"The early spring, and subsequent cold—thick ice was formed in the last of April and first of May—destroying most of the fruit, and in many instances the trees. Cherry trees have suffered most. Again, the long drought in June, and subsequent extreme heat, caused pears to ripen prematurely, and many to rot on the trees. Madeline, Maynard, Bloodgood, Dearborn's, Peeche and Skinless, are already gone. Ott, Tyson, and Brandywine are ripe; in passing, let me say that with these last, (natives,) the Bartlett and St. Ghislain, we have a succession, for near two months, that leaves little to be desired. The lists issued in the last report, as worthy of general cultivation and promising well, contain everything that a general cultivator in this section need expect upon.

"The experience of two years, I regret to say, has added nothing worthy of remark to the knowledge of blight in fruit trees, nor failures of varieties. Unless we have gained some interesting additions, it is entirely unnecessary to trouble you with a repetition of long catalogue lists."

From a letter, under date August 22d, received from Wm. G. Warring, Esq., of Centre county, the following extracts are given:

"I hope that the Pomological Society may continue to flourish and be active. So long as time

is required to fully determine the true merits of any sort of fruit, the work of the society will increase, instead of diminish upon its hands. There will be a great many re-considerations. The same fruit varies from indifferent to very good, and from being grafted on a different stock. The variations in different seasons is considerable; and another frequent and important cause of uncertainty, is the grafting of various sorts upon one tree. In this case, the weaker go to the wall, and cannot possibly show their qualities. We have had but few cureulios or apple worms, this season. It is to be accounted for, I suppose, by the severe freezing of the latter part of March, after a week or two of warm growing weather. But we have extraordinary swarms of grasshoppers, which have, in many places, stripped large orchards of every leaf. Perhaps they would not have been so numerous, had the heavy snows in March killed off the birds. The borer has not yet penetrated the mountain ranges so far as to reach our valleys, but is near us on the east. The slug, which eats the parenchyma of the leaf of the pear and cherry, is also approaching us on different sides. The cherry knots are here, or rather were, for they have killed off most of their subjects. The plum knots are close on our borders, in Union and Missin countries. They have appeared at intervals during many years, but so far, cutting out has checked their progress.

Dreadful Inundations in Holland.

Accounts from the provinces of Guelderland and North Brabant state that in consequence of the driving ice of the rivers having fixed itself in various points into barricades, a vast quantity of territory lies now entirely under water. As many as seventy villages are submerged. Since 1850 such inundations have not been known in Holland. At Arnhem, enormous dams have been constructed in all haste, to prevent the entire town being submerged. The Rhinish railway will, it is apprehended, become impassable. In the village of Veenendaal the water covers the tops of the houses, most of which will be left undermined and in ruins. In most places the water has simply overflowed the dams, which have hitherto resisted the pressure of the accumulated waters.

Many cattle have been drowned, but in consequence of the excellent precautions used in signalling to the people the moment of positive danger, comparatively few of our fellow creatures have lost their lives by these lamentable casualties. A telegraphic message has just arrived from Bois-le-Duc, to the effect that one of the dams in the neighborhood has given way, and that others are expected to give way, and that a great part of the city is entirely under water.

Accounts from the Lower and Upper Rhine, and from the province of North Brabant, continue to be of the most distressing description. We hear of houses undermined and beaten down by the inundating waters, while others, more capable of resisting their violence, stand with their roof peering above the surrounding flood. In one instance, in a village near Dusseldorf, the inhabitants had not time to effect their escape before the waters dashed in sweeping all before them. Many poor creatures were drowned, though not so many, happily, as under the circumstances might have been expected. To those who escape, the only place of safety, was in the higher stories of their dwellings; and many instances occurred of people being obliged to seek safety on the roofs of their cottages, whither no assistance could be conveyed to them, in consequence of the enormous masses of ice dashing about on the surface of the encroaching waters. The village of Veenendaal has suffered severely; the inhabitants have left—i. e. have been driven from—their homes en masse, and may be seen bringing with them their children, their furniture, and what provision they could save, seeking shelter in the neighboring villages. Even the water may have returned to its channel, a fearful scene of devastation will await the return of the inhabitants. The village must in a manner be rebuilt, repopulated, and refurnished, before its inhabitants can occupy it again.

In North Brabant the flood is not so general, but it has broken down the dykes so that the damage caused will prove of a fearful character. Several bridges have been carried away, and the town of Bois-le-Duc is a diminutive island amidst a waste of water and ice. The surrounding villages are deserted, but when the dykes are repaired they will again, for the most part, be habitable. In one village, however, twenty houses were at once swept away by the flood, and seven of their occupants were drowned. It is 144 years ago since Holland was before visited with a similar destructive flood. The ice, however, is now breaking up very generally, so that no further stoppages are likely to occur in the channels; thus we may hope that we have now seen the worst of this inundation. The Maese before Rotterdam has broken up, though not until a steamer of great power had first forced a passage through the ice. The fact was immediately telegraphed to the principal foreign ports, so that next week we may expect to see the usual activity resumed.

POTATOES.—A large quantity of European potatoes were sold a few days since by auction, in New York, and at a price which would pay the foreign farmer a very large profit beyond the cost of freight, etc., and this, too, in a country where they might be produced at less than the freight paid by the foreign farmer. Every year since our childhood, we have heard farmers say that they feared potatoes would be low next year, as everybody would be raising them in consequence of the high prices; and thus far has prevented a full supply being grown, particularly during the last

few years, when the extra crop required each year for the consumption of the half million emigrants, has been a million and a half of bushels beyond the requirement of the previous year, and which at the average crop of 100 bushels per acre, would require 15,000 acres of land for their culture. This is not only true of potatoes, but of other roots, the consumption of which is not only increased from the same cause, but from our own citizens becoming convinced that a large appropriation of vegetable diet is conducive to health. The farmers and livery-stable keepers are also feeding roots more liberally to cattle and horses, and as a consequence, carrots are now sold readily in the New York market at fifty cents per bushel; and even parsnips and ruta-baga turnips bring prices equally large, as compared with those of former years.—*Working Farmer.*

SACRAMENTO VALLEY RAILROAD.—The clipper ship Winged Racer arrived last week, in 120 days from Boston, to Flint, Peabody & Co. Her entire cargo consists of machinery, engines, locomotives, baggage and freight cars, chairs, &c., for the Sacramento Valley Railroad Company. The Dashing Wave will succeed the Winged Racer, consigned to the same house, and a large portion of her cargo is also for the Sacramento Valley Railroad Company. The freight on the material for the Company brought by the Racer amounts to within a few hundred dollars of the snug little sum of one hundred thousand.

A CROP OF TOBACCO.—Mr. Stewart, who has a farm near Dent's Ferry, Stanislaus, has succeeded in raising a crop of three thousand plants of fine tobacco. The ground was prepared in the old Maryland style, and there was no occasion to irrigate. Mr. Stewart, in a letter to the Republican, says that his tobacco will compare favorably with the plants raised in any part of the Union.

THE fire in Auburn on the 4th inst. destroyed 75 houses, leaving only the Bear River office, the Court House and a livery stable standing. Total loss \$250,000. The Herald saved its material; the Placer Press suffered severe loss. Rebuilding commenced vigorously the next day.

Ladies' Department.

OMELETTES.—Break four eggs into a basin, add half a teaspoonful of salt and a quarter ditto of pepper, beat them up well with a fork, put into the frying-pan one ounce and a half of butter, lard, or oil, which put on the fire until hot; then pour in the eggs, which keep on mixing quick with a spoon until all is delicately set; then let them slip to the edge of the pan, laying hold by the handle, and raising it slantways, which will give an elongated form to the omelette; turn in the edges, let it set a moment and turn it over on to a dish, and serve. It ought to be a nice yellow color, done to a nicety, and as light and delicate as possible. It may be served in many ways, but the following is most common: two tablespoonfuls of milk, and an ounce of the crumb of bread cut in thin slices may be added.

TO CLEAN WINDOW GLASS.—Take finely pulverised indigo, dip into it a linen rag moistened with vinegar, wine, or water, and apply it briskly to the glass. Wipe off and polish with a dry cloth. This method of cleansing window glass imparts a brilliant polish, and is far more expeditiously accomplished than cleaning with soap-suds or whiting.

HOW SHALL I PRESERVE THE HEART I HAVE WON?—Endeavor to make your husband's habitation alluring and delightful to him. Make it a repose from his cares, a shelter from the world, a home for his heart. Invariably adorn yourself with delicacy and modesty. Let your husband suppose you think him a good husband, and it will be a strong stimulus to his being so. Cultivate cheerfulness and good humor. In the attire of dress, study your husband's taste. Conceal his faults, and speak only of his virtues. Shun extravagance. Let your home be your empire, your world. In its sober, quiet scenes, let your heart cast its anchor, let your feelings and pursuits be centered.

MAKING BRIDES.—A traveller in Germany says:—"The Germans, by the way, have a queer way of making 'brides,' and of doing some other things in the courting and marrying way which may interest you, perhaps. When a maiden is betrothed, she is called 'bride,' and so continues till she becomes 'wife.' All the while she is engaged she is a 'bride.' The lovers, immediately upon the betrothal, exchange plain gold rings; which are ever worn afterwards till death parts them. The woman wears hers on the third finger of her left hand, and when she becomes 'wife,' her ring is transferred to the third finger of the right hand, and there it remains. The husband always wears his ring just as the wife hers, so that if you look upon a man's hand you can tell whether he is mortgaged or not. There is no cheating for him ever after—no coquetting with the girls, as if he were an unmarried man; for lo! the whole story is told by his finger ring. A married Viennese lady was much amused when I told her that we only 'ring' the women, but let the husband run at large unmarked! 'Oh that is dreadful!' said she, more than half shocked. 'Think, there is Frederick, my husband—only twenty-four—so young, so handsome—and all the girls would be taking him for an unmarried man, and be making love to him! Oh, it is dreadful, is it not! They would never know he was married. How can you do so in your country? I would not live there with Frederick for the world.'"

Miscellany.

THE POOR MAN'S WIFE.

Her dainty hand nestled in mine, rich and white,
And timid as the trembling dove;
And it twinkled about me a jewel of light,
As she gazed on our feast of love;
Twas the queenliest hair in all Italy-land,
And she was a Poor Man's Wife!
Oh! but little ye'd think how that wee white hand
Could dare in the battle of life.

Her heart it was lowly as a maiden's might be,
But bath climbed to heroic height,
And burned like a shield in defence of me,
On the sorest field of fight!
And startling as fire, it hath often flashed up
In her eyes, the good heart and rare!
And she drank down her half of our bitterest cup,
And taught me how to bear.

Her sweet eyes that seemed, with their smile sublime,
Made to look me and light me to heaven,
They have triumphed through bitter tears many a time,
Since their love to my life was given;
And the maiden-neck voice of the womanly Wife
Still bringeth the heavens nigher;
For it rings like the voice of God over my life,
Aye, bidding me climb up higher.

THE SOUL-LIT EYE.

The diamond may sparkle, the ruby may shine,
With light that may seem to their owners divine;
But never can diamond or ruby outvie,
In brilliancy of lustre the soul-lit eye.

The eye hath a language, though voiceless it be,
That all may interpret—so all it is free;
Convincing its eloquence, warm its appeals,
And swifter than thought to the heart it steals.

How awful in hatred! how winning in love!
Now fierce as the tiger, now mild as the dove;
All potent its glance is, where love bath the way—
In a moment we look what we could not say!

The Two Loves.

BY CAROLINE E. HOWE.

"FATHER, I thank thee!" It was all she said
—and it said all.

How pale she looked as she knelt there with
uplifted hands! If she had been thought lovely
one year ago in the festive hall, when her grace-
ful form was swaying to the undulations of the
rich music, how much lovelier looked she now
in the simple robe of white, half-hiding and half-
revealing the slight figure it enveloped. A lamp
stood beside her on the dressing-table, and its
rays fell upon the snowy pillow and counterpane,
and were reflected back upon her brow, but it
was not this that "covered her with light as with
a garment." The inward life had found an out-
ward manifestation, and Helen Brooks was not
Helen Brooks of last year's memory.

And what had wrought this change? Death
had been busy in the home circles, losses had
been sustained, friends had become estranged,
and disease had laid its remorseless hand upon
her mother's slender frame. The waves of mis-
fortune swept away joy after joy, and left her
with only gloom and darkness around her in her
solitude. She had folded her waxen hands across
Ada's bosom, and was sisterless. She had laid
back the dark locks from a manly brow, cold as
death makes cold, and was fatherless. She had
been crushed by the first sudden blow, and when
the second came, she prayed that she might die,
but a mother's sad face pleaded with her and she
nerved herself anew for that mother's sake, and
moved around pale and silent, to perform the
duties required of her. Many who had been
friends in her prosperity and joy, forgot her in
her lonely hours, or found in the society of new
friends a substitute for hers, until she seemed
literally to stand alone and apart from the world.
Alas for the heart that is compelled in youth to
measure the friendship of the world! But in
those hours of darkness and of conflict, she learned
to know more of herself, and to look forth in a
clearer light upon the objects around her. She
saw how perishable were the riches she had been
seeking, and lifting her eyes heavenward, as
earthly joys were fading, she found there a light
unquenchable—a hope undying, and the prayer
rose day after day from her white lips, "Lead me
to the Rock that is higher than I!"

With every new conflict came new power to
act and endure, until the mind seemed to lift the
body into healthy life again. She was surprised
at herself and her own capabilities—at the en-
dowments she had not been aware of possessing,
as well as at the indomitable courage that rose
stronger at every effort misfortune put forth to
crush it.

But a still heavier stroke awaited her. There
was one she loved from childhood, one who had
been as a brother to her, but to whom her heart
had yielded a warmer sentiment than a sister's
affection. He had been absent from her side
many months, but his letters told her that she
was kindly remembered, and on this staff of his
affection had she leaned, half unconsciously
through all the weary days of her trial. There
was scarce an hour in which she thought not
of that silent parting—that fervent pressure of
the hand—that light touch of the dear lips upon
her brow—and the long sad look that turned to
meet hers, as Louis Graves passed through the
gate in the gloom of twilight. The stars came
out one by one and looked sadly down upon her,
as she stood there in the silence, and she almost
felt as if it would never be light again; but then
came the memory of that parting, and she felt as
by a sudden instinct that she was beloved—and
what more could she ask of Heaven than this?
She thought not of change. Love questions not
the future. It lives but in the present moment.

She had not been insensible to the tender yet un-
conscious gaze of those dear eyes, though she
veiled her own beneath their white lids when
they looked upon her too long, or too earnestly.
Silence is oftentimes the best interpreter of true
love.

But now his letters had grown cold and infre-
quent, and the hope that she scarcely acknowl-
edged to herself, but which had in reality sus-
tained her more than all else during her troubles,
was to depart also. Where now would she look
for light or for strength? Yet sickly and feeble
as it had become, hope had not died altogether
out, and for many weeks she lingered in that
fearful state of suspense, whose end seems life or
death. But while the certainty had not yet come
that she was forgotten, she clung to this one
slight thread as if it were a chain reaching down
from heaven.

But the truth came at last. Few proofs had
Helen received of Mary Graham's friendship, but
she could not doubt her worth, or the kindness of
motives that prompted the few intimations, which
served as a clue to the whole. It had been said
that Mary herself once saw the flowers of love
wither and die that had blossomed in her path-
way; and it might have been so, for she seldom
mingled in society, and seemed every day to grow
more reserved and silent. But few could under-
stand her, and little did Helen Brooks know how
well she had remembered the few acts of courtesy
extended to her aged mother years before in a
stage coach, and which had bound her in grati-
tude forever. We seldom think how much of
kindness there may be hidden beneath a reserved
exterior.

Mrs. Barton, a lady who had been strongest in
her professions of regard to Helen in more pros-
perous days, and who had been first also to for-
sake her when misfortune assailed her, was a
relative of Louis Graves, and had just returned
from a visit at L—, the town where he was of
late residing. While there, she had so misre-
presented Helen's character, her conduct, and her
motives, and the falsehoods were made so plausi-
ble, strengthened by the confidence he had in
Mrs. Barton's integrity, that doubt—that "foe to
love"—had risen up there like a giant in his bos-
om, and crushed down the blossoms that else had
made a spring-time in the garden of Helen's heart.

Miss Graham had only spoken of this, that
Helen might be led to impute the change in him
to Mrs. Barton's influence, and not to his own
pride or fickleness, as would naturally have been
the result of her own thoughts at this time.

Alas, how he mourned. He had thought her
to be all that was true and lovable, and he had
looked forward to the hour when he might see
her beside his own hearthstone perhaps, and
making an Eden for her in some quiet home. He
had read her heart aright, for she had made no
effort at concealment. And why should she?
If it were pure enough for God and the angels to
look into, why not for him?

He had only waited to become permanently
settled in business, that he might claim the love
that was more than life to him, and now that he
had learned—too truly as he feared—that she
was unworthy of his regard, he resolved never to
trust again. If Helen Brooks was not what she
seemed, where could he look for truth. Yet
severe as it was for him, it was more severe for
her, when she at length realized all her position.

Louis Graves had questioned not only her motives
and her conduct, but her very integrity. It was
impossible to explain. Indeed, he had never pos-
sessed other than common friendship, and he
asked no explanation, and desired none probably.
She felt the full injustice of his decision, yet
blamed herself for having overrated his kindness,
and arguing therefrom a warmer attachment than
friendship or brotherly affection.

Alas, what pang is there to be compared with
the pain of being thought unworthy, by one
whom we have enthroned in our hearts as king
and ruler, as life and strength and happiness.

Helen sank beneath this stroke. As her heart
sickened over its withered hopes, her steps fal-
tered, and she grew feebler day by day. Physi-
cians were consulted in vain. The whole care
of her mother devolved now upon a nurse, and
the hand whose touch was softest—the voice
whose tones were dearest—the eyes whose light
was most cheering—were felt, and heard, and
seen, but seldom by that pale sufferer.

One evening as she was strolling along, busy as
usual with her thoughts of gloom, a folded news-
paper attracted her attention, which some one
had evidently dropped by accident. She opened
it mechanically, and the first thing she noticed,
was that beautiful sonnet by Elizabeth Barrett
Browning, entitled, "Consolation." She read it
calmly and folded the paper again, but the words
haunted her for many hours.

"Daughter I am,
Can I suffice for heaven, and not for earth?"

was sounding in her ears continually. The im-
pression it made was not to be measured by that
night. It led permanently to a new train of
thought and feeling. Who shall call it accident
that laid that paper before her? Not I, who see
wisdom and design in the falling of a leaf.

Helen had too much native strength of char-
acter to be content to die for one who had been
so unjust to her in taking his impressions from
another. She wept no more, but she was thin
and silent, and her white, unsmiling lips gave
forth an impress of her sorrows, more clearly
than words could have done. She clung no more
to life. The bitterness of death was past, for
what are the mere struggles of the body when
the links are already torn apart that bound the
soul to the earth! Yet although she looked for-
ward to the grave with calmness, she knew not
but she had many years' work to do before she

lay down in its calm repose, and she resolved to
do that work well. If our afflictions are wisely
received and rightly used, they become as moun-
tains of strength to us in the end, by which our
souls may ascend nearer to the Infinite. To
Helen, every grief had a consecrating influence,
opening clearer to her view the mighty purposes
of a Father's love, and this last great bereave-
ment, this withdrawing of the earthly arm, had
brought her to fling herself upon the bosom of
her God.

She had sometimes doubted the love that was
offered revealed to her in storms than in sun-
shine, but she doubted no longer. It is a tenui-
tious attribute of grief, that it awakens faith in
the Christian bosom which grows deeper and
deeper as the spirit is compelled to look for its
all of light—upward! What a settled calm there
was on Helen's brow, as she knelt at her bedside
on this night in which we first saw her. The
crowning glory had been given her. She had
realized her full losses, had sounded her soul to
its depths. Prosperity, wealth and homage had
failed to instruct her. The true life had not been
opened to her in their false atmosphere. She
had walked amid the summer flowers, and lived
but in their brightness. But they faded as
flowers will fade, and the autumn winds sweep-
ing through her soul, told a mournful tale of
blight, and the winter snows had fallen chilly
upon the graves in the churchyard, and the darker
grave in her own heart, where memories lay
buried, yet living and struggling forever!

But summer was on the earth again, and Na-
ture had found elements of growth in the storm,
as well as the sunshine. Helen accepted its
teachings. It was her triumph hour! She
lifted her brow to heaven, and said serenely,
"God, I thank thee!" It was all her prayer—
it said all.

When the soul has helped to work out his pur-
poses until it feels the labor a delight—when it
can thank God for its sufferings even, then is it
drawn near to him indeed!

There was rejoicing in heaven that hour!
Little did she think—that slight girl—that the
angels were waving their white wings above her
as they rose with that low prayer to the throne.
"One more spirit is added to us," they sang in
tones of thanksgiving. "The veil of flesh is
around her, but we looked upon her spirit and
saw that it is whitening for heaven."

There were tears on her pillow that night.
She did not strive tumultuously to stay them,
but wept calmly and naturally, and there was
no murmuring or doubt in her heart. She could
not put away that clear face from her memory—
she could not quench the light of that blessed
smile, or shut out the music of a tone heard far
above the wail of sorrow, but she could bend
down submissively, and weep unshining over her
dead hopes, as the Man of Sorrows wept at the
grave of Lazarus.

Yet as night advanced, there was a strange
vision of Louis Graves, and of a mighty hand
that reached gently downward between them,
and with her two great faces mingling, iron-like
into one, she slept!

At the first reddening of day she woke suddenly
with that keen sense of suffering that is realized
more deeply than at any other time. She could
scarcely find strength to rise, but she knew that
this was the turning-point in her destiny—the
hour in which she must sink utterly, or gain new
power from the conflict, and she smoothed the
hair from her brow, and lifting her hands for one
moment upward, went calmly forth into the sun-
shine.

How beautiful looked all Nature that cloudless
morning! The dews were on the roses, the birds
were carolling among the branches, and the long
grasses glistened on the hillside. The air was
delicious, and she seemed to grow joyous again
out beneath the loving sky. There was a little
brook—her favorite resort, a short distance away
in the green valley, and toward this she turned
her steps. And now she stood on the rude
bridge that had been thrown across it, and looked
down into the bright waters below, leading and
laughing over the great white rocks, or glistening
softly over the yellow sands, until her heart came
to sing in unison on that glorious morning.

She was thinking of Louis Graves—of the hours
they had roamed together in childhood over these
same rocks, when the waters were low, and of
the later meetings there, when they looked ad-
miringly across the smooth hills and talked of
the beauties of the landscape, or bent down
silently over the singing waters, listening the
while to the sweeter music of their own hearts.

A step was beside her but she heard it not—a
long, searching glance was fixed upon her pale
face, from eyes that even then were haunting her
dreams, yet she felt it not. Her hand was
grasped, softly, yet firmly, and she turned. Louis
Graves stood beside her!

Neither spoke, but that long, half-questioning,
half-tender look said more than words. He drew
her to his bosom. He laid his hand upon her
head. "Poor Helen, poor Helen!" he said many
times with quivering lips; he smoothed the hair
from her pale forehead, and she wept there in his
arms.

No other words were spoken, but I dare say
the violets there, peeping out from amid the
grasses, saw a tale told without words.

Ah, thine was a kind heart, Mary Graham,
although the icy robes of reserve were wrapt so
closely around it that few could penetrate so far
as to feel its warmth. Thine was a kind heart,
else had these two been tossing for years perhaps,
on the sea of disappointment. The shadows be-
soft on thy grave, Mary! Heaven is all love—
all love.

"My God, I thank thee!" prayed Helen Brooks

Beauty and Art.

There is a little hime flower—the livorlent,
which blossoms almost at the edge of our forest
snows, springing up at the first instant of breath
the earth gets after its winter-trance, and assert-
ing, it might seem to a poetic fancy, its exist-
ence, simply by force of the beauty which it em-
bodies. Buried fathoms deep under the snow-
drift, it has still preserved its vitality, and breaks
forth at the first loosening of its bonds.

So Art, which is Beauty's gospel, lies inert
under the cold necessities of a rational childhood,
and the cares and storms of a political first exist-
ence; but when the winter of discontent is made
summer, it bursts out to gladden and beautify
life. Beauty, deep-rooted in every human mind,
is its vitality, and it must therefore live. To us,
and to our generation, it is given to determine its
future in our country, whether free and healthy,
or dwarfed and deformed by pride and conceit.

We could have whispered to a
world, rushing heedlessly along to the wreck of
commerce, that there were things more gratify-
ing to the intellect than the accumulation of prop-
erty, or the gratification of pride—that to those
who reverently seek her, Beauty has an eleva-
tion of enjoyment, compared to which, all self
glorification is a hollow show—a thing which the
heart craves in embracing it. We could have
taught men that Beauty is the antithesis to those
wearing, consuming cares of the material life—
that, as trade and money belong by their very
nature the origin of selfish influences, and bring
men for ever into struggle with each other, not
for mutual advantage, but for selfish appropri-
ation; so Beauty and Art, belonging none the less
to one, because given to all, widen our sympa-
thies and unite us by a common delight. It is
bitter to those who love their race, to see men
shut themselves into themselves, year after year,
pursuing that which can belong to themselves
alone, while around them everywhere lies that
which, if once taken up, is theirs forever, and yet
is not diminished for the next comer. Do men
realize this? Do they think of it, or are they
skeptics with regard to Beauty, as well as the
future? Does the world of nature absolutely
lie around them a waste desert—only so much
space to be got over, where they travel with
blinded eyes until all that is most glorious and
instinct with immortality in them has died for
want of culture? There are too many such.
Could we but reach them, could we open for an
instant their sealed eyes to the perception of the
outer world, life would be new to them, and in
the perception of the great harmonies of nature,
they would become tranquilized and elevated.
The more entirely delight is based on the eternal
and immutable, the more enduring and unchange-
able it becomes; and we doubt much if there can
be found a merchant, who has found time and
disposition to cultivate his love for art, who does
not feel that his daily routine of duty is gone
through with better from its effect upon his
mind, and who does not feel that there is some-
thing in him better than his computing capacity,
and something in life more profitable than cent-
per-cent. profits.

THE INVENTION OF RAILROADS.—Howitt, of the
People's Journal, gives the following sketch of
the alleged inventor, who, up to May, 1830, had
been neglected in England: "About half a cen-
tury ago—the exact year is not known—there
was born at Leeds, England, a man named Thom-
as Gray. Scarcely anything is known of his early
history. He was, we believe, a poor collier boy,
and being very ingenious, he conceived the idea
of facilitating the transportation of coal from the
Middleton colliery of Leeds, a distance of three
miles, by means of a sort of railway, which he
had constructed of wood. Upon this his cars
moved at the rate of three miles and a half per
hour, to the great mortification of a wise and dis-
cerning public, who laughed at the idea of a
railway, as something very visionary, and as the
mere suggestion of madness. Magnificent visions
of future railways, such as are now stupendous
realities, loomed up before him, and he began to
talk in public of a general system of iron rail-
roads. He was laughed at and declared a vision-
ary moon struck fool. But the more Gray con-
templated his little railway for coal, the more
firmly did he believe in the practicability and
immense usefulness of his scheme. He saw in it
all that is now realized, and he resolved in spite
of the ridicule, the sneers and rebuffs that were
heaped upon him, to prosecute his undertaking.
He petitioned the British Parliament, and sought
interest with all the great men of the kingdom;
but all this had no effect except to bring down
upon him wherever he went, the loud sneers and
ridicule of all classes. Still he persevered, and at
length engaged the attention of men of intelli-
gence and influence, who finally embraced his
views, urged his plans, and the result is now be-
fore the world. Thomas Gray, the inventor of
railroads, who, not longer ago than 1820, was
laughed at for even mentioning the idea, still
lives in Exeter, England, in the full realization of
his grand and noble railroad schemes, for which
he was declared insane. How much has the
world been benefitted by his insanity.

A chord of love runs through all the sounds of
creation, but the ear of love alone distinguishes it.

EXPRESS FAVORS.—Full files of papers from the East, promptly received from Wells, Fargo & Co.'s Express. We are under repeated obligations to this House for the numerous attentions of their messengers on every route and more especially on the Sacramento, where we have received a "Tower" of aid and news.

To the Pacific Express, we are also indebted for the prompt delivery of parcels, papers, &c. We welcome to the field again our old friend and pioneer, John M. Freeman, Esq. Freeman & Co. sounds like old times to Sacramentoans. Prosperity say we to Freeman & Co.

SACRAMENTO COLUMN.—We invite especial attention to the new advertisements of "Old Californians" and others of Sacramento city. We shall in due time, endeavor to sketch the rise and steady onward progress of the mercantile, manufacturing, and mechanical, as well of the agricultural, interests of this growing city.

MARKET REPORTS.

WHEAT had receded in price, but is again in demand, and firm. It is wanted for shipment. Barley and Oats are going forward freely and at advancing rates. Our Eastern merchants may yet learn that we can supply them with better grain than they can raise, and at lower rates, and we can make money at it. Wheat, best, 1 1/2 @ 2 1/2; Barley, do, do, 1 1/4 @ 1 1/2; Oats, do, do, 1 1/4 @ 1 1/2; Flour, Cal., 1 1/2 @ 1 3/4; Haxall and Gilego, do, 1 1/2 @ 1 3/4; Potatoes, new, 1 1/4 @ 1 1/2; Butter, eastern, 50c; California Butter, 50c.

OBITUARY.

Gone like a meteor, that o'erhead
One moment bright, then quickly sped.
Here I the support of many a struggling heart, the stay and
staff of many a mind that would shrink at the view of its daily
frailties, did I not hear the soft voice floating like sunshine o'er
the brain. R. B. Buchanan is no more. A generous and sym-
pathizing heart has ceased to beat; an active, talented, and
energetic spirit has been called from a worldly toil, from earth's
trials, and his voice has been still. For many years the sub-
ject of this notice occupied an influential position in Yuba
county. He was known as Sheriff Buchanan, and a man of
uncommon energy and perseverance. Widely known, highly
esteemed, he had labored long to secure his rights in the great
inherited property of the Cordillera grant—hunting and struggling
as a Californian, against the odds and finks of fortune, he had
so far surmounted them by his indomitable spirit as to see with-
in his grasp the fortune which hope had told him for. It was
his by right, and he had just obtained the decree which was soon
to place him in possession when that destroyer of man's bright-
est earthly hopes, thrust in his sickle and cut down the strong
man in the midst of life—dashed the cup from his hand just at
the moment he was raising it to his lips, and left mourning
where joy was anticipated. We knew the deceased well—have
enjoyed his generous sympathy, and can estimate his loss.
Many, very many will mourn him, but none as the widowed
one who is thus suddenly bereft. To her and to all kindred
and stricken ones, that sympathize with her silent but sincere,
is the most consoling. Such would we ever offer to the sorrow-
ing.—We know its value.

SPECIAL NOTICES.

Wistar's Balsam of Wild Cherry.—As a con-
sequence of our variable and capricious North American climate,
coughs, colds and affections of the lungs prevail amongst our
people to an extent wholly unknown in Europe, and if neglected
often assume a dangerous, if not incurable form. Many
thousands die annually in England of Consumption. In the
New England States, the proportion is one in four or five. In
Boston, probably one in four. In the city of New York, sixty-
seven died in two weeks, in December, of this disease. Na-
ture's own remedy is at our hand. The Wild Cherry and the
Pine furnish us with a cure, where a cure is possible.
Thousands are cured every year by Wistar's Balsam of Wild
Cherry.
Sold by all druggists.
Agents for San Francisco, B. B. THAYER & CO.

Consumption in Massachusetts.—The abstract of
deaths, prepared by the Secretary of State, for 1852, shows an
average of twelve deaths a day of this disease alone. Can we
thing be done to stay this fearful mortality? If the allegations
of those who are at least entitled to veracity, may be believed,
there is a preventive and a remedy.

WISTAR'S BALSAM OF WILD CHERRY has cured
thousands who had tried all other remedies in vain. This can
be substantiated by a mass of reliable evidence.
"He who is signed I. BUTTS on the wrapper.
Agents for San Francisco, B. B. THAYER & CO.
Sold by all Druggists. v3-24

Little & Co., Apothecaries Hall.—One of the most
important establishments in a city is a good Apothecaries Hall.
When the "pill" or "drug" must be swallowed, it is a consola-
tion to "hope" (we mean be relieved, if not cured; and by reason
of this hope many a bitter pill has been gulped down. But dark
days are nearly gone, and the apothecaries rooms are not
now so terrible a place, nor are they often associated with
sweat and pain. They are rather places of pleasant resort,
where the offensive drugs are changed to pleasant pills, and the
atmosphere seems more like a conservatory of beautiful flowers
than the place of noxious medicines. And all this change has
been brought about by the free use of DR. JENKIN'S PINK LOZ-
ENGES, now the recognized remedy for Coughs and Colds, these
being the great originators of nearly all other diseases which
behold is held to. And of course in speaking of these and so
pleasant, fragrant and palatable a medicine as Dr. Jenkin's Lozen-
ges, we can mean no other place than LITTLE & CO.,
Apothecaries, Montgomery street.

**At a Meeting of the Stockholders of the Cal-
ifornia Steam Navigation Company, held at their office February
25, 1855,**

Samuel J. Hensley,
Richard Cheney,
J. Whitney, Jr.,
A. Redington,
W. B. Minton,
R. M. Jessup,
David Van Pelt,
John Boley,
F. F. Low,

Were elected Trustees for one year from the 23d. May, 1855.
At the annual meeting of the Trustees for the election of offi-
cers, San Francisco May 24, 1855.

SAMUEL J. HENSLY was unanimously elected President,
J. WHITNEY, Vice-President, and
Wm. NORRIS, Secretary of the California Steam Navigation
Company.

Persons purchasing articles advertised in our
columns will confer a favor by saying they observed
them advertised in the "CALIFORNIA FARMER."

Freight Reduced.
FROM and after the 1st of June, the California
Steam Navigation Company will carry freight
to Stockton and Sacramento at 50c per ton, with further
notice. v3-24 SAM'L J. HENSLY, President.

San Francisco, Sacramento,
139 Jackson st. 103 K st
Resident Partner, Sacramento, B. C. NEWCOMB,
77 K street, Sacramento City.
San Francisco, May 8, 1855.

To Our Friends and the Public.
By uniting the above three firms our capital is largely increas-
ed and our expenses reduced more than one-half
which enables us to offer you a greater variety of Goods at
15 to 25 per cent. less than our former rates.
One of the partners will be in Boston and New York to pur-
chase goods, and will take advantage of the markets to obtain
such goods as are desirable, at the
lowest Cash Rates.

Three years' experience will enable him to select stock that will
Defy Competition in Quality and Prices.
We are now before you with a large and
DESIRABLE STOCK OF NEW GOODS,
and shall endeavor to merit a share of your patronage. It will
be our pride to give
Perfect Satisfaction,
both in quality, prices, and good treatment.
HOWES & CO.,
77 and 103 K street, } 180 and 182 Montgomery street,
Sacramento. } opposite Metropolitan Theatre.

FURNITURE!! FURNITURE!!
AT REDUCED PRICES.
NEW FIRM AND NEW GOODS.

Our stock of Furniture is now complete, comprising
every thing suitable for the Parlor, Chamber, Dining
Room or Office. We have lately added to our
stock \$40,000 worth, purchased here at low
rates, which, together with our former
stock, and constant additions by
every clipper ship, gives us one
of the largest stocks ever of-
fered in California. We
have reduced our
prices to con-
form to the
times,
at least 25
per cent, as all
who will favor us
with a call will be con-
vinced.—By the addition of
Messrs. Moore & Newcombs
stocks, here and in Sacramento, we
can safely say that our stock is the most
varied and complete ever offered to the public,
and that we cannot be undersold by any firm in
San Francisco, Sacramento, or elsewhere in this State.
Call and examine our stock before purchasing.
HOWES & CO.,
v3-19 180 and 182 Montgomery street.

HOTELS.

Orleans Hotel,
Second, between J and K streets, Sacramento.
THE above Hotel, occupying a space of 85 by 150 feet,
in the most central part of the city, built of brick
and three stories high, offers inducements to travelers not surpassed
by any establishment in the State.
The ground floor is set apart for Dining Room, Reading
Room, Billiard Room and Bar Room.
The Table will be found at all times supplied with the choice
of the market.
At the Reading Room can always be found the daily papers
of the State and the latest dates from the Atlantic and Europe.
The Billiard Saloon is furnished with five excellent tables,
superintended by a competent keeper.
The Bar will be supplied with the best Liquors and Wines.
The second and third stories of the building are set apart for
Parlor, Family Rooms and Chambers, comfortably furnished.
We have also leased the large brick building corner of J and K
and Front streets (formerly known as Sweeny's Hotel) set apart
for Lodging Apartments, which are furnished in a superior
manner, and, added to the Hotel, will afford ample accommo-
dations.
The "Orleans" is also the Depot and Office of the California
Stage Co., from which place Stage Coaches daily for all parts
of the State. v3-2 HARDENBURGH & COSE, Proprietors.

American Hotel, Benicia.
THIS HOUSE has been established Five Years, with-
out interruption or change of proprietorship, and is be-
lieved by the traveling public to be one of the best conducted
Hotels in the State.
Large and well ventilated, and handsomely furnished rooms,
for families travelling or for permanent boarders, can always
be obtained.
A **LIVERY STABLE** is connected with the Hotel, so that
travelers can have their choice, either to take the steamers and
stages, or a private carriage, to any of the beautiful valleys
around. Stages leave this Hotel every morning for the different
valleys.
The daily papers from various sections of the State are on
file at this Hotel. Everything will be done by the proprietor
that the patrons of this House may find their stay pleasant and
satisfactory.
v3-16 1st C. M. DAVIS, Proprietor.

Rassette House.
SAN FRANCISCO, CAL.
THIS HOTEL offers inducements to persons visiting
San Francisco, unequalled by any on the Pacific Coast.
Gentlemen can be accommodated with single rooms, or fami-
lies with suites of rooms.
The House is entirely new, built of brick; all the rooms are
furnished in a style of comfort hitherto unknown in the Hotels
of California, and the House is capable of accommodating over
five hundred boarders. v3-23

Wilson's Exchange,
RECENTLY under the management of Wilson & Wal-
riss, is hereafter to be conducted by
W. W. ESTABROOK.
One of the original proprietors, who will use every exertion to
render it all the public can wish. v3-15

Murray's Fifty-cent Western House.
Corner of Second and D streets, MARYSVILLE, CAL.
THIS HOUSE is entirely devoted to the wants of the
travelling public and to all who will favor us with a call,
entire satisfaction will be given. [17] R. J. MURRAY.

American Hotel
NAPA CITY, CALIFORNIA.
L. A. & W. W. CHAPMAN, Proprietors.
GOOD accommodations for families, and on reasonable
terms. Saddle and buggy Horses kept for hire. Horses
kept on board, by the day or week, and well taken care of. v3-20

Works in Press.
By T. B. PETERSON, Philadelphia.
T. B. PETERSON, 102 Chestnut street, Philadelphia, has
in press, the "Missing Links," by Mrs. Southworth,
authoress of the "Lost Heiress," "Wives' Victory," &c.—com-
plete in one large volume, neatly bound in cloth, for \$1.25.
The above celebrated work will be published on Saturday, May
5—being the last one written by Mrs. Southworth, which has
been pronounced by all that have read it to be superior to any
one ever before written by this talented American authoress.
They all say that it is an engrossing, thrilling and deeply inter-
esting work; the interest never flagging from beginning to end.
The scenes are all founded on facts, and the characters are ad-
mirably sustained. The portraiture of the heroine is that of a
perfect woman, and yet a beautiful, loving and tender creature.
The opinions of the press are eager in its praise. The New
York Dispatch says Mrs. Southworth is the first female pro-
fessional writer of America, beyond the shadow of doubt. There is a
chasteness and purity in all she writes which has a peculiar
charm. A full and complete notice will be given of this cele-
brated work as soon as published.
Copies of the above work will be sent to any person, to any
part of the United States, free of postage, on the remittance of
the price of the edition they may wish, to the Publisher, in a
letter, post paid.
Published and for sale by T. B. PETERSON,
v3-23 102 Chestnut street, Philadelphia.

In Press and Shortly to be Issued.
A NEW, complete and uniform edition of CHARLES DICK-
EN'S WORKS, reprinted from the last London edition,
by T. B. Peterson, 102 Chestnut street, Philadelphia. Peter-
son's is the only complete and uniform edition of Charles Dick-
en's Works, published in America. The cheap edition is com-
plete in twelve volumes, paper cover; either of which can be
had separately—Price 50 cents each. The fine illustrated edition
is also in twelve volumes. This edition is printed on very thick,
fine white paper, and is profusely illustrated, with all the origi-
nal illustrations by Cruikshank, Alfred Cruikshank, Philz, &c.,
from the original London edition, on copper, steel and wood.
Each volume contains a novel complete, and may be had to
complete sets, or any volume separately—Price 50 cents—
as follows:
Black House, Dombey & Son,
Pickwick Papers, Christmas Stories—being all
Old Curiosity Shop, ever written by C. Dickens.
Oliver Twist, Hard Times,
Sketches by "Boz," Lizzie Leigh,
Barnaby Rudge, Minor's Daughters,
Nicholas Nickleby, Fortune Teller,
Martin Chuzzlewit, The Foundling,
David Copperfield, Pictures from Italy, &c.
All subsequent works by Chas. Dickens will be issued in uniform
style with the above.
Copies of the above works will be sent to any person to any
part of the United States, free of postage, on the remittance of
the price of the books they may wish, in a letter to the Pub-
lisher, post paid.
Published and for sale by T. B. PETERSON,

Benicia Female Seminary.
THE Fourth year of this institution opens July 23, 1855.
This is one of the oldest Female Seminaries in the State,
and therefore well known. There is now a full corps of
teachers, and those who are well qualified to fill their respective
departments. A German lady, and an artist in her profession,
is teacher of Music; and a French lady, as skilled in Drawing,
is teacher of French and Drawing.
The School and Boarding Department are entirely under the
supervision of the Principal.
Terms.—(Payable quarterly, invariably in advance.)
For Board and Tuition in English branches, per week... \$7 50
Washing, per dozen... 1 50
Extra Charges.
French, Spanish and Drawing, per month... \$3 00
Music, with use of Piano, per month... 10 00
For further particulars, address

LIFE'S POETRY.

THE proudest poetry of youth
Is—"Would I were a man!"
The golden years that lie between,
Youth like a dream would span—
"Tis in its thought, 'tis in its heart—
'Tis ever on its tongue;
But oh! the poetry of age
Is this—"When I was young!"

Thus, in the morn of life, our feet
Would distant pathways find;
The sun still face to face we greet,
The shadows fall behind!
But when the morn of life is o'er,
And nature grows less kind,
And lengthening shadow creeps before,
The sunlight falls behind!

With many a murmur low and sad,
The stream of life flows on;
That which we prized not when we had,
Is doubly prized when gone!
And many a sad and solemn truth
Lies written on Life's page,
Between the "Poetry of Youth"
And "Poetry of Age."

ANCIENT ANTIQUITIES.—Nineveh was 15 miles long and 40 round, with walls 100 feet high, and thick enough for three chariots. Babylon was 60 miles within the walls, which were 75 feet thick and 300 high, with 100 brazen gates. The temple of Diana at Ephesus was 425 feet high. It was 200 years in building. The largest of the pyramids is 481 feet high, and 793 on the sides; its base covers 13 acres. The stones are about 30 feet in length, and the layers are 206; 100,000 men were employed in its erection. About the 1590th part of the Great Pyramid of Egypt is occupied by chambers and passages; all the rest is solid masonry. The Labyrinth of Egypt contains 3000 chambers and 12 halls. Thebes, in Egypt, presents ruins of 27 miles round. It has 100 gates. Carthage was 25 miles round. Athens was 25 miles round, and contained 25,000 citizens and 400,000 slaves. The temple of Delphos was so rich in donations, that it was once plundered of £10,000 sterling; and Nero carried from it 500 statues. The walls of Rome were 13 miles in extent.

"DON'T WORRY."—This is the first thing an editor should get by heart. If Mr. Slocum threatens to withdraw his patronage, because you criticized Professor Drawl's lecture on the onion question, don't worry—but tell him to go ahead and do it. If Mr. Ballion writes you an insulting letter, saying that if you don't stop writing about the Diddleton Railroad, he will ruin you with a law suit—don't worry, but dare him to try it on. If Mr. Smith threatens to "cave your head in," because you mentioned that "his son Bob," was sent to the Tombs for pelting a street lamp with brickbats—don't worry, but tell him that you so love the law, you dine on a salad made of red tape and sealing wax. If Mr. Silk approaches you with a horse pistol "that kicks," and offers to blow your brains out if you ever again allude to his visits to Mrs. Demures, don't worry about it, but tell him to blaze away. Again we say, never worry. If you do, you are no more calculated for an editor than a Quaker is for marine hornpipes.

HAPPINESS NOT IN STATION ALONE.—There is one experience, gentlemen, to which the history of my various changes in life has peculiarly, and I will even say, has painfully exposed me—and that is, how little a man gains, or rather, indeed, how much he loses in the happiness of natural and healthful enjoyment, in passing from a narrow to a wider, and what some may call, a more elevated sphere. There is not room in the heart of man for more than a certain number of objects; and he is therefore placed far more favorably for the development of all that pleasure which lies in the kind and friendly affections of our nature, when the intimacy of his regards is permitted to rest on a few, than when, bustling through an interminable variety of persons and things, each individual can have but a slender hold upon the memory, and a hold as slender upon the emotions.—Dr. Chalmers.

BURNING POSTS.—'Tis known to be a fact that charcoal will not rot, hence the idea has obtained, that to char the posts will preserve them; but if the timber is scorched it will certainly crack into many small seams—and probably many of them from one to two inches deep—which, of course, will admit the damp and water about as freely as if the coal was not there; consequently the posts are injured and the durability decreased. Many years ago, I too was under the impression that to burn posts would make them last longer. I have been a cultivator of the soil for upwards of 55 years, and am now upwards of 77 years old, consequently have some experience in these matters.

A GOOD EXAMPLE.—We are glad to learn that the proprietors of the Astor House and the St. Nicholas have resolved that the bars of those hotels shall be closed on Sunday for the future, law or no law. If other hotel keepers desire the respect of good citizens they will follow this example.

A SAILOR having a mind for a ride, and not being acquainted with the horses' rigging, he happened to put the saddle on the contrary way. A person near him observed to him his error. Jack looked steadily at him, and giving his quid an extra twist, said: "How do you know what direction I am going to ride?"

EXPRESSES, &c.

E. W. TRACY & CO.'S EXPRESS
TO SHASTA, WEAVER, YREKA, JACKSONVILLE,
AND ALL INTERMEDIATE PLACES.
CONNECTING WITH THE
PACIFIC EXPRESS CO.

To the Atlantic States and Europe.
For the purpose of accommodating the business community, the undersigned commenced on Wednesday, Feb. 28, to travel from Shasta to San Francisco, carrying Money, Letters, Packages and Valuables, and attending to all matters of Express Business.
The Express will be dispatched regularly as heretofore, in charge of careful messengers, and the whole business will be under the direct management of E. W. Tracy. We have no security to offer except business capacity, and for that refer to the annexed card, signed by the business men of Shasta.

Card.
We, the undersigned, Traders, Merchants and Dealers, in Shasta, do hereby recommend to all who have business to be transacted between this place and San Francisco, E. W. Tracy, as a person in whose honesty, integrity and business capacity, the utmost confidence can be placed.

PACIFIC EXPRESS COMPANY.
THE late employees of Adams & Co., in consequence of the disruption of that firm, have organized themselves into a joint stock company, under the above name and title, for the purpose of conducting a General Express and Forwarding business in all its branches, throughout California, Oregon and the Pacific Coast generally.
The business will be strictly a forwarding one, having no connection with banks and bankers, and will be conducted on safe and economical principles.
The Expresses will leave the office at the north-west corner of Washington and Montgomery streets, daily, at regular hours, for Sacramento and the Northern Mines, Stockton and the Southern Mines, San Jose, San Juan and Santa Cruz, Monterey, San Pedro and the Southern Coast generally, as well as to the Northern Coast of California and Oregon.
We will also run a regular Express for Freight, Small Parcels and Letters to and from the Atlantic States by every steamer.
The parties who have organized this company are well known in the community as old and experienced express men, and hope it will be acknowledged generally, that their business thoroughly. They think they are not saying too much, when they attribute much of the success of the late firm of Adams & Co., in the express business, to their exertions and personal energies.
In conclusion they would solicit a fair share of the favors of the public, pledging themselves to exert their best endeavors to transact such business as may be entrusted to them in a prompt and business-like manner.
Collections of all kinds will be promptly attended to at any of the points mentioned above.
San Francisco, March 1st, 1855. R. G. NOYES, President. v3-10.

WAINWRIGHT, RANDALL & CO.,
Real Estate and Stock Auctioneers,
No. 100 Merchant street, San Francisco, California.
WE respectfully inform our friends and the public generally, that we have connected with our other business that of HOUSE BROKERAGE and GENERAL DIRECTORY, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.
As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.
House Brokerage.
This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.
General Directory.
This department will include a registry, (already prepared,) of all persons, (except Chinese,) within the limits of the city, by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.
We consider the information which our register will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.
This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.
To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and addresses of forty-three thousand persons, with the place of their nativity, occupations, etc., which has required several months of labor to compile.
We invite the attention of the public to our establishment.
v3-18 WAINWRIGHT, RANDALL & CO.

Bookseller's and Stationer's
WHOLESALE AND RETAIL WAREHOUSE.
WE beg to call attention to the following catalogue, which comprises in part our stock of books and stationery.
By the recent arrival of clippers, our assortment of goods in this line has been made very complete, and we feel sure that the public will find it to their interest to call and examine our stock before making purchases elsewhere.
Blank Books.—Ledgers, Journals, Cash, Invoice, Day and Record Books, in Russia, Sheep and Muslin Binding. Copying Books, Indexed and Plain Memorandums, Bank and Pass Books, Diaries, &c., &c.
Paper.—Brief, Letter, Cap, Note, Envelope, Tissue, Blotting and Filtering Papers.
Stationery.—A complete assortment of Law, Counting House and Fancy Stationery.
Bound Books.—A large and splendid assortment of Law, Standard, School and Miscellaneous Books, including many in rich fancy binding, suitable for presents.
Blanks.—Law, Shipping and Custom House Blanks.
Miscellaneous.—Gold Pens, Razors and Razor Strops, Pocket Cutlery, Toilet Brushes, Cash, Dood, Date, Post Office and Envelope Boxes; Portable Desks, Gent's Dressing Cases, Ladies' Toilet and Work Cases and Reticules, Port Monies, Perfumery, Opera Glasses, Fancy Articles, &c., &c.
On the arrival of each steamer we receive a full supply of all the leading Newspapers, Periodicals, Reviews and Magazines published in America and England, which we can furnish to all in quantities to suit.
GEO. W. MURRAY & CO., Montgomery Block.
N. B.—Particular attention paid to filling orders. v3-19

F. BLAKE, 88 Merchant street. v3-18

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARKE, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise" on Consumption, says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Lamee and other pathologists." Dr. CANSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis." (pulmonary consumption.)

It is no Fiction.
These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or embroiling falseholds.

The Remedy which we offer
Dr. Wistar's Balsam of Wild Cherry,
has cured hundreds of cases of
Consumption of the Lungs, Liver Complaints, Coughs,
Colds, Asthma, Bronchitis, Whooping Cough,
Influenza, &c.

Many of them after every known remedy had failed to reach the disease.
We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.
Dr. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought Consumptive Consumption had taken place, the Wild Cherry effected a cure."

Dr. A. H. MACANALD, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

Dr. Wm. A. SHAW, of Washington, D. C., says: "I wish hearty success to your medicine. I consider every case of onset of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity."

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry."

DR. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful."

[From the Boston Journal.]
"Wistar's Balsam of Wild Cherry."
"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following case: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most distressing malady."
C. D. MAYNARD,
Argus Office, Portland, March 26, 1855.

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations.—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine.

Dr. Wistar's Balsam of Wild Cherry.
Signed I. BUTTS on the wrapper.

Surgery.
R. B. COLE, M. D.,
Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.
Office—Albion Building,
South-east corner of Montgomery and California streets, opposite Wells, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself principally to his office, where he proposes to treat all

Surgical Diseases,
feeling assured as he does that his former connection with Medical Schools and Hospitals, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the affections to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and morbid growths, occurring on any part of the body; Diseases of the Spine, Chronic Ulcers, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of the Eye, Ear and Skin, Affections of the Bladder, Uterus, Scrotum and Testis (or in other words, all diseases of the Genito-Urinary Apparatus) and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, Badly-treated Fractures, Contractions of the Limbs and Loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.
Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.
Office Hours: { Morning, From 10 till 12.
{ Afternoon, " 2 " 5.
{ Evening, " 7 " 9. v3-12

A Lady's Praise of Spalding's Oil.
As the shadows of evening began to fall,
A Lady was dressing her hair for the Ball;
Soft were the accents that fell from her tongue,
And this was the song that the lady sung—
"Away with Pomatum and Balmoline,
No more to my room shall Bear's Grease be seen.
The hair's soft texture they only spoil!
Oh, give me the Castor and Rosemary Oil—
It's made my tresses look soft and bright,
And my hair keeps its curl tho' I dance all night.
No more of grease or strong spirit for me,
But Spalding's mixture of Rosemary!"
Sold by B. B. THAYER & CO.,

PRACTICAL HATTERS,
(PREMIUM HAT STORE.)
157 Commercial street, San Francisco.
THE undersigned would take this opportunity to return their thanks to their friends and the public generally for the very liberal share of patronage which they have received. They take pleasure in now announcing that they are determined that no one shall surpass them in the beauty, or finish, or quality of a Hat; that no gent shall wear a finer Hat than can be found at COLLINS & Co.'s Warehouse.
The proprietors of this establishment exert themselves to manufacture to order the latest styles and most approved patterns. The stock of HATS and CAPS, of every kind, now on hand, cannot be surpassed in this city.

THE CALIFORNIA FARMER

And Journal of Useful Sciences.

VOL. III.

SACRAMENTO, THURSDAY, JUNE 21, 1855.

NO. 25.

The California Farmer

AND JOURNAL OF USEFUL SCIENCES.
PUBLISHED EVERY THURSDAY MORNING.

BY WARREN & SON.

Office—on Fourth street, between J and K, Sacramento.

TERMS.—Six dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis. A limited number of Advertisements inserted at fair rates.

AGENTS.

J. Q. A. WARREN, BOSTON.—For all the Eastern States, Messrs. WELLS, FARGO & Co.—At their Office throughout the Country.

PACIFIC EXPRESS COMPANY.—At all their Offices in the State. Messrs. HAYES & BAKER.—Napa City and County. GARDNER & KIRK.—Newspaper and Bookellers, Sacramento. Messrs. LANGTON & Co.—For Donnellville, Foster's Bar, Good-year's Bar, Minnesota.

Messrs. LELAND & McCORMICK.—Crescent City, Port Orford, Uniontown, Dutchy, and Buckley.

SULLIVAN'S NEWSWORTHY STAND, No. 5 Post Office Building; KIM-BALL'S, No. 100 Carriers Hall, 1012 wharf—San Francisco.

P. FEAR, Napa City, Butte Co. A. HANCOCK, P. M., Columbia. D. G. WILSON & Co., Colusa. I. COLLIN, Mokelumne Hill.

Treadwell & Co., Marysville. Geo. M. M. McCARVER, Mount James & Co., Napa. Farm, O. P.

A. W. POTTER, Nevada. Dunlap & Co., Napa City. Nash & Davis, Placerville. Baker & Hamilton, Sacramento.

C. O. BURTON, Stockton. Tanny & Roberts, Sonoma. Dr. Thomas J. HARVEY, P. M., San Luis Obispo.

Craig, Rogers & Co., Yreka. Worth & Shurgis, Martinez. Howard & Chamberlain, U'n City, and Mission San Jose.

* Postmasters throughout the State are kindly invited to act for us.

We desire our Agents to report to us on the 1st of every month, the increase of names and the prospects, together with the amount due the office.

AGRICOLA'S LETTERS.—NO. 4.

On the Modifications Necessary to Accommodate Scotch Husbandry to California.

EDITORS FARMER: Though there is much to recommend the Rotation of Crops referred to in my last letter, there are many obstacles to prevent its entire adoption in this country, which no one can fail to observe. One of its greatest recommendations, in Scotland, is, that by having, as is generally the case, about one-sixth part of the farm in turnips, which are there grown in the most approved manner, namely: on raised drills, twenty-seven to twenty-eight inches from centre to centre, all carefully separated into single plants, at a distance of about ten inches apart in the drills, and the land skillfully hoed and hand-hoed in the most perfect manner; and the whole of the manure of the farm being laid on the turnip field, such an abundant crop is generally raised as makes all the full-grown cattle on the farm, which have been kept in good condition on grass through the summer, so "hard fat," as the farmers there express themselves, that they bring the very highest price at the London market. This is doubtless a great advantage to Scotland, as, instead of the cattle, as formerly, which had abundance to eat during the summer, getting starved and stunted during the winter, they are thus enabled to fatten them, at that season, to an extent which, during the summer it is impossible for them to do. But turnips are a crop suited for winter use only, and it would be perfect folly to think of growing them for the sake of any anticipated supply, to be derived from them during that portion of the year when with us the grass fails, and at other seasons they are not wanted. Potatoes, however, may form a very good substitute; and there is no other country where they attain such size, and grow in such abundance as in California. Let us therefore adopt a similar practice in regard to potatoes, as is done in Scotland with turnips, and see whether we cannot make it equally advantageous. Let us make them one of a regular series of crops, planting them regularly in drills, on a well manured field, as a green crop after grain. It is necessary, it is true, to use caution in giving raw potatoes to cattle, as they are apt to ferment in their stomachs if not given in moderate quantities, especially at first, and care must be taken, to feed them on dry hay only, for a couple of days after taking them off the grass, before giving them potatoes at all; but after they are a little accustomed, I know, from my own experience, that cattle can be fed as effectually on hay and potatoes as they can on turnips.

Such a practice would be a mighty advantage to California, in so far as, in the end of the dry

season, and for months after, till the grass begins to have some strength, meat gets to be of such an inferior quality; and there seems no reason, because turnips are unsuitable as a field crop, why some rotation, in which a fitting substitute is included, should not be adopted. But another objection to the system suggested occurs in the impracticability of growing clover and rye-grass, or timothy, on a great portion of the cultivated land in this State. Such is no doubt the case, in many instances; although, I think, there would be no harm in giving clover and rye-grass a trial, mixed with other grasses so as not to have to depend on them altogether. To obviate this objection however, entirely, I would suggest to go to some upland pasturage, on the sandstone or limestone formation, where the grass is most likely to be of the best quality, or to any place within a convenient distance, where it is really good, after it has ripened and before it has shed its seed, and cut and dry a sufficient quantity to have at least two bushels, by measure, for each acre intended to be sown in grass. After thrashing out the seeds, it would be well, if they are not very light, to endeavor, to separate as much of the chaff as possible by wind, but if this cannot be done without blowing away seeds, let us have recourse to sieves of different degrees of fineness; by means of which we will be enabled, first to separate all the little bits of broken hay, which may be mixed with the seed, afterwards most of the chaff, and finally a great portion of inferior seeds, and seeds of inferior grasses, as those plants which have seeds with awns on them are seldom, if ever, relished by cattle. With such a quantity of these seeds, as I have recommended, mixed with ten or twelve pounds of rye-grass, four or five pounds of red clover, and two pounds of white, by way of experiment, no farmer need have any hesitation in relying on having such a crop of artificial hay in this country, from grasses which are accustomed to the climate, supposing the others do not grow at all, if his land has been properly manured, and he has been guilty of no mismanagement, as will make him a complete proselyte to the advantages of raising grass artificially, instead of depending on making hay from that which grows naturally.

I am not disposed, however to recommend the natural grasses of this, or any other country, in preference to those in general use among farmers, and which, by general consent, are recognized as valuable. The grasses which we know to be good, from past experience, are those which, if possible, we ought to acclimate. To do this successfully, we must not expect from them too much on their first arrival, and should be careful in selecting for them such a soil as we know they prefer, and take care that there is nothing which may, at any season of the year, be so uncongenial to their nature, as would prevent them from growing on that account. If we can succeed in growing them well on any soil, let us not despair. In time they will grow on others, which now they would probably perish on. On the other hand, let us not too much despise our native grasses, though at present so much inferior to those we have been accustomed to in other places. If we are compelled to have recourse to them, let us find out those which make best hay, and are best liked by cattle. Let us learn how to separate them from the others, and sow them alone, or rather two or three of the best kinds together; and let us go on persevering. By cultivation their qualities will be improved. It is a law of nature which is universal, and it cannot fail us here.

Instead of these, I might recommend a number of grasses by name, which are known to grow on dry and exposed soils, and which, we may naturally conclude, would be well adapted for such a climate as ours. But a number of those grasses are of an inferior quality, and your readers and I are not yet sufficiently acquainted, for me to expect them to put such confidence in my opinions, as would induce them to buy the seeds of grasses which they know only by name, because

they have been recommended to them by an anonymous writer in a newspaper.

Thus I conclude that, if it were not for the difficulty and inconvenience of changing from one system to another, there is nothing to prevent the "Five Course Shift" of Scotland from being introduced, under certain modifications, into general usage in California, and greatly to our advantage.

AGRICOLA.

[For the California Farmer.]

Letters from Roving Jack,

NO. VI.

MERCER COUNTY, June 1st, 1855.

EDITORS OF FARMER: The battle is fought, the race is run, and while I have been brushing the dust out of my eyes. The smoke has pretty well cleared away and I see quite clearly that your correspondent has been a little the worst deceived in his land that over a poor mortal was who attempted to be Judge of a new county. I own up like a man, believing open confession to be good for the soul. Yes sir, I am fairly bent—aye, "licked up like salty soap." At the same time it is a source of pleasure, when I come to reflect, that it was the voice of republicans that defeated me at the ballot box. That they, (exercising the right of free suffrage, the glorious privilege guaranteed to every American by our liberal institutions, founded upon freedom and the bible,) did then and there, make choice of a gentleman who in their judgment, will make them a more efficient and better County Judge,—"Vox populi vox dei,"—and I here congratulate the citizens of the County of Mercer upon their good success in selecting officers that notwithstanding the great number of hungry politicians who usually make their appearance upon such occasions in this State, who, Wilkins Micawber-like, lay upon their oars anxiously waiting for "something to turn up" whereby they may float themselves into positions to subsist upon public pay; whose hands refuse to labor—who make politics a traffic, and office-seeking an occupation—whose voracious disposition and peculiar indifference to plunder, often induces them to mistake rapine for love of country, and not infrequently do they contract a migratory disposition, and may be seen like some bird of prey, soaring away to new, strange and untried fields, seeking a more genial climate for the healthy exercise of their ruling passion (spoils of office) I say, notwithstanding this state of affairs, they have not elected one man of this stamp, but they are all permanent citizens, high minded, honorable gentlemen, whose interest is peculiarly identified with that of the people—men who will not swerve from the path of rectitude. There is also one other attribute peculiar to these officials as a body of men, well worthy of note, to wit: they are to a man all farmers, and are to exercise the functions of their respective offices in a county devoted to agriculture almost entirely. The territory embraced in the new County of Mercer, hitherto has occupied rather an isolated position, and from its unfortunate situation, being politically attached to the mining County of Mariposa, has failed to command any great degree of respect, and as a consequence cut but a very insignificant figure in the case. We at last in our struggle to rise, have effected a separation, a contingency of territory and a community of interest, necessary to the well being of every county or state, without which none may prosper. I hope that I may not be misunderstood as waging war with my esteemed friends and citizens of old Mariposa County, for such is far from being my purpose in this or any other article that I ever have written or ever shall. While I entertain the warmest feelings of friendship and the profoundest respect for them as "quondam" friends and fellow citizens, I shall reserve to myself the right to think and judge for myself touching the things that are to effect the future prosperity of our infant county. The argument that mining and agricultural districts may jointly compose a county and prosper equally as well as either would separately, after proper investigation will be found wanting in almost

every particular. Geography has marked a natural line of demarcation. I am convinced it was not the intention of the great ruler of the universe that interests so conflicting and opposite in their nature over should harmonize. It is morally impossible, and as far as it can be made to suit the convenience of the inhabitants, new agricultural counties should be formed, that their weight may be felt in our State Legislature. Agriculture in the State of California, is in its infancy at present, and that it is only second to the mining interest, no longer admits of any doubt. Separate the farmer from the miner, and you may depend upon it that the "cud chopper" will assuredly "make his mark," even in California. And why not? Respectfully,

ROVING JACK.

Stock from Salt Lake.

Messrs. Thomas J. Barnes & Brothers, who have just arrived from Salt Lake with 810 head of cattle in fine fat condition, inform us that the grass is good and abundant over the Plains. They came over with twenty wagons, in perfect health—no deaths or sickness, Indians perceptible. A bad road was found at "Johnson's cut off," that broke their wagons considerably. A good migrant road is imperative now. Complaints were loud against the excessive tolls exacted. They paid a \$120 toll to cross the ferry bridge of the South Fork of the American river, and had they crossed all the bridges and ferries from Placerville, the amount would have been \$700. It was so excessive that they came round, turning off to Grisham's Ranch, thus adding over three days to their journey—more than twenty miles out of the way—but in doing this they saved about \$300.

Messrs. Barnes informed us they learned of some 5,000 or 6,000 head of cattle that were on the way. Some 6,000 or 8,000 sheep were at Salt Lake for Mr. Greenhouse. They met several pack trains going to the States. Met Major Ormsby with 100 California horses, on his way to Missouri.

Messrs. Barnes feel much interest in introducing stock, and note all events that tend to promote the general good. We have many facts from them, for future use, to lay before our readers.

MAIL FACILITIES?—We frequently hear of mail facilities! and we have a sample of them before us from San Luis Obispo, a letter bearing date May 15th—only a month—twenty-five per cent longer than a letter from New York or Boston, and here on our own coast too. Where is the fault? Not with our post-master here, but with the department at Washington, where they either neglect to enforce the mail contract or to furnish the proper conveyance. This neglect may seem all very well on the Atlantic side, but it will not do here. If our post-master here could have the control of the matter he would make it Well-er soon.

BANKERS AND BILL DRAWERS.—We invite Bankers and Exchange dealers to our columns as a medium of advertising, that will make known their business in every county in the State, and in Oregon and Washington Territories. Besides the ordinary exchange for remittance, the stock raisers, nurserymen and farmers, are purchasers of Exchange to large amounts for imported stock, grains, seeds, plants, implements, and the amount is large annually. This trade is worth having.

FAMINE IN UPPER GEORGIA.—We have sad accounts from the north part of Georgia. The Dalton Times says that many people are without corn, or means to procure any. And besides, there is none for sale. In some neighborhoods, a bushel could not be obtained for love or money. Poor men are offering to work for a peck of corn a day. If they plead "our children will starve," they are answered "so will mine, if I part with the little I have." Horses and mules are turned out into the woods, to wait for grass or starve. The consequence is, that those who have land can only plant what they can with the hoe—they cannot plow. It is seriously argued that, unless assisted soon, many of the poor class of that section will perish.

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, THURSDAY, JUNE 21, 1865.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

"HE was prosperous as long as he was minding his own business."

Why are not all farmers prosperous? Why with such abundant harvests are so many farmers discontented, unfortunate, bankrupt?

These are questions of great moment at the present time; they are questions we have been desirous to solve that we might answer them satisfactorily to those who inquire. We are satisfied of the cause ourselves, but our opinion is but one. We wish to present an array of opinions from all sections of the country, and from all kinds and degrees of farmers; from him with his four acre garden lot, to the owner of his thousands of acres. In pursuing these inquiries we find a mass of facts all bearing upon the same point, and the words at the head of this article we heard uttered by a most attentive observer of cause and effect, who expressed his views thus a few days since, in relation to a number of very industrious men he named, who some two or three years since, were very prosperous, contented and happy—but who now were bankrupt! Of each he said, "They were prosperous as long as they attended to their own business."

Now we would inquire of our readers if they understand what he meant? for all he said was true. And yet he did not mean that they were meddlesome men, looking and prying into other people's affairs—oh no, far from it; for of each he gave them the credit of being hard working men, industrious men, prudent men, and good citizens, and they were for a time prosperous, made money, got beforehand, had spare cash—and this spare cash, was their downfall.

While they engaged themselves to their farms and gardens, money came in fast; but as soon as this surplus money made its appearance, they must needs feel rich, buy more land, pay a part, mortgage the balance; or buy quartz mines, or stock in some company. They were making money, and were soon to get rich. These last plans were outside of their business, and took a portion of their time away from their true business. And it took their surplus capital, that should have gone to improve their real property and make that more valuable and more productive. And it took that capital which should have been reserved for a short crop, a rainy day, a season of sickness, a calamity, (contingencies to which it is the lot of mortals to be subject.) And again, the part unpaid lands, or mining shares, or whatever speculation it was, consumed interest money. This reduced the old income, and when reverses came, the wheel of fortune turned backward, they got under sternway, with sails all aback, and as it ever must be, they went down. And it is by such plans that many a farmer has been ruined.

Again, when farmers have large fields of grain, or large crops of any kind, they have not, in a majority of cases, sat down to count the cost of plowing and putting in the crop, the cost of tending during the season of its maturity, or the cost of harvesting implements, or the value of the interest money they are paying. They had capital to have paid for half that number of acres, but they cultivated too much, became involved, and going beyond their means, became unfitted to do well or take care of what was done, and this added to the disaster, and loss and ruin followed.

Again, many farmers farmed on shares, or let others do their farming, never giving it their personal attention, they giving their mind and heart to other employments, never studying the profession so as to secure prosperity, rarely over knowing the demand of the crop planted, its value at home or abroad—planting, harvesting, storing, all for luck. This was not "minding their own business," as the word was, and this and similar causes were the ruin of those to whom we alluded, and will be the ruin of all who engage in farming without an object in view and that object steadily and faithfully pursued, and that too as one's own, sole and legitimate business. A farmer to be prosperous, as the great Fessenden said, must have not only his hands in the work, but his heart, mind and strength; and when he is prosperous, then instead of withdrawing his surplus capital, he should use it for still higher

and greater improvements in some departments of his business, or keep it for an emergency.

Farmers as a class are, the world over, the most prosperous of any one of the professions. General Dearborn, of Massachusetts, many years since, in an investigation relative to the causes of failure and the want of success in life in all classes and professions, found that the cultivator of the soil was 33 per cent. more successful than any other class. Why then should it be that here in California there is not an equal degree of success? We answer, because it is not made a sole business and carefully studied, guarded, and as highly esteemed. When this is done, the farmers of California will be the most successful, the world over.

Grasshoppers.

REPORTS come in from many quarters in relation to these destructive insects. They have swept away the garden and farm produce of many a cultivator, leaving the ground as though a fire had passed over it. Hook Farm has suffered very much, which we the more lament, for the good old pioneer has had trials enough. Many farms and gardens in Yuba county have suffered, and Sacramento county is now feeling the effects of their visit.

We were at Smith's Gardens on Monday and saw them in the vineyards. We trust these splendid gardens may be spared, for the crop of Peaches will be very large, and of the most splendid varieties. Smith's young orchard and his very extensive nursery of young trees, of many thousands, will stand but a poor chance before these destroyers. Mr. Smith has now perfected his water pipes, extending them over the whole ground. The plan is a good one and should be familiar to those who are planting large nurseries and gardens, where water is needed. By the plan of Mr. Smith's hydrants are scattered over an area of fifty acres, and, with hose attached, a gentle shower of rain can be spread over all his fruit trees, vines, shrubs, vegetables, and his entire grounds. This is the most complete plan we have seen in this country.

Fruit—Will it Pay?

The following are the prices, per pound, for fruit in San Francisco markets:

Cherries, \$4; Strawberries, \$2 to \$2 50; Raspberries, \$3 to \$3 50; Currants, \$2 50 to \$3; Apricots, \$1 to \$1 50; Gooseberries, \$1 to \$1 50; Blackberries, (plenty) 50 cts. to 75 cts.; Pears, (new crop) 75 cts. to \$1 50; Apples, (new crop) \$2 to \$2 50; Apples, (old crop) \$1 to \$1 50. Foreign Fruit.—per dozen—Oranges, \$1 to \$2; Lemons, \$4 to \$6; Limes, (scarce) \$3; Bananas, \$1 50 to \$2.

When our public journals bear constant reports of distress in mercantile and commercial affairs; when reports of failures and ruin press upon these interests—if they are so disastrous—where does the money come from to pay such prices. There is money. Would not some of our young men and merchants who are now doing nothing, earning nothing, and finding themselves, do better to find a piece of land and cultivate fruit. They will secure to themselves, at least, health, and prevent the blues. Besides they can do well, can be successful; if what they do, they do it well. There is a large field open, and now is the time.

Grain Prospects.

Santa Clara County—A short crop is only to be expected.

Alameda County—A fair crop.

Many of the counties near the Mountain Range, a latitude of greater moisture and later rains, will have fair crops.

Yuba will have a fair yield.

Sonoma, Napa and Suisun Valleys have more or less smut.

Sacramento Valley—The entire length and breadth of it will have a very fair crop.

In many of our lower counties, in Sacramento, and up-river in many places, harvesting has commenced in right good earnest, and, generally, farmers look more hopefully to the present year's crops.

The Placerville Herald mentions tall oats only 11 feet high. This beats our samples some 3 inches. Who will send us 11 feet 6 inches?

OLD RELICS.—J. Jennings, Esq. of Sacramento, has kindly sent to the State Agricultural Society's Rooms, for the sight of the curious, a "Snuff Box," made from live oak which formed a "pile" of Old London Bridge. Upon the pile was found an inscription, bearing date 640 years back. A silver plate is upon the box, and over the English coat of arms are these words, "May prosperity crown our endeavors," and in the scroll, "Diminus dirigit nos." Mr. Jennings also left an English Guinea, bearing date 1774, of George III.

Second Semi-Monthly Horticultural Exhibition, at the State Society's Rooms.

ON Saturday last, the 16th, there was quite an interest shown, and a lively time. Ladies and gentlemen seem to realize that we can have as fine fruits and flowers in California as in any other State. The attendance was quite numerous and gives promise of a steady increase.

It is to be hoped that members of the Society, and cultivators generally, throughout the State, when in Sacramento, will visit the rooms. It is important that the officers over the State should call and report as often as they can.

Specimens of grain from the different counties are solicited. They can be boxed and sent by express to the Society's rooms.

The contributions on the 16th were as follows:

Messrs. L. Prevost & Co., of San Jose Gardens, sent a collection of superb roses, numbering thirty-two varieties. They were very beautiful and attracted much attention, and reflected great credit upon these gentlemen. They were all numbered and named, and came in fine order. They were as follows:

'Tea', Chromatella or Cloth of Gold, Gold of Ophir, Yellow Harrison,—all yellow roses and superb specimens.

Souvenir La Malmaison, Eliza Sauvage, Bouton de Flor, Duchess of Sutherland, Vettolina, Davionensis,—these all blush and elegant roses.

General Lamarque (very pure white), Daily White, White Ayershire (climbing),—all choice white roses.

Noisette Marie, do Pallida, do Multiflora (ranchan), do Ayerstim, do Leonie Vergee,—all fine climbing roses, large and fine clusters.

Giant de Batailles, Rose de Roi, Henry Fabore, Madam Speedum,—these were all dark crimson, and of extraordinary beauty.

La Reine, Baron Prevost, Wm. Jesse. The above three roses were the most superb we have seen in this State. The La Reine was the size of a large coffee cup, fine form, brilliant and perfect; Baron Prevost a bold and fine show flower; the Wm. Jesse we laid upon a dish by itself, and it looked as fresh and beautiful as a rosy cheek babe upon its mother's breast—pure, lovely and beautiful.

Also Gigantique, Eva, Stamboul, Candace, Hermosa, Reine de Gillytoire, Agrippina,—these last were most excellent roses, all select, and it is rarely that so good a collection can be found in one garden.

Messrs. Prevost deserve well of our State for their zeal in the science of Horticulture, and all the lovers of Flora, when they visit San Jose, should be sure to visit their fine Gardens.

From A. P. Smith, Esq., a beautiful pyramidal open work bouquet, having centre flowers. Also a pyramid of flowers, in fine taste. These beautiful specimens were the handiwork of Messrs. San and O'Brien, at the Gardens of Mr. S.

W. Vaughn, Esq., on Ninth and M streets, contributed a very fine obelisk of flowers, of brilliant colors. Mr. V. is an enthusiastic amateur and displays a fine taste.

Dr. B. B. Brown presented a cluster of flowers, formed as a centre-table bouquet, composed of fine blooms of the Dahlia rose, and some forty other varieties. The Doctor is no trifle with the Goddess Flora; he pays her due honor, worships at her shrine, and she blesses him. Does any one doubt it? go to the Doctor's Gardens; if they are not convinced, we give them up as hopeless unbelievers.

A very extra specimen plant of carnation pinks from a garden at San Francisco.

Smith's Garden also presented six very splendid hand bouquets, in beautiful taste.

Mr. Jesse Morrill contributed two fig leaves of enormous size, sixteen inches long by fifteen wide, from trees planted in young cuttings this spring.

Mr. E. L. Marsh, of San Francisco, sent more of his famous Chile strawberries. They are a mammoth fruit indeed, surpassing any ever seen or known. We are glad to know the vines are to be offered for sale the coming week. The berries are as big as peaches.

Many other contributions of curious things are constantly added.

Mr. Vaugh sent a dish of English Winsor Beans and a bunch of red Spanish onions.

Messrs. Wheeler & Brooks exhibited turnips of superior size and quality, nearly three feet in circumference, weighing ten pounds each, as fine in appearance as any taste could require.

From J. Ball, Esq., the good old fashioned Red Clover, some four feet high and just beginning to blossom.

Geo. H. Johnson, Esq., sent a fine specimen of gold bearing quartz, very rich in the precious ore.

From the Wolfkill Ranch, on the Putah, a box of most luscious Apricots, and as we now write it is delicious to be thus refreshed, in our high temperature, by such fine fruit. We find them, on-tasting, to be really delicious.

Will Farmers, Gardeners, and all who feel an interest in Home Industry, give some little atten-

tion to these meetings? It will do good and encourage the Society in their efforts to advance the public weal.

The Voice of Pennsylvania.

THE recent noble grant of this State for an Agricultural School, is a step that will reflect upon her the highest honor. The grant is made without stint. There is a liberality and a tone about it that shows the cause to be worthy their regard, and they have acted as nobly as the cause is noble. We have not space to copy the whole act of incorporation, or we would do so, that it might serve as a specimen act for the future legislators of California. We can copy only the following sections:

"Section 1. Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania in General Assembly met, and it is hereby enacted by the authority of the same, that there be, and is hereby erected, and established at the place which shall be designated by the authority, and as hereinafter provided, an institution for the education of youth in the various branches of science, learning and practical agriculture, as they are connected with each other, by the name, style and title of the Farmers' High School of Pennsylvania.

"Sect. 2. That the said institution shall be under the management and government of a board of trustees, of whom there shall be thirteen, and seven of whom shall be a quorum, competent to perform the duties hereafter authorized and required."

"Sect. 6. That on the second Thursday of June, after the passage of this act, the board of trustees who are hereby appointed, shall meet at Harrisburg, and proceed to the organization of the institution and selection of the most eligible site within the Commonwealth of Pennsylvania, for its location, where they shall purchase, or obtain by will, grant or otherwise, a tract of land containing at least two hundred and not exceeding two thousand acres, upon which they shall procure such improvements and alterations to be made, as will make it an institution properly adapted to the instruction of youth in the art of farming, according to the meaning and design of this act; they shall select and choose a principal for the said institution, who, with such scientific attainments and capacity to teach as the board shall deem necessary, shall be a good practical farmer; he, with such other persons as shall from time to time be employed as teachers, shall compose the faculty, under whose control the immediate management of the institution and the instruction of all the youth committed to its care shall be; subject, however, to the revision and all orders of the board of trustees; there shall be a quarterly meeting of the board of trustees at the institution, and as much oftener as shall be necessary, and they shall determine; the board shall have power to pass all such by-laws, ordinances and rules, as the good government of the institution shall require, and therein to prescribe what shall be taught to, and what labor performed by the pupils, and generally to do and perform all such administrative acts as are usually performed by and within the appropriate duty of a board of trustees, and shall, by a secretary of their appointment, keep a minute of the proceedings and action of the board.

"Sect. 7. That it shall be the duty of the board of trustees, as soon and as often as the exigencies of the institution shall require, in addition to the principal, to employ such other professors, teachers, or tutors, as shall be qualified to impart to pupils under their charge, a knowledge of the English language, grammar, geography, history, mathematics, chemistry, and such other branches of the natural and exact sciences as will conduce to the proper education of a farmer; the pupils shall themselves, at such proper times and seasons as shall be prescribed by the board of trustees, perform all the labor necessary in the cultivation of the farm, and shall thus be instructed and taught all things necessary to be known by a farmer, it being the design and intention of this law to establish an institution in which youth may be so educated as to fit them for the occupation of a farmer."

In addition to purchasing land, erecting buildings, procuring professors, teachers, &c., the State Agricultural Society is authorized to give from its treasury \$10,000 whenever it shall be required to carry forward the work.

This is right—money nobly spent. Educate the farmer to his profession, scientifically, and he will then understand the true meaning of the earth yielding, some thirty, some sixty, and some an hundred fold.

CALIFORNIA NUTMEG TREE.—This beautiful evergreen tree, now in its glory, is laden with its green balls hanging from its pendant branches, and is one of the most graceful trees known. The ball or nut, resembles the nutmeg, except it is of longer shape and its aroma is of a pine or resinous nature until thoroughly dried.

This tree, which has been of some celebrity as the "California Nutmeg," has always been claimed among the "Pinus" tribe, and will become one of our finest ornamental evergreens. A splendid specimen branch, with its fruits, has been sent to the Society's Rooms by Josiah Howell, Esq., of this city, which he had received from the mountains.

Whale Fisheries of the Pacific.

The California Whaling Company, contemplate with \$300,000, to commence the Pacific depot at Benicia. They have the amplest water front, sufficient to float a navy, and depth beyond the requirements of the largest vessels in that trade. Here, too, they will have ship and rope yards, machine shops, capacious warehouses, and manufacturing of oil and sperm. There will commence and grow up a commerce of incalculable benefit to the State. They can build and equip vessels, furnishing anything needed—provisions and supplies, of home growth. Here, they will ship their crews,—here clothe them, and provide them with every article required for that peculiar service.—*San Francisco Citizen.*

We feel pleased to see the prospect of a fulfillment of what we have long since prophesied. In December of last year, in our leader upon "California Enterprise," we made the following remarks; and we again repeat them, believing them true then, we do not believe them the less true now:

"Look through our streets, see our stately public buildings, our Exchange, our Custom House, our stores and warehouses—these are specimens of our mechanics and laborers. See our churches, halls of learning, and mansions—again the enterprise, the moral enterprise, of our people. Look to our wharves, stretching out into the sea. See the palaces that float up and down our rivers, and the swift-winged messengers that course the two oceans. Are not these evidences of California enterprise? They are nothing else. It is this enterprise that will open steam communication between this city and our sister State, the Sandwich Islands, and thence to China. It is California enterprise that will concentrate a large whale fishery upon the Pacific coast, making San Francisco their port of outfit, thus increasing trade.

"The same enterprise will awaken our citizens to the true importance of the Great Pacific Rail Road, and California enterprise will not slumber until that road is completed. California enterprise can build her own ships, steamers, engines, boilers, rear her own factories, and then manufacture her own goods. California can do more than this—she can feed her citizens with her own products. Her bread stuffs, she has already enough to spare; and the energy of her farmers and stock raisers, can fatten countless thousands with the "cattle upon a thousand hills." All the necessities of life are now within our own reach, the product of our own soil and the result of our own enterprise. Not only the necessities, but the luxuries of life are already flowing in upon us, the result of our own labor, like as the gold flows from our hills and mountains."

Yes! all these enterprises that engage the attention of men abroad, will attract them here, and thus will California enterprise be enlarged and made permanent.

PUBLISHING HOUSE.—Mr. Jas. French, started business at No. 78 Washington street, Boston, in 1843, and in 1853, the house became Jas. French & Co. Mr. F.'s first publication was a System of Penmanship, of which twenty-seven editions of 200 each, have since been sold; since when, he has been extensively engaged in publishing Writing and Drawing Systems, which in the aggregate have amounted to over 750,000 copies. Foster's Book-keeping, has also reached a sale of 15,000, and is still a very popular book. Of Floral Gems, and other similar Miniatures, from 15,000 to 20,000 each have been sold. Mr. French also, for five years, was the originator and publisher of the Massachusetts State Record, which has since been transferred to G. Adams & Co. This House has issued in twelve years about forty-six distinct works, including three books in 1854, among which are, Turkey and the Turks, by Dr. J. V. C. Smith, (one edition sold), and the New Hampshire Festival; which, together with the record of the proceedings of the previous year, has met with an extensive circulation, (say 3,000 each). During the present issue of books from this House Messrs. French & Co., are paying, we are informed, about \$700 per week. They are also the publishers of Burleigh's new book, the Hen Fever, 20,000 copies of which have been sold. This is believed to be the largest first edition ever issued of an American book.

ERROR IN LAST ISSUE.—In the subject of education, when we were speaking of the qualification of "teachers and superintendents," immediately after the circular of Col. Hubbs, the article reads: "We would have gentlemen of manners," instead of *gentleness of manners*. We make this correction at length, because we expect none but gentlemen would be elected to this trust, of that sex, and ladies are always gentle. Therefore, to read "gentlemen of manners," the article could not be understood. We make it, too, because we have seen so many teachers lose command of their tempers and become harsh and unkind, and thus lose all good influence over the pupils. This habit of severity, once acquired, and the pupils feel this harshness, the better influence of the teacher is forever gone from them. Therefore, we esteem a gentle and kind course of instruction, a pre-requisite among the qualifications of teachers, and most valuable in those who superintend.

Boston Department.

WM. V. SPENCER, 128 Washington street, has just sent us the Limerick Boy, an original farce in one act, by James Pilgrim—with editorial remarks, scene and property, plots, and the whole of the stage business. This is No. 16 in the regular issue of Spencer's Boston Theatre.

Dickens's New Stories, containing the Seven Poor Travelers, Nine New Stories by the Christmas Fire, Hard Times, Lizzie Leigh, The Miner's Drought, Fortune Wilfred, &c., have been published by Peterson of Philadelphia, in an 8 vo. pamphlet of 223 pages, illustrated with a handsome portrait of the author. Received at Redding & Co., Boston.

Just published by J. C. Derby, New York, Bell Smith Abroad, a lively and interesting work of 326 pages, and illustrated with live steel and wood engravings—among them a portrait of Miss Smead, the beautiful star of the Tuilleries, last season, and complimented by the Emperor Napoleon as the most beautiful woman he ever saw. Also, a fine portrait of Rachel, the French tragic actress. This book is in the form of a series of letters, written at sea, in a very sprightly and pleasing style, giving the events of the voyage, in a style that cannot fail to please all who may read it. Received by Philipps, Sampson & Co.

A PUBLIC CALAMITY.—Under this head the Union records the extensive ravages committed by grasshoppers, and says the devastations heretofore reported are small, when compared to those which these insatiable insects are now perpetrating in the immediate vicinity of our city.

Above Norris' homestead they had destroyed almost every blade of grass and green herb. Even the bark of the trees is eagerly devoured, and as for leaves and fruits, and vegetables, they devour them all with rapacity. Thus far, the grains have mostly escaped, owing, however, to their being yet young, but everything else, in their line of march has been visited with mildew blight. It is furthermore stated to us that myriads of grasshoppers are now ravaging the farms bordering upon the Coloma road in the vicinity of "Patterson's," ten miles east of town.

The probabilities now are, that the entire Sacramento Valley is to be overrun with these greedy creatures, and if so, the damage to farmers and gardeners must be incalculably great.

All efforts thus far to suppress their ravages have proved unavailing. The proprietors of the magnificent gardens on the banks of the American river, and about the Fort, in anticipation of the invasion of this resistless army of grasshoppers, are exerting themselves to warn off their attacks, by every means in their power, but we are fearful their efforts will be unavailing.

About nine miles from Gold Hill, multitudes of grasshoppers are observable, flying from south-east to north-west, destroying everything in their passage.

It is sincerely to be hoped that the destruction caused by these more than Egyptian locusts, will prove less ruinous than is now apprehended by those who have witnessed their depredations.

A GREAT LOSS.—From a private letter, written to Col. Andrews, of this city, by Gen. Sutter, we regret to learn that the injury sustained by the noble pioneer, this year from the invasion of grasshoppers, is almost irreparable. The annoying insects have almost entirely destroyed his fruits, vines, and grain, and he thinks the loss cannot be less than \$10,000. To save a few choice grape vines, and rare fruit trees, he has been compelled to cover them with mosquito nets, and in some instances, these barriers have proven no impediment to the attacks of the scourge. We sympathize deeply with the General in his severe loss, as few men in California have worked harder to succeed, and are less able to bear the reverses of fortune, than the once "lord of the manor," who is first in the kind remembrances of all Californians.—*Tribune.*

GRASSHOPPERS.—These insects are now committing serious ravages in the Soledad cattle pastures, Monterey county.

SALINAS VALLEY.—The Monterey Sentinel says that from the insufficiency of seasonable rains the present year, in the Salinas Valley, the grain crops do not look as well as last year. During the heavy rains occurring in the vicinity since the first of January, the clouds have passed over this valley without discharging but little rain, compared to that experienced at Monterey. The cattle, pastures, and sowings, in consequence have suffered very materially.

VERY GOOD.—At the meeting of the Settlers of San Francisco county, in Musical Hall, on Saturday evening, the following were among the resolutions adopted:

Resolved, That there should be a union of Californians for the sake of California.

Resolved, That there are no political interests for which we struggle, and no greatness which we seek to achieve, but the interests and the greatness of this, the adopted country of us all.

Resolved, That as legislative reforms are demanded in behalf of those interests, they ought to be clearly and distinctly avowed, in order that the principles upon which they are founded, and the policy of their adoption may be fully discussed and fairly understood.

SACRAMENTO BUSINESS.—We note that the business of this city, is quite lively. To one long familiar with Sacramento, a walk through her streets will present a goodly array of old familiar names and firms, who have adhered to their first love, passed through all her perils and trials, and are now rising with her prosperity. It is to the exercise of that energy and perseverance that never tires or flags amid adversity, by her merchants, mechanics, and citizens, that Sacramento presents the proud spectacle she does to-day.

We are now engaged in sketching the causes of this prosperity, and propose to publish them in a series of numbers, commencing with the new volume, in July. We hope to receive a large increase to our subscription list from our old friends.

MR. AND MRS. STARK.—Mr. Stark, the distinguished tragedian, and his lady, are announced to deliver a course of readings in this city. That it will be an intellectual treat of a very high order, there can be no doubt. These readings will be continued if sufficient encouragement is given, and we trust they will be duly appreciated. We remember well the pleasure we enjoyed years since, in listening to Mr. Stark in his readings before the Mercantile Library Association of 1851-52. If there are actors that deserve well of Californians, and especially of Sacramentoans, they are Mr. and Mrs. Stark, who strive to advance the Drama.

YOUNG LADIES' SEMINARY.—A very commodious building has been erected for a young ladies seminary, and was to be dedicated Wednesday evening. The building was planned and built by Miss Bennett, and will be under her special care. This lady has manifested great perseverance and devoted interest, to this enterprise, and merits a generous support from all the friends of education. We have received a call, and shall avail ourselves of the happy privilege, to be present at the dedication. In our next issue, we shall endeavor to give a sketch of what we know, by the extent of the preparations, to be a pleasing festival.

HEMP.—A very handsome sample of hemp was brought to the State Journal office of this city, by Gov. Bigler. We examined the sample. It was very long and fine fibre, and gives promise of excellence as to quality. That sample has gone on to Washington. Thus another article of value is added to California products. It is fortunate hemp has been discovered, for it is needed very much. Something is wanted to "hold horses;" ordinary mending won't do. Hemp only will prevent horses from being stolen.

CALIFORNIA WILD HEMP.—The hemp alluded to in another article, will soon attract the attention of cultivators, and we have no doubt attention will be given to the cultivation of hemp in California another year. We have received from Messrs. B. B. Reibling & Co., of the State Journal, a note with data relative to the specimen exhibited by them, where found, &c., for which they have our thanks. We shall avail ourselves of their kindness.

CALIFORNIA EAGLES.—A monster eagle was shot at Volcano Canon recently, that measured ten feet from point to point of wings. Two young ones, from the nest of the parent bird, were taken from a tree 180 feet high. They were taken to this city, and may be seen at the Veranda, on Second Street.

MR. HARVEY BAXTER, formerly of Boston, was drowned while attempting to cross the Sacramento river, just above the city. Mr. B. was a printer by profession, but had recently been engaged in the fisheries.

BETTY MARTIN.—Our young gentlemen readers may think this a strange "non de plume" for a beautiful young lady to assume—one too with a very "sing little fortune,"—yet the name is in perfect keeping, for the lady seems perfectly independent of that personage known as Mrs. Grundy. Pretty Betty loves the country, and seeks happiness. We shall be right glad if, through the columns of the FARMER, she may receive such proofs from some real worshiper at the shrine of "nature," as shall plant in her heart the seeds of permanent happiness.

VALUABLE DOCUMENTS.—We return many thanks to the Hon. Mr. S. Latham for kind attentions in favoring our office with several valuable public documents. Among the last we have received is Vol. 2 of the Explorations of the Valley of the Amazon, with maps, and the President's Messages, parts No. 1 and 2.

AGAVE AMERICANA.—This beautiful and showy blossom is in bloom at the garden of Donna Catalina Nommass, at Monterey. The Sentinel informs us that this Agave was planted by Don Esteban some twenty-five years ago, and this is the first blossoming. The flower stem has grown twenty feet in six weeks, and measures seven inches in diameter at its base. The flowers hang upon this lofty stem like bells, of a pure white, and sometimes tinged with a yellow shade. We have seen this flower with blooming stems twenty-five or thirty feet high. It is a gorgeous sight, and worth a trip to Monterey, to all lovers of the beautiful. It is called the "Century Plant," on account of the long time required to bloom in cold latitudes. Yet twenty or twenty-five years in Mexico, and even less time, finds it blooming freely. After its first bloom it throws up annually or biennially its flower stems.

RISE IN PRICE OF GRAIN.—The rise in the price of grain East, and the condition of Europe, should be a subject of study among all who are interested in the success of grain fields in California. The crops of wheat in this State are to be none too large; and when we note the injury by rust, short crops and other blights, we only wish to note these facts and call attention to them by those most interested. The shipment will still go on, for it will pay, and crops East and the prices there, of course, utterly preclude any possible chance of shipment from that side, and if the price continues there as high, our market can supply them, and with profit.

ANNALS OF SAN FRANCISCO, by Frank Soule, Esq., and others. This valuable work has just been issued in beautiful style, reflecting great credit upon the authors and publishers for the manner in which the work has been gotten up. Not having had time to examine it, we cannot speak of its merits, but presume it to be excellent, from the source from which it emanates—it most assuredly should be.

LOST.—Vol. I of the Explorations of the Valley of the Amazon. Some time since some friend called and asked the loan of it for a short time; but has forgotten to return it. We hope this may meet his eye, so we can have said volume returned. For such a blessing may we be always thankful.

W. C. McHENRY, Esq., has kindly sent to the Rooms a very handsome specimen of White Flint, from Fremont's Peak. It is very clear and almost transparent—really a fine specimen.

SCARCITY OF DEER.—The Monterey Sentinel, justly complains of the wanton destruction of the elk, deer, &c., thereabouts, by outside sporting parties. Last year, the hunters for the San Francisco market, made their appearance in that section in great numbers, and slaughtered the deer to such an extent that four horse teams were going all the time, loaded with venison for that market. The citizens of Monterey, who have their families there, when they want to indulge in an old fashioned hunt, find the game so frightened that it has become quite a treat for them to bring in a fat buck; when, but a short time ago, a day's tramp was sufficient to amply supply their family larder. The Sentinel says that if something is not done to remedy the evil, there will shortly be no deer left in the State.

THE CHINA.—The information received from the Genesee valley is that the wheat crop looks promising, and scarcely ever appeared better. A large increase of ground has been planted with every seed and excellent that gives sustenance to man. Stock has been wintered well, and a great business will be done in the dairy department, the coming season. From Illinois, Michigan, Missouri, and Ohio, the accounts of the agricultural prospects are all cheering, notwithstanding some reports to the contrary from the last mentioned State. In the northern part of Grand Prairie, Illinois, one of the best wheat-growing regions in the world, the fields present a glorious appearance. Several gentlemen, who traveled recently through Georgia, North Carolina and Virginia, concur in representing the crops as looking unusually well. In Maryland, within a fortnight past, vegetation has sprung up with wonderful rapidity, and there is cheering intelligence from every part of the State.—*N. E. Farmer of May 15th.*

ANTIDOTE TO POTATO ROT.—Prof. Bollman, of the Russian Agricultural Institute, has published a pamphlet on the potato rot, and announces to the world that mere drying, if conducted at a sufficiently high temperature, and continued long enough, is a complete antidote to the disease. This result was ascertained by repeated experiments conducted for a series of years. The temperature required is not very clearly made out. Prof. B.'s room, in which his first potatoes were dried, was heated to about 72 deg. and much higher. By way of experiment he placed others in the chamber of the stove itself, where the thermometer stood at 136 degs. and more. He also ascertained that the vitality of the potato is not affected even if the rind is charred. This hint may be useful, and with similar experiments carefully conducted, the fact may be established.

Horticultural Department.

Culture of the Tomato.

BY WILLIAM CHORLTON, NEW BRIGHTON, STATEN ISLAND.

It is very likely that many of your numerous readers will consider it very superfluous to be writing about so common a subject as the Tomato, —the more common and often more needed,—so, at the risk of being thought out of matter, I will venture to offer a few remarks on this generally accepted edible.

The Tomato was originally a native of South America, but it may now be considered as indigenous to all warm or temperate regions; for, like the Grape, it has been introduced to all countries where there has been any prospect of its flourishing. Wherever the climate is sufficiently suitable to perfect the fruit, it seems to be universally a favorite; and yet there is perhaps no other vegetable which is dressed in the kitchen, that represents so nearly the normal condition. From a small, bitter tuber, as the Potatoe is in its aboriginal state, there has been obtained the good-flavored farinaceous product we often feed upon; by the same care and skill in improving the loose, open-leaved Kale—a mere weed in some places, has produced the burly, close headed Cabbage and the tender Cauliflower; the nutritious and sugary Currant has emanated from one of the farmer's most troublesome weeds; and Giant Asparagus, from a comparatively mere pigmy of its own character, found on the sea shore; while the Tomato, because nature was more lavish in her bounty, has been almost left to itself, to improve by accident. It is true that there are a few varieties of good merit, but there is much room for improvement. Why should a hollow Tomato be recognized as worth culture, so long as the same care which has been bestowed on other things would accomplish solidity?—and why tolerate those of unequal surface, when they may be shaped like the Pippin Apples? The flavor likewise, notwithstanding the present acknowledged excellence, may become considerably better.

How to bring about this improvement, is a question that is easily answered. Let every one who has a Tomato plot,—and who that has a garden has not,—notice the plants when in full-bearing,—and one or more will show more excellence than the others—pick from the very best, the most desirable fruit, and save them for seed. Repeat this each season, always having an eye to form, color, productiveness, flavor and size; and if no improvement takes place, then consider the writer an ignoramus. I have followed the above plan for several years, and the result is quite satisfactory; and so it will be to others if adopted. Let this be more generally done by private growers; let them raise their standard of excellence, and the awards of prizes at the public exhibitions follow suit, and the large growers for market will soon be forced to take a better sample to the city, instead of the thick skinned, hollow subjects, which are too often seen on the huckster's stall, and which "hinnies" like a foot-ball.

There is no vegetable that requires less care than the Tomato, where a general crop only is wanted; but to have it fresh all the year round, which is no difficult matter, there will have to be succession stocks of young plants, and the convenience of a hot-house, or glazed pit for winter fruiting. To show how this perpetuity of bearing is to be accomplished, will be the object of the following paragraphs.

GENERAL CROPS.—To get the general summer supply, as likewise as early as possible in the open ground, it is advisable to have strong and healthy plants ready to be turned out in a warm aspect, so soon as all danger of frost is over; or where there is the convenience of glass box frames, a portion may be planted therein two or three weeks earlier, some at the distance apart that it is intended they should remain. A good start is a great advantage, and fine plants will furnish fruit much earlier, and in more abundance, through the summer, than those which are weak and stunted to begin with; consequently the little extra trouble required, is more than repaid. The common plan of sowing in a hot bed, and leaving the plants to crowd each other up till planting time, and then removing, almost without roots, only partakes of the "pony rise and dollar foolish" notion that is too often practiced, and always ends in keeping the per centage profits small. Yet we see persons who ought to know better, still drawing along in the old way; and when things go wrong, blaming everything but their own want of observation and foresight. All kitchen vegetables without exception, are of the best quality when well grown, and nothing deteriorates this quality more than starving the young plants in the seed bed. Do not be in too great hurry to begin, but when started, take care that there is no check until ready for use, is advice that all vegetable growers ought continually to act up to. Where a large stock is required, this advice will seem to the "laggard" somewhat out of place; but is it not much more profitable to obtain double produce by one-fourth more labor and a little foresight, than to be grumbling about short crops and cheap prices? In the present instance, the seed may be sown about the middle of February, on the surface of a gentle hot-bed, upon which is three or four inches of good friable mold, and covered over with a box frame; or in boxes in a hot-house, where a temperature of 50 to 55 degrees by night is obtained. When the plants are two or three inches high, transplant, either into another or the same bed, or into boxes about six inches apart. Where the required supply is not large, they may be put singly into pint

pots; and after planting, give a light watering, to settle the soil around the roots. Amid all the light possible, and in mild days, let in a good supply of fresh air, but avoid cold winds and frost; the object being to keep a moderate temperature, without checking the progress of growth, and yet not so warm as to draw plants up weak. As the weather milder off the glasses may, in fine days, be entirely removed. Pots or boxes are only necessary, when the hot-house is used; and in the former case, when they become filled with roots, the plants ought to be moved into those of a larger size,—say two quarts. By the first week in April, both may be removed into a cold frame, and kept close for a day or two; after which air should be freely admitted during warm days, and gradually increased, until the glasses are entirely pushed down, but be careful to cover at night when frost is apprehended.

It is often amusing, and some time even annoying, at the beginning of summer, to see our neighboring cottagers scouring over the country in search of Tomato plants. Almost everybody who has a patch of ground wants them, and in many cases they are not to be had "for love or money;" yet they have the means at command to raise for themselves; every house has its window, and the only space required, is enough room for a box two feet long by six inches wide and four inches deep, and anybody or ordinary ingenuity can fix a little glass frame over this, to counteract the dry atmosphere of a dwelling room; such a simple contrivance will accommodate as many plants as will be required, and be less expensive, than the loss of time and shoe leather, that is expended in troubling other persons, who too often have only time and convenience for their own stock.

Almost any kind of soil will answer for the Tomato; but it prospers the best, and produces fruit of a finer quality, in a well-drained, tolerably fertile, but not over rich loose mold. So soon as all danger of frost is past, begin to plant out; loosen up the soil well, dig holes four feet apart, six inches deep, and as many across; lift each plant with a ball of earth, do not keep the roots exposed longer than is necessary, and in fixing the plant in the holes, let them be placed about the same depths as they were previously; cover up, and press the soil somewhat around the neck, and lift a little extra up to it, which will encourage fresh roots and strengthen the plant. If the weather be dry, give a good soaking of water; and so far all is finished.

A few words may be said about training. The most common mode is to spread out the branches, and let them trail along the ground, in which case, if cleanliness be cared for, there ought to be a covering of marsh hay or straw placed over the surface. Sometimes brush-wood is laid flat, and the branches allowed to lay over the top of it, which elevates the fruit above the soil, and prevents it from rotting, if the season should happen to be wet; but there is no other advantage in the method, and it is inconvenient when gathering. The neatest and cleanest plan, and one which may be adopted in all private establishments, is to sink poles in an upright position along each row, leaving the tops five feet above ground, (if placed four yards apart, it will be close enough,) and fasten a wire horizontally to them, which will form a cheap trellis to train upon. As the branches elongate, they may be tied loosely to these wires, and a kind of hedge-row is formed with very little labor, the fruit is free to the action of air and light, and is unquestionably of much better flavor.

SUCCESSION CROPS.—Notwithstanding the extreme fruitfulness of the Tomato, it often happens that the earliest planting becomes exhausted before the end of summer, and only produces a decreased quantity of inferior fruit, when a succession becomes useful. In this case, it is only necessary to sow in the open ground about the middle of April, and transplant as recommended above. The plants from this stock will continue to yield with certainty until cut down by frost; and if covered over at night, may be kept bearing longer than if unprotected.

GROWING THROUGH WINTER.—There is no difficulty in growing and fruiting the Tomato through the winter and spring months, where such is desired. Indeed, no fruit-bearing plant is more easy to manage thus artificially, with the possession of a suitable structure. A close and sheltered glazed pit is the best and most economical, although a moderately warm plant house is nearly equally convenient; but there must be a full exposure to the sun, or the blossoms will not fertilize. The seed may be sowed the last week in August, and when large enough for transplanting, remove the plants into the house, having previously prepared for their reception. A suitable provision may be made by fixing boards, with the sides upright, along the inside front of the house, and three feet from it; fill in one foot deep with good fresh mold, and place the plants three feet asunder in the bed so formed. If this arrangement cannot be adopted on account of some peculiarity in the house, large boxes filled with rich earth will answer the purpose to almost equal advantage. As the plants continue to grow upward, train them near the glass, in the same way as a Grape-vine, only allow the side shoots to spread out, so as to cover the whole surface so far as they extend. This may be done very simply, by stretching copper wires horizontally along on the under side of the roof, and eight inches from it. After planting, give plenty of air till cold nights come on, when a little fire heat is necessary. The most suitable temperature through the night, is from 55 to 60 degrees; and this ought to be maintained pretty regularly. In the day time it may be allowed, with sun heat, to rise to 75 or 80 degrees, always admitting air on every suitable opportunity. In cloudy or foggy weather, it is well

to keep close, or to give air very carefully, as the plants, if exposed to too much damp and cold, are subject to be attacked by a black mildew, which destroys the leaves and weakens the blossoms, rendering them abortive. If such should occur, sprinkle a little sulphur upon the coolest parts of the heating apparatus, and give a trifle more heat for a few days, when the pest will disappear. As the blossoms continue to expand, go over the whole once a day, when the sun shines, and give them a sudden but light stir with the finger, which will liberate the pollen and greatly assist impregnation; and nip out the end of each shoot, a leaf or two above the flowers, to help the embryo fruit to swell. I have never been troubled with insects, in forcing this fruit, but if Red Spider (*Acarus*) should appear, the sulphur will destroy it; and Green or Black Fly (*Aphis*) may be got rid of by fumigating with tobacco. No further care is requisite, than occasionally removing superfluous or weak branches, withered leaves, and such like; and the crop, with attention, will continue to produce from Christmas until those in the open ground are ready for use. —*Horticulturist*.

Hoing in Dry Weather.

EXPERIENCE has fully established the fact that corn, and other crops, are essentially benefited by hoeing in dry weather, but the reason why, or the manner how it is done, is not so generally understood. That moisture is formed by stirring the dry particles of earth and changing their relative positions, is generally admitted.

Water is composed of oxygen and nitrogen. These substances are also contained in different proportions, in the earth and atmosphere, and are to some extent, formed by the action of different particles of earthy matter upon each other, when brought in contact, as done by hoeing. Water acts as a solvent of other substances, and holds them in solution so that they can be taken up by the roots, and made to nourish the growing plant. This is the reason why it is best to sow or plant seeds as soon as possible after the land has been plowed or harrowed. The different particles of matter coming together, form new relations and produce a chemical action, during which heat is evolved, and oxygen and hydrogen are generated, and caused to unite, and form water; which with other substances act upon the seeds and produces germination; and gives to the new-born plant a vigorous start into existence. After the soil has remained quiet for some time, these substances having exhausted their energy, by naturalizing the powers of each other, the plant having absorbed all the elements of nutrition within reach of its roots, its growth becomes retarded, and can only be restored by renewing the chemical action. This can be done by applying some compost manure or by hoeing or stirring the earth, so as to bring different particles into contact with each other and forming new combinations, and consequently, thus producing a further supply of nutritious matter. Corn that is hoed every two or three weeks, will come to maturity sooner, produce more, and be better filled on the cob, than it will when treated in the usual way. We would recommend to our farmers, to select two or three rows in the field and hoe them regularly once in two weeks, and in the fall inform us of the results of their experiment.

Make Farm Life Attractive.

Why do your young men run, as by some universal instinct, from the farm, where they were born, to the city, where they so often learn to wish they had not been born anywhere? Chiefly—whatever explanation they may put forward as having a handsomer look—chiefly because on the farm there is supposed to be an inevitable doom to hard, monotonous, wearing bodily toil, from daylight to sundown, life through, with no room for mental expansion, or generous tastes, or social recreation; and, secondly, because, after all this labor, the farmer makes too little money. Nor will my faith in young men's natures suffer me to believe this is always a sordid calculation with them. For, in thinking of money, they think of it oftener as a means than an end. They want it for what it brings. On the farm, very frequently, are rooms without books, walls without pictures, manners without grace, clothes without fitness, and grounds without shaping or decoration. On the contrary, the city merchant buys a library and works of art, sends his children to schools where they learn to move with elegance as well as to cipher and parse, gets garments that are finer and fit, and is not so exhausted physically at nightfall as to prefer sleep to any company or book. He comes back into the country, and lays out a beautiful estate, sometimes with statelier animals, and selecter fruits, and tidier fences and hedges, and more blooming gardens on it, than his neighbor, who has all the while been staying there and making farming the business of his life. Now, it would be a hard task in persuasion to convince most young men that these things are not good, not desirable, and that the dollars which command them are not of the nature of an advantage. I confess I should be a bad subject for such persuasion myself. Besides, these things are all of the nature of picture-work; the boy cannot help seeing them; they work upon him while he stops on his way from pasture under the fragrant shrubbery, or peeps through the pickets of the yellow peaches and pears.

I know perfectly how apt this sanguine blood, and his ignorance of the ninety-odd failures in a city for every single success, are to put a fallacy into his plans and cheat his choice. But none the less it is true, what he goes to the city for is a chance, though but a chance, for certain means of refinement, liberality, and width in the whole style of life, such as scarcely a mere farmer about,

in the old way of farming, has displayed. Who ever knew a confident and chivalrous youth to doubt he should be one of the five that succeed, though five hundred fail? And, moreover, many young men at that aspiring period of life, before the charm and glory of early ideals have faded off, thirst honestly for more stimulus to mental action, more enlarging ministries to thought, than they have found in rural places. This they dream of finding in the pressure of crowds and the sharp collisions of traffic. Perhaps they dream delusions; but this is the feeling. Depend upon it, if you would hold your sons and brothers back from roaming away into the perilous centres, you must steadily make three attempts—to abate the task-work of farming, to raise maximum crops and profits, and to surround your work with the exhilarations of intellectual progress. You must elevate the whole spirit of your vocation, for your vocation's sake, till no other can outstrip it in what most adorns and strengthens a civilized state.—*Address of Rev. F. D. Huntington.*

The Sleep of Plants.

THE way in which sleep is shown in the vegetable kingdom, is infinitely more variable than among animals. Man throws himself prostrate; some kinds of monkeys lie on their sides; the camel places its head between its fore legs; and birds roost with their heads beneath the wing. Beyond these are few remarkable differences. But in plants there is no end to the curious and beautiful diversity which rewards the seeker in nature's mysteries. Some plants droop their leaves, at night, the flat part becoming flaccid and pendulous. Others, of the kind called "compound," as clover and vetches, close their leaflets together in pairs, and occasionally the whole leaf drops at the same time. The three leaflets of clovers bring their faces to the outside, and so form a little triangular pyramid, whose apex is the point of union between the leaflets and their stalks. Lupines, which have leaves resembling a seven-fingered hand without a palm, fold together like a lady's half closed parasol. Chickweed raises its leaves so as to embrace the stem; and some species of lotus, besides many of its elegant family, the Leguminosae, bring them together in such a way as to protect the young flower buds and immature seed vessels from the chilly air of night. These are only a few out of the many cases which could be instanced of change of position in leaves, whilst in flowers there seems to be no limit to variation. The greater part shut the petals at night, the stalks declining one side; but there are some which roll their petals back, and curl them up like miniature volutes. The sleep of such plants is probably unaccompanied by any external change. The same may be said of Campanulas, and other bell-shaped flowers of Cruciferae, it should have been observed, are remarkably careless of repose. Their sleep never appears sound or even constant, for many successive nights they seem restless, and in the morning always look dozy and uncomfortable. When flowers are overblown, or the plant, if an annual, is near its decay, the phenomena of sleep are very considerably diminished. In fact, they are only seen in perfection when the growing powers of the plant are in full operation. Deciduous trees—that is, such as cast their leaves in autumn—are in a sort of trance in the winter months. Flowers, too, lose their sensibilities altogether, when the period of fertilization is passed, as may readily be seen by inspecting a field of daisies early in the morning, before the dew is off the grass. The overblown one will be found wide open; those in the younger stages, all crimson tipped, and sound asleep.

LARGE YIELD.—The Lancaster Whig says: We learn that J. D. Fisher, Esq., raised 1609 bushels of corn on a sixteen acre lot, near Battle Swamp, in Lancaster county, which two years ago was a sedge field. The lot has had guano applied to it three times in that period; the first application was 200 lbs., the second 100 lbs., and the third 400 lbs. to the acre; making in all 700 lbs.

MRS. PARTINGTON IS INDIGNANT.—The shadow of something dark fell on the paper we were perusing, on Saturday, and looking up, the black bonnet of Mrs. Partington brooded above our head like a detached thunder cloud. We saw at once that something was wrong. The brow of the dame was troubled like a mountain lake in November, her eye, in the cavernous gloom of the bonnet, seemed unwontedly brilliant, her voice was tremulous as though pent feeling was struggling with some philosophical thumb that was holding it back. "See here," she said, at length, and laid a Transcript before us, much soiled and crumpled, as if ashamed of itself; "see here"—pointing to a paragraph insinuating that it was Mrs. Partington, and not Mrs. Patterson, that had been discovered at Lowell.—"I can be contented and unmoved under most things," said she, "but this is an importation that I can't stand anyhow. What is it that I have lived so long virtuous, if I am to be treated with this vile calomel at the last? Don't you think I could level an attachment on the editor for a label?" We saw that she was excited, and not wishing to ruin the Transcript, we informed her that it was probably a typographical error, and that the editor would undoubtedly correct it. She went out to join Ike, who stood down stairs, watching the operation of Mr. Saunders' railway.—*Boston Post.*

A wise man stands firm in all extremities and bears the lot of humanity with a divine temper.

A good change in life is like a cold bath in winter—we all hesitate at the first plunge.

Ladies' Department.

Country Life.

MESSRS. EDITORS FARMER: I am a young lady of eighteen, whom many call pretty; and nothing affords me such pleasure as living in the country. So I have come to the conclusion that I will only marry a farmer. As I have ten thousand dollars of my own, I am not in any haste, although my uncle, who is my guardian, and is himself one of the best farmers in the State, says, if I choose to marry a farmer, I may do so when I please. So we are both of one mind. I do not wish any one, however, to marry me for my money, but for my love of country life and my other good qualities. As I know that young men are apt to forget, I mean to send you a few lines of my poetry, as I am a sort of poetess, for each FARMER, provided you think them worth inserting, and the Muse will let me, under the title of "Rural Lays," of which I now send you No. 1.

I am, lovingly, yours,
BETTY MARTIN.

Rural Lays—No. 1.

MORNING AND EVENING.—(Introductory.)

There is a pleasure, when at early dawn
We leave the room and seek the verdant lawn,
Brushing with youthful steps the morning dew,
The varied scenery opening on our view—
The rising hills and swelling woody vales,
And rural homes where happiness prevails,
With rill and river, mountain, bay and shore
In smiling landscape brightening more and more,
As from the rising sun, with flushing face,
Each in their turn receives his warm embrace—
That makes us love the city and its strife,
And wish, and wish we lived a country life.

Or when the moon, with mild and modest ray,
Makes night appear more lovely than the day;
And whispering winds, conversing with the trees,
Sigh for the death of the departed breeze,
Or, from the sleeping waters steal a kiss
So gently, they but smile, but sleep not less;
When laughing stars, as if in playful mood,
Peep through the leaves, and sparkle in the flood;
And loves and graces come at our command,
To mingle with the spirits of fairy land;
Who, in such hour as this, each holy hour,
When Nature reigns, and Manhood has no power,
But must depulse each lore as lets the heart
Cease to preserve its proper place and part,
And wish such pleasure as but Nature brings
Were felt by all, as 'tis by her who sings!

BETTY MARTIN.

[From the Benicia Wreath, Miss E. A. Walsh, Editress.]

OUR COUNTRY.

THE love of country and home, is implanted in the heart of every being. The inhabitants of dreary Lapland, love their snow-clad hills; the Italian his sunny plains; and the Swiss his mountain homes; nor would they, were it in their power, exchange their childhood's home for brighter climes. And if they love their homes beyond all others, is it strange that we should love our highly favored, our glorious America, with all the ardor of a freeman's heart? They are bound only by love for the rocks and hills of their nativity; we, born on freedom's soil, and taught with lisping tongues to sing the songs of liberty, are bound by ties they know not of. We are bound by that liberty so dear to a freedom's heart; by the remembrance of the past, and by the hopes of that glorious future which is to crown our country. We not only love our home, but we feel proud of it, and well we may. America! the noblest nation on earth, on which others gaze with respect and awe, and the oppressed of every nation fly for refuge to its standard of liberty, and seek their homes beneath the wide-spreading folds of freedom's banner. The old world envies and fears us; and from the hearts of thousands now held in bondage, rises the prayer, "Would that I were in America!"

Our country, extending its arms from the dark Atlantic to the shores of the golden Pacific, and clasping in its embrace all the beautiful plains and rugged mountains that lie between. It is indeed, a possession to be proud of, with all its beautiful scenery and fertile lands, yielding a golden harvest to the industrious occupants. But a few years ago, the thrilling war whoop of the red man ascended to heaven and their council fires were kindled, on the very spots where now our large and prosperous cities rear their heads, and where the busy hum of civilization alone is heard. "Their light canoes have vanished from off the crested wave," and in their stead the beautiful waters of our broad rivers and lakes are plowed by magnificent steamers, and the terrible fire-horse, of iron sinew, now rushes with headlong speed along their once quiet hunting grounds. What a transformation is this! and all accomplished in a few short years! What may we not expect from the future of our country! Other republics have risen and fallen around us, but ours is based upon too firm a foundation to crumble into decay unless deserted by its noble sons and daughters. Our fathers established it to us as a birth-right, with the injunction to guard it from all that would cast a shadow upon its glory; future years must prove how well qualified we are to fulfill the sacred trust. Let no action of ours ever cloud its brightness or cast a shade upon its pure, untarnished fame. Be true to your trust as men, and you may even say with joy and pride, *I am an American!*

AMBITION.

WHAT is ambition? It is that feeling, that impulse of the human soul, that causes man to toil with unremitting energy for the attainment of that end on which his heart is fixed. It is ambition that causes man to perform great and noble actions in order that his name may be inscribed on the lists of fame, that he may rise high in the moral firmament, and become as a bright star on which others will gaze with respect and admiration. It is ambition that causes man to toil and labor, day by day, in the accumulation of wealth, and deny himself the comforts, sometimes even the necessities of life, in order that he may be termed wealthy. It is ambition that causes the high minded statesman to bend his proud spirit, his noble mind, to the influence of a selfish party spirit in order that he may gain the office for which he is seeking. How often have our noblest minds, our most highly gifted countrymen, knelt at the altar of selfish ambition and wasted their energies in vainly pursuing the phantom of power. Ambition acts in various ways, and pervades all classes of humanity in some degree. It seeks the heart of the gifted youth, and inspires him with new hopes and golden visions of the future. It dwells in the heart of the great and good man, and nerves him to encounter the trials and troubles that assail him. It animates the breast of the little child, and the great man. It was ambition that led Demosthenes and Cicero to become the orators of the world; that led Alexander and Bonaparte to become the conquerors of the world; that led poets and philosophers to spend the prime of their life in solitude and loneliness; and it was ambition that guided Washington throughout the the perils of the revolution; but it was no selfish ambition that animated his breast; it was ambition to do good, to free his country from the galling bonds of slavery and place upon its altar the standard of liberty.

It is not by a stoical indifference to all the world can say or do, that we can become truly great, nor is it by a servile submission to men and men's praises. If we have not the ambition, the moral courage, to do right regardless of the world's opinion, we can never become truly great. Ambition is a noble, a god-like impulse, and without it man would be but little better than the wild beasts over which he claims sovereignty. No man was not made to waste his life in idleness; his is a spirit that should soar above the mere sensual cares and pleasures of life, and toil for his own improvement and elevation, and the welfare of his fellow beings. The unambitious man who, though possessing the power to do good, will not use those powers for good purposes, is but a poor specimen of the noble race of humanity. He should rise like a man and throw off the shackles of indolence that threaten to sink him in the dark sea of oblivion, and employ his talents in making himself useful to mankind, thus rendering himself a worthy object of love and respect, and not remain inert as if he had no resolution, no ambition, and thus sink himself to the lowest grade of humanity. The ambitious man rises on the buoyant wings of hope, and engages with enthusiasm in the most hazardous undertakings that a vivid imagination can picture. His spirit, like the eagle's, knows no bounds, is discouraged by no impediments, and he is continually rising step by step, action by action, until his name is borne on every passing breeze, and wafted to the remotest ends of earth. He is determined to excel in the work he has undertaken; to raise himself above the common minds around him, and place his name with those of the brightest minds that have glided on our horizon. He intends to leave his name with posterity, not as a man whose only aim was his own sensual gratification, but as one who had the ambition to excel and succeeded in his aim.

We as human beings, are placed in this world for a great and a good purpose. We have the power to become useful; to say the least, we have talents lent us that we are to improve, and not let lie buried in the stagnant waters of indolence. We are to render an account of how we have employed those talents, and if we have not made good use of them it will be to our eternal loss. Let us then, be up and doing. Let us rouse our sleepy, dormant, energies out of the moral lethargy into which they have fallen, and endeavor to use them so as to add interest to our possessions; so that when we shall be called to render our account to the God of the universe, we shall not be found wanting. Let us be true to our nature, and push forward with ambitious zeal for the attainment of knowledge, and rise on the wings of ambition to a higher, a holier, sphere than that in which we now tread. MARY A. HOOK.

GOING HOME.

WHAT words! how they sound in the ear! Home. The heart leaps at the very sound of them, and the eyes sparkle at the thought of home. School girls especially, when their time comes for starting home—what bright faces and happy hearts; all thinking of the pleasant time they expect to have, those few weeks, at home. When the time is near at hand, what a packing of trunks, satchels, portmanteaus, laughing, singing, talking and even dancing for very joy; all impatient for the hour to come. Some watching for carriages, some for boats. Then the kissing, tying of hats, pinning of capes, "good bye" here, "good bye" there, some going in one direction, and some in another, all excitement and confusion. This is the feeling of young school girls, when they start for home. FROM BLANCH.

CURIOSITIES.

A shoe, from the foot of Mount Diablo. A lock of hair, from the man in the moon. Why is an old maid like Sebastopol? Because she is not yet taken.

FAREWELL.

BY MISS MARY RIDDLELL.

The maiden, when leaving her father's halls
To his to the convent cell,
Feels the tear gleam softly down her cheek
As she whispers the word, "farewell!"

The youth, as he leaves his woodland home
Mid worldly cares to dwell,
When he hears his mother's heart-felt sighs,
Weeps as he says, "farewell!"

The school girl, when gay and merry laugh
Rings out with a magic spell,
Grows sad, and the ringing laugh is stilled
As she lists to that word, "farewell!"

And often, when youth's reign is o'er,
When grief in her heart doth dwell,
She sighs as she thinks of her younger days,
And the school girl's but "farewell!"

MARRIED AND SINGLE MEN.

I think that there should be some means of distinguishing single from married men. Unmarried females are known by the prefix of Miss to their names, but all men are styled Mr. How much unnecessary trouble might be spared to anxious mothers of marriageable girls, could they make this distinction. How very annoying to a mother and a young girl after laying themselves out to please a nice young man, to hear him accidentally allude to his wife!

This subject really demands attention, and we think that the girls might suggest some plan by which these disappointments might be obviated. We think that there is a mode already by which ladies may distinguish married men from single ones: it is by paying a little attention to the conversation and manners of gentlemen. There is an ease and grace in the manners of a married man—a sensibleness and want of flutter in their conversation, which enables them to be readily distinguished in a mixed company. Unmarried men may be known by a general greenness, a certain frivolousness of conversation and peculiar flutter of deportment, that nothing but matrimony can entirely cure. JASMINE.

WANTED.

PHILOSOPHICAL apparatus for the Benicia Female Seminary, and notice is given that the friends of the Institution will be called upon to contribute from three to five hundred dollars for that purpose. ONE LITERATURE.

NOTICE.

The gentleman who stole a glance at a young lady's face to-day, is requested to bring it back, on pain of being banished from society.

HOW WE GOT RID OF MOTHS.—A year since we had occasion to store a lot of furniture, with a considerable amount of woollen garments, carpets, bed clothing, &c. As the house necessarily used for storing was infested with moths and cock-roaches, we had some fears on the account, but we procured a pound and a half of gum camphor, and packed all woollen materials in a single close room, with large lumps of the camphor in several places. The room was then closed up tightly, and left till a few days since. On opening it, we found it filled with a strong odor of camphor. The lumps of gum, which were about the size of a hen's egg, when put in, had now lost about half of their bulk, and not a single thread of any cloth in the room had been injured by moth or other insects. One thing surprised us not a little; the ceiling of the room was literally covered with thousands of moths, though none were found elsewhere. The dollar expended in getting so much camphor, probably saved us from many dollars' loss, since a bit of stair carpet and an old fur muff, which were left in another room with some furniture, were entirely destroyed.—Am. Agriculturist.

AN INCIDENT.—The following incident is related as having taken place at the burning of the steamer William Knox, on the Ohio river, some two months since: "At the burning of the Wm. Knox, a woman jumped overboard with a babe. She came to the surface, and taking the babe's hand in her mouth, thus held it out of the water, while she attempted to paddle to shore. A man plunged in after her, and by strong efforts succeeded in getting the mother to where the water was shallow enough to allow them to touch the bottom. 'Do not lift its hand, now—you see safe,' said the man to her, while they were waiting ashore. She took the child's hand from between her teeth, and simply said, 'You do not know a mother, sir.' Scarcely a print of the gentle mother's hold on the poor infant's hand was perceptible."

FLOUR A REMEDY FOR SCALDS AND BURNS.—Dr. Rees, the editor of the American Medical Gazette, in a recent number thus reiterates his advice to apply flour to burns or scalds: We still see reported, daily, an appalling number of deaths by burns and scalds, not one of which we take upon ourselves to say, need prove fatal, or would do so, if a few pounds of wheat flour could be promptly applied to the wounds made by fire, and repeated until the inflammatory stage had passed. We have never known a fatal case of scalding or burning in which this practice had been pursued, during more than thirty years' experience, and having treated hundreds in both public and private service. We have known the most extensive burns, by falling into cauldrons of boiling oil, and even molten copper, and yet the patients were rescued by this simple and cheap remedy, which, from its infallible success, should supplant all the fashionable nostrums, whether oil, cotton, water, ice, turpentine, or pain extractor, every one of which has been tried a thousand times with fatal results, and the victims have died

in excruciating agony, when a few handfuls of flour would have calmed them asleep, and rescued them from pain and death. Humanity should prompt the profession to publish and re-publish the facts on this subject, which are established by the authorities of the best standard medical works on both sides of the Atlantic. Flour is the remedy, and the only one, in severe cases of scalding and burning, casualties which so often destroy life. Let us keep it before the people, while the explosion of steam boilers and fluid lamps are so rife all over the country.

VEGETABLE SOUPS.—All vegetables that are put into soups, should be put into cold water, and gradually brought up to the boiling point. This causes the vegetable to diffuse its flavor through the whole mass. Irish potatoes should never be put in soups, until first having been cut in hot water; this extracts their bitterness, and renders them fit to be mingled in the other mass. The meats to flavor vegetable soups may be beef, veal, mutton or chickens, and like the vegetables, should be put into cold water. There are fewer good soups made in the country, than almost any other dish, the reason is obvious—it takes time to cook them. An old gumbo soup should boil incessantly six hours, then the flavor of the meat, vegetables and condiments are so intimately and delicately blended, that they seem one delicious mass. Salt hardens water and flesh, and should not be put into soups until the mass is well done. Soil of the South.

WHO ARE YOUR COMPANIONS?—"He that walketh with wise men shall be wise; but a companion of fools shall be destroyed."

It is said to be a property of the tree-frog that it acquires the color of whatever it adheres to for a short time. Thus, when found on growing corn, it is commonly of a very dark green. If found on the white oak, it has the color peculiar to that tree. Just so it is with men. Tell me whom you choose and prefer as companions, and I certainly can tell who you are. Do you love the society of the vulgar? Then are you already debased in your sentiments. Do you seek to mix with the profane? In your hearts you are like them. Are jesters and buffoons your choicest friends? He who laughs at folly is himself a fool, and probably a very stupid one too. Do you love and seek the society of the wise and good? Is this your habit? Would you rather take the lowest seat among others? Then you have already learned to be wise and good. You may not have made much progress, but even a good beginning is not to be despised. Hold on your way, and seek to be a companion of all that fear God. So you shall be wise for yourself, and wise for eternity.

GOVERNORS.—Of all the peculiar harshness of the vice of covetousness we need no other proof but this; for as the prime and more essential property of goodness is to communicate and diffuse itself, so in the same degree that anything encloses and shuts up its plenty within itself, in the same it recedes and falls off from the nature of good. If we cast our eyes over the whole creation, we shall find every part of the universe contributing something either to the help or the ornament of the whole. The great business of Providence is to be continually issuing out fresh supplies of the divine bounty to the creature, that lives and subsists like a lamp fed by continual infusions, and from the same hand which first lights and sets it up. So that covetousness is nothing so much as a grand contradiction to Providence, whilst it terminates wholly within itself.—South.

Absurdities of Life.

That any man should despair of success in the most foolish undertaking, in a world so overstocked with fools.

To send your son to travel into foreign countries ignorant of the history, constitution, manners, and language of his own.

A man is in debt to you in a large sum of money, and has no means in possession or in prospect of paying you, that it may be utterly impossible for him to earn it by his industry, you immerse him in a prison.

Many people drop a tear at the sight of distress who would do far better to drop a sixpence.

To take offense at the address or carriage of any man with whose mind and conduct we are unacquainted.

There are many who waste and lose affection by careless neglect. It is not a plant to grow unmatured. The rude touch may destroy its delicate texture for ever. The subtle cords of love are chilled and snapped asunder by neglect.

Hens and chickens should never be allowed to amuse themselves as it always results in foul play.

The throat of birds is generally very small, but hawks nevertheless, often take quite large swallows.

LABELOUS.—The following paragraph, says an exchange, is from the regular report of the proceedings of the Legislature of Connecticut:

"Bill to tax geese, cats, and bachelors. Mr. Morrison was opposed to the bill taxing bachelors. There was a tax already laid upon a goose, and any man who had lived twenty-five years without getting married, could be taxed under that section."

"SLOUCH, how is it to-day—can you take that note up?" "I'm sorry to say I can't—never was so cramped in my life." "By the way, you are always cramped, are you not?" "I'm sorry to say I am; and yet there is a natural cause for it." "And what is that?" "Why I was weaned on green apples and water melons."

MARRIED.

On the 3d June, in Placerville, J. E. Clark and Miss Ada K. Motta.
On the 5th June, by E. D. Carson, Esq., Mr. Sigmund Alborg and Mrs. Rebecca Unger, all of Placerville.
On the 5th June, in Jackson Valley, at the Buena Vista Ranch, by Rev. H. L. Reed, Mr. Wm. Blanchard and Miss Margaret O. Ponge.
On the 5th June, in San Jose, John Cyrus, of Napa, and Miss Lovian Graves, San Jose.

DIED.

On the 2d June, at sea, on board steamship Cortes, of inflammation of the bowels, Geo. O. Gunn, M. D., surgeon steamship Cortes, formerly of New York.
On the 3d June, in Georgetown, B. F. Gibbs, late of Lansing, Mich., aged 23 years.
On the 3d June, at San Gabriel, Col. Abram Shelly, of Texas, aged about 60 years.

SPECIAL NOTICES.

Wistar's Balsam of Wild Cherry.—As a consequence of our variable and capricious North American climate, coughs, colds and affections of the lungs prevail amongst our people to no extent wholly unknown in Europe, and it neglected often assume a dangerous, if not incurable form. Many thousands die annually in England of Consumption. In the New England States, the proportion is one in four or five. In Boston, probably one in four. In the city of New York, sixty-seven died in two weeks, in December, of this disease. Nature's own remedy is at our hand. The Wild Cherry and the Pine furnish us with a cure, where a cure is possible. Thousands are saved every year by Wistar's Balsam of Wild Cherry.

Sold by all druggists.
Agents for San Francisco, B. B. THAYER & CO.

Consumption in Massachusetts.—The abstract of deaths, prepared by the Secretary of State, for 1852, shows an average of twelve deaths a day of this disease alone. Can nothing be done to stay this fearful mortality? If the allegations of those who are not least entitled to veracity, may be believed, there is a preventive and a remedy.

WISTAR'S BALSAM OF WILD CHERRY has cured thousands who had tried all other remedies in vain. This can be substantiated by a mass of reliable evidence.

* Be sure it is signed I. BUTTS on the wrapper.
Agents for San Francisco, B. B. THAYER & CO.
Sold by all druggists. v3-24

At a Meeting of the Stockholders of the California Steam Navigation Company, held at their office February 25, 1855.

Samuel J. Hensley, Richard Cleary, J. Whitney, Jr., A. Reiddington, W. R. McIntire, R. M. Joseph, David Van Pelt, John Bouley, P. F. Low.

Were elected Trustees for one year from the 23d May, 1855.

At the annual meeting of the Trustees for the election of officers, San Francisco May 21, 1855.

SAMUEL J. HENSELEY was unanimously elected President, J. WHITNEY, Vice-President, and Wm. McINTIRE, Secretary of the California Steam Navigation Company. v3-22

Persons purchasing articles advertised in our columns will confer a favor by saying they observed them advertised in the "CALIFORNIA FARMER."

Now is your Time to Buy Cheap Goods!

HANBARGER & BROTHERS, who have been established in this city since 1850, and well known all over this section of country, take pleasure in informing their friends and customers in general, that they have now in store, and receiving in addition by every clipper and steamer, from New York, a general assortment of Fancy and Staple Dry Goods, consisting of plain black and broadcloth Silks; plain, changeable and plain colored Silks, full qualities; French and American Lawns; white and colored plain and embroidered Sixty Muslins; Bareges and Silk Tissues of all colors and prices; Necktie Worked Bands, Collars, Stewies, Chemises and Linon C. Handkerchiefs; Satins and Lace Curtains.

A large assortment of all kinds of Bonnet Ribbon, Irish Linens, Cotton Shirting and Sheetings of all styles. Ladies white and colored Cotton Hose; Kid, Silk and Lisle Thread Gloves. With a general assortment of Fancy Goods too numerous to mention, which are offered to sell at twenty-five per cent. cheaper than any other house in this city, as we are direct importers of our goods.

A call is only necessary—you can judge for yourself.
Ladies are particularly invited to call.

Store, 91 J street, near Fourth, Sacramento.

P. S.—We keep constantly on hand a full supply of Silk and Straw Bonnets, and all kinds of Millinery Goods. v3-25

Wilson's Exchange,
By Estabrook & James.

THIS popular and extensively known Hotel, which for the last five weeks has been under the management of W. W. Estabrook, has been painted throughout; new Furniture has been added, and the house is now in complete order for the reception of the public.

Mr. Estabrook has formed a connection in business with Mr. P. T. James, who has been favorably known in the above Hotel, and recently at the International.

Every possible exertion will be made by the present proprietors to render the above establishment the most popular in this State.

Works in Press.

By T. B. PETERSON, Philadelphia.
T. B. PETERSON, 102 Chestnut street, Philadelphia, has in press, the "Missing Link," by Mrs. Southworth, authoress of the "Lost Heliotes," "Wives' Victory," &c.—a complete in one large volume, neatly bound in cloth, for \$1.25.

The above celebrated work will be published on Saturday, May 5—being the last one written by Mrs. Southworth, which has been pronounced by all that have read it to be superior to any ever before written by this talented American authoress. They all say that it is an engrossing, thrilling and deeply interesting work; the interest never flagging from beginning to end. The scenes are all founded on facts, and the characters are admirably sustained. The portrait of the heroine is that of a perfect woman, and yet a beautiful, loving and tender creature. The opinions of the press are eager in its praise. The New York Dispatch says Mrs. Southworth is the first female prose writer of America, beyond the shadow of a doubt. There is a chasteness and purity in all she writes which has a peculiar charm. A full and complete notice will be given of this celebrated work as soon as published.

Copies of the above work will be sent to any person, to any part of the United States, free of postage, on the remittance of the price of the edition they may wish, to the Publisher, in a letter, post paid.

Published and for sale by **T. B. PETERSON,**
102 Chestnut street, Philadelphia. v3-23

Varieties

THE FAMILY NEWSPAPER.

WRITTEN FOR THE SATURDAY EVENING POST, BY MAGGIE C. HIGBY.

Gents may sigh for their regalia,
Mads for dainty cups of tea,
But something in this pleasant world
Hath greater charms for me.
Tis not exchanging gossip
With your neighbors as they pass,
Glancing o'er the latest fashions,
Nor yet looking in the glass.

It is sitting, nice and easy,
In a cosy old arm-chair,
With the open casement nigh you,
Filled with fragrant summer air,
And the "weekly paper" lying,
With its choicest gems of thought,
Wholesome stories, poets' musings,
From the far-off city brought.

Dropped into your quiet window,
In the leafy country here,
Where the cricket low is chirping,
And no jarring sounds are near,
Food it gives so light and cheering,
For your sometimes doubting mind,
And it brings with modest teachings,
Truths that you could never find.

And I know that you will join me,
When I wish there seem might be
One in every cottage window,
From Nebraska to the sea.
And that all their happy fates,
On the prairie, in the glade,
Knew to read them and to love them,
And would see THE PRINTER PAID.

A KNOTTY TEXT.—There was once an itinerant preacher in West Tennessee, who, possessing considerable natural eloquence, had gradually become possessed with the idea that he was also a great Biblical scholar. Under this delusion he would very frequently, at the close of his sermon, ask any member of his congregation, who might have a "knotty text" to unravel, to speak it, and he would explain it at once, however much it might have troubled "less distinguished divines." On this occasion, in a large audience, he was particularly pressing for some one to propound a text. No one pressing to do so, he was about to sit down without an opportunity of showing his learning, when a chap by the door announced that he had a Bible matter of "great concern," which he desired to be enlightened upon. The preacher, quite animatedly, professed his willingness and ability, and the congregation was in great excitement. "What I want to know," said the outsider, "is, whether Job's turkey is a hen or a gobbler?" The "exponent" looked confused, and the congregation tittered, as the questioner capped the climax, by exclaiming in a loud voice: "I fetched him down on the first question." From that time forward the practice of asking for "difficult passages" was avoided.

COPARTNERSHIP NOTICE.

THE undersigned have formed a copartnership for the purpose of continuing and carrying on the Furniture Trade as Wholesale and Retail Dealers and Importers, in this city and Sacramento, under the name and style of HOWES & CO.

Resident Partner, Boston,.....R. HOWES,
of the old firm of Howe & Co.,
180 and 182 Montgomery street.
Resident Partner, San Francisco,.....DAVID MOORE,
San Francisco, Sacramento,
133 Jackson st. 103 K at
Resident Partner, Sacramento,.....H. C. NEWCOMB,
77 K street, Sacramento City.
San Francisco, May 8, 1855.

To Our Friends and the Public.

By uniting the above three firms our capital is largely increased and our expenses reduced more than one-half which enables us to offer you a greater variety of Goods at 10 to 25 per cent. less than our former rates.

One of the partners will be in Boston and New York to purchase goods, and will take advantage of the markets to obtain such goods as are desirable, at the lowest cash rates.

Three years' experience will enable him to select stock that will defy competition in quality and prices.

We are now before you with a large and desirable stock of NEW GOODS, and shall endeavor to merit a share of your patronage. It will be our pride to give

Perfect Satisfaction,
both in quality, price, and good treatment.

HOWES & CO.
77 and 103 K street, } 130 and 182 Montgomery street,
Sacramento. } opposite Metropolitan Theatre.

FURNITURE!! FURNITURE!!!

AT REDUCED PRICES.

NEW FIRM AND NEW GOODS.

Our stock of Furniture is now complete, comprising every thing suitable for the Parlor, Chamber, Dining Room or Office. We have lately added to our stock \$10,000 worth, purchased here at low rates, which, together with our former stock, and constant additions by every clipper ship, gives us one of the largest stocks ever offered in California. We have reduced our prices to conform to the times, at least 25 per cent. as all who will favor us with a call will be convinced.—By the addition of Messrs. Moore & Newcomb's stocks, here and in Sacramento, we can safely say that our stock is the most varied and complete ever offered to the public, and that we cannot be undersold by any firm in San Francisco, Sacramento, or elsewhere in this State.

Call and examine our stock before purchasing.

HOWES & CO.,

EXPRESSES, &c.

E. W. TRACY & CO.'S EXPRESS
TO SHASTA, WEAVER, YREKA, JACKSONVILLE,
AND ALL INTERMEDIATE PLACES.
CONNECTING WITH THE

PACIFIC EXPRESS CO.

To the Atlantic States and Europe.

For the purpose of accommodating the business community, the undersigned commenced on Wednesday, Feb. 28, to travel from Shasta to San Francisco, carrying Money, Letters, Packages and Valuables, and attending to all matters of Express Business.

The Express will be dispatched regularly as heretofore, in charge of careful messengers, and the whole business will be under the direct management of E. W. Tracy. We have no security to offer except business capacity, and for that refer to the annexed card, signed by the business men of Shasta.

Card.

We, the undersigned, Traders, Merchants and Dealers, in Shasta, do hereby recommend to all who have business to be transacted between this place and San Francisco, E. W. Tracy, as a person in whose honesty, integrity and business capacity, the utmost confidence can be placed.

Freight and packages forwarded with dispatch and at greatly reduced rates.
Collections attended to promptly, and returns made in cash or draft.
E. W. TRACY & CO.

PACIFIC EXPRESS COMPANY.

THE late employees of Adams & Co., in consequence of the disruption of that firm, have organized themselves into a joint stock company, under the above name and title, for the purpose of conducting a General Express and Forwarding business in all its branches, throughout California, Oregon and the Pacific Coast generally.

The business will be strictly and solely a forwarding one, having no connection with banks and bankers, and will be conducted on safe and economical principles.

The Expresses will leave the office at the north-west corner of Washington and Montgomery streets, daily, at regular hours, for Sacramento and the Northern Mines, Stockton and the Southern Mines, San Jose, San Juan and Santa Cruz, Monterey, San Pedro and the Southern Coast generally, as well as to the Northern Coast of California and Oregon.

We will also run a regular Express for Freight, Small Parcels and Letters to and from the Atlantic States by every steamer.

The parties who have organized this company are well known in the community as old and experienced express men, and hope it will be acknowledged generally, understand their business thoroughly. They think they are not saying too much, when they attribute much of the success of the late firm of Adams & Co. in the express business to their exertions and personal efforts.

In conclusion they would solicit a fair share of the favors of the public, pledging themselves to exert their best endeavors to transact such business as may be entrusted to them in a prompt and business-like manner.
Collections of all kinds will be promptly attended to at any of the points mentioned above.

R. G. NOYES, President.
San Francisco, March 1st, 1855. v3-10.

WAINWRIGHT, RANDALL & CO.,

Real Estate and Stock Auctioneers,
No. 100 Merchant street, San Francisco, California.

WE respectfully inform our friends and the public generally, that we have connected with our other business that of HOUSE BROKERS and GENERAL DIRECTORY, and have made extensive arrangements for conducting them satisfactorily to all who may favor us with their patronage.

As these new branches possess some novel features, and not having been heretofore introduced in this city, we deem it proper to make manifest their advantages, not only to our own citizens, but to all who may visit our city.

House Brokers.

This department is an agency for leasing and letting Dwelling Houses, Stores, Shops, Rooms and Buildings of every description, and will receive the attention which its importance demands. From the advantages derived from the "Directory Department," and having made arrangements for receiving information immediately when premises are vacated, we shall possess superior facilities for providing, at the shortest notice, Houses, Rooms and Places of Business of all kinds, in any part of the city where required. All persons who may have vacant premises will find this a desirable medium of obtaining tenants for the same, and their business is respectfully solicited.

General Directory.

This department will include a *registry*, (already prepared,) of all persons, (except Chinese,) within the limits of the city, by reference to which we will be enabled to give the name and residence of all Merchants, Mechanics, Artists, Professional Men, Laborers, and those out of business, which will be continually corrected, as they change their residence, and will receive additions from time to time, as new comers arrive.

We consider the information which our registry will afford to be of essential importance, as well to our own community as to strangers, from the fact of changes occurring so frequently among us, and it having been demonstrated that published directories are nearly useless in a month or two after being issued. This with other information in our possession, enables us to present a complete epitome of the entire city, which we shall keep "posted up," to keep pace with the movements of its inhabitants.

This department will be under the supervision of an agent who has had a large experience in this branch, here and elsewhere.

To give an idea of the extent of our Registry, we may mention that up to the present time it contains the names and addresses of forty-three thousand persons, with the place of their nativity, occupations, etc., which has required several months of labor to compile.

We invite the attention of the public to our establishment.
WAINWRIGHT, RANDALL & CO.

Booksellers and Stationers

WHOLESALE AND RETAIL WAREHOUSE.

WE beg to call attention to the following catalogue, which comprises in part our stock of books and stationery.

By the recent arrival of clippers, our assortment of goods in this line has been made very complete, and we feel sure that the public will find it to their interest to call and examine our stock before making purchases elsewhere.

Blank Books.—Ledgers, Journals, Cash, Invoice, Day and Record Books, in Russian, Sheep and Muslin Binding. Copying Books, Indexed and Plain Memorandums, Blank and Pass Books, Diaries, &c., &c.

Paper.—Brief, Letter, Cap, Note, Envelope, Tissue, Blotting and Filing Papers.

Stationery.—A complete assortment of Law, Counting House and Fancy Stationery.

Bond Books.—A large and splendid assortment of Law, Standard, School and Miscellaneous Books, including many in rich fancy binding, suitable for presents.

Blanks.—Law, Shipping and Custom House Blanks.

Miscellaneous.—Gold Pens, Razors and Razor Strops, Pocket Cutlery, Toilet Brushes; Cash, Deal, Date, Post Office and Ladies' Toilet and Work Cases and Reticules, Port Monies, Portmanteaux, Opera Glasses, Fancy Articles, &c., &c.

On the arrival of each steamer we receive a full supply of all the leading Newspapers, Periodicals, Reviews and Magazines published in America and England, which we can furnish to all in quantities to suit.

GEO. W. MURRAY & CO., Montgomery Block,
N. R.—Particular attention paid to filling orders. v3-19

To Printers.

FOR SALE.—One Second-hand Lino DOUBLE CYLINDER PRESS. Size of bed, 44 by 28. Apply to
v3-1m F. BLAKE, 68 Merchant street.

MEDICAL.

IT IS A FIXED FACT,
CONSUMPTION CAN BE CURED!

SIR JAMES CLARK, Physician to Queen Victoria, and one of the most learned and skillful men of the age, in his "Treatise on Consumption," says: "That Pulmonary Consumption admits of a cure, is no longer a matter of doubt; it has been clearly demonstrated by the researches of Linnæus and other pathologists." Dr. CANSWELL, who investigated such matters probably as thoroughly as any man, says: "Pathological anatomy has, perhaps, never afforded more conclusive evidence in proof of the curability of a disease than it has in that of tubercular phthisis," (pulmonary consumption.)

It is no Fiction.

These statements are made by men who have demonstrated what they say, time after time, in the crowded hospital, and in the truth telling dissecting room. They are from men who have no possible motive for publishing what is untrue, or calumniating falsehood.

The Remedy which we offer

Dr. Wistar's Balsam of Wild Cherry,

has cured hundreds of cases of

Consumption of the Lungs, Liver Complaints, Coughs, Colds, Asthma, Bronchitis, Whooping Cough, Influenza, &c.

Many of them after every known remedy had failed to reach the disease.

We can present a mass of evidence in proof of our assertion that

Cannot be Discredited.

Dr. BOYDEN, a Physician in Maine, says: "I have recommended the use of DR. WISTAR'S BALSAM OF WILD CHERRY for diseases of the lungs for two years past, and many bottles to my knowledge have been used by my patients, all with beneficial results. In two cases, where it was thought confirmed Consumption had taken place, the Wild Cherry effected a cure."

Dr. A. H. MACANISH, of Tarboro, North Carolina, writes us, under date of Feb. 14, 1854, that he has used DR. WISTAR'S BALSAM OF WILD CHERRY in his practice the last eighteen months, and considers it the best preparation of the kind he ever saw, and knows of none so deserving the public patronage.

Dr. WM. A. SHAW, of Washington, D. C., says: "I wish heartily success to your medicine. I consider every case of arrest of the fatal symptoms of pulmonary disease as a direct tribute to suffering humanity."

SAMUEL A. WALKER, Esq., a gentleman well known in this vicinity, writes as follows: "Having experienced results of a satisfactory character, from the use of WISTAR'S BALSAM OF WILD CHERRY in cases of severe colds during the past two years, I am induced to express the gratification I feel from the favorable effects that followed, and also the full faith I have in the renovating power of Wistar's Balsam of Wild Cherry."

HON. SAMUEL S. PERKINS says: "For several days I had been suffering from the effects of a severe cold, accompanied by a very sore throat and sick headache, which completely incapacitated me from business. I had taken but a very small portion of a single bottle of this Balsam, when I experienced immediate relief. My cough was broken up at once, and my lungs entirely relieved from the pressure which had become so painful."

[From the Boston Journal.]

Wistar's Balsam of Wild Cherry.

"This medicine, coming from a respectable source, and carefully prepared by an experienced and skillful physician, is received by the public with confidence. Its efficacy has been proved in many obdurate cases of disease, and its fame has rapidly extended."

It is a powerful remedy for Asthma, as will be seen by the following cure: "Sir—Having been afflicted for more than thirty years with the Asthma, at times so severely as to incapacitate me from attendance to business, and having adopted many medicines without any but temporary relief, I purchased several bottles of WISTAR'S BALSAM OF WILD CHERRY, from the effects of which I obtained more relief than from all the medicine I had ever taken for that distressing disorder. I have, by the repeated use of your valuable Balsam, been more free of pressure for breath, and oppression on the lungs, than I anticipated, and, indeed, conceive myself cured of the most distressing malady."
C. D. MAYNARD.
Argus Office, Portland, March 26, 1850."

Fifty Thousand Persons die annually in England of Consumption! In the New England States the proportion is one to four or five. In Boston, probably, one in four. In the city of New York sixty-seven died in two weeks, in December, of this disease. The mere fact that such a disease is ever curable, attested by such unimpeachable authority, should inspire hope and reanimate failing courage in the heart of sufferer from this disease.

Beware of Counterfeits and Imitations.—Syrups, and all other preparations of Wild Cherry. Remember, they imitate in name, without possessing the virtues. Buy none but the genuine.

Dr. Wistar's Balsam of Wild Cherry.

Surgery.

R. B. COLE, M. D.,

Late Lecturer on Surgery and the Diseases of Women; Late Member of the Board of Censors of the San Francisco Medical Society; Member of the California Academy of Natural Sciences, and Corresponding Member of several Medical Societies in the South and East.

Office—Athenum Building,

South-east corner of Montgomery and California streets,
opposite Wills, Fargo & Co.

DR. R. B. COLE, for many years a Medical Practitioner in the city of Philadelphia, and for the past three years in this city, would respectfully announce that, in consequence of a most serious injury received some months since, with which this community are familiar, he will in future confine himself principally to his office, where he proposes to treat all

Surgical Diseases,

feeling assured as he does that his former connection with Medical Schools and Hospitals, together with the extensive practice he has enjoyed for the past ten years, peculiarly qualify him for the successful practice of surgery. Of the operations to which Dr. Cole has devoted much of his attention, may be mentioned: Tumors and morbid growths, occurring on any part of the body, Disease of the Spine, Chronic Ulcerations, Cancerous Affections, Dropsies, Diseases of the Bones and Joints, Diseases of Eye, Ear and Skin, Affections of the Bladder, Uterus, Scrotum and Testis (or in other words, all diseases of the Genito-Urinary Apparatus) and Deformities, whether congenital or the result of accident, amongst which may be enumerated, Club-Foot, badly-treated Fractures, Contractions of the Limbs and loss of substance about the face, the result of disease or accident. Dr. Cole has also for many years, and continues still to pay special attention to obstetrics and the treatment of all diseases peculiar to Females.

Patients from the interior will be provided with suitable boarding houses and experienced and attentive nurses.

COMPOUND
PITCH LOZENGE
FOR THE CURE OF
COUGHS AND COLDS
BRONCHIAL AFFECTIONS
LITTLE & CO
AGENTS
137 MONTGOMERY ST.
SAN FRANCISCO.

TO PREVENT COUNTERFEITS, EACH BOX OF GENUINE DEVINE'S PITCH LOZENGES will in future bear the written signature of "Little & Co."

THIS CELEBRATED REMEDY

is offered to the WESTERN WORLD in full faith, as being The Only Certain Cure ever Discovered

For COLDS, COUGHS, SORE THROAT, CROUP, ASTHMA, WHOOPING COUGH, BRONCHITIS, INFLUENZA, HOARSENESS, Incipient CONSUMPTION, PAINS IN THE SIDE AND CHEST, AND ALL CURABLE CASES OF DISEASES OF THE LUNGS. They will be found the best article in use for the RELIEF of the Consumptive Patient when past all hope of recovery, and will in any case where lungs sufficient are left to maintain life, check the ulceration and raise the patient to health.

Certificates of cures, to be relied on, can be found in the circulars left with the agents, and the public may be assured that we shall never publish anything we do not believe entitled to the fullest confidence, as truth.

"Nothing but the Truth."

The world is challenged to produce such cures as are effected by faithfully using this cheap and pleasant medicine. This remedy is pronounced by Clergymen, Orators and Vocalists to be the best in use for clearing the voice and relieving the irritation of the throat, so troublesome to public speakers.

Price 50 cents a Box, or 3 Boxes for \$1.

AGRICOLA'S LETTERS.—NO. 5. On Watering of Plants.

EDITORS FARMER: There is no one engaged in carrying on gardening in California, who is not aware of the necessity of watering his plants, during the dry weather of summer. I presume, therefore, I may be excused for walking a little out of the course I had chalked out for myself, in writing these letters, for the purpose of discussing the subject, as we are now arrived at that season of the year when artificial watering is most needed, and when attention is, in consequence, most directed to its importance; and more especially, as there are some facts connected with it which embrace interesting inquiries, which do not appear to have been referred to by any writer on Vegetable Physiology—in particular, the query:—What is the reason that the watering of plants, under a warm sun, or even in the morning of a very warm day, is frequently attended with injurious effects, when the same amount of water, administered at night, or in a shower of rain (and in warm weather) by day, is so very beneficial?

To answer this satisfactorily, it is necessary to take into consideration the particular constitution of plants, and the *modus operandi* of their growth. Without going back to trace the plant through the earliest stages of its existence, let us, for the sake of example, suppose that it is half-grown at the time we propose to water it, and let us see what Nature is doing to enable it to increase in size, and remain in a healthy condition. Plants, it is well known, principally consist of woody fibre, composed of carbon, oxygen, and hydrogen; and the constituents of their ashes consisting of potash, soda, lime, silica, alumina, iron, magnesia, &c. The carbon is principally, if not altogether, derived from the atmosphere through the leaves; and the elements of their ashes entirely, through the roots, from the soil; and the manner in which this is effected (and by means of which their growth is promoted) is equally interesting and ingenious. The plant, which is composed mechanically of a bundle of small tubes, gets partly by its own vitality, and partly by capillary attraction, filled with sap, containing in a very diluted state, alkaline and metallic elements, which entering by the roots, ascends through the tubes of the stem, diffuses itself over the surface of the leaves, and descends by the bark or exterior covering to the extremities of the roots. This circulation is maintained by the heat of the plant and the circumjacent atmosphere being greater than that of the roots buried in the soil below, and consequently the greater the heat of the sun, if there is an abundant supply of moisture in the ground, the greater the rapidity with which it proceeds. But let

us observe the propriety of this arrangement. The leaves, by means of which the principal portion of the plant (its carbon) is derived from the atmosphere, are thereby, from the strong affinity which these alkaline and metallic elements have for carbon, enabled to separate it from the carbonic acid gas absorbed in their pores, requiring an energy which, if it were not corroborated by the highest authority, few unacquainted with chemistry would be inclined to believe. "This intensity of action, or of resistance," says Liebig, "may be and is compared to the very high temperature of a moderate red heat." But the sap in the plant, now saturated with carbon, permeates the vessels along the outside of the plant, and thus furnishes them with a similar defence against the penetrating effects of oxygen, as we apply daily when we use oil or grease to prevent cutlery from rusting.

Thus the plant goes on, day by day, increasing in strength and size—the sap ascends the stem—meets with and decomposes the carbonic acid gas of the atmosphere in the leaves—carries it along in its downward course—and plasters it, coat over coat, mixed with metallic earths and alkalies, on the growing plant, leaving pores and tubes for the necessary conduction of an increased quantity, as its extending circumference requires it. Now while Nature is thus carrying on the beautiful arrangements of the Great Designer, if, when the sun is high, or even in the morning of a warm day, we foolishly proceed to interrupt this perfect contrivance, by throwing over the plant a quantity of cold water, what ensues? The temperature of the plant is immediately lowered, and more in the leaves and smaller twigs than in the stem and roots, the ascent of the sap, so necessary to its protection, is thus resisted and reversed, and before it can return, loaded with alkaline earths and oxides capable of assimilating carbon to its relief, the plant, thus left at the mercy of the oxygen of the atmosphere, bearing upon it with a force (nearly) equal to "a moderate red heat," is necessarily half-killed, and would be so entirely, did not the sap provide and deposit along the outside pores a varnish or skin, to protect from ordinary events its otherwise too delicate fibres.

This is exactly what takes place when plants are injured by frost. The temperature of the plant is so lowered, that the ascent of the sap, with all its beneficial qualities, is prevented, till the heat of the sun has evaporated the frost from off the plant, and left it exposed to the attacks of the devouring oxygen; when it too late returns, to attempt, in vain, to circulate through a blasted leaf. But when the careful gardener brushes it off, and covers the plant, which has been so severely used, so as to screen it from light and heat, every one knows how far these evil effects are modified—the cause of this being, that the sap is thus allowed time to return before any decomposition of the leaves has taken place.

To these arguments it may be objected, that no bad effects take place from natural rain, even in the warmest weather, and that since the watering of plants is so injurious when done by day, why does it happen that it is not only innocuous but beneficial, when done in the country? This portion of the subject I consider worthy of investigation, and shall endeavor to explain it next week. Meantime, let me state two questions which have naturally occurred to me, in the examination of this subject: First, Was not the potato disease the result of some such excess of oxygen in the atmosphere; or deficiency of the alkaline elements of the plant and in the tubers, as prevented them from defending themselves against the oxygen, and thereby becoming liable to decay? And might it not have been so far prevented, by the application, at a certain stage of their growth, of some alkaline mixture, in a liquid form, to their roots? Second, Could we not learn a lesson from nature, and, by some similar combinations of alkalies and oxides, as she adopts, find a substitute for the excessive quan-

tity of salt which we use in preserving meat? The glazing of hams, as recently adopted, seems to be taking a leaf from her book, for she frequently uses a liberal quantity of salt for outside varnishing; and likewise, it is evident, to guard against decay. AGRICOLA.

Who Deserves the Premium?

This article is worthy the attention of all who are connected with Agricultural Fairs:

We need not say, that it might happen that B, or C, whose products are less valuable than A's, are both better entitled to a premium than he. Is he the best farmer, who, in a single season, forces out of his grounds the greatest crop? By no means. A's grounds are in good condition. He bought them recently of one who took proper care of them, and all he has done is just to plant his seed, and, without especial skill or extra labor, let his crop grow. And he finds in the fall, taking the affidavit of his hired man as evidence, that he has grown one hundred and twenty bushels of corn to the acre. Any fool might have done the same. Or, perhaps, he has been lavish in his expenditures on a given lot, doing what no one but a very rich man can do. But B, owns a farm consisting almost exclusively of sand. Still he is resolved to make a good soil, and hence he collects his leaves, and his turfs, and his clay, and his lime and ashes, and mixing all these with the strong products of his hog-pen, and with his manure-heap, and carrying out a thorough system of plowing, and mixing, and a judicious growth of crops, on land that had produced only eight or ten bushels of wheat, or twenty or thirty of corn, he has grown fifty or fifty of wheat, and eighty or ninety bushels of good corn. Who best deserves a premium for these crops? Who is entitled to the highest reward for good farming, from those who would reform our agriculture?

Is it said "we have offered a premium for the greatest crop?" Indeed! Do you give premiums, and "the highest premiums," for unwise, unscientific farming—for farming that costs, in the end, more than the value of the crops—for farming in which, if your hired man persisted, you would discharge him?

Some exhibitors buy their land already prepared for them, and thus secure "the best crop." But why pay a man for buying a good farm, or why reward a man for ploughing corn on good land, when he has it at command, while he does not exhibit any skill in his tillage. Of course, if he has good land, he will use it; and, if he uses it at all, we might almost say, he will not fail of a good crop. But reformers should not give honor or a man for mal-practice. No reward should be given for that which, in its production, does not furnish evidence of peculiar skill, and is not worthy, eminently worthy of imitation. If A, has, for a series of years, kept his land in good crops, reward him for it, if you will, but we insist that no "premium" should be paid for anything that is not, all things considered, worthy of especial commendation. One may be willing to pay expenses for a pleasing addition to a show, which otherwise may fail to attract general attention, when he would not be willing, as an agriculturist of skill and discernment, to declare that for each a production, the grower is entitled to be singled out from all other competitors, and receive a premium, or be honored by a proclamation of "well done," by the neglect of a score of others, more industrious, and better informed, and, in the end, more successful, than he.

We have just laid down an exchange which illustrates our ideas on this branch of the subject. The editor says, in substance, that he has taken pains to get "the cream" of the doings of the agricultural societies, in his State, (Vermont,) and then "making a report in part," he proceeds to give a statement of a few of the sums paid as premiums to sundry exhibitors, and attempts nothing else. If this is "the cream," we don't care for the skim milk. But this is not the cream, nor even the skim milk. It is only the old horse that brought the milk to the market. He wholly misapprehends his business as a teacher of good systems of agricultural labor and production, who teaches such doctrines. The premiums are the bait to draw public attention. The mode of cultivation is the prize to be won, and, if the matter is so managed, that this is not worthy of attention, then the whole concern is not worth a straw, and such societies may as well disband.

We do not think it well to honor with a medal, or its value in coin, the mere production of an extraordinary growth. If one has, by skill, produced a soil capable of honestly sustaining a wonderful crop, no man must. Bestow upon him that need of praise of which kings may not be worthy. Hence, we would not offer a premium for that cultivation that happens to produce the great number of bushels, without reference to the antecedents. That same State of Vermont, in the

county of Windsor, recently presented a case bearing directly on this point. Two competitors for the prize, for the greatest crop of corn, reported exactly the same quantity per acre. Which shall have the "first prize?" To us the problem is perfectly simple—he who contended most skillfully against obstacles and embarrassments. But that point does not appear even to have entered into the minds of that committee.

We know not where to stop in writing on this subject. We commend these thoughts to all our agricultural societies. They have done like other societies long enough. We are fully persuaded that our annual shows are not managed as they should be; that, besides the personal favoritism sometimes exhibited, there is great want of judgment displayed in assigning premiums, and in awarding them; there is a great want of preparatory labor on the part of managers, in taking suitable measures to secure a good show, which is a most crying sin; and there is a great, even a fatal, want of means to make the good secured useful to the community. Here, involving discussion on this whole subject, we pause for the present.—*Flow, Loan and April.*

Profits of Farming.

We ask our farmers to note how far the following, taken from the N. W. Farmer, will apply to California:

Mr. Emmons: While on a visit to a friend, I chanced to visit across your valuable agricultural paper. I saw some of your correspondents gave their experience in managing their farms, and, thinking it might be acceptable to some of your readers to know how we of the Empire State get along in farming, I give you a short sketch, as follows:

I purchased a farm of forty acres in the spring of 1852, not forty miles north of Troy, and paid \$20 per acre, or \$800; \$500 were paid down and the remainder left on mortgage. One-third of the soil is alluvial, one-third gravelly, and the remainder decomposed slate, mixed with reddish loam; thirty acres of improved land, and the remainder timber. The farm had been rented for the past ten years, and was in a very poor condition, promising. House old, barns loose and swinging in the wind, the windows almost without glass, &c.; the out-houses were miserable, and worse still were the fences; rails were scattered hither and thither, and hedges, stone heaps and old logs were thrown promiscuously over the premises. Being determined to get hold of the world, I commenced fencing and repairing, and have, in the course of three years, built a new dwelling house, and repaired the out-buildings and fences. My little place has now the appearance, and is a neat and comfortable farm. While paying the mortgage, I am now out of debt, with one span of horses and fixtures, five calves, twenty sheep, four hogs, poultry, &c. I give below the amount of farm produce which I raised the past year, though it was one of drought, and generally short crops in this section of Washington county:

20 tons of hay, worth \$10 per ton.....	\$200
200 bushels corn, 50 cents per bushel.....	100
300 " potatoes, 50 cents per bushel.....	150
150 " oats, 50 cents ".....	75
20 " wheat, worth \$2 ".....	40
100 " apples, 20 cents " (estimated).....	20
Wheat, clover and birds grass.....	10
200 lbs butter, worth 20 cents @ 10.....	100
Cornstalks, straw, &c.....	50
	\$805

Expenses.	
One hand 5 months, \$12 per month.....	\$60
Five tons manure and plaster, \$4 per ton.....	20
Repairs, &c., for farming tools.....	10
Fencing tools purchased.....	30
One cow, &c.; wintering apparel.....	50
Interest, &c., on \$500 value of repairs, stock, &c.....	150
Produce consumed, deducting the growth of stock.....	100
	\$420

Which leaves a net profit of..... 385
My own labor has been amply paid by the increased value of the farm. I have been offered \$3,000 for the farm and stock. Do our merchants or mechanics often do as well on the same amount of capital employed? J. HADEN.

FARMER'S CLUB.—The first Farmer's Club in the United States was organized on the 11th of February, 1785. George Washington and Benjamin Franklin were members of it. At one of its meetings it was stated that the King of England had issued a proclamation against the importation of American wheat, on account of the Hessian fly. It was said, "he need not be afraid of the grain, as the fly never touches the berry—it only attacks the stem." In 1782 the fly was not known in this country. It was introduced by the Hessians, it is said, when they landed upon Long Island. The scalding of the roots of young peach trees before planting out, was recommended at one of the meetings of this Club. The peach worm doubtless existed at that day. Corn was exhibited in March, 1805, from the Pacific ocean, that was unusually farinaceous.—*Ind. Farmer.*

The California Farmer.

WARREN & SON, EDITORS AND PROPRIETORS.

SACRAMENTO, THURSDAY, JUNE 28, 1855.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

The CALIFORNIA FARMER OFFICE is at the State Society's Rooms, where subscriptions and advertisements are received.

Circular.

THE Executive Committee of the State Agricultural Society, beg leave to say to the Agriculturists of the State that as the time for holding the Annual Fair approaches the necessity for increased and energetic action throughout the State becomes, daily, more apparent.

The officers of the Society are giving their time, attention and money to the furtherance of the work, but this will not suffice. Unless the Farmers, Merchants, Lawyers, Hotel Keepers and all others interested (and who is not?) come up to our aid, subscribe and pay their memberships and give countenance to the work, our approaching Fair cannot be made what it should be—cannot be what the resources of our State call for, what the honor of this most prominent interest demands.

The State has made commendable appropriations for premiums, and the Executive Committee has published a schedule for the approaching Exhibition, and it is hoped that we may be placed in circumstances to show full statistics of Farms, Orchards, Nurseries, Gardens, Vineyards, &c.

A competent and reliable Committee may be expected to visit and report upon every case in this department. Send in your propositions, that the Committee may know the amount of its work.

The statute under which we are organized limits the terms of membership to ten dollars. Any Gentleman or Lady sending us this small sum will have subject to his or her order a certificate of membership for one year.

The question of the utility of the Fair depends very much upon the manner it is gotten up, and it cannot be what it should be without personal interest of a general character.

Persons holding certificates of membership are, with their families, admitted to all the exhibitions of the Society free of charge.

By order of the Executive Committee.

C. I. HUNTERSON, President.

O. C. WHEELER, Rec. Sec.
Sacramento, June 23d, 1855.

Notice.

At a meeting of the Executive Committee of the State Agricultural Society held this day, it was resolved to extend the time for receiving proposals for Farms, Orchards, Vineyards, Nurseries, &c., for examination, to the 10th of July.

O. C. WHEELER, Rec. Sec.

Sacramento, June 22, 1855.

A Card.

THE public throughout the State and Agriculturists in particular, are hereby notified that the Corresponding Secretary of the Society, J. L. L. F. WARREN, Esq., is now making the tour of the State, for the purpose of presenting the general interests of Agriculture to those who are interested in its advancement, and gathering statistics for the Society, with the view of adding to the interest of the approaching Annual Fair.

It is not only desirable but indispensable, that the membership list of the Society must be largely increased beyond its present number, in order to make the Fair what it ought to be, considering the important position that California occupies among the Agricultural States of the Union.

Col. WARREN is furnished with Certificates of Membership, and is authorized to furnish them to those who may desire to become Members of the Society, and are earnest in their endeavors to develop the Agricultural resources of the State.

C. I. HUNTERSON, President.

O. C. WHEELER, Rec. Sec'y.

Entrees for Premiums.

ALAMEDA, June 28, 1855.

To the President of the Agricultural Society of the State of California:

I hereby give notice to the Executive Committee of the above Society, that my nursery is offered and put in for examination, by the Visiting Committee, for the present season.

Respectfully yours, A. H. MYERS.

VALLEY OF SAN JOSE, June 18, 1855.

To President State Agricultural Society:

I hereby give notice that I enter my Grain Fields for the State Society's Premiums, and shall be happy to receive the Committee at such time as shall suit their pleasure.

Yours, JAMES E. JOHNSON.

Miss BETTY MARTIN.—We invite a thought to the lines from Betty. Where are our young men?

A New Volume.

THE present number will complete Vol. III. of the CALIFORNIA FARMER, and we deem it a most fitting time to say a few words to those with whom we meet in our weekly round of duties.

In looking over our subscription list, we are pleased to see many names that we have written weekly from our first issue—"they are with us still." Others we find who have finished their course on earth, and passed away, but they are fresh in memory still.

Friends, we hope and trust, are all our readers, in the work, for we profess to be engaged in an enterprise the success of which insures homes for the domestic circle—employment for the industrious, and prosperity for the people.

The CALIFORNIA FARMER was established for the purpose of awakening public attention to the great and important interest of Agriculture. It will be conceded by every intelligent mind that with the success of this branch of industry, is linked that of all others. And now as we enter upon the new volume, may we not write down all to whom we send our paper, as friends, subscribers, who aid us in our work?

The co-operation we need is real subscribers—these sustain us in this work—and we hope we deserve the price for our journal. Paying subscribers aid us. All those who neglect this important matter, we must strike off, however painful so to do. With those who are in this list, alone remains the answer whether or no we part. We do sincerely hope, however, that the importance of the work in which we are engaged, and a sense of justice, will induce all who are in arrears for our paper, to make prompt remittances, that we may work with better heart, better courage, and better ability.

The Grasshopper Plague.

THIS evil is one of such magnitude as to demand something more than the public notices of the calamity which appear in the papers of the day, although we would still urge the importance of publishing every fact connected with the grasshoppers in their devastating march. We hope some action will be had. Calamities of this kind should call men together so that by a gathering in of all the facts relative to them—their appearance, their habits, their ravages, their devastation, and their final disappearance,—measures may be adopted whereby this evil can be prevented in the future.

Calamities befalling so great and vital an interest as agriculture, should call agriculturists together at as early a period as possible, that while facts connected with the calamity are fresh in the memory they may be noted or recorded, and made available.

We now repeat what we said a few days since in one of our dailies (the Citizen,) relative to the matter, with the facts and suggestions then made known, as matters for inquiry and record, hoping they may prove useful:

"For the last few days, the destruction which has been caused by grasshoppers in the counties along the Sacramento river, has been immense. Every green thing falls before them; no remedy has been effectual thus far to prevent their ravages. Grain not fully ripe—fruit trees with their fruit—cabbages, onions, the root crops, potatoes, melons—everything is consumed so 'as by fire.'"

Hock Farm, Brigg's Ranch, Swazey's, Wickersham's, and many splendid gardens and ranches, in Yuba county, have suffered. Remedies, such as cayenne pepper, mustard, oil, sulphur, tobacco water, have been tried, but to very little or no avail. These seem only to give the devourer a zest to his appetite. There is one vegetable, that is spared until all else is gone—the tomato; if an abundance else is found this escapes, if not it falls lastly.

"We have had letters from many sources, and many persons calling upon us with the inquiry—'What can we do? What will save us?' And we feel most earnestly a desire to make known every possible opportunity, that gives a hope of a remedy from so terrible a scourge.

"We have visited many places and grounds where this havoc has been made. We have seen these pests as they move in clouds, covering the earth, and blackening fences by their masses. It is an evil of such magnitude that we feel called upon to put forth every exertion to check it if the thing is possible. Nets were spread over trees and vines at Hock Farm, but the nets were eaten up. Russia mats even, spread over the plantations of cabbages, have been riddled, eaten up, and the crop below them consumed. We have endeavored to gather facts from every source we could, and spread them before the public, that as much good may be done as possible.

"We find the following facts corroborated so often, that we wish to suggest them to all exposed to this evil.

"The grasshopper is checked where there is moisture. Heavy dews repel them. Hot dry atmosphere they seek, and increase in such weather. They rest at night upon the staw of the grain, upon the branches of trees, perpendicular, and upon the upper side of the leaf. They aim to avoid dampness.

"We have been informed by G. N. Swazey, Esq., of Yuba county, who has closely observed them, that cotton woods always escape, and under the shade of this tree they never eat. These facts suggest to us the following remedies:

"For valuable young trees in fruit, prepare drilling bags, and, after carefully tying in the branches at top, draw the bag over them, tying it at the body of the tree. At night, take off the bag, and syringe the tree with pure water.

"For plantations of vines, or valuable plants of any kind, awnings of colored cotton cambric or drilling, should be placed over them, about one foot high, thus making a shade; remove the awning at sunset and syringe as in case of the trees.

"As the cotton wood is the only shade tree that is safe, fruit trees will not protect what is below them, for they will not be spared by this destroyer. Shade and moisture, we hope and believe, from what we have seen and known, will check at least if not prevent, this ruin to the industrious."

We repeat it, shade by day and moisten at night. But remember that water upon plants with the sun, is very injurious, and often certain death; therefore watering should be done when the sun is gone. Remember too, cold and moisture destroys the grasshopper—please observe this fact—give air and light to trees and plants, bagged or shaded, the moment the sun is gone.

In addition to the foregoing, we learn this fact, that wherever the waters have flooded the lands, the grasshopper is not found. We are informed of portions of grounds thus flooded and since planted, where the entire crop has escaped their visitation, while on the right and left every thing fell before them—the water line being their boundary.

Query? As this pest now hovers over a similar tract of country as that visited last year, and as they greatly increase as they go, we ask, were not their eggs deposited the past year, and they now return to the same places this year to find and hatch them, for it is certain that every place they visited last year that has been flooded the present year, they avoid, seeming to know by instinct that they have been destroyed?

We have found also some gardens where a constant cultivation has been going on and the ground is very moist, that they pass over quickly—seeking dry soil.

We find also that, with few exceptions, full ripened grain has escaped.

From these facts, may there not be lessons of instruction drawn? Deep and constant cultivation produces moisture, promotes the growth, and strength of plants, and increases the product; it also saves the expense of irrigation, and is better; and it is likewise to some degree, a shield from the grasshopper.

Again, grain planted early is ripened and harvested before the grasshopper appears, while that which is late sown falls a prey to this devourer.

Terrible as this calamity seems, may not these two lessons, well understood, be worth to California all they cost? The floods even, which have ruined so many and drawn out the useless anathemas of unthinking man, may have been but a blessing in disguise. Our climate, our soil, our seasons, with many attendant circumstances, are but imperfectly understood as yet—more observation, more study, and more trials, are needed before even the blessings that surround us, will be fully appreciated.

The great staple, wheat—the staff of life—has escaped. Vegetables can again be planted successfully. Fruit, though lost here, will be supplied by other places. We shall not starve. Trials are good for us, though they be bitter to the taste.

REMEDY FOR THE GRASSHOPPER.—The following communication from Dr. Brown, of this city, we are happy to present to our readers, being practically corroborative of the communication we presented and the plans we proposed in our article on Monday last. We have faith additional, for the Doctor is a practical Horticulturist and a close observer, and his suggestions and observations are of great value:

EDITORS FARMER: The Grasshoppers (Gryllus) have assailed my garden, and in casting about for a remedy, I have hit upon one, at once available and sufficient. By means of hose with a nozzle attached, I am enabled to throw upon the fruit trees, shrubbery and flowers, copious showers of water every evening as the sun declines, and to which the insects are exceedingly inimical, so much so, that there is not one to be found within the periphery of the irrigated district. If they should persist in their migratory advance, I will also sprinkle in the morning before sunrise.

The Migratory Locust, is one of the members of this genus, and without exception the families are formidable, and pestiferous. Those in our neighborhood present many characteristics of the African variety.

B. B. B.

Alameda Gardens.

WHATEVER may be the fate of our cities; however stagnant may be the course of trade, and however lifeless all may be within these masses of brick and granite, thank God the country bespeaks activity, energy, hope and life. It is true, portions of it may be under the cloud; the smut and rust may visit one portion, and the grasshoppers another: yet for all this there is a wide extent of territory where activity and prosperity casts a bright halo over all.

Stealing away from the dull city, we crossed the bay "via the Oakland steamers" to Alameda. This was our first visit to this particular locality, and we confess our surprise in noting the rapid advance which we found, knowing that all has been done in the brief space of about one year.

Our first call was at the gardens of Mr. Palmer, (Sonntag & Co., of Mission Dolores.) We felt highly gratified with these grounds. We went over several acres of strawberry plants in most excellent order and in fine bearing. Among the varieties we noticed Hovey's Seedling, Boston Pine, Hudson, Crimson Cone, Prince of Orleans, Bath Scarlet, British Queen, Alpine, and Black Prince. Of all these varieties, and we ate freely of each, we preferred the Black Prince; a full, dark color, cone shaped, a luscious and highly fragrant fruit, and one excellent feature in it—it carries without bruising. For this reason, with its high and delicious flavor, it is the best market berry. Mr. Palmer sends from forty to one hundred boxes to market daily. We passed into the nursery and found cleanliness and order there; fine fruit trees growing rapidly—apple, pear, cherry, peach and quince. We noticed some very fine ornamental trees—the locust, maple, and the paulonia imperialis. This last will prove a most beautiful and ornamental tree, and is of rapid growth, the leaves often measuring three feet in diameter. After a pleasant examination of the gardens, our friend Palmer tried to "choke us off" with those Black Princes, that are liked so well in the garden, smothered with cream and sugar, the usual "condiments"—(see Wide West.) We are most grateful to Mr. P. for his kind attention. Such attentions make our duty pleasant and beneficial, and we hope that complete success will crown the efforts he has made to improve the soil.

We next visited the residence of Hon. Wilson Flint, Senator from San Francisco. Here we were again pleased, nay delighted, for here we saw the foundation of a very fine nursery. We found at this place superb cherry trees, tempting us to eat. To those accustomed to Eastern orchards, where fruit trees, especially the cherry, are seldom in fruit before they are ten or fifteen feet high, it is curious to find these trees, four, five and six feet high, bearing freely. In Mr. Flint's gardens, or rather Dr. Haile's, for these gardens and nurseries are under the care, skill and fostering hand of the doctor, (father-in-law of Senator Flint,) and we must say they are doctored well—we found trees of all varieties, showing fruit thus early. Peaches two and three feet high in full fruit; a nectarine tree fifteen months from the pit, in fruit; apple trees, second year, with large apples; and in all such cases the fruits always mature. One of the finest young nurseries of the peach we have yet seen, we found at this place—some 25,000 trees. We felt highly gratified to find here the full realization of a new and important fact in nursery science—the grafting of the peach. We saw a most successful result from the experiment of Dr. Haile; a plantation of 2,000 trees of very strong growth, two and a-half and three and a-half feet high, and scarcely a single graft failing. The process of grafting is the same as practiced with the apple or pear—simple root grafting. In one row of 600 young trees not three in one hundred missed. We esteem this a fact of great importance for the following reasons: the process is carried on and the work done at a leisure season, (the rainy season;) both the stock and scions are gained from the prunings of maturing trees, or those lifted from the nursery; a very laborious and trying work (that of budding in the hottest weather,) is thus saved, and a finer formed tree is secured, and a whole season gained. For these reasons we esteem Dr. Haile's successful result in presenting the first nursery of grafted peaches to the public, worthy of especial notice and commendation. It is a triumph in pomology worthy of California, and will reflect great credit upon this gentleman.

Adjoining the grounds of Mr. Flint are the nurseries of A. H. Myers. We much regretted the absence of the proprietor, for we desired a more thorough examination than we could have without him. Mr. Myers has a very fine collec-

tion of fruit trees in his nursery, of all kinds, and his *standard bearing trees* were very full of fruit, apple and peach. On many young apple trees we counted 40 to 50 fine apples, and what was at least curious, on many trees were a second crop forming and new buds and full blossoms on the same trees. We saw very handsome almond trees in full bearing. The first fruit of the Siberian crab apple which has been grown in California, we saw at these grounds; also large plantations of the currant, strawberry, and raspberry, and each bearing fruit. We are pleased to accord to Mr. Myers great credit for a fine and well advanced nursery of fruit trees. A very pretty collection of greenhouse plants and border flowers were looking well. Upon some other visit, when we meet the proprietor at home, we shall be more minute, and extend our remarks.

Next in course came Oak Grove Nursery, Capt. G. B. Cooke. Here was a fine new house erecting, the garden laid out, and the fruit trees in bearing finely. We saw also a few collections of roses and ornamental trees. Among them the "Magnolia Grandiflora." This will be a most magnificent flower. The Captain displays a most excellent taste, and in a short time will have a fine estate. His nursery and fruit orchard are well laid out, and he will have a fine stock of fruit trees for sale this fall.

In addition to these gardens and orchards are Rev. Mr. Taylor's and others, which we cannot fully notice until another week. Mr. Chester's new house, near the sea-side, we esteem one of the prettiest spots in Alameda. The residence of Mr. Flint is one of the most spacious and convenient, being embowered in the large oaks. To Mr. Flint and lady, and Dr. Haile and lady, we are under many obligations for their attention and courteous hospitality, which gave our visit additional pleasure. In a very few years we hope to see Alameda a fine city. It has many attractions.

The Lily.

"Behold the lilies of the field, how they grow: they toil not, neither do they spin: yet I say unto you, that Solomon, in all his glory, was not arrayed like one of these."

It has been our privilege and our pleasure to have seen the various species of this gorgeous flower under the most favorable circumstances and associations, and for these reasons it may, in a measure, be a "pet flower" with us.

Many years ago, that which is very common now, the spotted lily, (*Lilium tigrinum*), was quite a show flower. The pure white lily, (*Lilium candidum*), and the agapanthus and amaryllis lilies were all considered very pretty and ornamental in the border some years since. But when the Hon. M. P. Wilder introduced the magnificent Japan lilies into the United States, other varieties sank into insignificance in comparison with these magnificent varieties. This tribe of lilies—shaded and spotted—are of the most beautiful character and of the highest order, and we hope to see them cultivated extensively here. They will do well under our shade trees in the garden.

The great *Victoria Regia* is now the all absorbing theme when speaking of lilies. This most superb lily is indeed the queen of the tribe, and its beauty and worth should be extensively known and appreciated. The *Victoria Regia* can be easily introduced into California, in many of our beautiful valleys. Our private residences could be enriched by its fragrance and beauty, with but little cost. The climate is well adapted to the open culture of it in Sacramento, Sonoma, Napa, Santa Clara and San Jose. We trust our wealthy citizens will not neglect to prepare for it, so that we can have blooms of it in another year. Does any one wish to know how very beautiful this lily is? The colored plates of the lily are on show at the State Society's Rooms, Sacramento City, free for any one to examine.

But we have seen another beautiful lily this week, and one worthy of a visit. We paid a hurried call to the splendid show rooms of Vance, the celebrated daguerreotypist, and our eyes were in a moment attracted to a "gorgeous lily," when lo and behold we found this skillful artist had copied the *Victoria Regia* in all its glory; and there upon the walls of his elegant saloon, among other fair and beautiful flowers, we found this queen of lilies fair among the fairest and bright among the brightest; and we could not but feel that this copy, so truthfully taken, was indeed a surety that *Vance is a premium artist*.

THE CHILI STRAWBERRY.—Especially attention should be given to the introduction of this most remarkable strawberry into our gardens. It is the most luxuriant growing variety known, and produces a fruit of enormous size, often measuring from five to six and a half inches in circumference. See advertisement.

State Society's Premiums and Annual Show.

It becomes our duty to call the attention of all our readers and of all the citizens of our State, of whatever profession they be, to the Card in this week's issue from the Executive Committee of State Agricultural Society, relative to the importance of increasing its list of Membership, in order that the coming Annual Exhibition may be such as shall redound to the credit and honor of the State.

The language of the Committee is plain and to the point. Unless there is a manifestation of general interest—unless those who are identified with the great interests of the State, show a readiness to come forward and sustain an enterprise of so much moment as the State Fair, it cannot be expected that a few will bear the burden of all the labor and cost.

The Exhibition can be made beneficial to the State—to every grade of our industrial classes, if a proper interest is but evinced among our citizens throughout the State—and it is to be hoped this fact will be made manifest at an early day.

The Press throughout the State—those who feel a desire to promote the industrial Exhibitions—are most kindly requested to publish the Card, and call attention to it. By so doing they will confer a favor upon all the great interests of the State, the prosperity of which interests will in the end, amply reward them.

California Apples.

SAN FRANCISCO, JULY 20, 1855.

MY DEAR COLONEL: To-day, and just in time to catch the boat, I have been shown an apple from Oak Grove Nursery, Alameda, (Capt. Geo. B. Cooke,) which I think rare, and worthy of a high place in Saturday's exhibition. It is from a seedling, imported from Oregon, and planted only last January. This is the smallest and least perfect of seven from the same tree.

Who may now say that we cannot raise apples in California? And if in Alameda, why not in Sacramento. Truly, J. J. Houn.

("Comfort me with apples." These words of Solomon were full of meaning, so we say, "comfort us with apples." We could not but realize the delicious pleasure even the "wisest man upon earth" could enjoy, especially if the apples they had in those days were as fragrant as the above sample from our kind friend. We do feel grateful to friends that in their rambles finding specimens of the noble science of Agriculture, bear us in remembrance thus. We esteem it the highest evidence of their appreciation of our humble efforts to make known the resources of our State, and a handsome compliment to the State Society and the cause generally. We return our sincere thanks Doctor.—Ed.)

WHEAT CROPS—Smut, Rust, and Blight.—Accounts from various quarters come to us respecting the prospects of the wheat crop. At present, it is almost impossible to speak with any certainty as to the average amount of yield, so conflicting are the accounts. No doubt some of these reports are put into circulation for special purposes, to affect particular contracts, yet from accounts that come to us well authenticated, there can be no longer a doubt that we need in California all the wheat that will be harvested. From present appearances East, we need not fear or expect any breadstuffs from that quarter, for the crop of the whole United States was not as large in 1854 as 1852, and the present crop in the United States is not larger than that of the past year. The present aspect of Europe certainly shows that they will want grain and breadstuffs, and where will they get them? Not from Russia, or that quarter. Will the United States have any to spare? Look at the present prices, and judge of the future. It will be well for our grain growers to note carefully passing events and act accordingly—act carefully.

GRAIN THRESHERS.—Among the many kinds of threshers we have seen, Pitt's pinion on wheels stands pre-eminently high, and deservedly so. For sale by Case, Heiser & Co., Sansome street. Hall's patent, with Smith's new powers, are also very popular. We noticed the movement of one of these last named at McNally's warehouse the present week, and took pleasure in minutely examining it. The addition of Smith's power is valuable. This power gives more force and action, and adds some 300 pounds more weight; but the improvement is of the highest order. Messrs. Treadwell & Co. have Hall's and Pitt's. Wheels can be added to Hall's patent for about \$20 extra. Messrs. McNally & Co. have only a few left, and with these they furnish double sets of extra irons (wheels and pinions), thus guarding from delay in case of breakage. Farmers will do well to call on Messrs. McNally & Co., and these other houses, and examine these machines. They are all carefully boxed, and can be shipped safely any distance.

Meeting of Farmers in Alameda County.

At a meeting of farmers in Alameda county, convened at the Presbyterian church, Eden township, June 23d, Henry Watson, Esq., was chosen Chairman, and Joseph Grammer, Secretary.

Addresses were made by Messrs. Crane, Watson, Brier, and Grammer, explanatory of the object of the meeting, and on subjects of importance to the farming community.

A committee of three, consisting of Messrs. Crane, Blake, and Samuel Marsten, was then appointed to draft resolutions expressive of the sense of the meeting. Said committee reported as follows:

Resolved, That the interests of the agricultural community demand a united concert of action, for the purpose of protecting themselves against the present ruinous prices at which they are compelled to dispose of their produce, the charges attending the same, and the exorbitant wages they are compelled to pay for mechanical and other labor.

Resolved, That the storage and commissions charged in the city of San Francisco are out of all proportion to the prices obtained for produce, and some means should be devised, either by concentrating their business in fewer hands, or otherwise, to remedy this evil.

Resolved, That the present price of labor, for harvest hands, is more than farmers are justified in paying.

Resolved, That inasmuch as the present harvest will produce a large surplus of grain, which must seek a foreign market, farmers ought, therefore, to take measures to ship on their own account, and by uniting together in doing this, secure, not only dispatch, but lower freight and charges.

Resolved, That we proceed to form an Agricultural Society for this county, and that a committee of three be appointed to draft a constitution and by-laws, to be reported at the time to which this meeting shall stand adjourned.

In conformity with this resolution, said committee was appointed, consisting of Messrs. Brier, Watson, and Barnes.

A committee of ten was also appointed to circulate notice of the next meeting, composed of Messrs. Chism, Blake, Geo. More, McKee, Grammer, Randle, Barnes, Haile, W. W. More, and Watson.

Voted that the proceedings of this meeting be published in the Daily and Weekly California Chronicle, and California Farmer.

Voted to adjourn to Saturday, July 7th, at 2 o'clock P. M. HENRY WATSON, Chairman. JOS. GRAMMER, Secretary.

We publish the above most cheerfully, for it will be recollected it is carrying out the very plans we have so often urged upon the attention of our farmers. When farmers will act in concert to guard and promote their own interests, and have less to do with politics, then we shall see more prosperous times.—Ed.

ONTOGEN HATCHERS.—This curious invention, advertised in our columns this week, is one of no inconsiderable importance to California. These machines have been before the public in the Eastern States, for some time. The objection urged to them arose from the difficulty in securing an evenness of temperature. In the invention of Mr. Fulton, this desideratum is secured, for a variation of twenty or thirty degrees outside does not affect the temperature within, a single degree. And added to this while other inventions of this kind require a constant care, this only needs a call of perhaps once a day, and all the care and attention requisite may be performed by a small boy or girl. The cost too, is greatly lessened—a brood of 400 or 500 being less than a penny each. The proprietor will offer this machine to the public, during the approaching autumn. It will be on public exhibition at the State Fair, next September, this only being necessary to secure its success. It is not large, being about four feet long, three high, and three wide. This invention is one of great public utility.

AGRICOLA'S LETTERS.—We feel confident that every reader and every cultivator, finds an interest in the perusal of these letters. Written in an easy and at the same time scientific style, they are readily understood by all, in their application and adaptability to our soil and climate. We would particularly urge a careful perusal of No. 5, (in this issue) as the dry season is now upon us, and the subject of this letter we esteem of great moment. It will be certain to carry conviction to every mind of its correctness, and at the same time explain to many the fatal results of watering plants while exposed to the sun—a matter very imperfectly understood, but of the highest moment to all engaged in cultivation.

LOSS OF THE GRAIN CROP.—We have conversed with many cultivators of grain along the Alameda and Santa Clara counties, and they speak very discouragingly of the crops. Many feel confident that there will not be over one-half the quantity of last year.

PLEASANT DRIVE.—Among the many places that surround San Francisco, Alameda—the "Eucinal"—will be found of interest. A trip across the Bay in the fine ferry boat "Contra Costa," to the Eucinal landing—stop at Hamilton's for a nice lunch; take a good horse and buggy, drive through the beautiful grove of evergreen oaks to Palmer's (Sontag & Co.) strawberry grounds, feast a while there; drive on to Alameda City, visit Myer's fine nursery, Hutchinson's conservatory of choice plants—(buy one of his Tree Plums sure)—call at Capt. Cooke's orchard, Dr. Haile's splendid peach orchard and nursery, and stroll among the majestic oaks that ornament this beautiful spot. If you will only take a little more time, then try this plan: Take Cummings & Davis' new coach line, and go direct to Alameda; then visit the places we have named, and Mr. Chester's new and beautiful residence; then go to Cummings & Davis, who will furnish you a horse and buggy, No. 1 style, and you can ride at your leisure and enjoy it. If a little trip like this don't make you feel better, nothing will.

CALIFORNIA DAIRIES.—Those who wish to know something of the capabilities of our State for supplying our citizens with butter and cheese of the best quality, have only to go to the establishment of HORACE GUANER, No. 57 Washington street Market, San Francisco, and see the samples of butter and cheese daily arriving from our great valleys. Tons of both articles are daily disposed of by Mr. G. His knowledge of the business and his facilities for procuring it, is such as to be worthy the attention of our dairymen. The sign of Mr. G., painted by Hay & Martin, a true dairyman's sign, is worth a visit to see.

EXPRESS FAVORS.—We acknowledge many favors from the obliging messengers and assistants of Messrs. Wells, Fargo & Co. We are also indebted to the Pacific Express for favors received. Each have our thanks.

Geo. W. Murray & Co., Booksellers, Montgomery Block, San Francisco, are special agents for the Farmer, where copies can always be had, and on steamer days, in wrappers.

NOT WORKING OFF.—Hangtown Creek, the oldest diggings in this vicinity, (says the Placerville Democrat,) is still worked and continues to pay. A few weeks since a company of three men had taken out as high as a pound of gold in one day's washing, and it was not an isolated case. There is a company of three men at work in the bed of the creek, a few yards from our office, who take out daily from \$30 to \$100. As there is water in these diggings during the whole year, we are surprised that there are not more persons working in them.

A COLORED MASONIC LODGE.—The Colored Masonic Lodge, Olive Branch, No. 5, have opened a Temple at No. 306 Stockton street. This Lodge was instituted April 3, 1855, under the jurisdiction of the United States Grand Lodge of the State of New York, and now numbers 37 members. The first Colored Lodge in America was formed in Boston, Mass., in 1784, under a charter granted by the Grand Lodge of England, and in the mother of all other colored Masonic Lodges in America.

THE MONTEREY SENTINEL states that Messrs. Emory and Basse have 35 men now engaged in getting out granite at Stillwater Bay, near Carmelo. We understand that there is good hopes of this quarry getting a portion of the contract for building the dry dock and offices of the navy yard at Mare Island, for which it is admirably adapted.

CAVALIARY.—We regret to learn, says the Shasta Courier, that Major P. B. Reading was thrown from his horse a few days since, and badly hurt, one of his ribs having been broken by the fall. We are happy to state, however, that although his hurt is exceedingly severe, yet it is not at all dangerous.

THE SHASTA COURIER says the wheat crop in that vicinity has proved to be a total failure. On the South Fork of Trinity thousands of acres have been destroyed by the smut. This is a severe blow to the farmers, many of whom were depending solely upon their wheat for the liquidation of their debts.

GOLD IN WASHINGTON TERRITORY.—Gold is reported to have been discovered near Fort Colville, in Washington Territory. The metal is said to be very much like the Feather river gold, both in appearance and quality. The diggers were said to be making from \$12 to \$20 per day.

THE SAN JOSE TELEGRAPH says that "the era of brick buildings" there has commenced. Seven fire-proof brick stores are in course of erection at the corners of Market and Santa Clara streets.

WARM.—In Jackson, Amador county, on Saturday, the 16th inst. at one o'clock, the thermometer stood at 110° in the shade.

A grist mill is to be established near Montecito, in Santa Barbara county, to be in operation this fall.

Why was the elephant the last animal going into Noah's ark? Because he waited for his trunk.

**AGRICULTURAL AND HORTICULTURAL
FAIR;
Cattle Show and Industrial Exhibition,
OF THE
CALIFORNIA
State Agricultural Society,
TO BE HELDEN AT
Sacramento City, in September Next.**

PREMIUMS OFFERED FOR 1855.

The following section from the Act of Incorporation, by the Legislature, is the basis for the premiums announced below:

"Sec. 8. There is hereby appropriated from any money in the Treasury not otherwise appropriated, the sum of Five Thousand Dollars annually, for the space of four years, to be paid in September each year, to the Treasurer of said Society, on a requisition of the Treasurer of this State, signed by the President and Recording Secretary of said Society, which sum shall be used only for the purpose of paying premiums, and for no other purpose whatsoever."

FARMS, VINEYARDS, ORCHARDS, ETC.

Competitors for premiums in this department are requested to give immediate notice of their intention, to the President or Corresponding Secretary, that the committee may visit and examine at the most favorable time. No such notice will be expected to claim the attention of the committee unless received before the first day of August.

It is of special importance to Grain Growers that they bear the above in mind.

Best Improved Farm.....	\$200
do do do.....	100
Best Vineyard.....	75
do do do.....	50
Best Nursery.....	75
do do do.....	50
Best Kitchen Garden.....	50

Best Nursery of Hedge Plants.....	25
do do do.....	15
Best Fence Hedge.....	25
do do do.....	20
Best arranged and largest Green-house.....	30
do do do.....	15

ORCHARD.

Competitors for premiums on Field Crops, must deliver samples of the same to the committee, on or before the 15th of September. The fields shall be measured by the surveyor of the county or by two competent persons where they are located, or by one of the members of the society; and their certificate of the amount of land shall be presented to the committee, and the crop shall be measured or weighed by such persons, who shall make affidavit of the amount of the same, to be presented to the committee. In the estimate of Grain Crops, the committee will regard the number of acres, quantity and quality.

Best ten acres or more of Wheat.....	\$100
do do do.....	50

Best Hay Press.....	10
Best six Hay Forks.....	5
Best Bee Hive.....	10
Best Ox Yoke.....	10
Best assortment of Buckets.....	15
Best Nest of Willow Baskets.....	10
Best Chair.....	10
Best Cheese Press.....	16
Best Two-horse Wagon.....	20
Best One-horse Wagon.....	15
Best One-horse Carriage.....	20
Best Dry.....	10
Best set of Team Harness.....	25
Best set of Carriage Harness.....	25
Best Single Harness.....	15
Best Dry Harness.....	10

No premiums will be awarded for manufactured articles not produced in California, yet the Society will be happy to place such articles, with the names of the importers or exhibitors, on exhibition.

CATTLE SHOW.

The Cattle Show will be held near Sacramento, and will take place on the third and fourth days of the Agricultural Fair.

Competitors for premiums on animals must deliver a list of these intended for exhibition to the committee, on or before the first day of the Fair.

Stock must be on the ground before 10 A. M. of the second day of the Fair, when proper places will be assigned them, and on the days of the Cattle Show must remain in their places from 10 A. M. to 4 P. M.

Best Imported or American Stallion.....	\$150
do do do.....	75
Best Imported or American Mare.....	50

Best pair of fat Swine.....	20
do do do.....	10
Best three Fowls (cock and pair of hens).....	10
Best pair of Turkeys.....	10
Best pair of Geese.....	10
Best pair of Ducks.....	10

Discretionary premiums will be awarded by the Society on articles or animals which they shall deem highly meritorious, although they may not be named in the list of premiums.

Each Committee is authorized to recommend special premiums upon objects that properly belong to the class assigned to them.

The managers of the Society will be present during the Fair to give directions to all who may wish to enter animals or any articles for premium or exhibition, and forage will be furnished gratis for all animals entered for premiums.

The Society earnestly desire to be informed, at the earliest possible moment, how far the different Farmers in the State can co-operate in this undertaking, and what specimens they intend to exhibit—so that suitable provision may be made for their contributions.

All communications upon the subject, will be promptly responded to, and all information cheerfully rendered.

The announcement of the awards, together with appropriate exercises, will take place on the last day of the Fair.

Address the President or the Corresponding Secretary, at Sacramento.

Orchards, Apples, and the Market.

"DAVID, I am going to quit the nursery business. In twenty-one years fruit will be a drug in New York city. Why, every body is setting out orchards. Just look around this neighborhood! There is deacon Jones has just set out 500 trees; Tom Smith 400, and his brother Jim will have 1000 next spring, and soon at that rate all over the country—grafted fruit, too, none of it for cider. Now what do you suppose is to become of all these apples? I tell you what it is, David, we must wind up the nursery business or we shall break flat. Every body is going crazy about fruit. Every body will grow it, but no body buy it, a few years hence."

This prognostication was made more than twenty years ago by a sensible man engaged in propagating choice fruits for sale in Central New York, and no doubt the speaker honestly believed the days of the nurseryman were well nigh numbered. Brother David, however, was of a different opinion. He did not believe it was so easy to overstock the market with such fruit as no other than American soil and climate can produce. He did not believe ere twenty years' time would elapse every body would have an orchard, the products of which would be so unsaleable, and the business so unprofitable, the owner could have no desire to plant more or better, or newer varieties of trees; consequently he urged that the business should be perseveringly continued until the dawning of the evil day was more visible in the horizon.

What has been the result? A sale of 40,000 apple trees and 7,000 of other fruits during the planting season of last year, and the prospect for the next equally good. The very men who had planted 500, have increased 1000, and some of them have doubled that ten-fold; and yet the market is now better than it ever was before for all the choice varieties of the product of orchard, vineyard, or garden. The market is not yet glutted, nor can it be while millions of mouths continually water for the luscious fruits which contrast so advantageously with the sour crabs, "five to a pint," which filled the market twenty years ago. The market cannot be glutted with such fruit as the Newtown pippin, Roxbury russets, Rhode Island greenings, Baldwins, Bellefleur, Swaar, Domine, and a great variety of other excellent winter keeping apples; while the luxuriant months of old England are within two weeks (we have done counting distance by miles) of the fruit bearing hills of New England. Nay, not only New England and New York, but the ever bearing trees of the rich plains of that once far away western wild, known in our boyhood as New Connecticut. But still the market is not glutted, nor will it be, though all Ohio, Michigan, Indiana, Illinois, and Wisconsin, shall pour in their golden treasures of golden pippins from their unbounded plains of the richest fruit bearing land the world ever saw, while that same world full of people possess the taste they now do for choice, delicious fruits.

Our advice, therefore, is, as it has always been, to every man who owns an acre of land—plant trees. Don't be afraid of overstocking the market with any kind of fruit, except such as your fathers used to grow, and some you still perpetuate; because the refined and improved tastes of the world demand, and will have, if it is procurable, the best that can be grown.—*Oswego Jour.*

DESTROYING RATS.—A correspondent of the Genesee Farmer gives the following method for destroying rats. He says: "One day a stranger came to the house to buy some barley, and hearing my father mention the difficulty he had in freeing the house of these disagreeable tenants, he said he could put him in the way of getting rid of them with a little trouble. His directions were simply these: mix a quantity of arsenic with any sort of grease, and plaster it pretty thick around their holes, and as, like all furred animals, they are very cleanly, and cannot endure any dirt upon their coats, to remove the offensive matter they would lick their fur and thus destroy themselves. This plan was immediately put in practice, and in a month's time not a rat was to be seen about the house or barn."

A New Kind of Silk-Worm.

The intelligent Paris correspondent of the New Orleans Picayune, gives the following account of a new species of silk-worm, which may be interesting to many in this vicinity:

"A great deal of interest is taken here in experiments making in Algeria, to ascertain the value of a new silk-worm, which is fed and thrives on the leaves of the Palma Christi. I have waited to learn the results. The experiments have been made in Piedmont, and in France as well as in Algeria. It appears this new species of silk-worm (which is a native of China,) can live in Europe, and can thrive not only on the leaves of the Palma Christi, but on lettuce and weeping willow, and even wild endive; and reproduce itself several times in the course of the year. The name given to this new species of the silk-worm is the Bombyx Cynthia. Every body is familiar enough with the silk-worm (thanks to the morus multi caulis fever,) to know that the silk in which the worm entombs himself, is composed of an uninterrupted thread, and that its numerous windings are connected together by a gum which is easily dissolved, and that the silk is readily wound upon reels, provided the worm is not allowed to pass through its chrysalis state, (which is prevented by exposing the chrysalis to a high degree of temperature,) if the chrysalis pierces the cocoon, the silk cannot be wound, and it is used as floss, and is carded (as cotton, which from the shortness of its fibres, cannot be spun until it has been carded,) before it is employed.

The cocoon of the Bombyx Cynthia is not entirely closed, and the chrysalis, after becoming a butterfly, may escape from its prison without injuring the value of the silk, consequently if the cocoon of the Bombyx Cynthia can be wound, the silk grower will not be forced to sacrifice the grub to save the cocoon. This reserved aperture is defended against dangerous curiosity, in a very singular manner. On the side of the grub, and through which it must come out, the cocoon is terminated in a sort of a point, which is formed by the convergence of a crown of still, continuous threads running in such a manner as to prolong the side of the cocoon, which renders this passage impassable from the outside; while it is easily traversed by the imprisoned grub, which, so soon as he is transformed, is engaged in a sort of a hopper. (like a mill hopper) the sides of which are stretched wider as it moves further on, at the same time that the "hopper" exerts, by its elasticity, a pressure favorable to development of the butterfly's newly acquired and large wings. The stiff threads which constitute the point of the cocoon are doubled, glued and folded on each other, so as to remain unbroken, in such a way that the cocoon remains in its integrity after the hatching and the flight of the butterfly. It is not yet known whether the cocoon can be wound; it is certain that Allen's process, (boiling), is inefficient to dissolve the gum, which unit is the thread, but experiments made with the alkali and water appear to succeed. I think the cultivation of this worm may be pursued with the greatest advantage in all our sea-board Southern States.

ENCOURAGING.—The Chronicle, in commenting on the "good time coming," says: It may be said with some degree of confidence, that the times in this city have reached and passed the deepest portion of the stagnant slough. We have found the bottom, probably, and henceforth shall wade toward the shore, finding shallower water at every step. The stringency has at length loosened its vice-like grasp, and many begin to breathe freer, easier, and deeper. Some already feel like one suddenly tumbled into the water and rescued by his own stalwart limbs, or by the assistance of friends, from his cold and strangling bath, when the first deep inspiration inflates his lungs. There is hope mingled with the pain of the trial. Business is reviving, goods are on the rise, confidence begins to be restored. There is money enough here, and at reasonable rates provided the security is undoubted. There's the rub. The ruinous influx of goods will not be as great for some time to come as heretofore. The crops, which will be abundant, from all accounts, will soon be coming into market. There will be a plenty of bread-stuffs. The poor will not starve. And although farmers may not realize the prices they could wish, the abundance of the yield may make amends for the moderate rate of prices.

MARBLE QUARRY.—A marble quarry was discovered some weeks since, between Illinoistown and Iowa Hill. A company of five stockholders was formed, who have been at work on the vein for the past month.

On Thursday last, we received a block of this marble from the quarry. It is nicely finished and is beautifully polished. It is of a dark and variegated color, and is of that class usually known as serpentine or magnolia marble. No better material can be procured in this country for mantle pieces, window caps, floors, &c., than this beautiful stone. We have the block at our office, where all who are interested, are invited to call and see it. The company have taken out and finished as yet but few slabs, which they have given away to their friends. They intend the public shall be thoroughly satisfied as to its fitness for building and other purposes, before erecting machinery. Success to the marble quarry, say we.—*Placer Herald.*

HEAVY TAX.—The authorities of New York have taxed the Rt. Rev. Bishop Hughes, as being worth \$17,000,000. Church property in that State, is not taxable, but the Board of Supervisors ruled that as the Catholic creed compelled the absolute transfer of all such property to the Bishop, it was his private property, and as such must pay its proper proportion of taxes.

Miscellany.

ONE GENTLE THOUGHT.
TO A LADY.

My soul thy sacred image keeps;
My midnight dreams are all of thee;
For Nature then in silence sleeps,
And silence hroods o'er land and sea;
Oh, in that still, mysterious hour,
How oft from waking dreams I start,
To find thee but a fancy flower,
Thou cherished idol of my heart,
Thou hast each thought and dream of mine—
Have I but one thought of thee!

Forever thine my dreams will be,
Whatever may be my fortunes here;
I ask not love—I claim from thee
Only one boon, a gentle fear;
May'er blest visions from above
Play brightly round thy happy heart.
And may the beams of peace and love
Ne'er from thy glowing soul depart.
Farewell! my dreams are still with thee,
Hast thou one tender thought of me?

My joys like summer birds may fly,
My hopes like summer blooms depart,
But there's one flower that cannot die—
The holy memory in my heart;
No dew that flower's cup may fill,
No sunlight to its leaves be given,
But it will live and flourish still,
As deathless as a thing in heaven.

My soul greets thine, unasked, unsought,
Hast thou for me one gentle thought?

Farewell! farewell! my far-off friend!
Between us broad blue rivers flow,
And forests wave and plains extend,
And mountains in the sunlight glow;
The wind that breathes upon thy brow
Is not the wind that breathes on mine;
The star beams shining on thee now,
Are not the beams that on me shine,
But memory's spell is with us yet—
Canst thou the holy past forget?

The bitter tears that you and I
May shed when'er by anguish bowed,
Exhaled into the moonlit sky,
May meet and mingle in the cloud;
And thus, my much-loved friend, though we
Far, far apart must live and move,
Our souls, when God shall set them free,
Can mingle in the world of love.
This wert no ecstasy to me—
Say—would it be a joy to thee?

Mending the World.

The world is full of reformers. Reform springs from discontent. They who do not fare well in the world, necessarily desire some change of arrangement for their own comfort. A considerable portion of reformatory impulse, therefore, arises from dissatisfaction and restlessness. Yet, at the same time that the dissatisfied demands a change for his own personal benefit, he will be apt to look about for the co-operation of others who may also desire a change, and extend his sympathies to other wrongs than his own. It is by no means certain that the spirit of reform is always philanthropic, for the philanthropy and justice of the movement may be a secondary consideration. The same sect which struggles for toleration when in the minority, will often indulge in intolerant persecution as soon as it has obtained political power.

In this business of mending the world, they who fare prosperously as the world is going on at present, are not very apt to desire any change, since they have little personal occasion for discontent. Reform, therefore, is never the fashion in the higher classes of society. The wealthy, the powerful, and learned, and they who belong to the higher classes by birth or association, are generally the opponents of reforms, while the poor, the unfortunate, the obscure, the half educated, the oppressed and despised classes, all have so strong a personal interest in reform, that thousands are ready to listen to the suggestions of the reformer. It is a necessary result, therefore, that conservatism be fashionable, respectable, and influential, while reform is unfashionable, humble in its origin, unpollished in its manners, vehement in its language, and perpetually engaged in a struggle with the leading influences of society.

In view of these facts, he who feels impelled by philanthropic motives, to become a reformer, can but expect to lose his influence with the more important classes of society, and cut himself off from the broad avenues of ambition. He must be content to take a humbler position, and find in his own internal sentiments, a compensation for the loss of his external advantages. He must expect, also, to be thrown into associations less pleasant and attractive than those which belong to conservatism. Instead of the courtesy, refinement and cheerfulness, which belong to the prosperous who have enjoyed all the advantages of life, he must expect discontent, impatience, jealousy, and fault-finding; for as the whole movement of reform is a matter of discontent and criticism, reformers are necessarily critical, captious, and liable to internal dissensions. Many a liberal spirit that would have been drawn into the ranks of reform, has been repelled by the captious strife, the personal jealousy, and censoriousness, prevailing among reformers.

These are deplorable evils, but according to the ordinary laws and operations of human nature, they cannot well be avoided. It is true there are occasionally slight reforms, which even the most conservative may approve, and which call forth none of that deep discontent and censorious denunciation, which belong to the discussion of greater evils. The slight reforms which do not excite the denunciation and persecution of the

higher classes, may be prosecuted without the fiery indignation and spirit of contention which are aroused among those who are persecuted. But all great reforms, which disturb the existing condition of society, the rights of different classes, or the doctrines of the leading professions, are necessarily accompanied by all the fierceness of moral warfare.

If this be the inevitable tendency of the laws of human nature, what lesson does it teach us? Does it not teach that reformers should especially beware of indulging too much the spirit of indignant denunciation, and censure, which their position naturally excites? Does it not teach that we should endeavor to look upon the world, not merely to find faults in men, but to recognize at the same time the good that is in them, in order that those whom we denounce and criticize, may feel that we are not unjust, nor void of human kindness? Does it not teach that we should cherish a spirit of hopefulness, to counteract the natural discontent of our position, and a spirit of kindly mutual appreciation, in order to prevent our jealous criticism from operating too severely upon each other, and introducing into our own camp a degree of discord fatal to our success?

It is wisely ordained that they who cultivate too discordant a spirit, shall be incapable of co-operation, and therefore, shall be deprived of their moral influence. Hence a reform prosecuted in a jealous and censorious manner, necessarily results in failure, as it should. And just in proportion as the jealous and censorious spirit is introduced, the power of reform is weakened and paralyzed.

When reform arises from pure philanthropy, its spirit is genial and comprehensive; it seeks not to destroy anything that is worthy, but to preserve all that is good. It engages in no mad ultraism, nor does it become the blind devotee of any single idea. With eclectic comprehensiveness, it embraces and cherishes all that is worthy of preservation, and makes no indiscriminate war upon parties, and their doctrines.

Perhaps the most important lesson to be drawn from the philosophy of reform, is that which relates to reformers themselves. They who would mend the world, and they who would mend themselves, are often sadly mistaken as to the true sources of the evils of which they complain. The majority of mankind, when they find serious evils accompanying their course of life, become indignant against the circumstances by which these evils are produced, and direct their attention to the outer world, instead of looking internally, to discover whether the source of evil is not in themselves. So common is this that a multitude of examples, at once rise before the mind, of those who execrate society, and denounce human nature, and the laws of the universe, because their own policy and course in life have been unsuccessful. There is not a greater delusion, nor a more universal source of human misery, than this very error of ascribing our misfortunes to external agencies instead of ourselves. Yet who among our moralists and divines, are earnestly engaged in correcting this lamentable error, or give it more than a passing notice?

A few familiar examples will illustrate its prevalence. Young men and women set forth in life, with an education designed rather to gratify vanity, than to serve the great ends of life. One is familiar with the dead languages, and another well supplied with light literature, music, and the accomplishments which ornament the parlor. They know almost nothing of the laws of nature, nothing of the laws of health, nothing of the constitution of their own bodies, nothing of the philosophy of their own minds, nothing of the principles of mental culture, and little of the practical, pecuniary, and industrial duties of life. Thus in the outset they have disregarded all the great laws or admonitions of nature, and the day of punishment is surely approaching, from which there can be no escape. From their profound ignorance of the principles of human nature, each contracts an unfortunate alliance and the remainder of their lives is embittered by discontent and blighted affections. How seldom do they ever reflect that the fault lay in themselves. They complain of their fate, but do not complain of their own blindness, and profligate disregard of the moral law. Hence they do not think of correcting the same evil in their offspring, by directing their attention to the science of man. Thus misery, crime and discord, are perpetuated, while the unfortunate victims blame their destiny, or denounce each other and the whole world, instead of denouncing their own folly.

The loss of domestic happiness is only a small portion of their sufferings. Ignorant of the laws of health, they blindly encounter diseases, which the study of their own constitutions would enable them to avoid. He suffers from dyspepsia, fevers, and inflammations, which cut short his life, and deprive him of half the energy of his constitution; while she falls a victim to neuralgia, headache, female disorders, and consumption, or a gradual failure of vitality, all the time regarding herself as terribly afflicted by divine providence, or by the agency of the devil, never dreaming that she is herself the sole cause of her own misery, and that she might be at any time relieved, by conforming to the laws of health.

Poverty, too, is among their afflictions; for neither has ever studied the moral principles which should govern the management of pecuniary affairs, and each lives with reference to fashion, and a false idea of respectability, sometimes spending their entire income, and sometimes running into debt, until, as old age, impaired health, and family responsibilities accumulate, they can only grumble at their bad fortune, and abuse the more opulent neighbors, instead of censuring themselves for their profligate disregard of the rigid economy which was necessary at their out-

set in life. Their children, too, are reared to consider it their leading object in keeping an elegant external appearance, without regard to ultimate poverty and suffering. Thus the race of grumbling unfortunates, is perpetuated. The constant pressure of misfortunes and annoyances, produced by their own imprudence, at length brings on an intense irritability of temper, which renders them unfit for social intercourse.

Young men and women with this peculiarity, are seldom guarded against its effects. Their captious remarks, and offensive manners, soon make them enemies, and all their ill temper is reciprocated with four fold increase. They find themselves badly treated, if not decidedly persecuted, and this enrages them the more against society. Their opinion of human nature grows worse and worse, from their own experience; their own deportment becomes more harsh and unpleasant, they live in continual warfare with society, and as they never look to themselves for the causes, they denounce mankind, and the very principles of human nature, and become firm believers in the doctrine of total depravity.

How easily might such individuals have been saved from their moral ruin, could they have turned their thoughts inward after their first conflict, and discovered that there was too much of harshness in their own nature, and that a little personal reform would enable them to live in harmony with mankind.

The laws of the universe are stern, inflexible and just, and whether we are satisfied with their operation or not, we have no alternative but to obey their admonitions, or pay their penalties. These laws, which operate upon all alike, indicate very plainly certain courses of action, which lead to health, to happiness, and to success. Others have obeyed these laws and succeeded in accomplishing all their objects—happiness, wealth, power and wisdom have been theirs. If we, living under the same laws, and possessing the same human faculties, cannot likewise attain satisfactory results, the fault lies in ourselves. It is but blind and brutal folly to rail against the laws of the universe, or the principles of human nature—to refer to the wrath of God or the power of the devil, in explanation of our own miserable failures, to accomplish what other men have accomplished, who lived under the same fixed laws, and exercised the same powers which we possess.

The principle should be impressed upon the mind of every young man and woman, that failure or success, in any of the desirable objects of life, is a matter which belongs entirely to ourselves; that in proportion as we fail, we should study more diligently the causes of our failure, not in the faults of the world or society, but in the faults of our own mismanagement.

Success is the just and inevitable reward of power rightly applied. He who fails to win success, either had not the power, or did not rightly apply it. He who does not rightly apply his power, has neglected the proper use of his intellect, which would have taught him the proper application. And he who has not the power necessary to win success, has neglected to exercise those organic energies, which every human being possesses, and which all may cultivate.

When you have failed, the fault may not be entirely your own, as an individual, but you represent your ancestors—you take their places—their virtue, powers, rewards, and punishments, as they were left by your predecessors. In speaking of your responsibilities, I speak of you as the representative not only of yourself, but also of the sum-total of your ancestors. But there are few, indeed, so utterly bankrupted by their ancestors, as to be incapable of putting forth that energy which is necessary to success in all the important ends of life: health, happiness, and intellectual growth. They are all within your reach. If you fail, the fault lies in yourself, and you should look to self alone for the cause.

Every twinge of pain, every hour of melancholy, every personal inconvenience and punishment which you experience, you should regard as a punishment inflicted upon you by the inflexible laws of nature, to compel you to fulfill those duties which you had neglected—to compel you to resume the work of physical, mental, and moral development, until you are lifted above the evils which now surround you.—*Buchanan's Journal of Man.*

THE OLD OAKEN BUCKET.—This most popular song was written by Samuel P. Woodworth, while yet he was a journeyman printer, working in an office at the corner of Chambers and Chatham streets. Near by, in Frankfort street, was a drinking shop, kept by a man named Mallory, where Woodworth and several particular friends, used to resort. One afternoon the liquor was super-excellent, and Woodworth seemed inspired by it, for, after taking a draught, he set his glass upon the table, and, smacking his lips, declared that Mallory's *caviar* was superior to anything he had ever tasted.

"No," said Mallory, "you are mistaken; there was one whiff in both our estimations, far surpassed this in the way of drinking."

"What was that?" asked Mr. Woodworth, dubiously.

"The draughts of pure, fresh spring water that we used to drink from the old oaken bucket that hung in the well, after our return from the labors of the field on a sultry day in summer."

A tear-drop glimmered for a moment in Woodworth's eye. "True, true," he replied, and shortly after quitted the place. He immediately returned to the office, grasped a pen, and in half an hour the "Old Oaken Bucket," one of the most delightful compositions in our language, was ready in manuscript to be embalmed in the memories of succeeding generations.

Ladies' Department.

[For the California Farmer.]

Rural Lays—No. 2.

OUR HOME IN THE COUNTRY.

NEAR where the Feather River's shores and tide
The "hunks and buns" on either hand divide,
My uncle Robbin, far from city and strife,
Enjoys the comforts of a country life;
His cottage home breaks a mountain's steep,
Embowered in beauty such as poet's dream,
For its built rustic walls may prove,
The reward seen in common country-ide:
The towering pine-clad hills by Nature made
Alike for grandeur, shelter, and for shade,
With grassy dells, and silver brooks between,
Now sporting freely, now again unseen,
As through the trees, all with low and song,
They dance or dally as they pass along,
Where fairs and well might trip with shrill feet,
And nymphs and naiads make the scene complete,
The opening vale extending all around,
Where buckeyes, limes and spreading oaks abound,
Where busy farmers turn the generous soil,
And boundless crops reward them for their toil,
And uncle Robbin, proud as the best,
Tis said by some, surpasses all the rest.

Ours is no cottage built for pride or boast,
But neatly planned, and done at little cost,
A sort of hybrid, of an emulation kind,
Of villa, cottage, farm-house all combined
In rustic style—a summer looking place,
Where elegance mixes with usefulness,
Back from the house, some half a mile between,
(Beside our orchard garden interview,) stand the out-buildings, neatly built and plain,
But so contrived as makes my mind rule;
Not straggling, nondescript, and out of place—
Their true and proper motto "I am agreeable!"
But so arranged by geometric rule,
As shows, at once, the builder's taste and skill;
By whose be-honored forethought, craft, and care,
They form exactly three sides of a square,
Point at the house no poor picture is seen—
Unkept, unglazed, dry, and ashen green—
But a broad lawn with "tall universal trees,"
Both perennials and short-lived;
Grown on the soil, when know our white nor slave
Our world of wonders o'er the western wave,
But monuments, by Nature raised, in show
Our children when to build and where to sow.

There, in this lovely vale, though far from noise,
But half-forgetting, and but half-forso,
We seek no phantom pleasure never found,
But find our hearts with all we want abound.

BETTY MARTIN.

Domestic Receipts.

RABBIT SOUP.—Begin this soup six hours before dinner. Cut up three large, but young and tender rabbits, in four small ones, (sewing the hunches) and dredge them with flour. Slice six mild onions, and season them with half a grated nutmeg; or more if you like it. Put some fresh butter into a hot frying pan, (you may substitute for the butter some cold roast veal gravy that has been carefully cleared from the fat,) place it over the fire, and when it boils, put in the rabbits and onions, and fry them a light brown. Then transfer the whole to a soup-pot; season it with a very small tea-spoonful of salt, a tea-spoonful of whole pepper, a large tea-spoonful of sweet marjoram leaves stripped from the stalks, and four or five blades of mace, adding three large carrots in slices. Pour on, slowly, four quarts of hot water from a kettle already boiling hard. Cover the soup-pot, and let it simmer slowly (skimming it well) till the meat of the rabbits is reduced to shreds and drops from the bones, which will not be in less than five hours, if boiled as gently as it ought. When quite done, strain the soup into a tureen. Have ready the grated yolks of six hard boiled eggs, and stir them into the soup immediately after it is strained, and while it is very hot. Add, also, some bread cut in dice or small squares, and fried brown in fresh butter. Or substitute for the fried bread, buttered toast, with all the crust removed, and cut into very small bits or mouthfuls.

Hare soup may be made in this manner. It is also an excellent way of disposing of old fowls. A similar soup may be made of fresh killed venison. For hare or venison soup, add (after straining it) about half an hour before you take it up, two glasses of Sherry or Madeira, and a lemon sliced thin.

CHICKEN SOUP.—Cut up two large fine fowls, as if carving them for the table, and wash the pieces in cold water. Take half a dozen thin slices of cold ham, and lay them in a soup-pot, mixed among the pieces of chicken. Season them with a very little cayenne, a little nutmeg, and a few blades of mace, but no salt, as the ham will make it salt enough. Add a head of celery, split and cut into long bits, a quarter of a pound of butter, divided into two, and rolled in flour. Pour on three quarts of milk. Set the soup-pot over the fire, and let it boil rather slowly, skimming it well. When it has boiled an hour, put in some small round dumplings, made of half a pound of flour mixed with a quarter of a pound of butter; divide this dough into equal portions, and roll them in your hands into little balls about the size of a large hickory nut. The soup must boil until the flesh of the fowls is loose on the bones, but not till it drops off. Stir in, at the last, the beaten yolks of three or four eggs, and let the soup remain about five minutes longer over the fire. Then take it up. Cut off from the bones the flesh of the fowls, and divide it into mouthfuls. Cut up the slices of ham in the same manner; mix the livers and gizzards; put the bits of fowl and ham in the bottom of a large tureen, and pour the soup upon it.

This soup will be found excellent, and may be

made of large old fowls, that cannot be cooked in any other way. If they are so old that when the soup is finished that they still continue tough, remove them entirely, and do not serve them up in it.

Similar soup may be made of a large old turkey. Also of four rabbits.

FROM THE NORTH.—From the Crescent City Herald of the 20th, we learn that news had been received there of an adjustment of the Indian difficulties, they having returned to the Reservation after giving up six of their number concerned in the murder of J. B. Hill, on Indian Creek, and also in the murder of Dyer and McHues, on Applegate.

The Herald says that Mr. B. F. Dorris, just in from Yreka, reports every thing quiet at Illinois Valley. He also confirms the statement of the surrender to the Indian Agent of the murderers of Hill, Dyer, and McHues, but says some soldiers and volunteers, however, were still out.

The Herald represents the mining prospects as very encouraging. On Scott's Bar, where mining is carried on more extensively than in other regions, all are doing well. One party took out as high as 162 ozs. one day, but this was after the ground had been thoroughly "stripped."

A party had been out prospecting in the region between the south and middle forks of Smith river, and report good prospects but no water.

OREGON SALT.—The Oregonian has been shown a fine specimen of salt, manufactured on the Willamette Slough, about fifteen miles below Portland. The salt is of the finest quality—of a pure white color—free from all impurities, and equal in every respect to the famous Salinas salt manufactured at Salinas, in the State of New York. The springs from which the water flows are said to be inexhaustible. Machinery is being prepared wherever to manufacture enough salt for our home consumption at a large reduction from the price now paid for it, and also large quantities for exportation.

CATTLE.—During the last week upwards of two thousand head of cattle from Salt Lake and Carson Valley, in line order passed through Placerville.

OPERATIONS OF THE MINT.—Dr. Birdsell, Superintendent of the San Francisco Mint, furnishes the following statement of its operations for the first fifteen days of the present month: Deposits of gold, 11,357,884 ozs.; value at \$18.40 per oz., \$2,159,859 55. Coinage of gold, \$1,280,000 00; Coinage of silver, \$10,450 00; Fine bars, \$15,500 00; Unparted bars, \$135,255 98; Total for fifteen days, \$1,411,205 98.

MARRIED.

On the 19th June, at Mokelumne Hill, Eli Brannan and Miss Arcella Humphrey.
On the 21st June, in this city, by Rev. Dr. Scott, James M. Parker, of New York, and Miss Caroline Stevens, of Boston.
On the 28th June, Richard Milner and Miss Catherine Asher, of California.
On the 21st June, in Placerville, Daniel E. Naupia and Miss Angelina Cox.

DIED.

On the 22d June, in Marysville, Bridget Rearding, aged 75 years, formerly of Memphis, Tenn.
On the 11th June, in this city, Capt. Geo. Brungard, late of Victoria, B. C., in the 41st year of his age.

SPECIAL NOTICES.

Opinions of Regular Physicians.

WISTAR'S BALSAM OF WILD CHERRY for diseases of the Lungs, for two years past, and many bottles, to my knowledge, have been used by my patients, all with beneficial results. In two cases, where it was thought consumption had taken place, the Wild Cherry effected a cure.

L. BOYDEN, Physician at Excelsior Corner.

Dr. William A. Shaw, of Washington, N. C., writes:—"As Wistar's Balsam of Wild Cherry is the only patent medicine which I have ever given my public recommendation, I shall not be suspected by the counsel of giving rash or precipitate testimony."

Sold by all druggists.

Agents for San Francisco, R. D. THAYER & CO.

Bleeding at the Lungs.

WISTAR'S BALSAM OF WILD CHERRY for diseases of the Lungs, which left me with a troublesome cough and the usual debility consequent upon such an attack; and having cured myself by the use of WISTAR'S BALSAM OF WILD CHERRY, I feel it a pleasure and a duty, to testify to its merits. My general health is in perfect condition; and for those who are suffering under pulmonary attacks, I am persuaded that the Balsam is an excellent preparation.

Yours, very truly, JONA. R. CHILDS,

Editor Chicope Telegraph.

Chicope, Mass., Feb. 20, 1854.

* No sure it is signed L. BUTTS on the wrapper.

Agents for San Francisco, R. D. THAYER & CO.

Sold by all Druggists.

Persons purchasing articles advertised in our columns will confer a favor by saying they observed them advertised in the "CALIFORNIA FARMER."

Important to the Dairywomen of California.

HORACE GUSHEE, No. 51 Washington Market, wholesale and retail dealer in Fresh Butter, Cheese and Eggs, having been engaged in the sale of the products of the dairy for the next two and a half years in San Francisco, would take this opportunity to return his thanks to those who have favored him with their business, and respectfully solicit a continuance of the same. Consignments from any part of the State by way of the various packets or steamboats, directed to us, will meet with prompt attention, and proceeds of sale forwarded as directed. Liberal advances made, if required.

Dairywomen, wherever in the city, are invited to call and see the various kinds of Butter and Cheese which are received daily from the ranches.

BOOTH, CARROLL & CO.,

Wholesale Grocers and Provision Dealers,

No. 62 J street, corner of Third,

San Francisco.

MISCELLANEOUS.

IMMENSE SACRIFICE!

THERE is no use in throwing 50 per cent. away these hard times, when you can purchase the same articles at 50 per cent. cheaper than in any other house in California.

HILLER & ANDREWS.

These well known Jewelers will commence selling off their immense stock of rich and valuable

Diamonds, Fine Watches, Jewels, Silverware, &c., &c., At New York cost. We do assure the public that there is no humbug in this, and we are determined to close out our Immense Stock at Cost.

and invite the public to call and examine for themselves, before purchasing elsewhere. We have now, by far the largest stock in the State, and it is necessary that we reduce our stock.

Remember 59 J street, near the corner of 3d.

Latest Importation.

WE would again call the attention of buyers, wholesale and retail, to the large and magnificent stock of

STAPLE AND FANCY GOODS,

which have been received direct from the manufacturers and importers the past week, per clipper ship "Flying Cloud," "Samuel Russell" and "Steel Rover," which, in addition to our former stock, makes it by far the LARGEST IN THE STATE OUT OF SAN FRANCISCO. And for quality and cheapness, we defy competition; and we say, without fear of contradiction, we keep the greatest variety to be found in any house in California.

By the Two Last Steamers.

200 Patterns, new, rich and beautiful;
100 yds. latest style Bonnet Ribbons and Trimmings;
50 yds. assorted colors, Bareges and Tissues;
85 patterns fancy Bareges and Tissues;
25 yds. plain and dotted Swisses;
40 yds. plaid, striped and plain Jaconet;
865 yds. Wash Linens, \$1 a Dress Pattern.

Mens', Youths' and Boys' Summer Clothing.

Manufactured by our House in New York, by the very best style.

BONNETS:—Mens' Flats, Boys' Hats, &c.

Together with a great variety of other Fancy Goods, for the Fourth of July celebration, too numerous to mention.

CHAS. CROCKER & CO.

346 J street, between Eighth and Ninth.

New Invention!

Now, Commit Your Chickens!

THE undersigned begs leave to offer to the public a new and improved machine for hatching the eggs of domestic fowls. After a series of costly experiments the proprietor has succeeded in perfecting a plan by which at a very trifling cost from four to five hundred eggs can be converted daily into young Chickens, Ducks, Goslings in Turkeys. After the first brood, &c., nineteen, or twenty days, this is the certain result; and it requires but little attention—once every twenty-four hours—the cost of fuel and preparation being only some \$2.50 to \$3 each day.

This invention will be in full operation at the State Fair at the city of Sacramento, in September next, when all information will be presented. They will soon be offered for sale. In the meantime information can be obtained at the office of the CALIFORNIA FARMER; or letters can be addressed to me at San Francisco.

JOHN J. FULTON,

346 J street, South Beach, near North Park.

The California State Agricultural Rooms.

THE Rooms of the State Agricultural Society are located on

Fourth street, between J and K, where all who are interested in Agriculture and kindred Sciences are invited to call.

Several hundred speeches in all departments are on exhibition constantly, and it is the object of the Society to make these rooms a place of resort for our citizens. The rooms are open daily, (Sundays excepted), and are free to all. They are under the charge of the Editor of the CALIFORNIA FARMER, who will be pleased to render any information or assistance to further any interest connected with agriculture.

By order of the President, C. I. HUTCHINSON.

346 J street, South Beach, near North Park.

Chili Strawberry.

THE famous Chili Strawberry, which has elicited so much wonder and which was exhibited at the Society's Rooms, some two weeks since, has induced the proprietor of the plants to offer a few for sale.

Samples of the same, with the condition, culture and price, may be had on application to the Editors of the CALIFORNIA FARMER, at their office, on Fourth street, between J and K, they being sole agents for the same.

E. S. MARSH.

FOURTH JULY.

J. R. RAY, 70 J street, Sacramento, has just received from

New York, a large assortment of splendid

FIRE-WORKS.

They are arranged in lots of \$10, \$25, \$50, and \$100 in value.

Cash Orders, per letter, or orders given Wells, Fargo & Co., will meet with prompt returns.

Fourth July Committees should give their orders immediately.

346 J street, South Beach, near North Park.

The Wonder of the World!

THE MAMMOTH OX ECLIPSE!!

THE largest, most beautiful and perfect Animal in the

World! only 6 years old, measures 18 hands (6 feet) high,

and weighs 4,000 pounds!

On exhibition every evening from 7 to 11 o'clock, at No. 124

Commercial street, 4 doors below Montgomery.

Admission 50 cents.

346 J street, South Beach, near North Park.

Ferry Notice.

NOTICE is hereby given to all persons interested, that the

underground will apply to the Board of Supervisors of

Sacramento county, on the 12th day of June, 1855, if said board

shall then be in session; if not, then on the first day thereafter

that they shall be in session, for a renewal of his license to keep

two ferries across the American river; one commonly known as

"Hoy's Ferry," near where 22nd street of Sacramento City

intersects said river; and the other commonly known as the

"Middle or Muldrow Ferry," about two and one-half miles from

said Sacramento City.

Sacramento, May 10th, 1855.

SAMUEL MORRIS.

346 J street, South Beach, near North Park.

First Premium Daguerreotypes.

R. H. VANCE just awarded the FIRST PREMIUM for the

best Daguerreotypes exhibited at the California State

Fair. Mr. V. would be happy to visit upon any one wishing a

PERFECT LIKENESS. The arrangement of his Rooms and

lights are superior to any in the State.

Rooms—New Building corner of Sacramento and Montgo-

mary streets, entrance on Montgomery street, next door to

Audin's.

16

CHAS. R. SCHEUNER respectfully informs the manufac-

turers of Saddles that he is now prepared to do all kinds of

stampings on California and Mexican styles of saddles, and

he is confident that his style of workmanship cannot be sur-

passed in this State.

Please call and examine specimens.

Orders from the country promptly attended to.
